cular remedy was so greatly superior to the evil consequences that might be apprehended from it, as to over-balance all the obstructions which could be offered to it. It was because he did not think that the remedy proposed by the rt. hon. gent. was of that description, that he could not bring himself to adopt it. He, however, was not disposed to admit that the course which Government and parliament had pursued, deserved all the imputations which the rt. hon. gent. had thought fit to cast upon it. The rt. hon. gent. accused Government of having been the original cause of the reduction of the rate of interest, which he said had led to excessive speculation. The rt. hon. gent. ascribed the reduction of the 5 per cents. to some previous mysterious combination between Government and the Bank. Under what circumstances did Government propose that measure? It was proposed under the sanction of a parliamentary committee. In 1817, a committee of that house particularly recommended the reduction of the 5 per cents. as a measure calculated to relieve the country, and diminish *pro tanto* the amount of the engagement which the national debt imposed upon them. It was not surprising, therefore, that when the rate of interest in 1822 was found to be such as favoured a reduction of the 5 per cents., Government, acting upon the recommendation of the committee, should avail themselves of it for the purpose of saving to the country an expense of 1,400,000l. a-year. However, many of the acts for which the rt. hon. gent. found fault with ministers, took place not before, but subsequent to the reduction of the rate of interest. The passing of the 11. and 21. note act, and the arrangement of the half-pay and pensions, took place subsequently to that measure. It was therefore impossible to charge on those acts the reduction of the rate of interest. He must most positively deny that Government endeavoured by any process of combination with the Bank to promote a state of things which should reduce the rate of interest. He thought that if Government had done any thing of the kind, they would have been guilty of a fraud;—beyond all doubt it would have been a fraud upon the persons who by the process of reduction were compelled to sacrifice a part of their incomes. He would state to the house one circumstance which would prove that Government had acted *bonâ fide* in the transaction, and had not been desirous to produce a state of things calculated to assist them in the operation which they proposed. When he stated, at the commencement of 1824, that it was the intention of Government to propose the reduction of the 4 per cents., it was suggested that great facility would be given to the operation—by what?—by reducing the interest on Exchequer-bills. He said, "No, it would be unfair to do that; the reduction of the rate of interest on Exchequer-bills must follow the reduction of interest on all other securities, but it would not be acting with good faith to resort to that measure for the purpose of increasing the disposition of individuals to accept 3½ instead of 4 per cent." He gave that as a proof that Government had not lent themselves to any measure calculated to effect by artificial means that which in the natural course of events was not practicable.—The rt. hon. gent. said that he thought it would be proper to follow the example of 1793; and he used one expression which he must confess rather startled him, and in his opinion furnished

one of the strongest possible reasons for inducing the house not to adopt that precedent. The rt. hon. gent., in alluding to the proceedings of 1793, spoke of it as being an established practice. If ever it should become the established practice for Government to become bankers and pawnbrokers, it would derange all the transactions of commerce, throw every thing into confusion, and teach men not to rely on their own exertions and those of their friends, but to trust to the unnatural and artificial course recommended on the present occasion, and which, if now adopted, would become, not the exception but the rule for future guidance (hear, hear). He did not think the case of 1793 was so precisely similar to the present case as the rt. hon. gent. seemed to consider it. Did the rt. hon. gent. attribute no importance to the remarkable changes which took place in the whole aspect of affairs on the continent and in this country between the summer of 1792 and the spring of 1793? In the summer of 1792, the universal impression (which the Government not only shared, but tended to produce) was, that if ever there was a period in our history when it was probable that the country would continue for years in a state of peace, that period had arrived. What happened? Within a few weeks after that impression prevailed, a war broke out in Europe under circumstances quite unusual. France acquired an attitude which the wisest men (Mr. Burke amongst the rest) had thought it incompatible with her situation to assume. In a short time the situation of France involved this country in hostilities, which in their nature exceeded any in which we had before been engaged. There was no question that the great prosperity which prevailed at the commencement of 1792 must sooner or later have experienced a revulsion, but the revulsion was occasioned by an extraneous cause, and not by the extravagant speculations of individuals; and that, therefore, might be said to constitute a case in which it was proper for Government to interfere. The case of 1811 had also been referred to. Although that case (like the one of 1793), as to the intensity of the distress, and the particular mode of its operation, might be said to resemble the present case, yet the circumstances which had produced the former were as unlike as possible to those which had brought about the latter. The distress of 1811 was not occasioned by general speculation and over-trading, though he admitted it was partly produced by over-trading in one particular branch of commerce, which arose out of the peculiar circumstances of the war. By the anti-commercial decrees of Buonaparte (provoked, it might be, by the retaliatory measures of the English Government) all the channels of trade between this country and the continent were dammed up. It was not surprising that under those circumstances persons engaged in mercantile speculations should avail themselves too eagerly of the sudden opening of trade with South America. The distress of 1811, then, resulted from over-trading with South America, occasioned by the peculiar situation of hostilities. The circumstances of that case, therefore, were very different from those of the case now under consideration, and that diversity of circumstances was with him an additional reason for not following one bad example, and setting another. It was the duty of parliament to abstain from entering a vicious circle, from which they would never escape till they were strangled.

in its folds. If it were right to adopt the course recommended on the present occasion, then, upon every principle of fair dealing and justice, Government ought to have done exactly the same thing when the landed interest was in a state of distress. A number of persons thought it desirable to do so upon that occasion. Indeed a distinct proposition was made to the house, though not adopted; that Government should adopt a similar measure to that of 1793. Ministers opposed the proposition, not only on the ground of the difficulty of carrying it into execution, but on principle; yet in point of fact, the agricultural interest had at that time just the same claim to the assistance of the Government as could be set up by any part of the community at the present moment. He knew not why, if parliament yielded now, they should not have done the same in the case of agricultural distress. In another case, with regard to Ireland, a similar proposition was made to parliament. It was moved that Government should advance £1,000,000, to be employed in the encouragement of the cultivation of flax, and the draining of bogs in Ireland. There could be no doubt that the advance of money would have been immediately beneficial to Ireland, and would have served for a precedent to be brought to bear upon the present argument; but parliament wisely abstained from establishing it. It could not be said that the distress which existed in Ireland at that period was not equal to that which now prevailed in this country. Ireland had just recovered from a desolating famine, which had swept away thousands of her inhabitants, and covered the land with mourning; all her banking establishments were broken up, or in a state of embarrassment, and yet parliament did not think proper to adopt the remedy now proposed, because they considered that it was likely to produce the evil of rendering Government liable to be called upon on every occasion of distress to act as bankers and pawnbrokers (hear, hear). To refer to another case: in 1823, a most important branch of our commerce, namely, the West India trade, was in a state of great distress. The circumstances of that case, as related at the period, were precisely similar to those of the present time. It was said upon that occasion that the planters possessed sufficient property to answer all demands; but that, nevertheless, merchants would not advance them any money, because they were not satisfied with the security of the planters' property. And to what was this doubt attributed? Partly to the anomalous nature of society in the West India islands, and partly—he begged the attention of the house to the fact—to the measures adopted by that house on the subject of negro slavery. The grounds upon which Government was then called upon to advance 5,000,000*l.* to assist the West India interest, were quite as strong as those upon which they were at present urged to advance a similar sum to the commercial interest; but parliament, conceiving that it would be setting a bad example, to be followed on some future occasion, rejected the proposition. No one could be found to defend the proceeding in question *per se*. It was admitted that it should be resorted to only in a case of necessity (hear, hear). If there was any one power which it was the duty of Government to be cautious in assuming, it was that of advancing money in what might be considered cases of

Scot. 1826.

necessity. The temptations to abuse such a power were so great, that he should not like to be answerable for the consequences which might ensue if parliament should be too facile in admitting the propriety of establishing it. Supposing that Government had lent the 4,000,000*l.* which were asked for the relief of the agricultural interest in 1822, the 1,000,000*l.* for Ireland in 1823, the 5,000,000*l.* for the West India interest, in addition to the 5,000,000*l.* which were now called for, they would have advanced no less than 15,000,000*l.* in the course of four years. Would any body say that such a course of proceeding was not dangerous; and that it was not a misfortune that the original precedent of 1793 existed (hear, hear)? It was impossible to confine a measure of the kind under consideration to any particular case. Each case was represented to possess particular claims upon the attention of Government. The best feelings of men's nature were appealed to in order to induce them to follow the course which had been adopted in 1793, and which, if now resorted to, could never be refused to the application of any particular interest which might conceive itself to be, or might actually be, in a state of suffering. The *rt. hon. gent.* (Mr. Tierney) seemed to think that, in point of principle, there was no difference between the Bank lending money on goods, and the same thing being done by Government. Government had not by law the power of lending money upon goods. A special law must therefore be passed, in order to give them that power. The Bank, however, already possessed the power; it was coeval with their original institution, and though never exercised, had, on every renewal of their charter, continued to form an inherent part of it. There was, therefore, in his opinion, the greatest distinction between the two cases. The absence of this power on the part of the Government was an indication that it was not congenial with their functions, and its possession on the part of the Bank was a proof that in the opinion of parliament it might be wise and prudent, under particular circumstances, for that body to exercise it. The exercise of that power by the Bank must of course depend on circumstances. It would not be prudent to bring it into action on all occasions, but periods might arrive when it would be highly useful to do so. It never could be supposed that it would be prudent for the Bank to act on all occasions as they did in December last. Their conduct on that occasion was justified only by the circumstances of the period.—With respect to the proposition of an issue of Exchequer-bills by Government, supposing that Government were to adopt that measure, would the Bank have nothing to do with it? Had they nothing to do with the measure of 1793? How would the bills be converted into money? The Bank would cash them. The *rt. hon. gent.* had assumed that only a small portion of the bills would be carried to the Bank, and that the rest would be cashed in other quarters; but he had no right to make that assumption, any more than that it would be necessary to issue only 1,000,000*l.* out of the 5,000,000*l.* which it was proposed to place at the disposal of commissioners. He (the Chancellor of the Exchequer) was bound to look at the measure under the most unfavourable circumstances. He would therefore suppose that the whole amount of Exchequer-bills would be issued. The Bank might be called upon to

2 Q

cash those bills under circumstances which would render it inconsistent with their duty to do so. The Bank, who were necessarily well acquainted with all the variations of exchanges, would contract and extend their issues as circumstances might require. A set of commissioners would not be governed by the same prudential reasons which would influence the Bank, and might issue bills at a moment when the Bank would feel it to be inconsistent with their duty to cash them. If such a case should occur, the mischief would be ten thousand times greater than at present. If these bills were not taken up by somebody, they would add to the already loaded state of the market of Exchequer-bills. He would then like to know how the revenue would feel the excessive issue of these bills, which, when they fell to a discount, might be paid at par into the Treasury, which would then be less able to meet the wants of the country.—The *rt. hon. gent.* had spoken of secrecy: when he (the Chancellor of the Exchequer) came to discuss the subject of rendering assistance, he found persons who said that when all experienced difficulty, there could be no discredit in going to the Bank of England, or any where, to procure loans of money on goods; for there was no credit asked; the parties offered goods as a pledge. He could not for the life of him conceive why persons should be afraid of being known, or require secrecy: they might go with a bold and confident face and ask for advances. Some persons had talked of commissioners being, on a former occasion, bound by an oath of secrecy: not one word of this was true. They took an oath of office, indeed, but not an oath of secrecy. The commissioners of 1793, who were sixteen in number, consisted (with the exception of Lord Sheffield and Sir Grey Cooper) of merchants, and a few of them were Bank directors; and why were we to assume that Bank directors would avail themselves of their situation, and publish sinister rumours to the prejudice of applicants? How happened it that persons, when distressed, did ever go to the Bank? The Bank did, as they were bound to do, look into the securities offered; whether the pledges were goods or bills of exchange, they must be satisfied, by previous inquiry, that they could safely trust to them. The argument as to secrecy, therefore, had no validity whatsoever.—The *rt. hon. gent.* conceived that ministers were bound to take this course of giving relief, because the measures taken at the commencement of the session, of which he was a supporter, had imposed upon them the duty of relieving the evil thereby created. But this proposition had been made previous to the session. Ministers threw cold water upon it, as they now did, because they conceived that the measures would lead to dangerous consequences; and were they to be reproached because they endeavoured to find out some better expedient? They were to choose between two measures, one liable to insuperable objections, the other to but few objections. It was not, therefore, a matter of reproach to them that they refused the former, and acceded to the latter, which they thought reasonable. The *rt. hon. gent.* complained that they had used no language of a cheering nature. When Government did so, it was vehemently reproached for drawing a highly-coloured picture of things; and if ministers had treated the matter lightly, as if the distress was nothing at all, they would have

experienced more censure than the *rt. hon. gent.* had bestowed, and with justice. He (the Chancellor of the Exchequer) never wished to undervalue the present difficulties, and one reason for it was, that he wished to show that the greatness of those difficulties resulted from particular evils. It was the duty of ministers to impress upon the house the real causes of the difficulties, and those which they were to avoid. He (the Chancellor of the Exchequer) unquestionably concurred with the *rt. hon. gent.* with respect to his sentiments on the strength and vigour of the country. Although the leaves and branches of the tree had been shattered, its roots were firmly fixed, and they would shoot forth again with fresh beauty. If we took measures with prudence and wisdom, we should succeed, at no distant period, in weathering the storm. Although there had doubtless been much distress in different parts of the country, the house would not have to reproach itself for not taking the speediest steps to meet (cheers).

Mr. Baring observed, that the question divided itself into two parts—whether any relief at all should be afforded; and whether the relief proposed was of the proper kind. With respect to the first branch, the *right hon. gent.* had argued that the Government should not interfere, and that former precedents and former examples were vicious, and ought not to be followed. Though representations had been made only a few weeks ago to ministers on the subject, and though it was a case of such urgency, that it might truly be said *bis dat qui cito dat*, ministers persisted in their refusal. Under all the circumstances of the case, and in spite of intercessions, such was their adherence to strict and pure principles, that the only answer they gave was, that the interference of Government was a bad principle. The *right hon. gent.* had said to-night that he was against granting relief at all; yet he forced the Bank to do what the Bank directors wished to avoid; they begged and prayed of Government to adopt the course prescribed by precedents on record. As to the non-interference of Government on all occasions, and the expediency of setting a precedent, not following one, the *right hon. gent.* had certainly deserted the practice of Mr. Pitt, for this was one of the precedents of that extraordinary man. But it had been attempted to invalidate the precedent, by showing that the emergency was an extraordinary one; but the distress of the country made the present crisis equally extraordinary. What were the circumstances which should take the case out of the class of precedents? This was a case in which, if ever, the distress had originated with Government. The circulation had been brought into an extraordinary state. Although there was much property in the country, there was no money. One-fourth of the currency was out of circulation, and the minister knocked out the other portion; he proceeded to destroy the little portion of confidence remaining, and to make a total change in the circulation, in the midst of the most poignant distress of the country. Was not this interfering with individuals? Ministers said they should be setting a bad example; but were they not throwing an office on the Bank of England, which exhibited a worse example (hear, hear)? He (Mr. Baring) admitted that it was only a case of great emergency which could justify Government in the measure suggested; he admitted that interference with individuals was

practice "more honoured in the breach than the observance;" yet there were cases in which extensive distress sanctioned it. It was not cases of particular distress which justified the measure, but only where the distress was universal; it was not to aid a particular class of speculators, but the substantial honest traders, numbers of whom might be seen around, who, though unconnected with bubbles, were affected by them: for it was in that state of things that honest men often suffered from the folly of others. The precedent of 1793 was founded on sound sense and discretion; it extended parental aid where it was needed, and by helping confidence, was calculated to work a great benefit. Within these two or three years there had been issues of Exchequer-bills for public objects, as papers on the table would show; and it was strange that, whilst there was a glut of money in the country, Government issued Exchequer-bills under the Exchequer-bill Loan Act, and refused to do it now, when money was scarce. The question was, whether the interference of Government could be usefully applied; and if ever there was a case of that kind, it was that before the house. What was wanted was confidence between those who possessed property; and Exchequer-bills produced just the means of dealing required. The *rt. hon. gent.* had said that the Exchequer-bills would go to the Bank, and that the Bank would have to buy them. That he (Mr. Baring) denied. There never was a time in which there was more capital in the country. He (Mr. Baring) could say that he had now twice as much as at many other periods; and although capitalists would not, from apprehension, advance money on goods, they would do it on bills. There was a complaint of a want of circulating medium; yet there were more Bank-notes and there was more gold in the country at present than there had been for some time past. But there prevailed a panic amongst capitalists as to the effect of the measures of Government, which made men who possessed money take care of themselves.—The *rt. hon. gent.* first said he disapproved of the plan altogether; then he sent the applicants to the Bank, who were reluctant, who at first refused, though they subsequently consented to compound. It was, nevertheless, a power which the Bank was improperly intrusted with. He (Mr. Baring) was aware that, in the present state of the foreign exchanges, the Bank might give themselves what latitude they pleased; yet a season of danger might occur. With respect to the legal authority of the Bank to advance money on goods, he (Mr. Baring) had been some years a Director of the Bank, and knew something of their concerns; and though he had read over their charter, he did not think that they were empowered to lend money on this species of security. He thought no person could read it over and maintain that it was ever intended to give them that power: it was merely a provision against the possibility of their taking goods for a doubtful debt, in order that they might have the power of sale. He was confident that the Bank solicitor would tell them so, and that it never was intended that they should be allowed to lend money on goods. It was in his (Mr. Baring's) opinion a most dangerous precedent. The *rt. hon. gent.* thought he did good by establishing sound precedents: he was departing from his principle, and doing great injury by the present precedent, in holding it to be dan-

gerous for the Government to do what they intrusted to the Bank. If this measure had been, however, acted upon before, it might have produced great benefit, and prevented much of that general disgrace which had brought many persons into the mire. He could not help declaring, that through the whole of these proceedings, the merchants had been held at arms-length by ministers in a manner that was perfectly unprecedented in the history of the country. As regarded that part of the plan which would touch upon the law of merchant and factor, he doubted the expediency too of putting forward the operation of the new bill. The new law, as the house would be aware, entitled the holder of goods to pledge them; making the possession the evidence of title. This was not the case with the old law, under which a holder of goods might take up money upon them; and yet a third person, proving himself the owner, might take them back (without repayment), provided no actual fall had taken place. Now the Lord Chancellor, with his usual dislike to novelties, had only suffered this bill—of which he (Mr. Baring) entirely approved—to pass, subject to a provision, that the world should have notice, as his lordship called it, of the change in their situation; and for that purpose, that the foreign merchant might have notice that his consignee in future could pledge the goods intrusted to him. The bill was not allowed to come into operation until October next. Now this was at least an honest provision, if it led to delay; and although he (Mr. Baring) would have originally passed the bill to operate *instantly*, he did not like, after the time of warning had been published, to run the chance of misleading people by shortening it. Nor was it at all necessary, in fact, practically to do this. When the Exchequer-bills, on a former case of emergency similar to the present, had been issued, no doubt some oath had been required from those who deposited, as to their real ownership of the property pledged; but not a shilling on that occasion had been lost, and it would be better in the same way, now, to take the hazard.—With reference, however, to the point of secrecy, which was a point of the highest importance—here he had no hesitation in saying that he should have preferred a parliamentary commission to the course proposed. The commissioners of 1793 stated in their report, that in many cases the information which came before them was such as to lay open the private affairs of most respectable individuals. On this account they had taken the precaution, before their duties concluded, that every paper connected with the business which they had been transacting should be destroyed. Now, on this very showing, he should decidedly have preferred another parliamentary commission. The Bank directors, whom people would have to confide in, were, no doubt, men of the strictest honour; but then they were the very men whom these borrowers would most likely be in constant mercantile communications with at the time when they wanted this assistance; and the very last, therefore, whom they would choose to trust.—Though the mercantile world had little to thank Government for in the present measure, he (Mr. Baring) was glad at least to find that something would be done. At the same time, he must repeat that ministers had hung back from the mercantile interest in a way which would not be forgotten. The value of the boon was much diminished by the way in which it had

been granted; and the assistance, after all, such as it was, was given in the shape of all others which was the most inconvenient.

Lord *Althorpe* concurred with his Majesty's ministers in their measures for the alteration of the currency; but thought that they would have done better if they had set out by providing some relief for the immediate distress.

Mr. *T. Wilson* thought that ministers were bound in mere courtesy to parliament to assign some reason beyond their personal pleasure, why the plan now under discussion was preferred to that which had been recommended to them. For the measure which had been suggested, there was at least a precedent to allege, and he still believed that it would have turned out the most advantageous as well as the most satisfactory to the country. It was said that there could be no difference between borrowing money upon bills of exchange, and borrowing it upon goods, especially as the time for which the accommodation was wanted would not exceed a few months; but he doubted very much whether any man of business could be found who would declare that he thought any such limited extent of accommodation likely to be sufficient. Gentlemen coming up on the spur from the country, and applying to the Bank for relief, might be glad to take it for any period, and on any terms they could get; and such persons might have talked of a few months' time being sufficient, but certainly no one else could. For what was said to justify the dislike of ministers now to assist the mercantile interest, viz. that relief had been refused some years since to the distress of the agriculturists—that argument had no force whatever; for the relief to agriculture, though nominally refused, was virtually granted. It was true that advances were not made by the Government; but the measure was passed, empowering the country banks to issue small notes, which had exactly the same operation. As it seemed to him, the precedent of allowing merchants to go to the Bank to borrow money upon goods, was likely to be a repetition of such applications at a future time, in such a way as would be highly inconvenient. Merchants would go to the Bank, when the custom was once established, upon any or every occasion which might seem to their own views to justify such a measure; whereas they could not have the face to make application to Government, unless in some case of great and general national distress.—He could not sit down, without protesting against the tone in which ministers had treated both the applicants for relief in the course of the measures now pending, and Parliament in general. In a case of general calamity, like that in which the country had been placed, as servants of the Crown, and standing immediately between the sufferers and Parliament, they might have shown more judgment in listening patiently even to the weakest of the various propositions brought before them, than by declaring, highly and hastily as they had done, that if the house adopted any measure but that to which they inclined, it might seek for some other persons to carry that measure into execution.

Mr. *Attwood* :—Of the two modes of giving relief, that by the course proposed, and that by an issue of Exchequer-bills, his opinion was in favour of the latter, as a course which had been tried and found successful. As to the pro-

priety generally of giving the relief demanded, there could not be a moment's hesitation. The request came from the whole commercial body, and it asked nothing of Government which it was not the province of Government to perform; it asked only that the channels of communication—the means of dealing between man and man—should be opened.

Mr. *W. Whitmore* believed that a fair arrangement of the currency of the country would do far more for the general benefit than the measure proposed; but, as relief was to be given, he thought it would be much better given by advances from the Bank than by an issue of Exchequer-bills. With reference to the conduct of ministers, the hon. member (Mr. *T. Wilson*) found fault with their steady adherence to the line which they had adopted; but he (Mr. *Whitmore*) could not see the subject in that light: he gave them credit for their steadiness, and thought that nothing but mischief could have resulted from vacillation. Ministers ought not to be such mere creatures of circumstances as to veer round with every breath of popular opinion. Let them steadily pursue the line of conduct which they had pledged themselves to support,—let them trust to their own good sense, and they would find that the difficulties which were now complained of would speedily pass away. Nothing which he had heard ought to deter Government from pursuing those just grounds of policy which they had declared it to be their determination to uphold. He implored gentlemen to weigh well the probable effect of the votes which they meant to give on the momentous subjects that had been recently brought under their consideration. He had no connexion with ministers, and most probably he never should have any connexion with them; therefore, he must at least be supposed to speak disinterestedly. In his opinion, the doctrines which they appeared anxious to pursue were calculated to improve the resources of the country. Those doctrines would lead to a just and proper development of our means; they would, if fairly followed up, produce the greatest possible benefit to the empire, by bringing back its resources to that high state of prosperity which formerly distinguished them. Impressed with these sentiments, he called on the house and the country not lightly to withdraw from ministers that confidence which had hitherto been so generally and so justly bestowed on them. He trusted that gentlemen would still continue to grant that support to ministers, by which alone they could hope to carry into effect those comprehensive measures, which, he was convinced, would in the end produce the most excellent results (hear, hear).

Mr. *P. Moore* said, that, amongst other things, they were told that 25,000,000*l.* of money had been sent out of the country on foreign speculations. That was all falsehood. The 25,000,000*l.* was still in the country, and, what was more, would not go away (laughter). Much of the present mischief had arisen from the system which had been pursued, of pointing out one speculation as good, and decrying another as bad, without possessing a knowledge on the subject; thus inflicting injury on one set of people, and heaping benefits on another, without duly considering the merits of any one case. That cursed, that abominable thing, called a hoax (a laugh)—(and he was

ny that such things were going forty hour,) had contributed in an im- agree to produce the present unfor- state of affairs. Many proofs of this is found in the public papers. He ined the subject deeply; he under- ell. He felt severely from the system y, of vice, and of falsehood, which on the Stock Exchange. They it nothing which appeared likely to he execution of their plans. That is a pandemonium of falsehood, ready ar the Government in its proceedings, art every transaction amongst honest pter). If, in the ordinary course of he wanted to buy or sell stock, he ere to go to a domestic broker k. Ay, he knew a great many of ighter), and his friends about him any as he did (laughter). He spoke, rious description, exclusively of those ho possessed what was called the of the Stock Exchange. A man must to have been connected with certain as before he was eligible to be ad- ere. If he obtruded himself "an test," he was hooted out, drummed ped out, kicked out (much laughter). it was a complete field for gambling. ; of this kind—gambling on an exten- —was attempted at this end of the at the worthy magistrates of Bow- na put an end to it; they had all the (laughter), and the wholesome disci- the tread-mill wrought an effectual ighter). His hon. friend (Alderman ad the other city magistrates were, he rather tardy in not interfering with the he had mentioned; but let them place . Moore) in the situation of Lord auch laughter), and he would very rid of the evil. He would say, that ling and swindling which prevailed at Exchange was infinitely worse than h had been practised at Pall-Mall, tbe put down just as easily.—In con- e called on the house to grant that re- e operative classes, which on former had been extended to individuals a higher sphere. He would now say, l said on a former occasion, "What- do, spare the people, and protect their ent."

lice said, in reply, that the present things was entirely owing to the plans era. In 1822, a large issue of paper ved to meet the agricultural distress. ent was then enabled to reduce the n the 5 per cents. There appeared to y of money in the country; indivi- shed to procure a higher rate of in- n the funds provided, and they had, uence, recourse to speculation. In- encouraging a large issue of paper thought it would be better to grant re- country through the medium of Ex- ills. If the circulating medium were creased, what would be the effect? great rise in prices, that would de- the circulating medium was nar- ned in what situation would the country placed? He had hoped that the pre- necture would have produced some e disagreement between the Govern- the Bank (hear); and he was sorry the l not forced the Government, as they

might have done, to have abandoned their pre- sent course.

The motion was then agreed to.

### *Promissory Note Bill.*

On the order of the day for bringing up the report of this bill,

Mr. J. Smith observed, that he must repeat what he had before said, that Government, by bringing this subject before the country as they had done, had created much danger, which they might have avoided, by adopting the more prudent course of previous consideration and inquiry. The evil was said, in the first instance, to have arisen from the speculation which the issues of the private bankers were alleged to have encouraged; and the existing, as well as the apprehended mischief, was now traced to the circumstances of the country bankers paying off their notes, and thus narrowing the circulating medium. One hon. member, not content with what the country bankers were doing, and what they were compelled to do, was desirous that they should be made to pay their notes in a week; without considering, however solvent they might be, whether the Bank of England would be able to supply the demand for specie. He considered the attacks that had been made on the country banks, generally, as unfair and unworthy. After all that had been said of them, the country bankers had done much good (hear, hear).

Mr. F. Palmer rose to express his strong dis- approbation of the measure before the house. It was, in his mind, ill-timed, injudicious, and likely to bring most serious distress on the country. If the expences of the country were not reduced, there could be no safe return to a metallic currency. To attempt one without the other, would bring upon agriculture the severest distress, and then they must come to an amicable or equitable adjustment. He was no friend to high prices. He knew that the manu- facturing interests could not exist with high prices, much less could any natural competition be successful under them. But he knew also, that if corn were not kept up to a certain price, starvation must ensue amongst the agri- cultural classes. Here, then, was the difficulty—they must have low prices for the manufac- turers, and high prices for the other classes. Under these circumstances they were not jus- tified in the unbounded extravagance of the expenditure.—The interest of the debt and the expenses of Government could not be paid at their present grievous amount in a circulation of increased value. He did not see the justice of raising the value of the currency, while the burden of the debt should remain. If the cre- ditor had a right to be paid in full, (a right which had been insisted on in no very measured or civil terms,) at least he could not claim to be paid in an advanced currency. It was the grossest injustice to the borrower to compel him to pay in a metallic currency that which had been borrowed in paper money, 28s. of which went to the value of a guinea.

The report was then brought up; and after several amendments had been agreed to, the bill was ordered to be re-printed.

MONDAY, MARCH 6.—Mr. Hume presented a petition from William Martin, a grocer at

Sevenoaks, who stated that he had tendered eighteen 11. notes and two 51. notes to a banker at Sevenoaks, by whom they had been issued, and demanded their amount to be paid to him in the current coin of the realm. The banker refused to pay him gold, but gave him 281. in Bank of England notes, retaining his own local notes. The petitioner applied to a justice of the peace, who told him that he had no power to procure restitution of the country notes. The next day the banker sent him 28 sovereigns, and offered to exchange them for the Bank of England notes which had been given to him on the day before, but these the petitioner refused to accept. He (Mr. Hume) had ascertained the truth of this statement, which the banker did not deny; and although it was an ill-natured proceeding on the part of the petitioner, he (Mr. Hume) could not but agree with his prayer that some security might be provided by the house against the recurrence of such accidents. The petition was ordered to be printed.

TUESDAY, MARCH 7.—The *Chancellor of the Exchequer* moved the third reading of the *Promissory Notes Bill*.

Lord A. Hamilton said that he would support the measure, not because he thought it the best that might have been proposed, but because it would, imperfect as it was, tend in some degree to amend the defects of the present system of country banking.

Mr. Hume moved a clause, requiring country bankers to make monthly returns of their notes in circulation, to be published at the discretion of the Treasury.

Mr. Hobhouse seconded the motion. We had now, he said, no certain criteria of the issues of the country bankers, and unless this proposition were adopted, we could have no means of ascertaining the amount of the paper-currency.

The *Chancellor of the Exchequer* repeated his objections to the clause.

Mr. Pearse said, that so long as Bank notes were liable to be paid in gold, there was a sufficient restriction on the issues of Bank paper. There could therefore be no rational grounds for the fears which some gentlemen entertained of an excessive issue.

Mr. Alderman Heygate thought Government might authorize an issue of notes on the security of the state; and such a circulation, if well arranged, might be better than gold.

The house then divided, when the numbers were—

For the Amendment, 24—Against it, 143—Majority, 119.

Mr. Hume then moved a clause, giving remedy by summary process against country bankers refusing to pay their notes in gold.

Mr. J. Smith said, that a 11. note might be protested for non-payment, as regularly as a bill of exchange; and the cost of that first step—which the banker would be liable to pay—would be 22s. This he thought was an ample security against the consequences of a refusal to pay in gold.

Colonel Johnson observed, that the remedy of the hon. member was inefficient. The banker might be liable to pay 22s. for protest, but the labourer must pay it upon the spot—and where was he to get it?

The clause was negatived without a division.

The bill was then read the third time and passed.

LORDS, TUESDAY, MARCH 14.—The Marquis of Lansdowne presented a petition in favour of the bill of which the noble lord (Liverpool) was about to propose the second reading (the *Promissory Notes bill*) from the President, Vice-President, and members of the Chamber of Commerce in Manchester. An attempt had been made some time ago to introduce a small-paper currency into that town, but the exertions of the inhabitants had been able to overcome the efforts which had been made for that purpose. They had had the means of comparing the advantages of a metallic and paper currency; and the result which they had been enabled to arrive at, induced them to give a preference to a metallic currency over that of small notes.

The Earl of Lauderdale:—The petitioners alleged that they had no local notes of 11. and 21. in Manchester; it was true that no local notes of that amount were issued there; but he would undertake to say that the circulation of Manchester and its neighbourhood for nine miles around, was almost wholly made up of those notes. He held in his hand a parcel of notes which he had received from within 12 miles of Manchester, comprising specimens of five different bankers' notes, which almost wholly constituted the currency in circulation in Manchester.

The Earl of Liverpool said, in confirmation of what had been stated in the petition, that having had an interview, within the last few days, with a deputation from Manchester, consisting of most respectable merchants, they denied that any great part of the circulation there consisted of 11. notes; they complained that attempts had been made by neighbouring banks to introduce the circulation of 11. notes in Manchester; but it had been discountenanced by the merchants, and had consequently failed. What had been stated by the noble earl (Lauderdale) was an argument in favour of the measure now before the house; for it showed that if a paper currency were suffered to exist in one part of the country, it would be difficult to prevent it from finding its way into the other parts where it was not wanted.

The Earl of Liverpool having moved the second reading of the *Promissory Notes bill*, observed, that it was not his intention to enter into any statements upon this occasion; because, when he brought forward the other measures, relating to the Bank charter, he put their lordships in possession of the whole system which Government had thought it advisable to adopt with respect to this subject. The object of this bill was to extinguish the circulation of notes under 51. in England. It was the opinion of Government, that the principle ought to be extended to Ireland and Scotland; and he now apprized their lordships that it was his intention to move on Friday next for the appointment of a committee to inquire into the present banking systems of Ireland and Scotland.

The Earl of Caernarvon objected to the whole of this measure; first, on account of the time at which it was introduced; next, on account of the circumstances under which it was brought forward; and thirdly, on the abstract principle

er-currency, founded on a metallic the best and safest for the country. objected to it, because this measure red by ministers as a means to pre- occurrence of such crises as that which y had lately suffered, and still conti- endure, convinced as he was that it ound wholly inoperative for that pur- was therefore his determination to give ion a decided negative. If the mea- professed to afford relief to the pres- of the country, he should, perhaps, ated before he offered any opposition when it was admitted that it would relief at present, and was hastily orward without inquiry, not for the meeting the existing evil but to pre- uence of it in future, the case was forest. There was no sort of propo- which he should be more jealous than ing to establish general regulations in moments of crisis; for there was e of their receiving, at such periods, e of cool and dispassionate consider- ch it was most important that they elve.. With respect to the object of which was not to be effected for three contended that if the thing was to be all, it had better be done at once; the effect would be similar to that of the e measure of 1819, when they came sation of paying a paper debt, ac- the old standard; which, instead of ct of justice, was one of the grossest and impolicy. The committee in gestions that measure had originated, n that we ought to return to a metallic; and now, upon the occasion of the e taking place, without waiting an must forthwith have recourse to this, important measure that could be ap- e country. The noble earl (Liver- calculated that not more than from L. to 8,000,000l. of gold would be ne- replace the paper which he proposed w from circulation. Now that calcu- y applied to England; how much, would be required for Ireland and he could not say, but he did not think an 10,000,000l. or 12,000,000l. would red altogether. Now this 10 or 11. must be withdrawn from the pro- apital of the country; and if the interest of that sum for the next 40 rs were calculated, it would be seen nsiderable diminution would be thus in what would otherwise have then amount of the national capital. That s a cheaper currency than gold, the would not contradict: then came the was it as safe a one? For an answer cation, he referred the noble earl to

It was impossible to look to the at country, which for 40 years had no y than paper, without being con- the safety of such a circulation when pon a proper system of banking. The stem of banks in Scotland had existed ds of a century, during which period, ad made the greatest progress in the nt of wealth. What was the differ- een the currencies of Scotland and

Was it only that they had no metal- cy there? No, but they had chartered while the banks in England were

formed upon a very different system. No man would defend the circulation of the 11. and 21. notes which issued from such banks as these. The people of Manchester had made compari- sons, not between a sovereign and a chartered bank-note, but between a sovereign and the note of one of those banks established upon the perishable system of banking which existed in this country.—Ministers ought, before they adopted a measure like the present, to have re- commended the Bank of England to sacrifice a portion of the privileges of their charter, and permit the formation of chartered banks.—He then contended that the distress had been produced by excessive trading and speculation, originating from causes wholly unconnected with the cir- culation of paper. At the time of the South Sea bubble, we had no small paper currency. In 1783, we had none, and the pressure was at that period greater than at present. In 1793 the case was the same; although it was the fashion to attribute the state of the country at that time to the war. Thus it was clear that there were no grounds for necessarily imputing the distress to the state of the currency.—The noble earl had intimated his intention of impart- ing to Scotland the blessings of his proposed system; but he ought first to consider whether it would not be better to place the system of the currency in this country upon the same footing as that of Scotland, under which she had been exempt from all the evils which England had endured. He ought to consider whether, by tracing cause and effect, he might not discov- er that it was that system which had so exempted Scotland from those evils, and find it a wiser measure to assimilate our own system to hers, thus proved by experience, instead of forcing upon her the application of our fine theory of 1819, or any theory at all. There were no grounds for presuming that a paper currency so established would not produce the same be- neficial consequences here as in Scotland; and it would, therefore, be much wiser to adopt that than have recourse to another, which, the very moment it was introduced, had produced a degree of distress that obliged its authors to relax it, even pending its progress through the house. He did not know whether the Scotch banks had received any assistance or not from the Bank of England during the recent pres- sure; but whether they had been enabled to weather the storm with or without such assis- tance, it equally proved their stability; for if the Bank had afforded them any aid, it showed that they possessed a degree of credit which the banks in England could not obtain.—He would now allude to some circumstances connected with the currency when the small notes were not in circulation, and nothing but the "genuine currency," as it was termed, prevailed. In addition to the loss to which a man was exposed by taking bad gold, he also suffered from clipping and sweating, and other processes, by which the value of guineas was reduced. He remem- bered, that when he took four or five guineas from his pocket, they were all weighed and rung before they would be taken, and he was generally obliged to change the greater part of them. When paper was introduced, the great- est convenience was experienced. There was no longer any necessity for weighing. If their circulation were limited in point of ex- tent, forgery would soon be detected. The

11. and 21. notes of the Bank of England were liable to forgery because of their extensive circulation; but that objection did not apply to local notes. Another objection to a metallic currency was, that it produced a greater number of robberies. At the period to which he had before referred, robberies were extremely numerous. He remembered a friend of his own who had been robbed on the highway; another had been wounded by a shot fired at him by a footpad, and a third had narrowly escaped with his life by seizing the muzzle of the pistol which the robber had thrust into his carriage, and wresting it out of his hand. Since the introduction of bank-notes, this description of robberies had greatly diminished. The note was numbered; it had the name of the person upon it to whom it belonged, and it furnished evidence to convict the criminal. It was in every respect a more dangerous property to a robber than a sovereign. He remembered when the transition took place from paper to gold, every body preferred notes for their greater convenience to sovereigns, although we were now apt to forget all those circumstances.—Another objection which he felt to this measure was, that the small notes (notwithstanding all that had been said about their having caused over-trading) had contributed much more to the upholding and propping up of the agricultural interests than to the encouraging of any wild speculations.—The noble lord then went into some calculations, for the purpose of showing that the excess of paper issues, during the recent period of speculations, had been much too trifling to afford any pretext for ascribing to it the disasters which were now oppressing the country. As to the argument that the poor were likely to be sufferers by the issue of the 11. and 21. notes being permitted to continue, he thought they were much more likely to be injured by their suppression, inasmuch as that measure must necessarily cause a very considerable portion of the labouring poor to be thrown out of employment.—For these reasons he should propose, by way of amendment, that “the bill be read this day six months.”

The Earl of *Darnley*:—His noble friend had somewhat misconceived the reason why highway robberies had become less frequent of late than formerly. It could not be owing, as he had supposed, to the want of a metallic currency, because, in point of fact, that species of currency had been in general use, at least in the neighbourhood of London, for these last four or five years, and still scarcely any instances of highway-robbery had occurred during that period. And as to the argument, that the suppression of a paper currency would be likely to cause great inconvenience, and throw considerable difficulties in the way of carrying on mercantile transactions, it should be recollected, that in Liverpool and Manchester, which were well known to be places of very extensive trade, a metallic currency had for some time prevailed, and had not been found to produce any of the difficulties which were apprehended. He thought that ministers, by putting an end to the fabrication of paper money, would do their duty to the country, and protect the interests of the poor.

The Earl of *Liverpool* could assure their lordships that he had not been influenced in his conduct on this occasion by any attachment to particular views.—To begin with one of the points, about which discussion had arisen, he

was convinced that if he had ever rendered any little service to the country, he had never rendered it a greater one than in resolutely resisting the recent applications which had been made to Government for an issue of Exchequer-bills. If these applications had been now acceded to, upon any future occasion, when any distress had arisen, relief would have been demanded as a matter of right from the public treasury. He could not but regard the precedent of 1793 as a most unfortunate one, and one which it would have been most highly impolitic to have followed in the present emergency; for the distress which now prevailed could not be said to have occurred by the hand of God: there had been no bad harvest or other similar cause for it; but it was allowed on all hands that over-trading had been the primary cause of the mischief. But he not only objected to the principle of Government interfering in this matter, but he felt persuaded that if the relief had been afforded by Government, instead of by the Bank, it would have been as different as possible in its practical effects,—the assistance would have got into totally different hands. The secrecy with which this relief would have been administered if it had proceeded from the Government, and which was the great inducement with many for desiring that it should have come from that quarter, was with him the principal objection to its being afforded in that way; this very secrecy would have a manifest tendency to encourage speculation. If relief was to be given, it was most desirable that the names of the applicants for it should be generally known. He had put the question to the great deputation from Manchester—whether they wished for secrecy; and their answer was, no; they were ready to accept the relief in any way it might be tendered. There could be no objection to the great bank of the country coming forward, and giving that relief which by its charter and by-laws it was enabled to do; and if it met with any difficulty in effecting this, then let the Government do what it had done towards the removing of that difficulty; besides, if Government ought to afford this relief to one interest, it ought to afford it to all: the proper policy was to afford it to none, at least except where the exigency was such as no human foresight could foresee or guard against.—As to the objection that this bill would not have the effect of doing away with all wild speculation or over-trading, it was never imagined that these evils could be entirely remedied by this measure alone. It must, in order completely to effect this, be accompanied by other measures, one of which must be the introduction of a more sound system of banking; and although, owing to the monopoly of the Bank of England, this system could not just at present be rendered quite so perfect as it might be after 1833, still this was no reason why we should not now make as much improvement in the system as it was capable of receiving under existing circumstances. The extinction of 11. and 21. notes would at any rate operate as a very considerable check upon wild and speculative projects. In all the deputations which he had seen of the more substantial country bankers, they had made no objection to the extinction of the 11. and 21. notes, but had declared universally that they would quite as soon be without them; but this had not been the case with the lesser bankers: to this class the

small notes were a principal source of profit; consequently this bill was calculated to do away with the lesser banks, the existence of which had a considerable effect in rendering the whole banking system insecure.—It had also been objected that the paper currency could not be withdrawn without great inconvenience. But the fact that in London, Manchester, and, indeed, through the whole of Lancashire, a metallic currency had prevailed for the last three or four years, without creating any obstruction to trade, completely refuted this objection, especially when it was considered that the customs of London and Liverpool were three-fourths of the customs of the whole kingdom, and that the customs of Liverpool were equal to those of all England, with the exception of London, and that the excise of London and Liverpool was three-fifths of the excise of the whole kingdom.—As to the objection that the agricultural interests would be affected by this bill, he would remind their lordships, that until 1797 we had done with a metallic currency without sustaining any inconvenience; and when it was considered that we should get rid of the losses and fluctuations in the value of property, which must always be attendant on a paper currency, it seemed to him that the balance of advantages preponderated much in favour of the present measure. We were not trying new experiments,—we were only reverting to the state of things which existed previously to 1797; and if the 11. and 21. notes had not wholly caused the present distress, in his opinion they had most materially aggravated it.

The Earl of Lauderdale entreated the Government, when so much misunderstanding prevailed, when so general a want of confidence was felt, not to seize upon so unfavourable a moment for effecting an important change in the old institutions of a country which had long thrived well under them. Let the noble earl recollect the road which he had to travel,—let him bear in mind his own recent declarations, that the crisis was past, that industry had returned to its usual channels of circulation, and let him compare these declarations with subsequent facts, which not only demonstrated that the danger was not past, but that the most alarming apprehensions still prevailed. But the noble earl seemed to think himself right, because the foreign exchanges had become favourable. He had on former occasions exhausted the topic of the exchanges, and shown that there were many causes, besides a depreciation of the circulation which could turn them against a country—the balance of trade, the balance of payments being against a country, would produce this effect. But it should be always recollected, that the exchanges never could run against a country to a greater extent than the relative expense of the conveyance of gold from one place to the other, including, of course, the amount of agency and insurance. If their lordships would examine the papers on their table, they would see that the exchanges had never shown a depreciation of the currency; nor could they so long as the paper medium was convertible into gold. He repeated, in the strongest terms, his condemnation of the time taken by Government for effecting the proposed change, believing as he did that the experiment would greatly aggravate all the previously existing evils.

The bill was then read a second time.

Sess. 1826.

### Fluctuations in the Currency.

COMMONS.—Mr. Hume presented a petition from Charles Andrew Thompson, complaining that he had been deprived of a large fortune by the measures adopted by the legislature with respect to the currency. The petition contained the following passage:—"Your petitioner is ready to prove at the bar of your honourable house, that the whole of his losses have been directly and entirely occasioned by direct acts of the Government or the legislature, which have swept away his property as with a whirlwind; against which no human wisdom, or precaution of your humble petitioner, could by any possibility have guarded. In the first instance, nearly a fourth of his whole property was swept away by the measures of the Government, in declaring war in 1793, which reduced his 300,000*l.* consols, from their selling price of 92*l.* to the selling price of 60*l.* In the second instance, his remaining 180,000*l.* was rendered, in effect, worth only 90,000*l.* by the depreciation of the currency, consequent upon the Bank restriction act. After submitting to these heavy losses with patience for near twenty years, another sum of 60,000*l.* was confiscated by the depression of his stock of wine, consequent upon the restoration of the currency, which was attempted on the return of peace. And now, by the legislative act for restoring the value of money to a level with the ancient standard, or beyond it, the whole of your petitioner's remaining property is seized; and your petitioner is left to earn a precarious bread, by means and sacrifices to which the habits of fifty years have but ill-accommodated his mind." The petition concluded by praying that the Parliament would adopt measures for ensuring an equitable adjustment of claims between debtor and creditor, whereby the latter should receive no more than he had really lent to the former.—The hon. member stated, that though he deplored the case of the petitioner, and pitied his misfortunes, he thought Parliament could afford him no relief.

The petition was ordered to lie on the table.

### Forgery of Bank Notes.

TUESDAY, MARCH 21.—Mr. Grenfell begged to draw the attention of the house to the fact, that six persons had been already sentenced to death at Lancaster since the Bank had resumed its issues, for forging or uttering 11*l.* Bank of England notes. He thought it highly necessary that the Bank, under such circumstances, should take measures to render their notes more difficult of being imitated. Country bank notes were seldom or never forged, because the issuers took precautions to make their imitation a matter of difficulty.

Mr. Irving said, that the Bank had appointed a committee of experiment (of which Sir W. Congreve had been a member), at the expense of nearly 80,000*l.* But the result of their attempts to form an inimitable note had proved abortive.

Sir M. W. Ridley thought the Bank notes might be improved; but under a metallic currency we should have coining—we should never get rid of the crime altogether.

Mr. Peel said that the coining was an offence far less dangerous in its extent than the forgery; the experience of the last three years sufficient.

2 R

ly proved that fact. He believed that the Bank had gone to great expense in attempting to improve their notes; and they would certainly be inclined to check forgery as far as possible, for the expense of prosecuting was enormous. At the same time, he thought that the note might be made more difficult of imitation than it was at present.

### *Local Payment of Bank Notes.*

**LORDS, MONDAY, APRIL 10.**—The Marquis of Lansdowne rose to introduce a bill, of which the object was to make all notes payable at places different from that in which they were issued, also payable where issued.

The bill was read a first time.

**FRIDAY, APRIL 14.**—The Marquis of Lansdowne having moved the order of the day for the second reading of his bill, entitled an act for making promissory notes payable at the places where they are issued, said, that the discussion which had already taken place in the course of the present session upon another bill connected with this subject, had rendered them perfectly familiar with the grounds of his present proposition. He considered the measure important in two distinct points of view: first, with respect to the currency of the country, as it had existed in late years, and as, in a partial degree at least, it was likely to continue; and secondly, in connexion with a free competition between the different banking establishments. As to the first point, their lordships had frequently expressed their belief that a check founded on a metallic basis was the best check on the undue or excessive circulation of paper; and that being their opinion, they must wish that check to operate as speedily as possible, when occasion required it. Now he knew of no mode of bringing it into operation more speedily than that of giving every facility to persons residing in the neighbourhood of a bank, but above all to the poorer classes, on the first alarm as to the solidity of that bank, or the excessive amount of its issues, for bringing their notes to it for immediate payment; to which the public had a right, when they allowed them the privilege of making a paper-currency. If a facility of this kind had existed last year, when the alarm commenced with the banks, the salutary admonition of an early run might have caused them to narrow their issues in time, and thus have averted those dreadful calamities which had occurred. In the other view of the subject, he considered this measure equally essential. If their lordships permitted one bank to make its notes payable at a distance, whilst another bank in the same town made its notes payable where they were issued, they would place the latter in unfair competition with the former; because the moment a great demand for gold commenced, the bank which did not pay its notes there might, by collecting notes of the other bank, and presenting them for payment, pump out of the reservoir of its rival as much gold as it wanted, without drawing any from its own. It was quite plain that the practice now pursued only by some banks of making their notes payable at a distance, if not checked, must soon extend itself to all the others, and at last the whole country circulation being payable in different places from where it had been issued, the country

would be left without that standard of metallic currency which their lordships had so often stated to be the best. In Ireland the want of a measure of this kind was peculiarly felt; for while the notes of one bank there circulated for their full amount, the notes of another in the same place were at a discount, owing to the causes which he had before mentioned. He was aware that there were persons who thought that particular circumstances ought to render particular establishments an exception to the measure; and his noble friends near him were of opinion that it ought not to extend to the banks established in Scotland. He had every respect for the people of that country, but in the absence of any information on which to found an exception, he begged to propose the second reading of the bill, reserving the right to inquire whether any and what alteration ought to be made in it.

Lord Farnham foresaw a great deal both of injustice and difficulty which would be occasioned by the way in which the bill was worded. It was difficult to define what was meant by the word "issue." In Ireland branch banks had been established, and the general circulation of the south of Ireland, and a great portion of the other parts of that kingdom, were altogether Bank of Ireland notes, payable in Dublin. Now, it would be a question whether the noble lord's measure extended to the re-issue of those from the branch banks; and if it did not, it might be defeated altogether, for the bank in Dublin could take in all their notes and re-issue them. However, when the bill came into the committee, their lordships might be able to devise means more effectual for accomplishing the proposed object than at present appeared on the face of the bill.

Lord Melville said, that so far as regarded Scotland, he was satisfied, that if they altered the arrangement of the banking-system there, they would occasion the withdrawal of the branch banks. Under these circumstances, on behalf of himself and the other noble lords from that country, he claimed inquiry before their lordships decided upon this question; and he therefore hoped that the noble marquis would not refuse to defer the subject, so far as regarded Scotland, until that inquiry took place, without which it would be unfair to adopt the measure.

The Earl of Lauderdale pointed out various inconveniences and difficulties, which, he said, would arise in Ireland from the adoption of this measure. The real grievance was, that the Bank of Ireland did not give the privilege to the provincial banks of making their notes payable in Dublin. The provincial banks made their notes payable in the provinces, and the Bank of Ireland theirs in Dublin; and the latter made the provincial banks the channel of supplying themselves with gold. This was a grievance which he would be as willing to correct as his noble friend; but the measure before the house was a still greater grievance than that for which it professed to be a cure. If this bill were to pass, it would be attended with the ruin of the banks of Scotland, where it would not allow one to exist in the most populous places, except, perhaps, Glasgow and one or two others. If this act were passed into a law, the best disposed people would issue no notes; whilst those individuals for whose control alone laws ought to be framed, would act as if no such law ever existed.

The Earl of *Liverpool* thought the object contemplated by this bill a most desirable one, and he would, therefore, vote for its second reading. He was in expectation of receiving important information on the subject next week; and the discussion and alterations which the bill relating to provincial banks was undergoing in the other House, might also throw additional light on it. Under these circumstances, he would suggest that the motion for referring it to a committee be fixed for Tuesday week.

The bill was then read a second time, and ordered to be committed on Tuesday se'nnight.

### *Bank Charter Bill.*

COMMONS.—On the motion that the house resolve itself into a committee for the further considering the report of this bill,

Mr. *H. Gurney* said, that the power of establishing joint stock banks would give rise to a system of speculation, which would, in the end, be found highly injurious. It was said, that by enlarging the number of partners, the banks would be on a more solid foundation, and the holders of their notes would be better secured. He would give the house one specimen of what they might expect from those "solid" joint stock company banks. He had lately seen a prospectus for a national bank, put forward by two attorneys of Broad-street, named Wilks and Verbeke. These gentlemen stated, that it was intended to have a national joint stock company with a capital of 1,000,000*l.* This as they set forth, was to be a real and not a nominal capital, and was to be subscribed for in shares of 2*l.* each (laughter). Application had been made to some distinguished members of that house for their patronage of the scheme. One application was to one of his majesty's ministers to become an honorary vice-president, and as an inducement, it was stated to him, that to hold that situation it would not be necessary for him to take any shares (laughter). He was further informed, that the duties of the station would not require any even the smallest portion of his time or attention (laughter). The duties would be all diligently performed by the directors and managers. This was, no doubt, one of the "solid" banks which the country might expect to see arise under the proposed system.—He thought it would be better to wait till the bank charter should be determined, and then place the banking system of the country on a new footing.

The Speaker then left the chair, and the house went into the committee, when

The *Chancellor of the Exchequer* said, in answer to an observation of Mr. *Pearse*, that he did not conceive that the Bank of England would be placed in any jeopardy by the new modelling of the banking system, and putting it on a more extended scale than it was on at present. It was impossible that the Bank of England could carry on all the banking concerns of the country; then if other banks must come into operation, why should the number of partners in them be limited to six? There was no magic in that particular number. That there were great defects in the act he was very ready to admit; and if the Bank could have been prevailed upon to have given greater facilities, or if the term of their privileges had expired, he should never have thought of bringing forward

this bill in its present shape; but he did not think that because the measure could not be rendered as perfect as he could have wished it, it ought to be rejected altogether.

Mr. *Monck* thought it would be advisable to postpone this measure till the Bank charter had expired, when it might have a fair trial.

Mr. *J. P. Grant* contended, that there could not be any danger of the over-issues which were apprehended on the part of the country banks, because, so long as they were compelled to pay their notes, in notes of the Bank of England, and those were payable in gold, there must be an effectual check upon too great an extension of credit in that way.—In remarking upon the clause which prohibited the chartered banks from discounting bills or issuing notes in London, he begged to ask whether it was intended that they should not have any agent or correspondent in the metropolis? If they were allowed an agent, he might, in the ordinary performance of his duties, violate the law in that respect, without any intention of offending against the provisions of the act; and he therefore thought it highly necessary that the clause should be so worded as to leave not the slightest doubt upon the subject.—He objected to the clause which prevented chartered banks from issuing notes payable in London, under the sum of 50*l.*; and to the clause by which these chartered banks were at once to be put in possession, without any act of the legislature, of a power enjoyed by no other corporation or company in the kingdom, unless under the authority of an act of parliament—he meant the right to sue and be sued in the name of their manager or director.

On the clause prohibiting discounts in London by the joint stock companies,

Mr. *Hudson Gurney* asked if it was intended under this clause, that the members of these companies should not employ their capital, if they chose, in the purchase of bills in London through the means of their agents, or that they might not re-discount bills which they had already given cash for?

The *Attorney-General* said, that as the law now stood, companies consisting of more than six persons were not allowed to employ their capital in London in the trade of bankers, and the clause now under consideration proposed to make no alteration in this respect.

Mr. *H. Drummond* said, that it had long been the practice in Scotland, where the banking firms consisted of more than six partners, to draw bills upon London, and to have them discounted as often as might be necessary. Whether this was legal or not he did not know, but he was sure that it could not be done in future under this clause.

Mr. *Pearse* said, that any alteration would require great nicety and care; and in order to give time for properly considering it, he thought it would be better that the chairman should now report progress.

After some further observations,

The *Chancellor of the Exchequer* proposed to postpone the clause under consideration, in order that the committee might get through the technical parts of the bill.

The consideration of this clause was postponed.

The other clauses were then agreed to, and after sundry amendments, the bill subsequently passed.

*Local Payment of Bank Notes.*

**LORDS, TUESDAY, APRIL 25.**—The Marquis of Lansdowne moved for the committee on the bill for enforcing the payment of bank notes at the place where issued.

The Earl of *Liverpool*, as far as he understood the principle of this bill, entirely concurred with it; but he confessed that he found many objections to the application of this principle at present. It was therefore well worth the consideration of the noble lord who had introduced this measure, and the house, whether it would be proper to proceed with it at present. A very important branch of the subject to which the present bill related had been referred to the consideration of a committee. He meant the question relative to the currency of Scotland and Ireland. Much evidence had been given before that committee, which it would be important for their lordships to consider when the report should be laid on the table. Now, whether the report might be made or not, there was, he thought, no probability than any legislative measure could be founded upon it this session. For this reason, he was of opinion that it would be better to postpone the present bill until after the inquiry now going on was completed.

The Marquis of *Lansdowne*:—After the declaration by the noble earl of his approval of the principle of the bill, and of his desire to see it in operation, the difference of time to be gained by forwarding it this session was not so important, as the assistance which he might hope to obtain from the noble earl in carrying into full effect a measure which he conceived to be essential to the establishment of a sound banking system, for without it that system could not operate with security and facility. As long as banks continued to issue notes of which the population of the district where they were issued could not obtain payment, it was obvious that a cause would exist for great fluctuations, and the banking system would be so constituted as to defeat the great object the noble earl had in view in all the measures he had introduced, namely, the creating a metallic instead of a paper currency. The making notes payable at the place where issued appeared to be a necessary preparation to that gradual introduction of specie which ought to take place before the small notes were entirely withdrawn.—He should agree to a motion for postponing the committee on the bill to this day three months.

After some observations this suggestion was agreed to, and the bill of course dropped for the session.

*Bank Charter Bill.*

**FRIDAY, MAY 5.**—The Earl of *Liverpool*, on moving the order of the day for the consideration of the amendments made by the Commons in the Bank Charter bill, observed that the amendments were merely verbal, with the exception of one or two, which were essential to the success of the measure. In the other house there were many persons connected with banking, and consequently more capable of forming an opinion as to what was wanting to render the bill efficient, than he or any other of their lordships were likely to be. These gentlemen felt it to be necessary, with a view to the establishment of joint stock companies in the country, that such companies should be allowed to have an agent for paying their bills in London.

Bills drawn payable at sight or on demand might thus be paid in London. To accomplish that purpose an agent in the metropolis was necessary. He was given to understand, that the introduction of a clause authorizing joint stock companies to appoint agents would remove a great obstacle to the working of the bill. There were besides some clauses introduced for the purpose of giving the country establishments with regard to stamps the same advantages as the Bank of England. There was another amendment of importance. When the bill was before that house, a good deal had been said on the propriety of the Bank of England establishing branch banks, and the noble marquis (*Lansdowne*) had in particular insisted on the necessity of obliging banking establishments to pay at the places where their notes might be issued. Now a clause had been introduced by the Commons, authorizing the Bank of England to establish branch banks, and providing that their notes should be payable at the branches where issued, as well as in London. At the time the bill was sent to the other house, it was not known whether the Bank of England would establish branch banks or not. The subject, however, had since been referred by the directors to the consideration of their own body, and had undergone a most patient and laborious investigation. He was authorized to say that the principle had been completely adopted, and that the Bank had decided to establish branch banks. As to the extent of those branches, and the places where they were to be established, the Bank had not yet come to any decision; but it was satisfactory to have to state that the principle had been determined on. With regard to joint stock companies, it had been thought by some that if the Bank of England was not favourable to the principle and details of the bill, that that circumstance might operate in some measure against the formation of such establishments. When, however, the fact was, that the whole circulation of Ireland was carried on by the charter bank of Ireland and joint stock companies, with the exception of only the Belfast bank and a small bank at Mallow, it was not unreasonable to find some expectation on the success of those establishments. With regard to the power of granting charters to companies, which would be most important, that power would be acquired in due course of law. He had, however, no reason to despair of obtaining from the Crown, even before the arrival of the period to which he had alluded, the power of granting charters to joint stock companies. In the meantime he could state, that joint stock companies were forming in this country, and forming not by what might be called new people, by persons without experience in banking, but by existing banking establishments, most respectable in themselves, uniting together. These establishments would by their union form joint stock companies, though without charters; and from this fact their lordships would be convinced that the bill before them was not likely to prove a dead letter. He concluded by moving, that the amendments of the Commons be agreed to.

The amendments were then agreed to.

*Small Notes in Scotland and Ireland.*

**COMMONS, THURSDAY, MARCH 16.**—The Chancellor of the Exchequer said, that after the

ample discussion which the subjects of banking and promissory notes had undergone, the more he had applied his attention to them, the more he had become persuaded that the opponents of the new regulations were without any grounds whereon they could rely for refusing to adopt them in the case of Scotland. There was a material difference between the cases of Ireland and Scotland, and it was necessary to take all circumstances into consideration before they proceeded to legislate. It appeared to him, therefore, that the most prudent and effectual mode for all parties would be to allow a full, free, and unreserved consideration to be given to the subject before a select committee. He agreed that they ought not to charge those who opposed the application of the new measures to Scotland with any unfairness in their purposes or their arguments, until they had first of all heard and endeavoured to convince them; but he must be allowed to remark, that Parliament, in dealing with this subject first of all, had begun with this very case of Scotland; for in 1765, it had restrained the issues of small notes, which were then in circulation in that country, as a medium wholly incompatible with the interests of those into whose hands it was likely to go. In Ireland, there appeared to be no such strong disinclination to the measure contemplated.—He should, at present, abstain from all further remark, and simply move "that a select committee be appointed to inquire into the state of the circulation in promissory notes, under the value of 5*l.*, in Scotland and Ireland, and to report their observations and opinion thereupon to the house, with reference to the expediency of making any alteration of the laws now in force relating thereto."

Mr. *H. Gurney* thought that it would be much safer to abstain from this inquiry, which could only add to the ferment lately experienced and still lingering in the public mind. The experience of the operations of three committees, including the bullion committee, which had sat already, ought to convince them that the only effect would be, renewed agitation, depression, and distress, in the affairs of the country. At least let them forbear from interfering with Scotland until they had tried the effect of the measure on England. He objected to any further interference on the part of Government or Parliament with the money affairs of the country.

Mr. *Keith Douglas* said, that Parliament ought to shew some deference for the petitions which were coming up from all parts of Scotland in opposition to the proposed alteration of their currency. During the whole period of the Scotch banking system, nothing had occurred which would warrant the proposed interference. The state of things which had arisen in England, was occasioned in part by the insolvency of some of the smaller bankers; but not so in Scotland, where the people were perfectly satisfied with the solvency of their bankers, and the accommodation which they afforded. In England the evils to be corrected were first, the too great extent of the small bank-note system; and the remedy to be applied was, the suppression of all notes under 5*l.* value. But, then, it was said, that for uniformity sake, the same system must be extended to Ireland and Scotland, and particularly in the case of the latter; for if the small note circulation were upheld there, it must necessarily interfere with and injuriously affect the British gold currency,

by being mixed up with it. Now he denied that this could ever take place in the manner apprehended; nobody in England would countenance the circulation of Scottish notes in preference to their own gold coin.

Mr. *W. Dundas* said, that the British Parliament could not be expected to take the mere words of the Scotch members upon such a question; it was therefore reasonable to call for a committee, where alone the requisite proof could be furnished. He was attached to the present system, and therefore courted rather than feared inquiry.

Mr. *M. Fitzgerald* eulogized the present banking system in Ireland, where there were branches of the national bank, and joint-stock bankers, properly maintaining the circulating medium of the country. The principle of the proposed change was sound, but they must be cautious in its application; and he had serious apprehensions whether they could supply with gold the vacancy occasioned by the suppression of the small notes throughout the kingdom generally.

Sir *Charles Forbes* said that he saw no necessity for this committee—it was uncalled for and unnecessary; but he would vote for it in compliment to Scotland.

After some further conversation, the motion was carried without a division.

LORDS, FRIDAY, MARCH 17.—On the motion of the Earl of *Liverpool*, a select committee was appointed to inquire into the circulation of promissory notes under the value of 5*l.* in Scotland and Ireland. The noble earl then moved, that the several petitions which had been presented to the house on the subject of the banking system in Scotland and Ireland, be referred to the said committee.

Earl *Grosvenor* then rose. He considered it very extraordinary, that after all the information which the noble earl must have obtained respecting the measure he had proposed to carry into effect, not only in England, but in every part of the united kingdom, he should still think it necessary to refer the subject to a committee, which was, in fact, nothing more than a mere form, and which appeared to be only resorted to for the purpose of screening ministers, by making the committee share the responsibility. He believed, that had it not been for the publication of the *Letters of Malachi Malagrowther*, the noble earl would never have thought of the appointment of a committee to inquire into the propriety of a measure he had previously resolved to carry into execution.

The Earl of *Liverpool* requested their lordships to recollect for a moment how the question stood. In the beginning of the session, he announced his intention of bringing in a bill to prevent the circulation of 1*l.* and 2*l.* notes. A question was then put to him, whether he intended to extend the measure to Ireland and Scotland. He answered, that it was his intention to extend it to those kingdoms after the bill relative to England had passed. One part of the united kingdom, namely Scotland, had manifested a very general, he might say a universal, objection to the principle of the bill, and their lordships' table was covered with petitions against it from that country. What, then, was the most decorous course which he could adopt, his opinion still remaining unaltered, notwithstanding these petitions? What

else but to investigate the facts stated by the petitioners, and then let the house say whether the measure ought to be extended to Scotland or not? He must repeat, that he had heard nothing yet to shake his opinion as to the necessity of extending the measure to the other parts of the united kingdom; but whether it should be extended or not, the most proper course for their lordships, and the most satisfactory for the country, would be to institute an inquiry of the nature of that he proposed.

The Earl of *Aberdeen* conceived that after the bill for prohibiting the circulation of promissory notes of small value had passed, the country had returned to the state in which it was before the Bank restriction act. Before that period the circulation of Scotland was the same as now. No evil had been felt in Scotland from the state of the circulation, and there had never been any complaint of it. The people of Scotland were perfectly satisfied with the present state of their banking system, and their objection to any interference with it was universal. The whole of the measure was in the nature of an experiment, and the noble earl perhaps thought that extending the prohibition to Scotland, would render the experiment more easy in England; but very many things might occur to render it difficult to carry the measure into effect in England. Why, then, not wait till the result of the experiment in this country was seen? If England returned easily and quietly to a metallic circulation, their lordships could then with more confidence extend that benefit to Scotland, if they thought it a benefit. This course seemed to him more advisable than proposing at once to deprive Scotland of a system under which it had long flourished, and which, if it was not the cause of its prosperity, was at least contemporaneous with it.

Lord *Melville* said, that a great deal of misapprehension prevailed in Scotland respecting the proposed measure. It was true that the objection to extending the prohibition to that country was very general, but it was at the same time perfectly well known that many well-informed persons in that country differed in opinion on that subject. The committee would only report facts, and upon these facts their lordships would be called upon to form their opinion.

The Earl of *Limerick* said, that a remedy should not be applied where no disease existed. The very agitation of the subject had done great mischief in Ireland. The measure, as applied to Ireland and Scotland, must be differently viewed. In Scotland not a sovereign was to be seen; but in Ireland the circulation stood on what was admitted to be a solid foundation, as the paper money was convertible on demand into gold. He begged leave to state that the situation of Ireland was peculiar. It was a country of small dealings, and therefore required small notes,—currency divisible into fractions suited to the nature of the agricultural and manufacturing transactions. On these grounds he objected to the proposed measure.

The Earl of *Lauderdale*:—The noble earl (*Liverpool*) had stated, that all that was wanted was to restore confidence; because the noble earl agreed in opinion that the wealth of the country remained undiminished. Now he had had very great difficulty in seeing how this measure was to produce the expected effect in England; but, whatever it might do in England, how its extension to Scotland was to restore

confidence was what he was sure neither the noble lord nor any other man could tell him. The opinion of the people of Scotland was unanimous against the measure.—It seemed to be supposed that the Scotch bankers had a particular advantage in the system that existed in that country. Unquestionably men would not employ their capital in trade but with a view of deriving profit from it. It was clear, however, that the Scotch bankers would have more profit if they were to follow the English mode of doing business, and give no interest to their customers: these bankers would, therefore, have an interest in the alteration proposed by the noble earl. If, therefore, they joined in the petitions, it must be from a conviction of the advantage of the system to the country. It was the best possible system for a poor people—for a people who were now becoming rich, but still wished to retain the advantages they possessed. He was sure that an attempt to new-model the banking system of Scotland would be a dangerous undertaking.

The Earl of *Liverpool* was astonished at the singular nature of the argument of a noble earl (*Limerick*); for if it was true that Scotland had been benefited by her banking system, surely the same thing could not be said of Ireland. He could not say that that country had not suffered by the failure of banks; for certainly no country could be said to have suffered more in that way than Ireland. It would be no answer to this to say, that a new banking system was established in Ireland: whatever advantage might be derived from that system, it was as yet merely an experiment. The question, therefore, as it respected Ireland and Scotland, stood upon different grounds. But as it related to Scotland, he begged noble lords would go into the inquiry fairly. The question of the banking system of Scotland was not to be considered with reference to its general operation on the people only, but more particularly as its effect on the commercial part of the community. Now, if their lordships looked at the commercial embarrassments which had occurred during the last 25 years, it would be found that Scotland had suffered more than England. It was said by the Scotch, "Keep your English system, and let us have ours, under which we have so long flourished; or if you will assimilate, why not adopt the Scotch system for England?" But the real question was, could Scotland, in commercial concerns, do without England (hear, hear)? When distress occurred, would the Scotch merchants find relief without coming to the Bank of England? Then, indeed, let them have their own system! But if this was not the case—if both Scotland and Ireland must lean upon the Bank of England—if, in periods of difficulty, the commercial classes of those countries must come to this for relief, then assimilation was necessary. Connected together as the countries were, where an alteration of the banking system was made in England, it seemed to be at least proper to inquire whether it would not be necessary to make a similar alteration in Ireland and Scotland.

Lord *Clifden* thanked ministers for getting rid of the small notes. No idea could be formed of the misery of the people of Ireland, when the country banks failed, as had been the case in the years 1819 and 1820. It was of great importance to prevent those country banks from springing up again. He under-

stood that there were now established in Ireland new banks, consisting of numerous and wealthy individuals, which he hoped would be found to work well in practice. For his own part, he felt an extreme horror for 11. notes.

**The Earl of Caernarvon:**—The present proceeding was a most extraordinary one; for after having applied this measure to England without having made any inquiry at all as to its expediency, it was now proposed to lump Scotland and Ireland together, and to inquire whether it would be expedient to extend it to those countries. Besides, was this a proper season for agitating this question, when credit was in such a ticklish state, and confidence in a great degree destroyed? Surely, instead of disturbing the public mind by this alarming proposition at present, it would have been much more politic to have had recourse to some healing expedients.

After a few words from Lord Ellenborough, the motion was agreed to.

**FRIDAY, MAY 26.**—The report of the committee appointed to inquire into the expediency of altering the state of the currency in Scotland and Ireland having been laid on the table,

**The Earl of Caernarvon** complained that the measures brought forward by Government on this subject with respect to England, had been passed without any inquiry. In the case of Scotland and Ireland, inquiry had been instituted, and what was the result? Did it bear out the principles of the noble earl? Quite the reverse: and he was satisfied that if inquiry had taken place into their expediency, as regarded this country also, the result would have been the same.

**The Earl of Liverpool:**—The committee had reported that it was inexpedient to adopt measures, this session, with regard to Scotland and Ireland, on account of circumstances peculiar to those countries. If, however, a paper circulation could be safely maintained in Scotland and Ireland, it was because they had a metallic circulation in England. The safety of a small-note circulation in those countries grew out of the state of the currency in England, which governed the exchanges in every part of the British empire.

**COMMONS.**—On the report of the Select Committee on the Banking System of Scotland being brought up,

**Mr. Tierney** rose:—"Mr. Speaker, as this is the last act belonging to the system, recommended by his Majesty's Speech, at the opening of the session, I am desirous of availing myself of the opportunity of stating my opinion on the transactions attending the adoption of that system. The house will bear in mind, that in the King's Speech we were desired to take such steps as would place the currency of the country on a more solid and permanent footing, or words to that effect: measures were in consequence brought forward by ministers, all of which are, no doubt, in the recollection of the house. The principle on which I understood Lord Liverpool to have acted, I take chiefly from the details of the letter, signed by his lordship and the Chancellor of the Exchequer, to the Directors of the Bank of England. I find it there asserted that the embarrassments of the country arose from over-trading. Whether

I entirely agree in that opinion is another matter; but in this I did agree, that whether such were or were not the fact, the distress had been much encouraged and increased by the acts of the country banks (hear, hear). The remedy proposed was—to get rid, within a limited period, of all the one and two-pound notes now and then in circulation. It was also mentioned, and truly as I think, that that by itself would not be a sufficient remedy; and it was, therefore, suggested that, with the concurrence of the Bank of England, branches of that establishment should be formed in other parts of the kingdom; and further, that it should part with a portion of its exclusive privilege, and that a law should be passed enabling more than six persons to join in speculations of the kind. I hope the house will not forget what it was called upon to adopt as the system to remedy the distresses which have recently so cruelly pressed upon the country from that day to the present. Nothing could equal the vigour with which Lord Liverpool set out: not a moment was to be lost, and the haste was so extreme, that all was to be done without the slightest inquiry (hear, hear). The further issue of stamps was stopped on the instant, by an act positively illegal. I beg to be understood, as not finding fault with that act: to the best of my abilities I defended it. I thought it absolutely necessary; but, at the same time, I could not shut my eyes to its illegality. So it was—the step was taken—an order was sent down to the stamp-office, by which it was rendered impossible that any addition could be made to the number of one and two-pound notes in circulation. The next step was, the bringing in a bill to prevent the issue of one and two-pound notes, after some day in April, 1829, three years from the time when the proposition was made. Upon that measure a great variety of opinions prevailed: for my own part, I conceived that ministers were acting upon a sound system, and I therefore gave them all the support in my power. This, let me observe, was not a pleasant part for any gentleman to act. I was appearing to wage war against a most respectable body of men—I was supposed to be acting with feelings of hostility to the country bankers. All I can say is, that I did it for the best under the circumstances; and, if they were to occur again, I should repeat the same conduct, having yet seen no reason to repent it (hear, hear). All went on smoothly, until it was suggested, that an exception should be made respecting the issue of one and two-pound notes in favour of the Bank of England. It could not be listened to for a moment: the minds of ministers were made up; their objections were irresistible; yet within one little week they gave way (cheering). This was the first indication that their valour was beginning to ooze out (laughter). Nevertheless, I continued to give them my support; and if the Directors of the Bank of England meant, really, and *bonâ fide*, only to issue such a number of notes as would supply the deficiency that might be occasioned by the sudden abridgment of the circulation of country banks, there would not have been much to object to. But I was satisfied that this would not be the case; for the principle always uppermost in their minds has been pushing out their paper to the very utmost extent; and I did not think there was any reason to suppose they would change

it for this special occasion. But this suggestion having been adopted, one great advantage of the system has been done away. We went on with the bill extremely well, (I am speaking here only of the first branch of the remedy), until we came to Scotland. Of Ireland I shall say nothing at present, because I understand that nothing conclusive regarding that country is contained in the report: that part of the subject is open to further investigation next session, and only a general outline is given of what it may be prudent to do. As to Scotland, the case is different. I really believe, that since the Rebellion of 1745, such a combustion has not been produced in that country as was raised the moment it was known that some plan was projected for altering the paper system there (hear, hear). Nothing, I must own, ever surprised me more than what I myself witnessed. When the measure of restriction was first introduced, all the members for Scotland, with one voice, hailed it as wise, prudent, and beneficial: out of the whole 45, I believe there was but a single exception (Mr. Hume), who voted against it. Nothing could equal the zeal of the Scotch gentlemen in supporting it, excepting, perhaps, the firmness, I had almost said the menace, with which they afterwards united to resist it (laughter). They found it was not relished in the north: and when it came home to their own doors,—when they discovered that the proposed change in the currency of Scotland would put them and their seats in jeopardy, they turned round without the slightest hesitation, forgot or disregarded all that they had before said or done, and joined their voices to the general cry against the alteration. The effect was magical—such as he, a plain man, had no powers of eloquence to describe. The Great Unknown's well-known picture of a "gathering"—an arrangement in which, by the exertions of a single man, speeding from house to house with a signal, a whole clan is mustered, and every individual is at his post in half an hour—is the only recorded process, the effect of which seems at all to approach it (laughter and cheering). Petitions were poured in from all parts of Scotland, and a greater hubbub was excited than I can recollect for many, many years. Nevertheless, I did hope that ministers were acting upon a matured and settled system; and one of my complaints is, that I have been disappointed: they have acted upon no system, but one of mere expediency, from day to day. Is there any man who hears me, who is not astonished, after all that has been said and done, to find, that the last act of nearly the last day of the session, has been to produce a report, the substance of which is to recognize the right of allowing the existence in Scotland of a principle totally different from that which governs us here (much cheering)? What is the principle of Lord Liverpool regarding England? That the earliest step must be taken to ensure the circulation of gold, and to drive out the circulation of paper. What is the last step taken regarding Scotland? To ensure the circulation of paper, and to drive out the circulation of gold (hear, hear). This is the short statement, but the correct one: in Scotland, the circulation of paper is to be free and unlimited; they are to have full leave to go on precisely as they have gone on after due inquiry, while in England the circulation of small notes is absolutely abolished

without any inquiry at all (hear, hear). It seems to have been thought, that the respectability of the character of the Scotch bankers, (and I do not mean to hint any thing against it), their prudent management and their tried integrity, covered them with a degree of sanctity which rendered it almost impiety to touch them. In England, however, without investigation, that has been done at once, by the strong arm of the law, which, it is not denied, has been and still is most severely felt from one end of the kingdom to the other. I did not conceal the difficulties from myself—I was aware of them at the beginning of the session. To touch the currency in so vital a part, must be attended with danger and disadvantage; but I balanced the conveniences against the inconveniences, and I thought the course recommended by Government right, although I knew the remedy would be severe. When we came to deal with Scotland, I was told we were all wrong in principle—that what was to be law for one country ought not to be law for another—that she had a right to her paper currency, and might maintain it even by dint of menace and intimidation. The ground on which the exception of Scotland rests, is this:—That she has acted for a long series of years on a system of excluding the precious metals; that no inconvenience has resulted from this exclusion; on the contrary, that her manufactures and commerce have been greatly benefited by it. I hope I state it fairly, and I am sure I mean to do so (hear). As to the long continuance of the system, I do not think that any very powerful argument is to be derived from that fact, because times and circumstances make all the difference. Scotland is no longer what Scotland was: what it might be proper to connive at in a poor and rising country, is not to be borne when that country has advanced to wealth and power equal, or nearly equal, to our own. Formerly, every assistance that could be given to Scotland was important; but now (and I say it with heartfelt satisfaction) I do not know a country in the world, which, in the same number of years, not more than thirty, has made such rapid and vigorous strides towards wealth and prosperity (hear, hear). I always feel every thing that belongs to the prosperity of Scotland, as part of the prosperity of England; but, then, I hope the Scotch gentlemen will allow that danger to England ought at least to meet with sympathy in Scotland. This is not too much to ask, even from the natives of the North. What I maintain is this,—that what might be necessary to Scotland formerly, is not necessary now. She has not only enjoyed the benefit of the banking system, which I will explain a little by and by, but other advantages, which have showered into her lap wealth in greater quantities, and in a shorter time, than any other country ever experienced; I allude to the wealth poured into Scotland from India within the last thirty years. Witnesses before the committee talked of the advantages produced by the system of banking, but they did not notice the vast sums of money which have flowed into Scotland from India, and arising from circumstances which it is almost invidious to mention. Let me ask whether the system of cash credits or of banking could have done that for Scotland which India has accomplished for her? I speak it highly to their honour; but every Scotch gentleman who

to India, on his return felt that laudation for his own country which induced place there the property he had realized. It has been a great source of wealth to Scotland. I am heartily glad that she enjoys it. The system of banking is different in Scotland and England; and the object in view, in the part of Lord Liverpool's proposition, is to assimilate the two by allowing an innumerable number of partners to establishments of the kind in England. But, say the Scotch, you destroy all the benefits derived to the manufacturers, and put an end to a system which has so long and so advantageously

Now, this system of banking in Scotland is undoubtedly one of extreme profit, for this reason—the precious metals being scarce, paper only is issued and circulated; the whole specie capital of the bankers is deposited in London, obtaining at least the ordinary rate of interest; therefore, all that is done in Scotland in the way of banking, is sheer loss to the country. I doubt, if I were a Scotch banker, I should be very anxious to support that which gives such an abundant source of wealth; I should not affect to blame them. The system of circulation originates in cash credits. I may explain thus: If a man begins the world as a tradesman, it must be thought a great advantage for him that some banker's, we will say 100l., he could apply when he wanted it; if he should become security for him, he is entered in the banker's books to that amount, and can draw for it at any time, unless by accident the credit thus acquired is exhausted.

But there is a second advantage in the system:—the tradesman may at any time have any part of the sum thus advanced to him, at the interest charged for the remainder, which he retains in his hands, is directly repaid; he pays no interest for a single day beyond the sum, beyond that which has been advanced to him. In order to accomplish the object, and to keep up this system, the issue of all coin became necessary; the principle on which it is founded, is, on the other hand, a man in the course of his business receives ten sovereigns; these he was in the habit of keeping in his till, or in the drawer of his counter, applicable to any use; but, by the new system, he gives the sovereigns, pays them into the Bank, and receives ten promissory notes in exchange. It is right to find fault with this system, and to say, that in countenancing Scotland by this system, ministers are acting more directly against the principle of their own system, than I should have supposed it possible even for them to do. It is boasted that she has devised these cash credits, the effect of which is altogether to exclude gold from circulation. If the evidence be true, she has most effectually succeeded; and it is true that these cash credits amount to no less than six millions: some witnesses state it to be eight millions, but it may be very near six. The other parts of Banking in Scotland are the same as in England, excepting that who make deposits are allowed in Scotland some greater advantages: one is, that they give 4 per cent. to those who lodge their money with them, and charge 5 per cent. for the use they make. No doubt this system is a great advantage to those who reside in Scotland, but give me leave to ask, whether any reason why those who reside in

826.

Scotland should possess it (hear, hear)? After the union, common prosperity ought to have been the common object, without any exclusive privileges; and it is not enough for a Scotch gentleman to say, "they ought to continue, because I am a great gainer by them." But while thus an extravagant advantage is given to Scotland, the rest of the country are severe losers. As I before remarked, this might be all very well while Scotland was a poor country; I might then be ready to shut my eyes, and connive at such a special benefit: but Scotland is now rich and powerful, and why is a gentleman of that country of 2000l. a year, to possess these advantages, and to secure four per cent. by cash credits, to his dependants and connexions in all their ramifications, to the exclusion and disadvantage of England? I can see no reason for it, and I deny that in England the same may not be done: indeed, I was surprised to find, what I did not know until this day, that cash credits do exist in some of the most respectable country banks in England. I am told that nothing is now more usual: if a man require 100l. or 1000l., he gets a friend to go to the banker and offer security for him, as for instance, a mortgage upon his estate; the money is agreed to be advanced; the party wanting it, may take it in what proportions he pleases, may return what he does not need, and only pay interest on the sum he actually employs. Can any man then assign a single reason why Scotland is to be so peculiarly favoured? Why is she to be allowed to continue a paper circulation, while England suffers so severely, and meets with so many difficulties and obstructions in her march to the goal of a metallic circulation? This cannot be called acting on a system; it may be right, or it may be wrong; but no man can deny that Lord Liverpool is blowing hot and cold, when he pretends to put the currency of the Empire on a solid and secure basis, and yet does all in his power to make that basis, in Scotland, unsolid and insecure (hear, hear). I dare say, when the report comes to be read, it will be found fairly drawn up; I have every reason to believe it; but I will venture to say, before it is read, that it contains materials for a manifesto in favour of a paper currency, from one end of the kingdom to the other (much cheering). No more effectual method can be taken than by the publication of all the evidence. Ministers lay it down for a rule that there is nothing so good as gold; but, read the report, and the world will be satisfied that there is nothing so good as paper. This is really the result of the investigation; and before next session we may depend upon having a full dose of pamphlets upon this long-disputed question. *Paper against Gold, and Gold against Paper*, will flourish on hundreds of title-pages, and happy the man who never reads a line further (laughter). The temper of the country will be fully tried upon the question, and the minds of the people may very reasonably be turned either way, when they see that the King's ministers do not know which way to turn their own (hear, hear). After being driven and goaded into a metallic currency in fact, we are to be told at last in words, that we ought, for all purposes of profit and convenience, to prefer paper. No man who hears me can think of the restoration of a paper circulation with more horror than I do; I know that good, wise and well-informed men differ from me, but upon that point I am more obstinate than on any other, although I

affect to know no more, and to see no further, than my neighbours. On this subject, I have uniformly resisted the projects of the Ricardos and other political economists, and I shall persevere in my resistance. Coin and paper cannot travel in company; and I lay it down as indisputable, that if there be in circulation at the same moment a piece of paper of the denomination of twenty shillings, and a piece of coin of the same actual value, the coin will very soon be missing. There can be no doubt, but that as soon as the metallic currency shall have been introduced, if it can be expected to be introduced at all, there will arise a strong inclination in many quarters to resort to any thing that may produce a rise of prices; and how is that to be done? Why, by recurring to a paper circulation. "See what advantage Scotland has by her paper," will be the general cry. "Remember how happy we were during the war with our paper circulation. We must have our corn raised to a fair remunerating price, and for that purpose we ought to have the same advantage as they have in Scotland." And then I ask, whether, if the Bank of England does not continue to issue small notes, while such notes are allowed to be freely issued in Scotland, we can go on for two years together? I hold it to be utterly impossible that we can; and the result will be, not that Scotland shall be assimilated to England, but that England shall be assimilated to Scotland (hear, hear). The forty-five gentlemen of the north will after this find a great number of coadjutors (a laugh). The English country gentlemen will say, "Why do you refuse us the same advantages which you allow to the gentlemen of Scotland?"—and what answer can we give to that? "You see," they will say, "how Scotland is flourishing under the small note system, and why should we not also have the benefit of small notes?" If you are of opinion that it is expedient that Scotland should have a paper circulation of this kind, why should it not be expedient for England likewise? It will be very difficult to give a sound and rational answer to such expostulations. And then, suppose a war should arise, in what situation shall we then be found? The consequence will be, that having done nothing in the last years of peace for the arrangement of our currency on a solid and secure foundation, we shall be compelled to engage in the war with our circulation in the utmost confusion; and foreigners will look with contempt on our financial knowledge and regulations; for foreigners understand the state of our currency, perhaps, in some instances, better than we do ourselves. Some foreign nations, at least, understand the proper measures to be adopted with respect to their own circulation, better than we understand the proper regulations which ought to be applied to our circulating medium. Look at the condition of France in this particular—every thing perfectly regular—the gold currency plentiful without excess—nothing doubtful—the Bank accounts submitted to the public view without the least disguise; and all this while we are involved in a series of vacillations, doubts, and difficulties. It cannot be otherwise. The only question is, what are you to do in 1829? Are you about to restore a metallic currency, or are you to retrace your steps and resort to paper? That will be the difficulty; and, from the course you are pursuing, the latter alternative is most likely to be the result. I say so, because I think that will lead to much

more important consequences than most gentlemen are at present aware of; since it is clear, from these proceedings, that you are not prepared to follow up your own act by reverting to a solid currency. But why did Lord Liverpool adopt a system at the outset which he was not determined to go through with? Lord Liverpool ought to have known his grounds completely before he proposed any measures; and having once taken his ground, he ought to have held it firmly. Give me the minister who will never introduce his measures rashly; and when he has once introduced them, will stand by them without flinching. Here nothing was settled in time with the Bank, and a great deal of squabbling took place, till, at last, it was agreed upon that there should be one branch bank at Gloucester. Then came the plan for giving an additional number of partners to the country banks. There are many country bankers who want no additional partners, whose means and credit are too high to make it of any consequence to the public what the number of partners may be; but, at the same time, I admit, that there may be others in a different situation; it may be attended certainly with additional security to the public, that, generally speaking, a banking concern should include a considerable number of partners; and, upon the whole, I agree in the propriety of legalizing and encouraging these joint-stock banking companies. But here again occurs another instance of the negligence and carelessness with which these measures were prepared; for the law which passed on this subject contains a proviso, that none of the notes or bills of the country banks below 50*l.* shall be payable in London—a regulation, which if carried into strict effect, would render the permission to form these joint-stock companies perfectly nugatory; for no country banking company could carry on business under such a system. Why did not Lord Liverpool and the bankers settle this matter before the measure was proposed to Parliament? After the act was a month old, several meetings were held, and several discussions took place, upon which it was at length discovered that the provision in question might be evaded. So, that after the act had passed, one of the principal objects of the minister was to show how it might be evaded. The law, it was found, could never answer, unless some mode of evading it could be discovered; and the whole utility of the law was grounded upon this evasion (hear, hear). See, then, the result of this grand system; and observe how it applies in the different portions of the Empire. In the course of three years England is to have a metallic currency, and no small notes; Scotland is to have her small notes, and, of course, no metallic currency; and with reference to Ireland, I understand the fractional notes, such as those of 25 and 30 shillings, are to be immediately abolished; then in three years, the one-pound notes are to be abolished; but the three-pound notes are to remain in circulation till 1833; and from that time the metallic circulation is to be introduced into Ireland. Now, why may not some such regulation as this be carried into effect with respect to Scotland? Here is a sufficiently long time allowed for a return to a sound currency, which may be gradually introduced as to occasion no inconvenience or agitation in the transition.—This, then, is the state of the currency at the end of

am, after it has so seriously engaged attention during the no very long period it has lasted; and I thought it due to the country to state my view of it before the approaching prorogation, speaking of myself, and for myself, only stating my own opinion. I attack the present. I do not mean at this apud blame to any particular individual. I thought the ministry were acting entire, sound, and solid system, which apply to every portion of the empire; and that I was wrong (hear, hear). I am boldly come down to parliament and make a measure on one of the most important subjects that could occupy the attention of parliament—they yielded, wavered, hesitated, and contrived to fritter away at destroy their own system. Lord Brougham—for I consider the measure as belonging to him—came forward so very confident, that he did not deem it necessary to inquire by committees of either house at all necessary, but to measure upon his own responsibility. As to the clamour made by the Scotch, we thought it not inconsistent in them their mode of proceeding. All inquiry was denied in the case of England; a committee of inquiry was agreed to be regarded Scotland. But may not the question, why did not you do the same with regard to Scotland? we were not determined to refuse any inquiry whatever, why should that be denied to Scotland while we are excluded? you of their cash credits; but we tell you we can show you our cash credits also; we have cash credits already, exactly of the same value in Scotland; and we are as ready as able to act upon that system as the Bank of Scotland. But no! you refused all inquiry into our situation and transactions, and assumed the demerit of England, but not the demerit of Scotland. What answer can we give to these remonstrances?—However, I merely wish to justify myself; I merely wish to show what kind of a measure we make in the last days of the session having devoted so much of that time to the consideration of this important subject. I wish the measure had been brought forward with less rashness; and had been more carefully considered. But *liberavi animam meam*: I have at least endeavoured to do my duty to my country; and shall not trouble myself with any thing further, except to wait for the patience and indulgence which they have been pleased to hear me.”

“I cannot help being very much gratified that the rt. hon. gent. should have thought right to make so severe a speech on a Report which is not yet on the table of the house. It is surely somewhat of a pity that he should take occasion to censure conclusions drawn from evidence in the hands of members, and of which, they cannot be competent judges. The committee did most anxiously apply to the subject, and endeavoured to do it with as much zeal and perseverance as circumstances would allow. We have not much of our exertions or our time; and that we had barely an opportunity to consider and make up our Report before the termination of the session. I think it is, therefore, to us, notwithstanding

this early denunciation, that the house should suspend their judgment until they shall have had the means of maturely weighing the evidence upon which the conclusions in the report are founded. This, I will say, that I never sat upon a committee where every one appeared more anxious to do his duty; and it is but fair, that no unfavourable impressions should be suffered to prevail against its proceedings and conclusions, until they are thoroughly examined. —The rt. hon. gent. says, that we declared our resolution to adopt and adhere to a general system applicable to all parts of the empire; and that we have abandoned that system—I deny both propositions. There has been no declaration by the ministers, that the system must necessarily be extended to Scotland; for we were always aware that the circumstances of Scotland and England were different, and might call for different measures. Let it be considered, that when the system comes into operation with respect to England, it will be the very same system which existed here for a long time up to the year 1797; so that, with respect to this country, it is merely a recurrence to our former currency, while the case of Scotland is entirely different. For a very long period before 1797, England had, practically, a metallic currency; and for twenty years before that time—that is, from 1777 to 1797—the law was, that no bank-notes should circulate under the value of 5l. But, during the whole of that period, concurrently with the metallic circulation of England, the small notes circulated in Scotland. I say, that none of us ever thought or said that the small notes ought to be put down in Scotland, merely because they should be withdrawn from circulation in England. In 1810, as is well known, a committee was appointed to examine into the state of the currency, and the expediency of a return to cash payments, and the conclusion to which that committee came was, that cash payments ought to be resumed within two years from that period; but it was never said, nor contemplated, that the circulation of small notes in Scotland ought to be abolished. Another committee was appointed in 1819; but it intimated no condemnation of the small notes in Scotland. And, observe, this was no *laches*—no negligence in us, for we had evidence before us, taken with reference to the circulation of small notes in Scotland. But we did not then think it essential to our principle, that its operations should be extended to Scotland. So, in the measures in contemplation in 1823—4, it was never mentioned that any alteration ought to be made in the currency of Scotland. Why, then, does the rt. hon. gent. say, that we had declared that our system ought necessarily to be extended to Scotland? I have no hesitation in stating that my own feeling was, that it should be so extended. But then, as we had no previous inquiry directed to the consideration of the state of the currency of Scotland in particular, we said, when we really had in contemplation to legislate in this respect, for that part of the empire, “by all means let us have a previous inquiry.” The rt. hon. gent. refers to the letter of Lord Liverpool to the Bank; and I refer to that very letter to shew that it was not by any means understood that the system should necessarily extend to Scotland; for in that letter, the noble lord, in reasoning on the causes of the evils under which the country laboured, expressly refers to Scotland, and says, “We have a further proof from the in-

stance of Scotland, that the circulation of 11. and 21. notes is not the sole nor the principal cause of the evil,"—intimating that the small notes might possibly be allowed to circulate there without producing mischief. In 1819, and at other periods, it had been recommended, that in England no notes under 51. should be issued; and the state of things in 1829, under the present system, would be merely the carrying into effect the recommendation of the committee of 1819. The *rt. hon. gent.* says, that my Lord Liverpool ought to have made up his mind on the subject before he came down to parliament to propose this system for the adoption of the legislature. Why, it is long since my Lord Liverpool has made up his mind on the subject. Even while Mr. Vansittart was Chancellor of the Exchequer, he had contemplated the plan of taking securities from the country banks for their issues. The inquiry proceeded on the advice given by the *rt. hon. gent.* in 1819. At that time, when a proposition of this nature was recommended with respect to England, the *rt. hon. gent.* said, that even Mr. Pitt, in the plenitude of his power, had never ventured to propose a matter of so much consequence without a previous inquiry; and the *rt. hon. gent.* himself moved for a reference to a committee. Why, then, in this instance we acted on the advice of the *rt. hon. gent.*—we have appointed a committee, and instituted a previous inquiry; and yet the *rt. hon. gent.* now objects to the very course which he himself had formerly so strongly recommended. I therefore contend, that when we propose the return to a state of metallic currency, as far as respects England, we have been guilty of no inconsistency. We have acted exactly according to the practice of past times, nor have we made any declaration, nor given any pledge, that we would act otherwise. In past times England and Scotland went on together without inconvenience, the former having a metallic currency, the latter a small note currency; and, therefore, although we have resolved upon an early return to a metallic currency in England, it by no means follows that of necessity we should, at the same period, adopt a metallic currency for Scotland. I now come to the consideration of the conclusions to which the committee have come, as stated in their report; and as to these, I say, let the house suspend their judgment until they have an opportunity of ascertaining what they are, and upon what evidence they are founded. The *rt. hon. gent.* says that he regrets the publication of that evidence, and that we shall be inundated with another overwhelming flood of pamphlets about paper and gold. Why we were surely not to be prevented from taking all the evidence we could procure, from any such considerations as these. When we called the witnesses before us, we of course asked them to state their opinions; and after we had got these opinions, we could not but publish them, because otherwise it might be said, that we had some view to mislead the house and the public, by a suppression of their evidence. It is our wish that the evidence should be published, and thoroughly sifted and examined. This is the first committee, be it remembered, which has been appointed for the exclusive purpose of considering the state of the Scotch currency; and I confess, that we had a strong predisposition, that the system of metallic currency should be extended to Scotland. The general

principle is decidedly in favour of that course; but we were determined to attend, with the utmost impartiality, to all the evidence on either side, that we had an opportunity of examining. It was represented to me, when the committee was appointed, that Scotland was not adequately represented in it; and upon this allegation, I immediately agreed that other *gents.* should be added to that committee, whose opinions on the subject I knew to be contrary to the bearing of my own, and therefore the *hon. members* for Malmesbury and Aberdeen were appointed members of the committee. I freely confess, that if we had suffered our opinions to be determined merely by general reasoning, the committee would most probably have reported that the system of metallic currency ought to be extended to Scotland. But, when I heard and considered the evidence to which it was our duty to give every proper attention, I have no hesitation in admitting, that my opinion was, to a certain degree, changed; and I thought, upon the whole, that, under existing circumstances, a further trial should be made, whether a small note currency could exist in Scotland, in conjunction with a metallic currency in England, without inconvenience, as had been the case in past times. But neither the *rt. hon. gent.* nor the house, ought to consider this as an unqualified opinion on our part, that the two descriptions of currency could exist now in perfect harmony with each other, although they had done so formerly. We go no further than to say, that the experiment ought to be tried; but whether, under the very altered circumstances of Scotland, it will succeed, is quite another question. The *rt. hon. gent.* himself, says, that the circumstances of Scotland are now changed—that she has made rapid advances in wealth and prosperity during the last thirty years—that the wealth of India has been poured into her lap—and that she has for many years past flourished to a degree which was never known before. Why that is just what we say; and it is partly on that account that I had a strong inclination to think, that although the existence of different currencies in the two countries had formerly produced no inconvenience, it by no means followed that much inconvenience might not result from a similar state of things now. But still, as the evidence of past experience was in favour of the hypothesis of those who imagined that no inconvenience would arise from the existence of a metallic currency in the one country, and a paper one in the other, we thought it prudent to recommend that the experiment should still be tried; and then, if it should appear upon trial that these opposite systems were incompatible with the welfare of the empire in general, in the present relative circumstances of England and Scotland, of course our opinion must alter according to the altered state of the question. Now, upon the view of the case, as we have it under our eyes at this moment, is it expedient to make any alteration in the currency of Scotland, without some further trial? The universal impression in that country is, that they ought to be allowed to continue their present banking system, and their issues of small notes. If I had been clearly and decidedly of opinion, that at this moment it would be for the best interests of the empire at large that the metallic currency should be introduced into Scotland at the same time at which it was established in England, I should have disregarded

cession, and the clamours that resulted. Indeed, I was quite prepared for the expression of such an opinion in Scotland; but at the same time aware that questions of this kind had a much better chance of being determined by the House of Commons, by the noise and clamour of multi-plied doors. But then, having gone into the matter, and the evidence being contrary to my impressions, I thought myself, for the sake of the country, bound by that evidence. I certainly did not think our inquiry was not much more exhaustive, as the matter now stands, eleven years, of the greatest respectability, have to facts highly favourable to the continuance of the Scotch banking system—at least, as a temporary continuation. The gentlemen present said, and said with some appearance of reason—“Why disturb us in the continuance of our actual system, which is so adapted to us, when you know that the very system was established among us before we had a metallic currency, and that the least inconvenience to you or to the country? Considering these circumstances, we ought it right to say, that for the present it is fitting that the system of Scotland remain unchanged, for the sake of the country. Then, as to the country banks of Scotland, as compared with the Scottish banks, they have no hesitation in saying, that the bankers of England are, as a body, the most respectable classes of the community. But, as amongst all other classes of the community there may be some amongst them not so deserving of respect; and I say, that it is better for the bankers themselves, that the state of things should be abolished, which enables a few so to misconduct themselves as to taint the whole body with suspicion. Then look at the state of the returns to the Parliament, with reference to the solid solvency of the Scotch banks, as compared with those of England since 1816. In that period, there appears to have been a Scotch bank, which sued out a sequestration under the Scotch bankrupt laws. During that period, the number of English country banks against whom commissions of bankruptcy had been issued, is 158. Under these circumstances, we did think it would be fair, to give the Scotch system a further trial, when we had, that in that country it had wrought out its own ruin. They said, “do not disturb our system; you cannot but see that there is no objection for it;” and to the extent of leaving the system as it is, for the present, by way of experiment we have thought it right to attend to the wishes of the people of Scotland. There is no evidence to shew that the two systems of currency would necessarily derange the operation of the great objection to the system of paper currency was, that though well enough for fair weather, it was not for times of panic and danger. The answer to Scotland was, that for a hundred years, which their present system had existed, no great evils had occurred in that country in consequence of the state of the currency. That period the people of Scotland had changed of dynasty, and undergone the changes arising from two rebellions. When the credit had been convulsed in England, it had remained unshaken in Scotland. There are surely strong reasons for leaving the

system untouched, at least for the present. But the chief ground on which its defence rested was the system of cash credits. The business of Scotch banking is conducted by about 30 establishments. There are three charter banks, and twenty-seven or twenty-eight others, with branches extending into the remotest parts of the country. Though these branches might not at their first institution pay the expenses attendant upon their establishment, yet, by the improvements they introduced into trade and agriculture, they, generally, soon became profitable. The witnesses who were examined before the committee agreed in stating, that it was their undoubted conviction that if the circulation of notes below 5l. was abolished, there would be no longer any motive for establishing these branch banks in the distant and least improved parts of the country. What object, for example, could a banker have in incurring the expense of instituting a branch of his establishment in the Highlands, if he was restricted from issuing small notes? Certainly he could have none, as that was the principal source of profit from which he expected remuneration. During the inquiry, the committee had deemed it necessary to obtain a total return of the paper circulation of Scotland, for the purpose of comparing it with that of England. In 1819, when the committee on the resumption of cash payments was sitting, it was calculated that the total amount of circulation in this country was 40 millions. The circulation of the Bank of England was ascertained by the returns it had made to Parliament. That of the country banks, judging by the number of stamps issued, amounted to between twenty-three and twenty-four millions, to which was to be added some gold. The amount of notes below 5l. was not exactly known; but, during the present session, though by some it had been estimated as low as four millions, I thought it safer to calculate it at six or seven millions. Let the house now attend to the comparison of the proportion between the total amount of the currency of this country, and that part of it which consisted of notes below 5l. The latter, certainly, is not much more than a sixth—perhaps only a tenth. But how stands the proportion in Scotland, between the total amount of the circulation and the small notes? The total amount of the paper currency of Scotland is 3,300,000l., and there is scarcely any gold. The amount has been ascertained by every bank furnishing a return of its own circulation; and it appears, that of the whole, upwards of two millions consist of notes below 5l. In the case of Scotland, therefore, the proportion of small notes is two-thirds of the whole circulation (hear, hear). I am afraid that, under these circumstances, it is impossible, without the evidence of an over-ruling necessity, or that the two systems are absolutely incompatible, to pass a law doing away at once with two-thirds of the circulation of Scotland. If experience proves that the metallic circulation of this country cannot co-exist with the paper currency of Scotland, then I will abolish the latter. I am not enamoured of the Scotch system. I do not consider it perfect or desirable, for its own sake, but I prefer a trial of its compatibility with our own to its immediate annihilation. I feel very sorry that the report has not met with the approbation of the right hon. gent. (Mr. Tierney); but I declare that, either as a minister or as a member of that

house, I have never done an act with which I am more satisfied than the presentation of that report."

Mr. *Abercrombie* said, that he went into the committee with a full persuasion of the extreme absurdity of having one set of principles regarding the currency for England, and another for Scotland, and he had heard nothing in the course of the inquiry that had altered his opinion. Every position in the report was in favour of the general principles the house had adopted for this country. There had been no evidence that the system of cash credits would be destroyed by the abolition of small notes. The committee, indeed, in one passage, expressed their unwillingness to derange a system which had proved so beneficial in practice; but that house was bound in justice to its own principles to impose them on Scotland, unless it was prepared to pronounce much more decisively than this report. If the currency of Scotland were left in its present state, there would be an excessive issue of paper in that country, and the whole burden of keeping up the supply of gold would be cast on the bankers of England. Why were they not heard in their defence? If the same indulgence had been extended to them that the Scotch bankers had received, a very different result would have ensued. A striking fallacy in the speech of the *rt. hon. gent.* (Mr. Peel) was, that he said there had been no distress at any time during the last century in Scotland. No mistake could be greater. There had been a recurrence of public calamities quite as often as in this country. The solidity of the Scotch banks, in consequence of the great number of partners in them, was a reason why, above all others, they ought to be put under restraint as to the issue of their notes. By dividing the responsibility among so many individuals, the temptation to over-issue was greatly increased. The people of Scotland had suffered as much as any people from excess of paper. Prices had been raised, and the labourer was mulcted of his wages by the over-issues of the Scotch banks. A great deal had been said of the loss occasionally sustained by the English labourer, by the failure of a country bank; but he was convinced that the Scotch labourer suffered a much more severe loss by the depreciation of the currency, resulting from over-issues, because this loss was of longer continuance. Another objection he had to the report was, that it recommended a measure which had never before been heard of—the exclusion of Scotch notes from circulation in England; and that by a penalty against bringing them over an imaginary boundary. If such a law were passed, it would be the most vicious, odious, and detestable in principle, that had ever received the sanction of Parliament. He had often passed the boundary between the two countries without being aware of it; yet this act, which any one might unconsciously commit, was henceforth to be subjected to possibly a severe penalty. The only offence to which this new crime was analogous was that of smuggling. The smuggler, at least, cheated the Exchequer; but the introducer of a Scotch note would be guilty of fraud against nobody. If the new parliament disgraced the Statute-book by an enactment of this character, it would infallibly disgrace itself in the eyes of all mankind. The course now proposed justified, in appearance, all the objections which had been thrown out

against their principles by practical men, and displayed an inconsistency extremely prejudicial to the interests both of England and Scotland. It was, in his opinion, quite impossible to maintain any law upon the subject of the currency in England, unless they made it equally applicable to Scotland. The report was in itself an argument against themselves, and against all those who had, on either side of the house, supported those principles, which the course now recommended would most decidedly controvert.

Mr. *J. P. Grant* denied that it was at all necessary, either from past experience or present emergency, that the currency of Scotland should be on a similar footing with that of England. The result of the inquiry convinced him, that it would be both unjust and injurious to interfere with a system which was found to work so well, and had given so much satisfaction. He thought that the house was not called upon to interfere with regard to Scotland, but that seeing the inutility of the measures proposed for adoption in England, that parliament should proceed to inquire into the expediency of issuing 11. notes for English circulation.

Sir *M. W. Ridley* demanded inquiry on the part of the country bankers, and he was confident, if it was granted, that it would be found no well-conducted bank in England was different from any well-conducted bank in Scotland. It had been said that the capital of this country would pass into Scotland, where a paper currency enabled the business of trade and agriculture to be carried on with more facility, and it was his intention to move early in the next session, for an inquiry as to the difference which might be produced in the trade or resources of either country by the difference of its currency. One thing was certain, that nothing could be done to prevent the paper of Scotland from passing farther than the bounds of that country. In 1797, there were 60 or 70,000*l.* of Scotch notes in circulation in England.

Mr. *H. Gurney* said, that if any new system were adopted with respect to Scotland, distress and ruin, he was convinced, would follow. The exchange on London had the effect of keeping down an over-issue of Scotch paper; so that there was no danger to be apprehended in that respect.

Mr. *T. Wilson* said, that by the exemption of Scotland from the system which was to prevail in England, an undue commercial and agricultural advantage was given to the one country which was denied to the other; and this was the infliction of injustice.

Mr. Alderman *Heygate* thought, that the only difference between the English and Scotch system was, that the latter afforded, from its nature, a superior security. Why not, then, have adopted the better plan in England? Why not have established chartered banks, and required Government security from those who issued 11. notes? With some modification of the principle, there was no English banker who would object to such a system of security.

Mr. *Ellis* said, that for precisely upon the same ground that the committee had excepted Scotland from the operation of the general system, he could have produced abundant evidence to except several of the counties of England. In fact, the distinction now sought to be established for Scotland respecting the currency, was just as rational, as if they were

to introduce one corn-bill for Ireland, another for Scotland, and a third for England. When he had given Government his vote upon the 11. system, he did so after receiving a pledge from the Chancellor of the Exchequer, that the measure was to be a general one; for the rt. hon. gent. had most distinctly stated, that though a little more time might be necessary for the application of the principle to Scotland and Ireland, yet that the regulation of the currency must be one and the same through the three kingdoms. He denied that the exemption of Scotland in the present instance was calculated to serve that country, while the restriction was enforced in England; for in the latter, her surplus produce must be disposed of, and of course its value would be regulated with reference, not to the Scotch, but the British currency.

After a few words from Mr. Cripps and Mr. Marmell, the report was ordered to be printed.

### *Law of Merchant and Factor.*

WEDNESDAY, MARCH 8.—Mr. Huskisson:—The house would recollect, that when his right hon. friend (the Chancellor of the Exchequer) communicated in the last week, that the Bank of England had agreed to advance money upon goods, he had stated that the Bank had done so under the expectation that the alteration in the law of merchant and factor, which was to come into operation on the 1st of October next, as to all advances made upon the security of goods, should, as far as respected these advances by the Bank, come into operation immediately. He now rose to ask leave to bring in a bill to carry that stipulation into effect. The object was to provide, that any goods on which the Bank advanced money, should be considered as pledged to the Bank, though they should turn out to be in other control than that of the party who actually pledged them.—In 1511, when advances of Exchequer-bills were made upon goods for the relief of the distress which then prevailed, there was in the act authorizing such advances, a provision giving to the commissioners appointed to carry it into execution the same security which he now called upon the house to give to the Bank, sanctioning in their favour a departure from the then law of the country, and rendering the lien of the commissioners upon the goods pledged with them preferable to that of any other persons. Having thus explained the nature of the measure, he felt that it was not necessary for him to do any more at present than to move for leave to bring in his bill.

Mr. J. Smith lamented that the operation of the new law respecting merchant and factor did not commence immediately. It had only been postponed till October, to prevent foreigners from being injured by their ignorance of the alteration which it introduced into our system.

Mr. Baring said, that though he looked upon the new law of merchant and factor as an important improvement in our commercial code, he regretted that it was thought expedient to bring in the present bill. When the new law was originally agreed to, and went to the House of Lords, the highest law authority of the kingdom declared it to be his opinion that its operation ought to be delayed till October, in order that foreign nations might become acquainted with the alteration which had been made in the long-established law of England

upon this subject. He (Mr. Baring) thought at the time that the scruple of the learned lord was unnecessary, and that the bill ought to be carried into execution *instantly*. The legislature acted, however, upon a contrary opinion; and therefore it was that he now thought it unwise to accelerate with regard to the Bank of England the time when it was to come into operation. Foreigners would say that because we were in distress, we had shortened the time which we had given them in our prosperity, for making themselves acquainted with the alterations of our commercial code. He thought that it would be much better to leave the Bank to the ordinary remedies which the law gave it. Such a proceeding would be more creditable to the country than any other; and if the Bank suffered any loss by adhering to the law as it stood at present—which he did not consider to be likely—it would be much better for the public to make that loss good than to deviate from general into partial measures.

Mr. Bernal could not look upon this bill with an eye of favour, as he thought that great injustice might be perpetrated by means of it. For instance, supposing that a man had raised money from a banker on the faith of certain goods, and had then gone and raised further money by depositing them with the Bank, this bill would deprive the banker of all security by the protection which it threw around the Bank of England at his expense. He did not see why the Bank should call for such an alteration in the law.

Mr. Huskisson observed, that the case which the hon. member (Mr. Bernal) had put, could not by any possibility occur; for no man could get money on goods, unless he had in his possession that symbol of property which gave him the right of using such goods in the market according to the ordinary practices of trade. Now, if a banker had made advances upon goods, he would have the symbol of property in his possession, and thus the man who had pledged the goods with the banker could not go to the Bank and ask for a further advance of money on the deposit of them.

Leave was then given to bring in the bill.

### *Usury Laws.*

WEDNESDAY, FEB. 15.—Mr. Sergeant Onslow rose to move for leave to bring in a bill to repeal the usury laws. After the repeated explanations he had given upon former occasions of his views upon this subject, he would not occupy their time with repeating them. He must, however, express his regret, that the house rejected his bill last session, because had they taken a different course, and allowed it to pass into a law, the late panic and all its attendant and still attending distresses would have been much mitigated, and in some of the great manufacturing districts many difficulties would have been removed which were now severely felt. He could prove that, in many instances, more than 100 per cent. had been given for money in the city of London, notwithstanding, and in consequence of the operation of the usury laws.

Mr. Davenport renewed his opposition to this measure, and would continue to resist it so long as he had a seat in that house. His firm belief was, that nothing could be devised more mischievous for the landed interest: it would necessarily disturb the whole mortgage system,

affect the property of the kingdom, and substitute a wild plan of theory in the room of useful practical experience. He called upon Government to take a part in stopping the eagerness for introducing such bills, and to look to themselves in time, before a perseverance in error brought ruin upon the country.

Mr. Bright was glad that the bill was thus early opposed. It was essential that the country gentlemen should not be year after year agitated in their minds, and more particularly at a time when they ought to be kept at ease. He condemned in the strongest manner the re-introduction of such a bill as that now submitted for their consideration; it could be productive of no good, and would disturb existing arrangements.

Mr. Irving thought that had this bill been in operation during the late crisis in the money-market, the heavy sacrifices made by individuals would have been lighter than they unfortunately had been (hear hear), and they would not have heard of such enormous sums lost in the attempt to maintain the credit of individuals. He thought, that in place of the present crisis being unfavourable to the introduction of such a bill, it was rather in favour of its wisdom, justice, and policy. At all events, he trusted the house would not take a stand against the bill in this early stage (hear).

Mr. Bennett said, that from a persuasion that money would be easier obtained, and on cheaper terms, after this bill should pass, than it had been hitherto, he should now, as he had done on former occasions, support the measure.

Mr. Sykes said, that it was most unaccountable that gentlemen should think the bill would act against the landed interest. What was the situation of that interest at this moment? By law they were interdicted from paying more than 5 per cent. interest for money; but in point of fact the law was frequently evaded by resorting to the ruinous system of annuities,—a system which had brought some of the noblest estates in this country into complete dilapidation. He supported this bill, because he thought that so far from prejudicing the interests of landed proprietors, it would greatly serve them, and be found most advantageous to their money concerns. All other commodities (for money was only a commodity) were open to the competition of individuals, and there ought not to be an exception for money. On the whole he wished to see the subject in the hands of ministers, and then to have it fully considered by the house.

Mr. R. Gordon said, that the landed interest did not stand in need of the suggestions of the hon. member (Mr. Sykes). He condemned the hon. gents. avidity to assist the interests of the landed gentlemen with new theories; it would be better to allow the country gentlemen to take care of themselves, for surely they ought to be the best judges of what suited their own affairs.

Mr. Wodehouse was decidedly opposed to the bill, because he thought it impossible to calculate the effect it might have upon the landed interests.

Colonel Davies thought, that a provision might be introduced in this bill, to exempt the country gentlemen from its operation (a laugh). They might still be permitted to pay 13 or 14 per cent. upon mortgages, but surely the trading classes might be permitted to borrow money on such terms as they thought more con-

ducive to their interests, than was permitted as the law now stood.

Mr. Monck was strongly opposed to the principle of the usury laws: they tied up the hands of the borrower of money, although they allowed the sacrifice of a man's goods at any rate he could sell them, for the supply of his necessities. Traders and country gentlemen might be very differently situated in their relative circumstances, and what would do very well for the one, might be very disadvantageous to the other. Mortgages upon land were in general given for a long run of years, but a trader's pecuniary wants might be only for a short time, and would therefore justify his paying a different price for the accommodation. One common measure for credit and security was inapplicable. The man who could give the collateral security of land in his bargain, ought to have money on better terms than the borrower who had only his personal security to offer. As to the time of introducing this bill, he thought it rather favourable than otherwise; for the late crisis had thrown great light upon the subject.

Mr. John Smith could state of his own personal knowledge, that during the panic in the money-market last December, enormous sums had been paid for pecuniary loans; indeed, he knew an instance, in which for a very large sum no less than from 74 to 76 per cent. had been paid (hear, hear). This of course had been done by a bargain in selling out stock for money. What, then, must be the state of the law, when such things could be done in spite of its penalties? In fact, if a man wanted money, he would make his own terms for obtaining it.

Mr. Wynn supported the motion; and, in so doing, he felt, that instead of injuriously interfering with the landed interest, he was conferring a great boon upon that body. He had known many instances of the bad effect of the usury laws, and particularly one about ten years ago, when a person possessing one of the largest landed properties in the country had a mortgage which was standing for thirty years. The security was for 40,000*l.*, and 20,000*l.* had been paid off, when the remainder was called in: it was impossible, at the time, to get this sum at the usual rate of interest, and it was borrowed at 9 per cent. by annuities. When the committee sat upon the usury laws, they had before them the evidence of eminent solicitors, who concurred in opinion that the landed interest would be benefited by the change. These usury laws were part of the old statute system, which foolishly sought to regulate the prices of all commodities.

Mr. Calcraft would not pretend to say that casual instances of individual hardship had not occurred, but these could not be remedied by any alteration in the law; nor, while Government paid 6 per cent. for money, could the public expect to borrow at less. His hon. friend (Mr. J. Smith) had alluded to the enormous sums which had lately been paid in the city for pecuniary accommodation; but this was in the gambling transactions of the Stock Exchange, where it was the daily practice to give and take in this illegal manner. This spirit of gambling there was no possibility of stopping; it must go on whatever was the state of the law, and like the games of hazard, *rouge et noir*, and *faro*, be carried on in defiance of every legal enactment. But gentlemen said, why should the trader be debarred

t, merely because it was unpalatable to usury gentlemen. Well, then, let a right in to enable traders to borrow terms they pleased, and not affecting ages of the country. Then, if the law worked well, perhaps the landed gentry would consent to participate in the ex-

At present, however, the only remedy is a bill as this would be generally to the rate of interest. They were of the terrible operation of annuities would still be found even if a bill passed, to fly to annuities to their cravings; but the amount of annuities compared with mortgages, was very small; they were not in a greater proportion as forty to one. So that, were a bill passed upon the notion which some entertained of the subject, they were passing a law for the exception, and not the rule. Were such a bill once passed, it would be that the Bank would permit the loan, which they had now out at 4 per cent, at that rate of interest? Every man who had money out upon mortgage would, as a duty he owed his family, demand better terms. It was a very simple step to bring forward this measure, and matters, so far as the interest of the country was concerned, were in a very satisfactory state. Those who were really interested were perfectly satisfied with the present law, and why, therefore, disturb it? I said, that his right hon. friend (the Earl of the Exchequer) had been too long in most important matters concerning the state of the country, to allow this subject that attention which it required to enable him at the present time to give an opinion upon it. He hoped, that the learned gentleman would postpone his measure,—he did not mean for the present, for a short period,—in order to give it for its consideration. Upon the principle of the usury laws as they were, would not now say any thing further, that whether defensible or not, they had within the last three months been discussed.

It was then given to bring in the bill: the recommendation of the Chancellor of the Exchequer (April 17th) it was afterwards postponed till next session.

TUESDAY, MARCH 7.—Earl Grosvenor presented a petition from certain merchants against the usury laws. He said the petitioners in the view they took of this important subject, and thought that if those laws would be advantageous to the country.

Mr. of Limerick totally dissented from the measure expressed in the petition, and by no means. If any moment more improper could be chosen for suggesting an amendment to the usury laws, it was one like the present, when every interest was suffering. The measure suggested would be most injurious to the landed gentry.

A petition was presented, on the following day, to the House of Commons, by Mr. Mon.

26.

THURSDAY, MARCH 16.—The Marquis of Londonderry laid in his hand a petition from the Chamber of Commerce at Manchester, against the usury laws. Those laws had greatly aggravated the distress which prevailed among the mercantile classes. Few of their lordships could be aware of the great losses which had taken place within the last six months in consequence of that unfortunate attempt of the law of England to fix the value of capital,—to make that fixed which was in its nature unfixed and variable, and which, in defiance of all law, must remain unfixed. The law said, that if persons found it peculiarly necessary to borrow money, they should not do so on terms above the fixed rate. What was this but saying that they might borrow money when they had no occasion for it; but that, when their exigencies required them to borrow, they should not? Thus, in times of great pressure, no means but such such as were illegal were left for raising money, and the law compelled persons in difficulty to resort to the most ruinous terms. This was as inconsistent as it would be to say to a person insuring his life, that no insurance should be effected for less than ten years' purchase. The principle was the same as telling such a person that when he was in good health he might effect his purpose, but that, at a moment of sickness or in advanced age, at any time when insurance became most necessary for the sake of his wife and children, he should then be deprived of the opportunity of taking such a step. The profit on capital must, like every thing else, depend on the relation between the supply and demand: and, if sound principles of commerce were followed, the interest of money would always readily adjust itself to the state of trade. To try to fix it by law, to impose a maximum, was as vain an attempt as to fix the mercury in the barometer. The most advantageous course for individuals, and the best policy for Government, was to allow the value of capital to adjust itself to the wants of commerce.

The Earl of Liverpool had had an opportunity of learning the sentiments of the petitioners on the subject of the usury laws, at a meeting which took place some time ago, when persons belonging to the same body as the petitioners and others applied to Government to learn whether some way or other could not be devised to afford relief to the then existing commercial distress. Those persons assured him that they should not have made, nor would they even have had any pretence for making, application to the Government for relief, had it not been for the circumstances in which they were placed by these laws. The question was one of much difficulty, but the present state of the law could be defended on no sound principle.

### *Corn Laws.*

(Numerous petitions were presented on this subject during the session, of which those only are mentioned which gave rise to such observations as seemed worthy to be recorded).

COMMONS, THURSDAY, FEB. 9.—In reply to a question by Mr. Baring,

Mr. Huskisson stated, that a gentleman had been sent from this country with instructions from Government, to obtain information respecting the corn-trade of those countries in

Europe from which England imported grain. He had returned, after making all the necessary inquiries, and only a few days ago put into his (Mr. Huskisson's) hands a report of great extent on the subject of his mission\*.

MONDAY, FEB. 13.—Mr. *Birch* presented a petition from Nottingham, complaining of the lamentable state of trade, and the distress of the labouring population. He himself had lately visited the place, and could bear witness to the truth of the petition. Skilful mechanics, who before maintained their families in credit, and could allow them, comparatively speaking, luxuries, were now at work on the road for 1s. a-day. They attributed this state of things, in great measure, to the operation of the corn laws. One strong instance of absurdity was pointed out by the petitioners—that of Government attempting to restrain the importation of corn, whilst they were actively engaged in removing all prohibitions from the importation of manufactured articles. The petitioners pointed out the impossibility of competing with the foreign manufacturers, while no competition was allowed in corn.

LORDS, MONDAY, FEB. 20.—Lord *King* presented a petition from the town of Brecon against the landlords' act—the job of jobs—the corn laws. The noble earl (Liverpool) had expressed a hope that this subject, when it came to be discussed, would be considered dispassionately; and, for his part, he was very desirous to attend to the recommendation when the day of discussion should come. The question was—When would that be? In the course of the last session he had been given to understand that the great discussion was to take place in this; but now, when the appointed time had arrived, he found that there could be no discussion until the next session.

THURSDAY, FEB. 23.—Lord *Suffield* presented a petition from the parish of Leeds, in Ashton-under-Line, Lancashire, for an alteration in the corn laws. However much his (Lord Suffield's) interest might be involved, he should not oppose any measure calculated to produce public good. He did not boast of any peculiar disinterestedness. He only meant to express his conviction that it was impossible for any class of persons in this country ultimately to thrive at the expense of the other classes. It was his earnest wish that the question of the corn laws should be strictly examined, chiefly with the view to the obtaining a steady price, and preventing violent fluctuations.

The Earl of *Lauderdale* wished that noble lords would not take the opportunity, on presenting petitions, of making those little harangues, which were more likely to prejudice than elucidate the question to which they related. He, who had also an opinion of his own on the subject of the corn laws, had thought it right to reserve the statement of it until the subject came regularly before their lordships. The noble lord who presented this petition had chosen to assume that the corn laws were not advantageous to the public. Now, if the noble lord looked at the state of prices before the corn laws were passed, and compared them

with what had been their state since, he would find that the country had little reason to complain of the effect of those laws as to price, and certainly least of all with regard to fluctuation. He was convinced that no member of that house would look to any other object in the discussion than the public good. For his own part, he never did, and never would give a vote on any other ground than the conviction that the view he took of the subject best accorded with the general welfare.

Earl *Grosvenor* presented a petition from certain land-owners in the neighbourhood of Stockbridge, Southampton, possessed of property to the amount of half a million, praying that no alteration should be made in the corn laws. For his own part, he thought it would be advantageous to allow the free introduction of corn, subject to such protecting duty as the burdens on agriculture might render necessary.

FRIDAY, FEB. 24.—Lord *King* presented a petition against the landlords' act—the bread-tax, or the corn law, from the operative weavers of Perth.

The Earl of *Limerick* begged to know whether the petition contained any proposition for compensating the landlords on account of the loss they would sustain by an alteration of the law?

Lord *King*.—"No. The weavers of Perth have too much good sense to put so absurd a proposition into their petition."

TUESDAY, FEB. 28.—Lord *King* presented a petition against the landlords' act, from the city of Rochester, in Kent. The people of that county had reason to complain of the corn law, for they had peculiar opportunities of knowing what the prices of provisions were in another country. They could not but severely feel the galling effects of the English law, as on the opposite coast, at Calais, corn was sold at half the price they had to pay for it.

The Earl of *Darnley* wished to put it to the good sense, the good nature of his noble friend, to say, whether he thought the constant agitation of this subject,—whether the seizing every opportunity for remarks of the kind he had just made, could be productive of any good; whether, in the present state of the country, when he knew that what he said would be widely circulated among great numbers who were not able to purchase bread at any price, he could expect any thing but evil from representing their lordships, the members of the other house, and all landlords, as combining to keep up the price of corn, and to starve the poor?

Lord *King* was aware that what he said on presenting those petitions was not agreeable to many noble lords; but that circumstance was with him a strong reason for pursuing it. He was the enemy of the corn laws, and wished to abolish them. Other noble lords were friends of those laws, and it might be a very good way for them to say nothing when petitions were presented, but that way did not suit him at all. On the contrary, he thought it his duty to lose no opportunity of bringing the subject forward, and stating his opinion upon it.

The Earl of *Lauderdale* confessed that the noble lord had a very different idea of the proper mode of debating a question from what he had. Last session the bench of bishops formed his topic. At a preceding period he chose to make the noble lord on the woolstack the subject

\* Mr. Jacob's Report on the Trade in Corn, &c. ordered by the House of Commons to be printed, 14th March, 1826.—*Parl. Paper*, 159.

of his remarks. The noble lord was, however, very much mistaken if he thought this a way in which important questions could be discussed—if he thought that mere sarcasm, and worse than sarcasm, would have any weight with that house. These lordships were told that they wished to starve the poor, and who was it that said so? A noble lord who had raised the question between gold and paper, and who, when gold was not to be had in the country, refused to take payment of his rents from his tenants in other money than gold.

The Duke of Atholl rose to speak to one point connected with the petition from the weavers of Perth, which the noble lord had presented the other day. He could inform the house that a few years ago, when those very people were in distress, no less than 1500 of them were maintained by the landed interest of the neighbourhood, and he had in his possession letters from them which were full of expressions of gratitude for the kindness they had experienced. It was a poor return for these very men now to petition against the persons who had fed them.

Lord King did not know whether the noble duke had maintained 1500 of the Perth weavers or not; but he would perhaps have the opportunity of maintaining 3000 this year.—The noble earl (Lauderdale) had represented him to have caused the passing of the Bank restriction act. There never was a greater mistake, for that act passed, as the noble earl must know, in 1797. The circumstance to which the noble earl alluded occurred in 1811. The noble earl well knew, and if he did not, a noble lord opposite (Bexley) could inform him, that on a certain day of June in that year the then Chancellor of the Exchequer caused to be placed on the journals of the House of Commons a resolution which declared paper and gold to be equal in value. Struck with the absurdity of this proposition, he gave notice that he would not receive paper in payment of his rents, and the consequence of this notice was, that the Chancellor of the Exchequer's resolution was within one month brought to the test. It was then that a noble lord took up the subject, and an act was passed, which, though it could not make paper equivalent to gold, at least prevented the public from getting gold. The noble earl, too, had misrepresented him on another point. He certainly had not said that the landed interest wished to starve the poor, whatever he said of the tendency of their acts. He undoubtedly considered their job as the cruellest monopoly in existence.

COMMONS, THURSDAY, MARCH 2.—Mr. Brougham presented a petition from the operatives of the Staffordshire Potteries, praying for an alteration in the corn laws.

Mr. Robertson contended that there could not be a greater grievance inflicted on the country than cheap bread (hear, hear). Who were to purchase pots if corn became cheap? It was not cheap corn, but good rents, good profits, and well-paid labour that were required to restore the country to prosperity.

Mr. Hume denied the doctrines of the hon. member. Cheap corn would cause the manufactures of the country to flourish, since every person who imported corn would be compelled to take our manufactures in return for it.

Mr. Calcraft referred to his uniform support of the lowest import price, when the question

of the corn laws was before the house in 1815, as a proof that he was not an advocate for high prices. At the same time he thought that those who fostered the prejudices of the country upon this subject, did not take the best mode of advocating their own interests. It was quite impossible to have a low price of corn with a taxation of 60,000,000*l.* a year (loud cheers). It was unfair to say that the country was in the gripe of rapacious landlords, and that the landlords were the only obstacles to its having cheap bread. Give the landlords of England the same chance as the landlords of other countries, and they would sell their corn as cheap. The landlords of this country had long been renowned for their generosity, and he knew of nothing which they had recently done to impair that character.

Sir T. Lethbridge objected to the position that, supposing we permitted the importation of cheap corn, those who imported it must take from us the value in manufactures. The position, he contended, was contradicted by fact: for the corn that had been imported into this country had always been paid for, not by manufactures, but in coin of the country.

Lord Milton said that, until the hon. bart. had given him the information, he did not know that coin was the produce of England. He had always understood that gold was imported into England, and therefore if the corn imported into this country were paid for in gold, that gold must first have been purchased by the manufactures of the country.—Another hon. member, who had put forward the claims of the agricultural labourers,—and really when the claims of the agricultural labourers were put forward in that house, he suspected that the profit of the landlords was the thing really meant,—another hon. member, he said, seemed to think that the agricultural labourers were interested in a high price of corn. He (Lord Milton) was himself a landed gentleman, and he must say that it never could be made plain to him that any class of the community was benefited by the high price of corn except the owners of the land. The farmer was clearly not benefited by it; he obtained the average rate of profit for his capital, but all the excess of the price of corn went into the pocket of the landlord, and of no one else.

Mr. Gooch observed, that every landlord in the house could positively contradict the declaration that the landlord alone was interested in the high price of corn. On the contrary, they were convinced that their interests and those of the manufacturers must go hand in hand. He only wished to see the growers of corn encouraged, because if they were not, 4,000,000*l.* or 5,000,000*l.* of gold must, in the event of a scarcity, go out of the country to purchase corn, and so produce an embarrassment in the currency.

The petition was then ordered to be printed.

LORDS, FRIDAY, MARCH 3.—Lord King rose to present a petition against the most gigantic of all jobs. It came from the working community of Manchester and its neighbourhood, and was signed by 40,000 persons, and he was informed would have been signed by 20,000 more, had it not been for the delay and expense of collecting them. He thought that the character of that house would very much depend upon the result of their determination respecting the corn laws. The public were

good judges, not only of their decisions, but of their motives also. He had no doubt that some noble lords would endeavour to prove that the real interest of the manufacturers and labourers consisted in eating the dearest corn, and in being confined to the narrowest possible market. To him nothing could be more absurd than this; for when the price of corn was dear, the labour of those who consumed it must be increased, as they could not get proportionate wages. There could be no greater injustice than this.

The petition was then read.

COMMONS, MONDAY, MARCH 6.—*Mr. Hume* presented a petition from the weavers of the borough of Pollockshaws, stating that their wages were now only 5s. per week, and that many of them did not even obtain that reduced rate. They therefore prayed the repeal of the corn laws, which of all the taxes paid by the people of England was the most burdensome, and which he could designate properly in no other way than as a bread tax.

*Mr. Bennett* said, that if the protection which the land had enjoyed was not continued, not only would the manufacturers find no market for their goods, but it would be impossible that the most important taxes of the state could be paid. It was by the land that the interest of the debt was paid—the church supported—the poor maintained—and the power of the laws, by which the manufacturing interests as much as any others were upheld, was kept in its due force. It was the great bank upon which every thing was drawn for. In one point of view, indeed, it might be advantageous to do away with the corn laws, because the certain result of that measure would be to get rid of all the taxes together by destroying the only means of paying them.

The petition was ordered to lie on the table.

*Sir R. Wilson* presented a petition from certain journeymen boot and shoemakers, praying for the repeal of the corn laws. He disclaimed any thing like the language of invective or asperity against the landlords of England. He believed that they were generally as benevolent and as prompt in the discharge of all charitable duties as any set of men in the country. He had no other wish than that a fair remunerating price should be paid for corn, but he wished also that the labourers should receive wages in proportion.

*Mr. Calcraft* said, that the effect of the corn laws was quite as beneficial to the manufacturers as it was to the land owners; for the latter, as they were the most opulent class in the community, were also the best customers to the manufacturers. For example, these petitioners, who stated themselves to be boot and shoemakers, had very little reason to complain as they did. If he wanted a pair of half boots, with spurs to them, they would cost him as much as he could sell a quarter of his corn for.—The price of bread bore no kind of analogy to that of corn. He could give no reason for this, but he would undertake to prove the fact. Whether the blame rested with the miller or the baker he did not know, but he was quite satisfied that bread was sold at a rate which was by no means justified by the price of corn.

*Sir M. W. Ridley* :—If the Promissory Note bill should pass, it would soon be found that the price of corn would be as low as the petitioners could wish, while they would find that

their wages would have accompanied it in its fall (hear, hear).

*Colonel Davies* said, that if the country gentlemen would come down to the house and oppose the enormous estimates which were presented to the house, the reduction in the taxes would render the burden of the corn laws so much lighter, that they would not be felt; but while he saw them here day after day supporting the extravagant expenditure of the ministers, he was neither surprised nor sorry to hear the corn laws complained of. The hon. member (*Mr. Calcraft*) only a few evenings ago had voted in favour of the enormous establishment which ministers chose to keep up in this time of profound peace.

*Sir F. Burdett* was of opinion that the distressed situation of the labouring classes arose from causes perfectly distinct from the high price of corn. They laboured under a mistake when they raised the cry for cheap bread. It was very natural for them to do so in their distressed state; but what he complained of was, that gentlemen who ought to be much better informed, should encourage the delusion under which those persons laboured in supposing that with cheaper bread they would still have the same rate of wages as they now received (hear, hear). The manufacturers who expressed so much compassion for the state of their workmen, in the next breath stated that they expected to derive benefit from a reduction of the rate of wages in consequence of a reduction of the price of corn (hear, hear); a reduction which would enable them to come into competition with the foreign manufacturers on fairer terms than at present. It was to be lamented, that any class of persons in this country, or in any part of the king's dominions, should be unable to maintain themselves in comfort by the exercise of their honest industry; but it was not fair to charge such a state of things upon the corn laws, for the purpose of enlisting the feelings of sympathy against that system. Every man in that house must wish that his poorer countrymen were well off—that every one of them had a fowl in his pot, not on Sunday alone, but every day in the week. The sort of declamation, however, to which he had alluded, was idle at the best, and moreover was calculated to excite mischief, and stir up feelings of animosity against the most important class of the country, on whom alone our power depended—he meant the landed interest (cheers). He knew the character of the land-owners—for he belonged to that interest himself—and he could say, with perfect impartiality, that throughout Europe, throughout the world, and even in that portion of the new world which he was inclined to view with a favourable eye on account of its liberal institutions, there was not a set of men to be found who could be compared with the landed proprietors of England for the exercise of all the virtues—and most important ones they were—connected with their situation (cheers). When the question came to be discussed, he should be prepared to support the propriety of a free trade in corn—not because he thought the measure would depress the landed interest—he believed it would have no such effect; if he thought that it would, he would adopt a different line of conduct, for he held it to be necessary that the landed interest, which was the foundation and support of all the other interests of the country, should, if need be, be upheld

He would support a free trade in corn, because he was friendly to the principle of free trade on all subjects of commercial policy, and he believed that the apprehensions which the landed interests entertained of a free trade in corn, would turn out to be altogether groundless.

The petition was ordered to be printed.

**LORDS, THURSDAY, MARCH 9.**—Lord King had a petition to present from the carpenters and joiners of London, who stated that the law which excluded foreign corn injured them by affecting the remuneration of their labour. The real object of the corn laws was high prices, and high prices were not to be had without the exclusion of foreign corn. But by excluding foreign corn, you exclude food. Some people, however, said that this exclusion of foreign corn only caused more to be grown in England. But it could do so in no other way than by forcing bad land into cultivation, and if bad land were forced to produce food, it must be at the expense of additional labour—of labour far more than equivalent to the value of the food produced.—Some persons, however, said, if you alter the corn laws you will do no good, because to lower the price of corn will only lower the price of labour. But this was an erroneous opinion. The price of labour now afforded the labourer only a bare existence, whereas heretofore he got enough, not only for his subsistence, but for comforts. It was certainly true that if corn were cheap, the money price of labour would fall, but its real remuneration would increase.

The Earl of Caernarvon could not acquiesce in the term "job" given to an act of Parliament, which had not been adopted until after the most serious consideration. Parliament might have erred, but if upon due consideration, it should be found that the corn laws were not consistent with the general interest, Parliament would doubtless alter them. But his noble friend should consider what had been the effect produced by the Bank Restriction Act, the operation of which had lasted for 25 years. After the operation of that act had brought into cultivation land which was never before cultivated, and had also brought into existence an immense agricultural population, which would be thrown out of existence by the discontinuance of that cultivation, he did not think that their lordships could suddenly rid themselves of all the consequences of that measure, without producing throughout the country, greater distress than could be experienced by the journeymen carpenters of London, who he believed were as well off as most workmen.—But at the time of agricultural distress, did not persons in trade also suffer? Did they not complain that the home market failed them? This showed how closely the interests of all parties were bound together, and that the present question was one of difficult solution.

**COMMONS.**—Mr. Hume presented a petition from the working manufacturers of Gorbals and other places, in the neighbourhood of Glasgow, praying for an alteration in the corn laws.

Mr. Curwen said, that if permission were given to import corn into the country without restriction, the result of it would be visible in a few years in the production of a famine.

Mr. Peel having objected to the desultory discussions on this subject, which had so fre-

quently occurred of late, in both houses of parliament,

Mr. Calcraft said, that if any evil consequences ensued from such discussions, they must be attributed solely to His Majesty's ministers, on account of the delay which they had occasioned in the settlement of this important question. If the country could once know what Government proposed, there would be an end of all discussions; but it was the uncertainty which produced the inconvenience. It was not, to be sure, difficult to guess from their measures what they intended to do. He had no doubt that the rt. hon. gent. (Mr. Huskisson) meant to approximate the laws relating to corn as much as possible to those which he had established on other subjects—that he would place a protecting duty on corn, and then leave its importation, subject to that duty, unrestricted. But why should this be concealed? Why should not the people be told what it was the intention of Government to do? There had been so many instances (and some of them very recent ones) of the people being reasoned out of their erroneous opinions, that upon a fair statement of the advantages to be derived from a change of the system with regard to corn, he (Mr. Calcraft) had no doubt they would readily concur in it.

Lord John Russell agreed that it would be advisable to have the question settled as soon as might be practicable; but since a delay had taken place, he hoped ministers would avail themselves of it to consider the nature and extent of the burdens which at present attached to the land. Before any alteration could be effected in the corn laws, those burdens must be alleviated, and the agriculturists brought upon the same footing, with respect to the demands upon them, as the manufacturing classes.

The petition was then brought up.

**FRIDAY, MARCH 10.**—Mr. Hume having presented petitions against the corn laws,

Mr. Heathcote, after condemning the language that had been indulged in against the landlords, said, that so far from the corn laws operating injuriously on the lower orders, he might call them a tax for their benefit; since the greater part of the poor-rates were paid by the growers of corn. He should like to know how those rates were to be defrayed, if the grower was to be deprived of a remunerating price.

Sir John Newport said that in Ireland the people were best off when the price of corn was high, and worst off when the price was low. This arose from their not being a manufacturing but an agricultural population.

Mr. Monck observed, that the effect of the corn laws in Ireland was to make the rich richer, and the poor poorer—a result which nobody could call advantageous to that country. He could wish to make Ireland partly an agricultural and partly a manufacturing country; but that could never be done by giving a large premium for its agricultural produce.

The petitions were then ordered to be printed.

**LORDS, TUESDAY, MARCH 14.**—Lord King presented a petition against the corn laws. On the present occasion, he said, he should avoid any of those abstract principles of political economy which had been so much complained of, and would confine himself to history and

plain matter of fact. Turning, then, to history, he must remind their lordships of the period when the corn laws were passed. That event took place in those dark ages of legislation, when it was declared that a 1l. note and a shilling were equal in value to a guinea. Tradition said, that after a very expensive war, which the landlords liked very well, but did not like to pay for it—they took counsel how to avoid that payment. Two ways occurred to them of accomplishing their object. The first was by defrauding the public creditor; the second by taxing the consumers of corn. Now it happened that to the first course the Government objected; and the public creditor was therefore saved, but the consumer of corn was sacrificed. It appeared that at this time a close alliance had been formed between the Government, the landowners, and the clergy. The object of the Government was high taxes; of the landowners, high rent; and of the clergy, high tithes. Now with regard to rents and tithes, the landlords and the clergy were as obdurate as ever; but the Government would break the compact, if they could; for although it was said that high taxes could not be had without high prices, the Government were justly convinced that high taxes could be paid with greater ease, if high prices were got rid of.—In this opinion, as well as in that expressed by the petitioners, he (Lord King) heartily concurred.

TUESDAY, MARCH 21.—Lord King, in presenting a petition against the corn laws, from the parish of St. Luke's, begged noble lords to reflect what the situation of the country would be if the price of corn were to rise considerably. That such an event might happen, was no vain fear. He could state it as matter of fact, that there was at this time less corn than usual in granary in the country,—that the markets were less crowded with supplies,—and that in the warehouses of the metropolis there was less corn than had ever been known at any former period. Now, he would seriously ask the house to consider what the state of things would be were corn to rise considerably before harvest? By such a rise, this country would be thrown into a state of greater difficulty than it experienced in 1796, 1797, and 1801, because the population was now much greater than it had been at that time; and because there had been for a long time past no importation from abroad. Besides, he believed that a sufficient supply could not be at once obtained by importation; for he understood that it would appear from the paper, about to be laid on the table, (Mr. Jacob's Report), that the state of the foreign markets did not hold out much expectation of large importations, and, at least, that they need not be looked to for any sudden supply to a large extent.

Lord Calthorpe thought that it was not for the interest of the landlords to maintain the present corn laws, and that importation, under a moderate duty, would be more to their advantage.—Ministers ought not to hesitate in entering upon a revision of the corn laws; for, if they were defeated in both houses of parliament in the attempt to change the system, that attempt would only raise them still higher in the public esteem. He did not expect that any great difference in the price of corn would be the result of an alteration of the law, but he

regarded an alteration as an indispensable step in that system which ministers had adopted with respect to commerce.

Earl Grosvenor presented a petition, praying for a revision of the corn laws, from the silk-weavers of Macclesfield. The petitioners complained that the principles of free-trade were extended to them, and not to other classes of the community.

The Earl of Malmesbury said, that this question, as to free-trade, stood on a very different footing, with regard to the landlords and other classes: in fact, the protection now given to the landed interest ought to be carried farther. The landlords, with regard to the free-trade, were placed in very different circumstances from any other class. They had never consented to a free trade in corn; neither had they forced a free trade upon other classes, while they had refused to submit to it in their own commodity. He was not favourable to free trade under any circumstances; but he believed the manufacturers and others had no right to complain; for, as far as he recollected, they had consented to the alterations lately made in our commercial regulations. The landlords in general were neither the authors nor the approvers of free trade; and if he had not opposed such measures in that house, it was because he had not heard any body of men complaining that they injured their interest. If any body of men came before their lordships, and complained of any such measures injuring their interest, he would support them in their opposition.

FRIDAY, APRIL 14.—Lord King presented a petition from Preston, against the corn laws—against the pauperism price of corn, which was 60s. the quarter—and against the famine price, which it reached, when it got to 70s. and upwards; and this price he fully expected that corn would this year reach. When the price of corn and labour in France and Germany was less than one half of the price in this country, by what magic could our manufactures be prevented from being transferred to places where there was security for property, and where the profits of industry would be great in proportion as wages were lower? What right had the members of the legislature to persist in maintaining a system of laws, which must condemn this country to all the miseries inseparable from a declining state of society?

The Earl of Lauderdale observed, that if the noble lord knew any thing of the history of the corn laws, he could not stand up in that house and assert that the object of those who wished to maintain those laws was to give dear bread to the poor. In the reign of Charles II. the protection against foreign corn amounted to 8l. the quarter; and from the years 1760 to 1775, when not a particle was imported, but when 600 quarters were exported, the price of grain did not exceed 33s. the quarter. Upon a fair examination, the noble lord would find, that the maintenance of what he called the dead-weight was the way to get cheap bread to the country. The noble lord was equally wrong, when he said that the price of labour depended on the price of grain. The price of labour, like the price of every thing else, depended upon the supply and demand. If the noble lord referred to documents which were before the house, he would learn that in those years when grain was dear, labour was

generally cheapest; and *vice-versâ*. On a former occasion, to illustrate this principle, he sent to Glasgow, and got the price of weaving a certain article for thirty years, and compared it with the Windsor price of wheat. The result was, that precisely as corn rose, the price fell. This was not the case with manufacturing labour alone,—the principle applied equally to agricultural. A Mr. Mill, who had been examined before a committee of the house, had stated that in enclosing a farm, the portion of work which in a cheap year cost five shillings, he got done in a dear year for half-a-crown.—Instead of meeting the question on its merits, the noble lord chose to heap aspersions on a body of men distinguished for their generosity, who had made a more generous provision for the poor than any other men, and whom the noble lord nevertheless chose to stigmatize as grinding the poor.

**Lord King** :—When the noble lord (Lauderdale) said, that a protecting duty of 5*l.* the quarter made corn cheap in the days of Charles II., he should have recollected, that then plenty of good land lay uncultivated, and that there was not one quarter of the present population. At such a time the protecting duty would make good land be cultivated; and as cultivation was extended, corn would become cheap. Now, on the contrary, all the good land in every part of the country had long been in cultivation; and the evil of the corn laws was, that bad land was resorted to for raising corn, and labour uselessly thrown away on its cultivation. Another crotchet of the noble lord was, that dear corn made labour cheap. The price of labour might not correspond with the price of grain in a particular period, but always accommodated itself to it in a series of years. If it did not,—if there was not this relation between food and labour, then those who made corn dear, knowing that labour was at the same time to be cheap, were guilty of tenfold more injustice and cruelty to the poor, than he had ever ventured to impute to them.

**TUESDAY, APRIL 18.**—Lord *Callthorpe* presented a petition from the merchants, manufacturers, and other inhabitants of Birmingham, praying for an amendment of the corn laws. He regretted much the disposition to procrastinate which ministers had manifested on this subject. Their conduct was, in this point of view, most invidious toward the landed interest. It was plainly saying to them—"You are so obstinate and ignorant, that it is impossible for us to hope to convince you of what is fair and just; we are therefore obliged to delay a measure which we consider necessary." He did not consider this slur on the landed interest just; but such was the inference to be drawn from the conduct of ministers. He wished the noble lord (Liverpool) to reflect on the mischief which might arise from his procrastination, if the quantity of corn in the country should prove deficient.

The Earl of *Liverpool* said, that he had lived long enough to know the necessity of looking to times and circumstances in bringing forward particular subjects. In this way he had looked at the corn laws, and had at an earlier period of the present session no difficulty in saying that he did not think this a time in which that question could be with propriety brought under consideration. This was an opinion in which

his friends who acted with him concurred, and which was very generally acceded to by all parts of the house at the time when it was stated.

—It was said, that in commencing the system of free trade, the Government should have commenced with the corn laws. It did not, however, necessarily follow that those who approved of the principle of free trade should think that in carrying it into practice the experiment should first be made on the corn laws. It was his wish to bring this subject under the consideration of parliament at the time at which he thought it could most advantageously and conveniently be discussed; and it was for him to exercise his discretion as to whether this was a time when the interests of the country required him to propose any measure relative to those laws.

**COMMONS.**—Mr. *W. Whitmore* rose for the purpose of bringing forward a motion regarding the corn laws.—He was aware that the agitation of this subject at the present crisis, when distress and famine were abroad, and when the want of employment and the dearness of provisions combined to create much suffering, was attended with considerable difficulty and inconvenience. On the other hand the good which would ensue to the country at large by the success of the measure which he meant to propose, would outweigh the danger to be apprehended from the discussion of the question.—He would endeavour to compress his statement into as narrow a compass as possible; but considering the variety of topics which it must necessarily embrace, he confessed that to be brief, and at the same time clear and satisfactory, was his greatest difficulty (hear, hear).—He should first consider the question in reference to the system of free-trade. He trusted it was unnecessary for him to dwell on the importance and advantages of that system; but could they in consistency, in policy, or in justice, refuse to carry those principles into execution with respect to the trade in corn? If they did, they would make themselves the laughing stock of the world, instead of an example to be imitated by all other nations (hear, hear). Government were pledged to carry those principles into complete execution; the house was pledged—every man who had voted in the majority of the division on the Silk Trade question this session, was personally pledged to this course. With what colour of justice or policy could the house now turn round and say, "We have deliberately sanctioned these principles, but we will not proceed to apply them to other and greater interests (hear, hear). He was convinced that if England would really act upon principles of free-trade, and extend them to the trade in corn and sugar (hear, hear), foreign nations, for their own security, must follow the example; and he must take leave to say, that no question had ever come under the consideration of the British parliament in which foreign states were more deeply interested than that to which he now prayed attention. The corn law which we passed in 1815, had inflicted upon foreign countries—upon Prussia, Poland, and Germany—a greater evil than the anti-commercial, anti-social system of Bonaparte himself (hear, hear). He held a report in his hand, stating the views of a most respectable individual (Mr. Jacob) who had been sent out, very laudably, by the Government to those countries, to collect infor-

mation on this subject; and that information fully bore out the assertion, that England, professing to act upon liberal principles of commerce, and calling upon other countries to adopt her system of free trade, had passed a law the most extravagant that ever was submitted to an enlightened legislature, a law which inflicted upon those countries a greater evil than even the Milan Decrees (hear, hear). Mr. Jacob said, "he had found every where the landowner and corn-merchant in the deepest distress; and this distress was too general, to allow the suspicion that it was not well-founded." Last year he (Mr. Whitmore) had stated to the house, that there was a falling off in the quantity of corn produced; and he had also stated, on good authority, that a considerable change had taken place in the state of culture in Poland. Mr. Jacob stated, that "a great change had taken place in Poland; much less wheat was cultivated, and more sheep were fed; and the great majority of farmers and landowners were nearly reduced to ruin." Another part of the report indicated the great distress of Poland, namely, that the Crown lands, which were less heavily taxed than any other, and which ought consequently to produce higher rent, had considerably diminished in value. There was one instance of Mr. Jacob's own observation, which was well worthy the attention of the house—"A nobleman, the proprietor of a large demesne, had let some lands about six years ago, at the yearly rent of 850*l.*; at the period when Mr. Jacob was there, the lease having expired, the landlord was obliged to let to the same tenants, no others being to be had, the same lands, amounting to 7000 acres, for 170*l.* a year" (hear, hear). He might multiply details on this subject if it were necessary, but he had adduced enough to shew the great depression in the corn trade which existed in Poland and other countries.—Having stated his view of the subject as bearing on the principles of free trade, he should now proceed to shew that experience had sanctioned the inference that the country had always prospered best when restrictions, such as those existing at present, were not in being. In the first place, then, he would be justified in stating, that from the period of 1773 to 1815, there was virtually a free trade in corn. If gentlemen had examined the subject, they must know that the law of 1773 contained three duties; one high, the other two low; the first being a duty of 24*s.* 3*d.*, which was charged only when corn was as low as 30*s.*; the second duty was 2*s.* 6*d.*, payable when the price of wheat was 44*s.*; the lowest was 6*d.*, payable when the price was 48*s.* Thus the law continued till the year 1791, and it was obvious that in very few years, could the higher duty have been paid at all—in fact, it never was paid; for the prices were so low, that no importation of corn could have taken place if there had been no corn law at all. In 1791 the law was altered, whereby the import prices were changed. The first duty continued as before; but the second was charged when corn was at 50*s.*, and the third when it rose to 54*s.* With the exception of two years, from this period to 1804, corn might be imported at 2*s.* 6*d.*, and more frequently at 6*d.* duty. In 1804 the highest duty was imposed, when corn sold at 46*s.*, the second at 60*s.*, and the lowest at 66*s.*; but the price at home continued so high, that from that period up to 1815 the low duty was charged. During this period, from

1773 to 1815, what had been the progress of the country, in arts, manufacture, in commerce, in population, and in wealth? Had she not made advances in all these, unexampled in the history of nations? Was he not, then, justified in saying that a free trade in corn, or what was almost equal to a free trade, might be carried on without injury to the agricultural classes? For let it be remembered, that waste and poor lands were yearly brought into cultivation. These considerations, if maturely considered, would tend to allay the alarms of those who feared that the power of importing corn at a low duty would throw the poor lands out of cultivation, those very poor lands which were brought into cultivation when foreign corn was imported at a duty merely nominal.—He now came to a part of the question which he touched with great reluctance, nor would he dwell upon it at that length which the documents in his hands would justify. One of the most unfortunate consequences which had flowed from the corn laws, was, not only the total destruction of the external trade in corn, but a severe blow had been given to the internal trade. He had been reproached with having predicted fatal consequences as likely to result from the corn laws long ago. He had stated in 1823 and 1824, and he repeated it now, that if they should persevere in the present system, it was possible that at some future period, he would not say when (cheers and laughter from the country gents.)—if the house would condescend to hear him to the end of his explanation, they would better understand his meaning. He stated in 1823, and he repeated it now, that from an absurd perseverance in the existing system, the most fatal effects must follow. The data on which he then went were most correct, and the more he considered them the more was he convinced of their accuracy. It would not of course be expected, that he should point out the exact time when these results were to happen. It would be sufficient if he showed that the direct tendency of the corn laws in their operation on the external and internal corn trade of England was to produce an insufficient supply, should there be unhappily a failure of the home crops even for one season. The general practice of the corn trade at home was to reserve a stock on hand. This stock might on the average be calculated at four months' consumption of the whole country, or about 4,000,000 of quarters. He took the general average of consumption of the year at 12,000,000 of quarters, and adding 1,000,000 for seed, the whole annual consumption might be taken at 13,000,000 of quarters. Now a country setting out with this quantity of 4,000,000 of quarters on hand, and being made to depend almost wholly on its own supply, might at no very distant period be so run out as to have that stock exhausted. The advantage of having the stock at all would be to make the surplus of one year meet the deficiencies of another. Those surpluses were in general reserved by the speculations of persons extensively engaged in the corn trade, whose utility to the country was inestimable. Now if circumstances occurred which should cause the leading speculators in corn to decline the trade, that would have the effect of causing a gradual diminution of the stock in reserve, as the same care would not be taken to provide for an apprehended scarcity. But these circumstances had in part occurred, and were in progress at

the present moment. It could be proved that there was a gradual decline of speculations in corn, and it must be the case; for when there was a gradual and continued decline in prices, the speculators must necessarily lose. This was the case during the period of agricultural distress; and the following scale of prices, from 1817 to 1823, would shew that the speculators in those years must have lost considerably. The average prices of the quarter of wheat were in

|                     |                      |
|---------------------|----------------------|
| 1817 . . . 94s. 0d. | 1820 . . . 65s. 10d. |
| 1818 . . . 83s. 8d. | 1821 . . . 54s. 5d.  |
| 1819 . . . 72s. 3d. | 1822 . . . 43s. 3d.  |

In 1823 prices rose; but besides the effect of the losses of the preceding six years, there were other causes which made the corn-merchant disinclined to speculate—his apprehension of a change in the present corn laws, from a conviction of the necessity of such a change, and the quantity of foreign corn in bond. Corn in bond might be bought at from 20s. to 30s., while that in the market could not be bought for less than 50s. or 60s. Of course, in the uncertainty as to what might be done about granting a free trade, a merchant would choose rather to speculate in the cheaper article; because if a change took place in the corn laws, his speculations in the cheap corn would be successful, while in the high-priced they would be ruinous. He (Mr. Whitmore) had made inquiries on this subject from some of the most respectable persons in the corn trade; and he was assured, that from the causes he had mentioned, the speculations in corn were few, and to a very small extent, compared with former years. All those with whom he had consulted seemed to be firmly convinced that the operation of the corn laws of this country had not only destroyed the external trade in corn, but had given a blow to the internal trade, from which it would with difficulty recover; but from which there was no chance of its recovery, if the laws were allowed to remain in their present state. Now if this were so, we might come upon a period of positive deficiency in the harvest, and what then would be the situation of the country, when from a change in the culture of land abroad, we could not hope for any supply from those places to which we usually had recourse in times of such difficulty? He did not mean to say that such an event was to be expected immediately. That would be too bold an assertion for any man to hazard; but he confidently stated, that we were now in a situation in which a sudden deficiency of even one harvest might be attended with most disastrous effects. The stock in the hands of dealers was, he had reason to believe, very low. As to the farmers, he knew little about them, but any thing that was known of their transactions in corn afforded no proof that the stock in the country was not low. It might, and he hoped it would happen, that the approaching harvest and the next after that might, by abundant crops, considerably add to the stock in hand, but still we should be in a state, living as it were from hand to mouth, and placing ourselves in circumstances of great peril, which would be increased every year that we allowed to pass without a change in our present system. He now came to the alteration which, in his opinion, ought to be made, and which he had suggested last year. Without going into all the details which might be necessary if a bill were before the house, he would suggest that a pro-

sess. 1826.

tecting duty of 10s. per quarter should be allowed, conjointly with another, but a temporary measure, increasing that duty, should the price in the home market be at once considerably reduced. He would suppose the price in the market 55s.; the general and permanent protecting duty would be 10s.; but the temporary measure would increase the 10s. to 15s. on foreign corn, when English wheat was at 50s. When at 45s., he would increase the duty to 20s.; and when corn sank to 40s., he would have the duty 25s.—He must observe, that the corn laws of this country had produced restrictions on trade in other countries. This was the case in France, Spain, and Portugal, the markets of which, when our ports were shut, were glutted with corn which would otherwise have reached our ports. Now, to prevent even the chance of a sudden glut from arising while the proposed change was being made, and to allay the fears of the agriculturists, he would recommend as a temporary measure, a still higher duty than he had mentioned. It was said, that if the ports were opened, we should be deluged with foreign grain at one time, and half-fed through scarcity at another—that agriculture in this country would be ruined—that we would be totally dependent upon foreigners for support; and that those foreigners would create artificial scarcities in time of peace, and afford no grain for subsistence in time of war. To prove the absurdity of these assertions, and particularly that relating to the extent of the probable importations, he would take leave to refer to the evidence of the state of the country in former times; and that such evidence might be more satisfactory, he would take those years when the greatest scarcity was said to prevail. The period to which he alluded comprised the whole time from the year 1800 to 1820, inclusive; but he would take five remarkable years, in which the scarcity of grain was felt most severely, and of course the importation from foreign countries was the most extensive; these were the years 1800, 1801, 1810, 1817, and 1818, when prices rose to an unusual and appalling amount. In 1800, the average price of grain in this country was, per quarter, 110s. 5d.; in 1801, 115s. 11d.; in 1810, 103s. 3d.; in 1817, 94s.; in 1818, 83s. 8d. In consequence of these high prices, foreigners were induced to send into this country, or there were imported on speculation, during the years above mentioned, the following quantities of grain:—in 1800, 1,264,000 quarters; in 1801, 1,424,000 qrs.; in 1810, 1,567,000 qrs.; in 1817, 1,089,000 qrs.; in 1818, 1,694,000 qrs. If they took the amount of the importations of these five years out of the whole amount of the twenty years to which he alluded, they would find it amounted to between six and seven millions; while the extent of the importation for the whole period was only 12,577,000 qrs. In three years of scarcity and high prices, therefore, when they drew the whole supplies of grain required beyond their own production from the whole extent of the continent of Europe—for it should be recollected that the high price stimulated every country in the world to send grain to the English market—the annual average of importation of the whole period was 598,906 quarters; while the average price was 84s. 6d. per quarter (hear, hear).—When discussing the question of the corn trade, with relation to the whole world—a way in which, from what he had stated, he felt fully empowered to

consider it—it appeared that the poor countries alone exported those quantities of grain which were required in times of scarcity; while in the rich countries, such as the United States, the quantity was so trifling, compared with the whole importation, as to be scarcely worth mention. Rich countries were indeed only tempted to part with their grain from an extraordinary price to be obtained in this country; and it was worthy of remark, that those rich countries never yielded to that temptation without suffering great inconvenience, if not downright scarcity themselves, from the obstruction of their own ordinary supply. Any tendency to such importation, produced an immediate and decided rise in the country. To prove that assertion, it would be only necessary to look at the average importation from all the countries of the world which supplied England with grain, during the years from 1800 to 1820. The annual average import of wheat between 1800 and 1820 (which, it should be observed, formed the ground of all these calculations) was, from Russia, 66,573 qrs. 6 bushels; from Sweden, 12,275 qrs. 5½ bushels; from Prussia, including Poland, 204,667 qrs. 5½ bushels; from Germany, 87,092 qrs. 5 bushels; from the United States, 87,376 qrs. 6 bushels; from Canada, 23,040 qrs. 4 bushels; from Holland, 40,033 qrs. 5 bushels; from Flanders, 29,530 qrs. 1 bushel; from France, 23,071 qrs. 2 bushels; from Denmark and Norway, 18,956 qrs. To satisfy the house of the difference in the exportation of grain between a rich country and a poor one, it would be sufficient to look to the average importation from France, the richest country, during the years alluded to. If they deducted from the importation of France in twenty years the amount of the year 1810, there appeared to have been imported, on an average, only 12,000 quarters per annum. From Germany too, the next rich country, if they deducted the amount received in the year of scarcity he had mentioned, the average was only 42,800 quarters. So that it was the poor country, and the poor alone, which furnished that supply of grain which the wants of this country required—a further proof, if any further was necessary, of the policy of that less fettered importation of grain which he hoped to see the house ere long adopt, as an uniform principle of the commercial regulations of the country. Turning to that portion of the valuable report of Mr. Jacob which treated of the exports from Dantzic and Elbing, he found that the calculations extended over a period of 166 years, in which the annual average of wheat and rye exported was stated at 279,794 quarters; and that surplus, he (Mr. Jacob) observed, might be considered as forming the nearest approach that could be made to what was the usual amount of the production of corn, in those countries, beyond the consumption of the inhabitants, when no incident occurred to excite or check cultivation. The fact seemed to be, that when the price was high in England, the farmers of the various countries all over the continent were induced, by the additional demand, to send their grain to the English market; but it was the extraordinarily high price which gave the stimulus to such a speculation; and unless that high price existed, it was nearly impossible that any encouragement could be afforded to exportations, unless in the immediate neighbourhood of the great navigable rivers; and he was the more confident in such an assertion, when he looked at the

proofs of the innumerable difficulties thrown in the way of the transportation of grain, as well as the expense and loss necessarily attendant upon it. Indeed, after the most laborious investigation of the different returns, he had no hesitation in saying, that if the average price in this country was from 55s. to 66s., they could never expect a larger quantity of grain to find its way to this market than the 400,000 quarters which formed the overplus of the maritime countries and those districts near the navigable rivers; and when they considered the consumption of the country to be thirteen millions, as he had proved before, he could not find any just grounds for the apprehensions entertained upon the subject of an immense quantity of foreign corn being poured into the country, even if the price continued as low as at present. The price in the ports of the Baltic, for common grain, was stated at 13s. a quarter; but could any man say that such a price did not proceed from the total derangement of trade? and was it not evident that its continuance, for any length of time, would have the effect of turning all the capital employed upon the cultivation of wheat into some different channel? Men would grow flax—they would sow rapeseed—they would cultivate wool, or employ their land in any other way which might bring in a better rent, or raise a more profitable produce; for it was with agriculture as with manufactures. In the manufacture of woollens or cottons, if the supply became too abundant for the demand, the manufacturer would gradually diminish the quantity, until he ceased altogether to produce that particular commodity which was depreciated in price; but he could not instantly apply machinery which had been erected for one purpose to the execution of another. The agriculturist, on the contrary, could immediately turn to some other species of production, and he felt convinced that, unless in consequence of some extraordinarily high price in England, the grower of wheat on the shores of the Baltic could not be much encouraged to exceed the fair estimate of the consumption of his own country. From the details of Mr. Jacob, it appeared that the inferior quality of wheat—that quality which was not exported, unless in time of great scarcity—could not be sent even from the maritime provinces of Prussia under 43s. a quarter. He states the first cost to be, including all charges, about 24s.; which, with rent, freight, insurance, and other charges, would bring it to the English market for about 43s. That was, he begged to be understood, for the very inferior kind, and from places quite accessible to water carriage. But the better kind, and that usually sent to this country, when the ports were open, could not be landed in England for less than 48s. a quarter, in a time of no peculiar demand. But it was not alone the ordinary expenses which were to be taken into calculation. No demand for grain ever continued for more than six days, without increasing the amount of freight and the price at least forty per cent.; and, if the demand continued for twelve days, it would exhaust, as he had already shewn, the whole stock of grain which could be brought into market. Mr. Jacob, to whose invaluable report he had so often referred, stated, most distinctly, from a consideration of these circumstances, that, if a duty of ten or twelve per cent. was imposed upon the importation of corn from Poland, it would, in his opinion, put an effectual stop to

the importation of grain from Poland, except in extraordinary seasons; and it should be recollected that he stated that, after the most laborious investigation of the subject, in compliance with an order from the Lords of the Treasury, requiring him to turn his attention to the grain trade of Poland, that he might be able to say what would be the probable supply if the price in this country was 60s. or 64s. The words of the concluding portion of that report were so conclusive upon the subject, that he would take leave to read them to the house:—  
 “If a duty in this country of 10s. or 12s. a quarter was imposed, it would not allow of such a profit on the supposition of the price being from 60s. to 64s. as to induce any great exertions to increase cultivation in the districts bordering on the Vistula. The chance of a rise occasioned by war, by a winter so severe as to injure vegetation, or by a rainy harvest season, might induce those of a speculative turn to increase their growth of wheat; but those who have that turn, and have the means of indulging it, are so few, that they would produce no sensible increase in the general surplus.—I see no reason to believe, that with such a duty as I have mentioned for England, and a price of from 60s. to 64s., and with some similar regulation in France, that the surplus corn produced in Poland, including all the countries bordering on the Vistula who send their corn to that stream, would materially increase in common seasons, or very much if at all exceed the average produce of that country. The greater part of this might probably be wheat; and if the duty was alike on all the various qualities of that grain, none would be sent here, but that part which is the driest, heaviest, and whitest. The inferior descriptions would not pay for importation, unless the average in England was much more than 64s.” This opinion upon a free trade in corn, from an individual who was once decidedly hostile to any such freedom, must be allowed to have the greatest weight. He had recorded his opinions in opposition to any such measure, in a work published in 1814—he had expressed his continuance in the same conviction before the committee of 1821—and it was therefore a proof both of his sincerity, and of the force of the facts which had come under his knowledge during the period of his inquiries, that he had, in the very face of all his former declarations, given such decided testimony in favour of a system directly opposed to that which he had formerly advocated. The present average price was about 58s., but he (Mr. W.) had no hesitation in declaring that the agriculturists—and he was himself an agriculturist—would be well protected at an average price of 55s. If the price was lower, the income from land would become still more available; and he put it to the landed proprietors whether the regular payments of such prices, and the comparative cheapness of every thing else, would not be preferable to a kind of income, which, though it might be nominally high, they received but with the right hand to pay it away with the left (hear, hear). He would ask them, whether the security to property, the advantage bestowed on manufactures, the general activity given to the whole commerce of the country, would not amply compensate for a nominal amount of rent, which produced no real benefit to those who received it. For his part, so long as he had a seat in that house, he would continue to raise his voice

against a system which he had periodically held up to their condemnation, and which he hoped yet to see give way before the united force of reason and sound policy. He concluded by moving, “That the house do resolve itself into a committee of the whole house, to consider of the present state of the corn laws.”

Mr. Philips, in rising to second the motion, said that it was expected by the manufacturing interests, that if there was to be a free trade in manufactures, there should also be a free trade in corn. He conceived that the doctrine of free trade ought to be applied to grain rather than to any other commodity. Some commodities were wanted only for luxury, others only for convenience; many were not of paramount importance, and many could be entirely dispensed with. Grain, however, was indispensable to human existence, and was one of those articles which it was impossible for a nation to do without. Besides, the tendency of manufactures was to become cheaper as the demand increased; whereas the tendency of grain was to become dearer in proportion to the quantity of new land brought into cultivation. The high price of commodities, too, might exist without producing any considerable effect upon the rate of wages: whereas a high price of corn led either to a great increase in the price of wages, or to the starvation of the labouring classes. It was said, in defence of the corn laws, that the agricultural interest was subject to heavy taxation. If such were the fact, he would say “place upon foreign corn a duty equal to the amount of that taxation.” But was the agricultural the only interest in the country which laboured under taxation? The legacy duty applied to personal property only,—the stamp duties fell almost entirely upon legal and commercial men,—not to mention a variety of duties which affected the commercial interest exclusively, and from which the agricultural interest was completely free.—It had been said, by an hon. member (Mr. Curwen) that more labour was expended in the production of corn than of manufactures. His hon. friend had told him, that according to his (Mr. Curwen's) calculations, the labour employed in the production of agriculture constituted 20 or 25 per cent. of its value, and that the labour employed on manufactures constituted a much less part. He would not pretend to speak decisively upon every species of manufacture; but he would inform the house of the result of his calculations in the cotton-manufacture. The value of the cotton manufacture he would take in round numbers at 24,000,000l. Now, the value of the raw material, including the expense of freight and duty, constituted 6,000,000l. The expense of dyeing, bleaching, furling, &c. the material, the wear and tear of the machinery, cost of keeping it in repair, together with the interest and profit on the capital so employed, amounted to 4,000,000l. He had thus accounted for 10,000,000l. out of the 24,000,000l.; the remaining 14,000,000l. consisted entirely of labour; so that the labour expended on the cotton manufacture, instead of being only 20 or 25 per cent., as in the productions of agriculture, was full 60 per cent. He made this statement to prove the fallacy of the position laid down by his hon. friend; but even if the position were correct, it did not deserve the importance which his hon. friend seemed to attach to it. If the value of a commodity were to be estimated from the quantity of labour expended upon it,

and to show he said was which was brought into circulation. The greater would be the advantage to the poor was bestowed upon it the amount of taxation, and to make the ruling of taxation would turn out a very profitable speculation, a laugh. He had been taught to be sure that the great object was to obtain the comforts and accommodations of life with as little, and not with so much, labour as possible. According to the statement he had just offered to the house, 14,000,000*l.* of the capital employed in the cotton manufacture was employed in the payment of labour. Of this sum he conceived that 4,000,000*l.* were paid by the labourers for nothing, furniture, and various other articles of necessary use, in which, however, food was not included. The labourers had then 10,000,000*l.* left for the purchase of food. His hon. friend Mr. Curwen admitted, he believed, that the exclusion of foreign grain from the markets of this country raised the price of corn 50 per cent. Now if food was raised to the labourer 50 per cent. it was clear that the labourers in the cotton trade paid a tax of 2,000,000*l.* for the benefit of the landlords. His hon. friend Mr. Curwen thought the protecting duty proposed by his hon. friend Mr. Whitmore insufficient, and wished for a duty of 2*l.* per quarter upon wheat, and 1*l.* 6*s.* a quarter upon barley. In order to show the effect which his hon. friend's proposal would have upon the circumstances of the country, he would take the protecting duty in both cases in round numbers—the first at 2*l.*, and the last at 1*l.* An hon. member Mr. Western had published a speech on the corn laws, and had rejoined to it a calculation made on the supposition of a smaller population than that which was proved to exist in the country by the late census. He had calculated the quantity of wheat consumed to be between 90,000,000 and 100,000,000 quarters. He Mr. Philips would now take it at 10,000,000. The hon. member Mr. Western had taken the consumption of every other species of grain in the United Kingdom at 80,000,000. Now, it was proposed to add on these two quantities a duty of 2*l.* and 1*l.* a quarter respectively. The result of such a measure would be to add 10,000,000*l.* to the price of wheat, and 16,000,000*l.* to the price of every other grain, thus making the people pay 26,000,000*l.* for the benefit of the landed interest class of no not. He did not mean to say that the people actually paid that sum; but that the proposal of the hon. member Mr. Curwen would inevitably lead to such a conclusion. Gentlemen might laugh, if they so thought fit, when the object of their schemes was thus unfolded to them; but laughter was not argument any more than contradiction was refutation.—He believed that the effect of repealing the corn laws would be much less than one class of the community was accustomed to hope and another to fear. He did not believe that the agricultural interests of Great Britain were so incapable of competition with those of other countries as they had represented themselves to be. Mr. Jacob had stated that the system of agriculture in this country, compared with that on the continent, exceeded it in the proportion of seven to five. He had stated further, that whereas 4-5ths or 9-10ths of the population were employed on the continent in the production of food, not more than one-half of the population was so employed in England.

In fact, the late population returns proved that not more than one-third of the population was so employed. If, then, our system of agriculture was so superior to that of the continent, could the house suppose that our agriculturists had any just reason for apprehending the competition of foreign nations?—Whilst he was upon this subject, he must beg leave to notice an argument which he had often heard urged in favour of protection—that the landed interest paid all the poor rates. Now it was not quite clear that the premises were correct from which the conclusion was drawn. He had in a former session moved for certain returns to show the proportion in which different sorts of property contributed to the poor rates. Those returns had since been made, but inaccurately. They were sufficient, however, to prove that out of 6,000,000*l.* of poor rates, more than 2,000,000*l.* were assessed on other property than land. These returns, he said, were inaccurately made, because it was the custom in some counties, and those agricultural ones, to pay wages out of the poor rates. In the manufacturing counties this was never done; and that was the reason why the poor rates in Lancashire were only 4*s.* whilst those in Sussex were 2*l.* in the pound. In the one case liberal wages were paid by those who benefited by the labourer; in the other, the labourer received part of his wages from the rates—a measure which was calculated more than any other that the ingenuity of man could have hit upon to degrade and demoralize the peasantry of England.—He was happy to find that the repeated discussions which the house had held upon the corn laws had been productive of one change at least. In 1814 and 1815 every person who opposed himself to the corn laws then proposed, was put down as an enemy to the agricultural interests; and he well recollected that his lamented friend Mr. Horner complained that any member who spoke against them was not even heard with common patience. It was then maintained that no gentleman who was not engaged in agriculture could be a proper judge on the subject. He (Mr. Philips), however, had no hesitation in asserting, that those whose property was vested partly in land, and partly in commerce, were the best qualified to judge on a question which was partly of an agricultural and partly of a commercial nature.—No change in either the foreign or the domestic policy of the country could add so much to its wealth, and to the comforts of all its inhabitants, or could tend so much to the improvement of its manufacturing, and even of its landed property, as a free trade in grain. For a time it might, perhaps, injure the agriculturist; but ultimately the increased wealth of the country would produce increased comforts—increased comforts would produce an increased population, and that increased population would produce an increased demand for agricultural produce, which would greatly enhance the value of every landed estate in the kingdom. Such a free trade would prevent those fluctuations of prices, which were as injurious to the agriculturist as to every other class of the community. If the motion of his hon. friend should not be carried that evening, he hoped that the rt. hon. gent. (Mr. Huskisson), in the next session of parliament, would recollect the pledge which he had given to the country in the last, and would come forward with some measure which should have for its object the adoption of a free trade in grain.—Though he

led the motion of his hon. friend (Mr. ), he did not approve of all the details of the plan. He wished to get rid of the averages, because they led to an use of fraudulent intrigues. He would retecting duty of 10s. per quarter, to a fixed system of averages (hear, hear). do, Mr. Tooke, and Mr. Blake, the sent authorities on this important sub- of opinion that a protecting duty of r quarter, would be an adequate pro- the agricultural body, for the land ities, and the poor's rates. He was a that 10s. would be sufficient; but willingly enlarge it to 12s., if by so could conciliate the sentiments of who were opposed to him on this and not only to him, but also to their idual interests (hear, hear).

Whitmore:—"Sir, I do not rise for the following my hon. friend (Mr. Whit- er the vast field which he has discuss- purpose in rising at all is rather to hon. gents. from entering at present discussion of this important subject. on why I am anxious that such a dis- should not be engaged in is, because I ensive it can only terminate in in- and embarrassment (hear, hear). at take leave to observe, that there, since the opening of this session—I ay, by concerted agreement, but ra- coincident feeling—a general under- on both sides of the house, that there ain questions (of which this was one) discussion should not take place ss of no, no, from the Opposition]. I hat there was such a common under- (hear, hear); and this understanding red into, not only in justice to the themselves, but also in regard to the of the country (hear, hear), in order questions might be more fully investi- a new parliament (hear, hear). I cer- lected from hon. members, that this a convenient season for the entertain- this question; and my rt. hon. friend (Mr. Whitmore) intimated, on the first night of on, that it was not the intention of Go- to propose any revision of the corn his intimation leads me to an argument on. gent. (Mr. Whitmore), in which pears to be more of refinement than He has said, that the uncertainty of the tended to be adopted by Government, rially checked speculation in the in- de of corn. Now what are the facts? first day of the session of 1825, I dis- ated that I had no intention of making ation in the corn laws during that ses- n the first day of the present session, a friend (Mr. Canning) made a similar ion. So that I am at least entitled to Government the credit of candour and em, in the early and open declaration ource it intended to adopt; and I am ntitled to say, that if there has been k in speculations in corn, that check occasioned by some other cause than uncertainty as to the intentions of Go- t. If people have bought corn at a rice, with a view of selling it for a some future period, it is too great a at upon the principles of trade to say are compelled to refrain from doing sequence of any uncertainty in the ex-

isting law.—If there is one question more unfit than another to be entertained at this moment, it is this relating to the corn laws. It is im- mediately connected with the well-being of whole classes of the community who are extremely numerous and important, including as well those who possess the property of the soil, as those whose capital and industry are employed in its cultivation, and who depend upon the land for their subsistence. It is difficult, on account of the circumstances which have grown up in this country since the establishment of the present laws: it is difficult, also, on account of the situation in which that alteration has placed other corn-growing and exporting countries with respect to their intercourse with us as to other commodities prior to that alteration. But these are not the only grounds of difficulty. It must be clear to every gent. who hears me, that we have been acting for some time upon a totally erroneous system; and I have no hesi- tation in stating what I have recorded in another manner, and advanced in other places, that I think a system of absolute prohibition upon this or upon any other article of com- merce, is a vicious and most destructive system (hear, hear). If we are still acting under this system, it is solely on account of contingent cir- cumstances of an imperious and difficult nature, and because we ought to be cautious in treading back our steps, with reference to the conse- quences which this system has entailed upon us. All mortgages, all leases, settlements, and other charges upon land, must be immediately affected by any alteration in the corn laws, and the parties interested in them would be exposed to the greatest injustice, while the difficulties which now exist would be aggravated by any unguarded change, or any mistake on the prin- ciple which ought to govern that change. Whenever, therefore, the Parliament shall re- solve on proceeding with this subject, they must take into consideration many circum- stances which they are not now prepared to embrace. The difficulties I have stated are chiefly of a general nature, but there are others scarcely less important. My hon. friend (Mr. Whitmore) has, in the course of his speech, made frequent references to a document not yet before the house. He alluded particularly to the change which has taken place in some of the countries of the north of Europe, respect- ing their capacity to supply corn; which, it appears, is considerably reduced. It is not only true as to those countries, but the same effect has been produced in France in conse- quence of the regulations which have been adopted there respecting the exportation of corn. With a view to these circumstances, Mr. Jacob was engaged to make personal inquiries into the subject, and the report which has been mentioned was drawn up in conse- quence of those inquiries. That report is not perhaps perfect; but it is, at least, a most valuable addition to the information which we already possess; and I say that we ought not to come to a decision on this question, before we have had an opportunity of reading it; and I do sincerely believe, that if it be read without those extravagant apprehensions which I know to prevail throughout a great part of the coun- try, and without those prejudices which some- times reject all evidence in matters of this description, it will enable us to decide the question better than we can possibly decide it at the present moment.—We cannot exclude

from our consideration the question of price; and this question of price connects itself intimately with the state of our money system. In the feverish and unsettled state in which our currency has been, and, I regret to say, continues to be, can any man think the present a fit moment to enter upon the subject? I think, also, that at this period of the session, when the public business is in a very advanced state, and every body looking forward to the probability of a general election (hear, hear), that nothing can be less advisable than to agitate this subject. The hon. gent. reproaches me with having departed from my pledges—I can only say, that I gave what he is pleased to call that pledge in the same way in which any other intimation might be given by a responsible servant of the Crown. Such a pledge cannot be considered so absolute, that I am to be debarred from the consideration of all circumstances which have happened between the time of making the pledge and the period allotted for its fulfilment. And what was the pledge which I am stated to have given? It was merely that if the necessary information could be obtained upon the subject in time, and if the question could be brought forward early in the session, that I hoped we might arrive at a satisfactory adjustment of the subject. The pledge I gave was qualified by, or rather dependent on, two material and necessary circumstances. Neither of these have happened, for we are not now at the beginning of the session, and the requisite information was not obtained early enough. I am disposed, however, to admit, that, powerful as circumstances are to prevent our entering into the subject at the present crisis, they would not be conclusive in my mind, if any relief could be given by it to the distress which oppresses the country. If I thought it within the power of legislation—if I thought it within the course of possibility, to produce any sudden or material reduction in the price of wheat, or of the other necessities of life, I would bring forward this or any other measure that could conduce to such an object; but I know that by adopting the present measure we should only aggravate the evil. It is my firm opinion that the measure proposed will not only increase the difficulties and distresses of the country, but will destroy the best hopes of their ultimate termination (hear, hear). I think prohibition with respect to corn not only to be a most irrational and pernicious measure, but a ten-fold greater evil than prohibition with reference to any other article (hear, hear). This is my most firm conviction; nevertheless, I say, that any immediate or sudden change in the condition of the agricultural classes would aggravate the distresses of all the other classes.—Under all the circumstances of the case, I do not feel it necessary, or even prudent, for me to go minutely into details, or to enter into any discussion of what ought to be the changes to be made in the present corn laws (hear, hear). But I have no difficulty whatever in stating, in the most unequivocal and decided terms, that I am thoroughly opposed to all further prohibitions. I can go much further; I have no hesitation in declaring, that, in our situation, I think a speedy revision of the laws is essential. In the present state of alarm, it is very difficult even for those who are able to convey their sentiments to the house much more clearly than I am able to do, to express themselves without being misapprehended. It is for this reason,

and because I think the subject of such great importance, that I trust the house will excuse me for going further into the subject. My wish is, that the question should stand as it now stands. I give my assurance—I hope the house will take that assurance—I again repeat it, that in the next session of parliament (a laugh)—Hon. gentlemen will laugh, but I think that I have stated sufficient reasons for the line I have taken (hear, hear). They may not appear good reasons to some; but I expect from the house credit for sincerity, when I state, that all I am anxious to do is, to transfer the question to the next session of parliament, when the intentions of Government upon the subject will be known. The hon. member (Major Maberly) may laugh; but if the hon. member thinks that, from any difficulty of the subject, I am disposed to avoid the question, he little knows my character, or what have been my habits of business (hear, hear). I pledge myself that I will take the first favourable opportunity to bring this subject fairly before the house; and I see no reason to apprehend, that next session will not afford that opportunity; but I will not be taunted for any abandonment of my pledge.—Before I sit down I must say, that some of the doctrines of my hon. friend (Mr. Whitmore) on the subject of free trade are not quite just; at least, they are not the doctrines which I have ever entertained, and certainly are very different from those which I have uttered in this house, and equally distinct from the principles upon which Government have guided their recent measures with reference to trade. My hon. friend has argued the question of free trade, as if it were the absolute removal of all difficulties in the way of the supply of foreign productions to this country. The hon. gent. has talked of free trade in sugar—of free trade in timber—of free trade in various other articles. But there are two distinct grounds of imposing duties upon articles of trade—one of which, at least, the hon. gent. seems to have overlooked. One ground of imposing duties upon trade is totally distinct from the system either of prohibition or protection. I allude to taxation or revenue, which in this country is material, in order to meet the public expences, and to pay the interest and charges upon the debt. The duties on timber are laid on in order to raise the revenue. The duties on sugar are sources of almost the largest revenue which the country receives; and this duty is not laid on, as the hon. gent. imagines, as any protection to the sugar trade. I do not know why protecting duties should not be granted to a certain degree on the productions of this country, or upon whatever may be produced by British skill, or by the application of British capital. I mean only to say, that the peculiar or favourable productions of this country ought to be put upon the grounds of a fair competition with similar productions of other countries. The principle is, to countervail the advantages that other countries may have, so that the productions of each may enter into the different markets upon equal terms. What are the principles of all the measures relating to free trade which I have had the honour of submitting to Parliament? Not free trade, in the sense in which some persons may understand the term; but free trade from all duties, excepting those which are necessary to give the trades of different countries an equal footing in the markets, and to protect them from the exclusive advan-

in many nations would wish to establish their own favour. Thus, in the silk trade, the Government have modified the old prohibitory duties, in order to relieve the country of the injurious effects of smuggling, upon the old rate of duties operated as so high that it was absolutely impossible to do it. The smuggling was equally injurious to the manufacturer and to the revenue, and the protecting duty was not withdrawn until it was modified so as to place the manufacturer in a state to compete with foreign growers without injury. The advocates for the present system have argued, that if we took off the duties on importation of articles of silk, and granted only a rate of duty which would operate as a reasonable protection to the agricultural interest, we should have no quarrel with foreign growers without injury. This was the principle adopted, and the doctrine held by all persons who advocate the interests of the agriculturists, as well as those who were interested in maintaining the agricultural monopoly. It was not difficult to see that the present system was modified. The very object pointed out by the agriculturists to protect their interests, has been conceded to them, but the measure has been adopted, if not totally, at least in some respects, as a preliminary to the corn laws. The very measures proposed by the agriculturists as the sufficient protection of their interests, have been adopted, not only in principle, but in degree. Mr. Webb has said, that it was sufficient to put the corn trade in a fair state of competition—to open one trade duty of ten, on another of fifteen per cent. This has been done. In these circumstances, I do not now feel at liberty to go into the question. I confine myself to those principles, which render it unfit to proceed further in the discussion—I shall, therefore, move the previous

*Mr. Millon* complained that, between the measures and the measures of Government, the country always found their expectations dashed away. As the *rt. hon. gent.* had said, the country could not gather up the opinions of Government upon the question, which was one of the utmost importance to the country at large. The people were at the mercy of the landlords, and the landlords were composed of those landlords who formed a body of men, powerful, but powerful. They were the members of Parliament, and those who made laws for Parliament (hear, hear). Not believing that a fair consideration of this question, and an adjustment of the law on the principles, would be dangerous to the public interest. The adjustment of the law certainly be accompanied by a fall in the price of agricultural produce; but that would be followed by such corresponding losses in the fall of other things, that the interest would not be such losers as in they seemed to think. In talking on the subject, some people were fond of using words which they misused themselves, and upon their hearers. A cry was raised, repealing those laws, the agricultural interest, the landed proprietor, and the farmer, would be ruined. Now, as to the labourer and the farmer, he would say, that whilst men required

food, agriculture must be pursued, and would be pursued with advantage. The fact was, that the farmer and the agricultural labourer had no interest whatever in the high price of corn; and when landlords said that they had, those landlords were, in truth, pleading their own cause, while they pretended to plead that of others. He would give the house an instance which had come under his own observation, of the tender regard which landlords felt for the farmers. Eighteen months ago, when the price of corn rose, the proprietor of a large estate in his neighbourhood gave notice to all his tenants to quit, preparatory to raising their rents. This example ought to be a warning to farmers, and should teach them not to be deceived by professions: when they heard men talk of protecting their interests, they should understand that the interests of the talkers were the only interests to be protected. He was very well aware that these opinions were not very palatable in that house. Men were generally too much disposed to listen to arguments which flattered their own views, and which appeared to conduce to their own interests, to have any great pleasure in hearing opposite opinions. He, however, was persuaded, that if there were any time when this question could be well considered, it was at a time like the present, of great commercial distress. He was convinced that the existing laws were not only injurious, as they tended to raise the price of provisions in this country, but that they were doubly hurtful as they affected our foreign commerce. They shut us out from most of the foreign markets of Europe, and they compelled our merchants to seek for markets for their commerce in the most distant parts of the world; in countries, whose resources not being accurately known, were of course much exaggerated; the trading to which was attended with greater expense and risk, and which frequently ended in involving the adventurers in ruin. These laws shut out English merchants from the Baltic, from the nearer coasts of Europe, and especially from France; though he believed, that if foreign corn was admitted into this country, very little would come here from France. These laws, however, affected us most as excluding our commerce from the northern parts of Europe. He trusted the house had not forgotten the important information given them by the hon. mover, who had shewn that not only now, but for some years past, we had been sowing in these countries the seeds of the perpetual exclusion of our manufactures and commerce (hear, hear). In short, in whatever view he contemplated the existing laws, he considered them impolitic, unjust, and in his conscience he thought they were unchristian, for it was not christian to enhance, except for the gravest causes, the necessities of life. He must admit that on his own head rested part of the sin of having consented to the enactment of those laws; he voted for them under the influence of the eloquent appeal of his *rt. hon. friend*, the late Mr. Elliot, who contended that it might compromise our national independence to rely upon foreign countries for a supply of corn. The consideration of national independence was the only ground upon which the present system could be defended; and, upon mature reflection, he was of opinion that the national independence could in no way be affected by a free trade in corn. Let the house consider

who it was that asked for these prohibitory laws. It was the landed gentlemen of England, and their object was to obtain high rents and large profits (hear, hear). Were they, who, though the wealthiest, were not the most numerous, class of society—were they, who, above all others, ought to shew their devotion to their country's welfare, and to set the example of a preference of country to self—were they to call on their fellow-subjects to sacrifice, not only their present interest, but their future comfort, to the wealth of that class which was already the wealthiest in society? He blushed for the order to which he belonged, when he thought of the arguments they resorted to for the purpose of supporting these laws. The corn laws could not be justified upon the grounds which had almost always been advanced in support of other prohibitory systems. Formerly, when any class of the community desired to obtain a prohibitory law in their favour, they had the dexterity to persuade the Government that the public at large was interested in their prosperity; but, in the present case, the landholders of England called upon Government to continue a prohibitory system, not on the ground that it was advantageous to the public, but because it was beneficial to themselves. The landholders said, that the interest of the debt could not be paid unless they obtained high rents; as if the industry of the labourer and the national stock did not all contribute, with the rent of land, towards making the payment. Really, the absurdities into which the landed gentry were led, would have excited pity, if another sort of feeling was not created by the conclusions to which these absurdities conducted them.

Mr. H. Sumner thought the country gentlemen were ill-treated by ministers, who, rather than meet the subject as it ought to be met, were for smothering it, whenever there was any danger of its exciting discussion. This perpetual delay was most inconvenient to the landed interest, who could not tell into what engagements they ought to enter while this subject remained suspended over their heads. —The principle of free trade might do very well in commercial concerns, but it was a frightful and fearful doctrine to apply to the agricultural interests, of which it might probably occasion the absolute ruin. The same rules did not apply to agriculture and commerce. If any branch of trade was injured, there was a disposition in the country to embark its capital in commercial adventures, and the interests of trade would be retrieved. It was not so in agricultural concerns, which ought, therefore, to be more carefully protected and encouraged. Besides, the agricultural interest had not yet recovered from the distress which it had suffered, and more time ought yet to be allowed it. In what he now said, he disclaimed the imputation of speaking merely for his own interest, and not for the interest of the farmer and the labourer. The particular case to which the noble lord had alluded to support this imputation, was certainly very far from honourable with respect to the person of whom it was related, but it could not be said to be a sample of the agricultural class, whose conduct had always been in the highest degree honourable. The principle of free trade might convert the lands of foreign countries from wastes to gardens, but it would convert the lands of England from gardens to

wastes. Before protection was taken off corn, the ministry should determine to put the agriculturists here on a footing with those in other countries. They should take off thirty out of the fifty millions of taxes; they should repeal the 2,000,000*l.* of land-tax, and the 6,000,000*l.* of poor-rates; and then he had no doubt that England would be able to compete with any nation in the world. The *rt. hon. gent.* said, that the question should not be agitated till Mr. Jacob's publication came forth. For himself, he could say, that the publications of the day produced but little effect on his mind (a laugh), and he understood that Mr. Jacob formerly entertained opinions very different from those which he now professed. When he saw a man entertain one set of opinions at one time, and a different set at another, when he was employed by administration to serve a particular purpose, he could not attach much weight to his evidence. Though, however, he (Mr. Sumner) had not read many books on this subject, he had read the book of experience. That book was uniform, and, except in two years, when high prices were caused by great scarcity, he had always found that years of high prices were years of prosperity to all classes, while years of low prices were those of the greatest distress.

Major Maberly expressed his surprise at the manner in which the *rt. hon. gent.* (Mr. Huskisson) had attempted to get rid of the question. The *rt. hon. gent.* said it was improper to discuss it this year, because it was a period of distress; and last year he came to the same conclusion, because it was then a period of prosperity. The *rt. hon. gent.* seemed to be playing at hide and seek. One did not know where to catch him (hear, hear). Such a set of arguments as the *rt. hon. gent.* had advanced in objection to the motion was never heard.—Gentlemen argued that cheap corn could afford no advantage to the manufacturer, because it was by the sale of that corn that the agriculturist, his customer, was enabled to buy the commodity which he produced. But this reasoning involved a fallacy; for, as certainly nothing could come into the country unless something in exchange for it went out, no import of corn could possibly take place unless by an exportation of manufactures.—He opposed the right of the agriculturists to what they called a "remunerating price," upon the ground that there was no saying at what point that remunerating price would stop. By bringing poor lands into cultivation it might be raised even thirty or forty per cent. higher than it was at present.—He hoped that the question would be brought forward and pressed from year to year, until the existing system was got rid of; convinced, as he was, that it was most mischievous to the wealth and prosperity of the country.

Mr. Curwen was anxious to rebut a charge made upon the land-owners, that in keeping up high prices they were looking only to their own interests (hear, hear). He should blush at rising in his place, if he felt that such a stigma deservedly attached to that body (hear, hear). But he was glad to know that such was not the case. In advocating their interests, they were advocating those of the public at large. It was impossible that the manufacturing and other interests of the country could go on with what was called cheap corn, because cheap

bring low wages; and this, instead of giving comfort and happiness to the workers, would be productive of the reverse.

Wodehouse spoke for a few moments; the stormy state of the house rendered it difficult to collect a single sentence that the speaker uttered.

Mr. Burdett differed entirely from the right hon. gent. (Mr. Huskisson); that there was no question which was fit for discussion than that before the Corn Law, by discussion, more was to be gained.—He could not altogether see in what had fallen from his hon. friend (Mr. Carver). He was not so disposed not to feel for himself and those connected with him; and if, as a gentleman of property and a landed estate, he could not measure in question was likely to be injurious to him, he should oppose it. He was convinced, that in maintaining a position in which accident had placed him, but supporting the interests of the general. He was placed in the singular position of voting for the motion of an hon. member in none of whose views or opinions on the subject he (Sir F. Burdett) coincided. He thought that the proposition of the mover would produce any of the effects he anticipated from it. Nor did he see any of the results from it which the mover of the measure dreaded. He gave it to the eloquence and patriotism of Mr. (Milton); but he voted as that voted, upon a principle altogether not because he was inclined to give the Corn Law to the landed proprietor, but as a landed proprietor and the public interest in the question. So, with Mr. (Mr. Philips) he (Sir F. Burdett) was one of two of the positions which he occupied; but there were several others, and he altogether differed from him.

That in every state of society, in pursuing the object, the effort should not be to use a scanty supply by the labourer but an ample supply by the employer. But it was a mistake to suppose that agricultural labourers were less industrious and productive, than the manufacturing population. There was no greater proof of the prosperity and resources of the country, to be found in the fact, that so small a number of persons as composed the agricultural population, one-third of the whole population, by their skill and industry, to raise produce to support the other two-thirds was a state of things to be found in no country in the world. Our population was estimated at twelve millions—of these six were employed in agriculture, six in manufactures, and two in learned professions and pursuits. Now there was not in the whole of Europe a country in which one-third of the population maintained the other two-thirds in their industry. Let them look abroad. Take for instance; there, there was a population of thirty millions, of whom four millions were employed in agriculture, and sixteen in manufactures. The state of things lay in a great measure the laws of France relative to the division of estates was so eternal, that the people employed in tillage was so thick, that there was no sur-

plus of produce from their labour. All that they raised or nearly all, they themselves consumed; and they had nothing left with which to pay or feed the manufacturing classes. Nothing could be more clear than the fact that there could be but one interest between the agricultural and the manufacturing classes; the only reason that England had so large a body of manufacturers—the only reason why she was enabled to support them—was, that her agriculturists produced with so little labour so much more than was needful for their own consumption. The living of each party being made out of the exertions of the other, it was impossible that either could be rich without their prosperity being mutual. The more the agriculturist's labour produced, the more he had to sell to the manufacturer; the less exertion the manufacturer had to lay out upon his commodity, the more the agriculturist received in the exchange. This was the plain and simple view of the question; putting aside for the present all those difficulties which arose from combining it with the subject of the currency—difficulties which seemed to belong, indeed, to the question of the currency, let it be discussed in what shape, or to what effect it might. Setting those difficulties aside, the point to be accomplished was the due adjustment of that trade which was always going on in the country—the exchange of their respective articles of produce between the agriculturist and the manufacturer. Hon. gent. said—"Give the manufacturer cheap corn, and he will give you cheap commodities;" but those who said that, spoke without consideration—because the terms "dear" and "cheap" applied in such a way became convertible. To say that manufactures were dear, was to say, in other words, that corn was cheap; and *vice versa*; for, in the whole, there only was an exchange of one article for the other. Both trades might flourish; the greater production of both was an advantage to both; but that the produce of both should be dear, was impossible. Those, therefore, who were disposed to endanger the safety of agricultural property were short-sighted as to the views of their own advantage; they endangered the stopping of the source from which all their own means of existence were derived. Without agricultural produce, it would be impossible for the manufacturers to live; and the members of learned professions, who, however valuable in their ministry, were not immediately producers, would soon find that their assistance must be dispensed with by society; for there would be no means of paying them for it. If any man doubted this principle, let him look at the way in which scientific pursuits were paid for in England, and the amount of payment which they received in countries on the continent, where agriculture was a less profitable pursuit. He was not prepared to say that—in a different view of this question—he should be inclined to merge his whole personal rights and interests in a scheme for the public advantage. The rights and interests of those immediately connected with him, whether they ought to do so or not, would, he believed, have weight with him, in preference to any general consideration. But he repeated that this difficulty was not one to which he need attend; for he was convinced that that which was his own interest was the interest of the country at large.—The hon. member (Mr. Philips) had observed, that, by a sufficient outlay, the mountain of Snowden

might be made productive. No doubt, but only by a misapplication of capital; because it would employ a greater number of hands, in the business of production, than the produce would maintain. It was not the actual quantity produced in any country which constituted its poverty or wealth; but the quantity produced with reference to the number employed in the production. A country of very small gross produce might be richer than a country where the produce was large; because the numbers employed in cultivation might be comparatively less in the former than in the latter. France, for instance, with only one half of her present population, and keeping up all her existing produce, would be a richer country than England; but the very scheme of her law, by preventing the accumulation of wealth, struck at the root of every thing like solid and lasting prosperity. Nothing was more common than to talk of the prosperity of France. The notion was perfectly unfounded; nor was it necessary to go to facts to make that apparent; for the law which she had recently, as it seemed in a fit of madness, confirmed, was a constant and certain engine of deterioration to her. On one side, there were confiscations suffered; on the other, accumulation prevented. As the French law stood, there was no choice—every succeeding generation must be poorer than that which preceded it.—He could not agree that the corn laws, by keeping up the price of provisions, had in any degree injured the labouring classes of the country. His opinion was that they produced a contrary effect—that they injured, not the working classes, but the landed proprietors; though even this not in the way which was contended for by the hon. member (Mr. Whitmore). To the labourer, as it seemed to him, neither the price of bread, nor the money price of any other article, mattered at all. It might be a fact of some little consequence to the labourer's employer, who wished to get his work done as cheaply as possible; but the labourer himself had no interest in it; and upon this point it was worth while to take notice, how anxious the manufacturers, who objected to remunerating prices in favour of the agriculturists, were to have remunerating prices for themselves. From Glasgow, Paisley, and other manufacturing towns, all the story was of "stagnation in trade," and "heavy, low, prices"—complaints which certainly did not come with a very good grace from gentlemen who were so desirous of having a "heavy low price" in corn. In truth, what was the price of corn, or any other article in the country, depended chiefly upon the state of the currency; but the real question—the amount of the reward received for labour—depended upon the quantity of surplus produce. The hon. seconder had spoken of "liberal wages;" as far as he (Sir F. Burdett) understood what was meant by "liberal wages," there could be no such thing. Individuals might be liberal, but nations could not. In the great concerns of a country, there could be but one way of carrying on business; the way which was most to the advantage of the person who carried it on. The value of the labour was the question; that was what it would fetch, and the amount of that would depend upon competition; and, as far as by "liberal wages" was meant any arrangement which tended to keep up a high price of labour, the result of that course must necessarily be the throwing a considerable portion of

labour out of employ. Persons might complain that the price of labour was kept low; but if it was raised higher than could be afforded, the effect must be to throw thousands out of employment, and consign them to starvation. The parties themselves appeared aware of this, for he observed, that, in a petition presented a short time since from Blackburn, they complained first of the high price of corn, and then of the power loom, a machine which, with the attendance of a boy, performed the work of several men. This was their great hardship. The high price of corn was merely thrown in; but that which pressed most heavily upon them was the introduction of that machinery which had so mainly contributed to the general advancement of the country (hear, hear). What would be thought of those who made a similar complaint when the plough was substituted for the spade, or, to go still further back, when the spade was substituted for the nails and fingers, with which the earth was turned up? He, for one, was as ready as any man to afford temporary relief where severe and pressing distresses called for it; but every man who attempted to legislate upon such principles as those he had just alluded to, would at once put a bar to those sources of wealth and aggrandizement by which the prosperity and greatness of the country had been hitherto maintained.—If he believed, with the country gentlemen, that there was any need of the corn laws, he should feel it his duty, as well as his interest, to maintain them. This he did not believe to be the case; and there was one fact he had almost forgotten, to which he thought it of importance to advert. This was, that during the very high prices, a large quantity of corn had been annually imported into this country; it was wrong, therefore, to say that low prices would necessarily be caused by importation. The fact was, indeed, opposed to theory; but when he saw that fact occurring during a period of twenty years, he preferred the fact to the theory. He believed that, during a part of the time when the importation was largest, the price of wheat was 120s. a quarter. But he had another theory to account for this, and that was, that the more food there was for the manufacturers, the more manufacturers there would be; the more their skill would be excited, and the greater return there would be for the produce of the agriculturist. It might be that a part of that food came from abroad; but it was, in his estimation, of little consequence where it came from—whether grown in this country, or dropped from Heaven, like manna—the advantages would be the same. He would say, therefore, let the trade in corn be free; and he was ready to vote for a free corn trade. The more the manufacturers increased, the more they would produce; the better off would the agriculturists be, and all classes would be richer. Since the prohibition to import foreign corn into England, corn had been at a certain price—perhaps higher, rather than otherwise—and this had certainly extended cultivation, and caused more corn to be produced, so as to supply the wants of the people better than before. But the manufacturers had also increased both in skill and numbers; and, though more food was produced in the country, they had ample returns to pay both the grower of food here and abroad, and there was a greater revenue in the country. For much of this prosperity we were indebted to that law of Primogeniture, which

believed, peculiar to this country, by tates were kept together, and descended me families, for many generations, and id to the establishment of large farms, that improved cultivation, for which stry was distinguished, and to that surd which was the means of paying all r clames. He believed these things ily went together, and they were aced by better modes of conveyance, mechanical and manufacturing inge-um were to be found in other countries, the towns gained in their turn, and abled to make large returns to the and the whole increased in wealth. ot think, therefore, that he was, as a ventleman, making any sacrifice by vot- he motion: he laid claim to no great doing it, but he thought he was pro- the public interest by such a vote, : injuring the landed interest. He reed that there was no measure which ore extensive mischief than the Corn If we would not take the corn of other , which was, perhaps, all they had to as impossible they could take our ma- es; if we forbade importation, we also ily forbade exportation. (Here the house manifest symptoms of impatience.) He the right hon. gent. (Mr. Huskisson) out with himself; he wanted free trade, r, he talked of wanting it, and with that cted reciprocity, and protecting duties. e things were incompatible. Protect- s only made us pay dearer for commo- de at home than we should pay for si- modities imported (coughing). Ano- ry such duties inflicted on us was, to engage in undertakings for which we atural advantages, and refrain from ing those manufactures for which, hav- al advantages, we could obtain large by exportation. [The impatience of becoming very evident here, the hon. cluded by saying, that he had no ob- whatever to a free trade in corn, and a such a trade would be advantageous ided interest.]

rougham rose, amidst loud cries of m," and other manifestations of impa- hich rendered the commencement of his tally inaudible. When the tumult sub- e was heard to say, that during ches of some preceding speakers, id been heard from about the bar, re were no country gentlemen; but ick might proceed, were there such the house, from a part of their stock ; and taking warning by the impatience d by the house, he should address him- y and plainly to the simple question be- —whether they should go into a com- or the purpose of ascertaining whe- ot some legislative measure might not ced which would settle this question? hon. gent. would not accede to the ; he would not run the risk of pro- session a few short days, or a week most, to enable them to settle this

The right hon. gent. said they : have time to discuss it. He referred, to the circumstance that the parlia- drawing to its close, and the members n have to meet their constituents; : under these circumstances that the gent. thought this an unfit subject for

discussion. He (Mr. B.) could not view the matter in that light; and could not but conceive, that, before they separated, they ought to take some measures to satisfy the country, and put this important question in a course for final decision. The course pursued by the right hon. gent. could give satisfaction to neither of the great parties interested in the decision. Coming to no distinct resolution, each party remaining in uncertainty as to the future state of the question, it was inevitable that both would put their own construction on it, and the construction of each would be influenced by their apprehensions. By not discussing the question they would come to a resolution that would, of all others, be the least likely to enable them to meet their constituents with satisfaction. There was one other reason which had been mentioned—and this was the only reason which had any weight with him—he meant what had been said of the unsettled state of the currency; but before the committee should have concluded its labours, something might be settled with regard to the currency, which would either show the difficulty of settling the question, or enable them to come to some resolution, which would, at least, promise a satisfactory conclusion. By putting it off till next session, it could not be hoped that it would even then be settled: and in what state, he would ask, did things in the meantime remain? While things were in this state, no man could tell what his land was worth; no man could sell land, and no man would buy land; no man could take a farm—contracts would not be made or could not be kept—no man could tell what rents would be, and hardly what they now were. The present system was never intended as a final arrangement, when it was proposed, and it had not been so understood by those who supported it. If the arrangement were only temporary, the time was now come for making it permanent; it was time to sweep away a system which was liable to all the objections ever made to any system of prohibitions; it was time to repeal the prohibitions, permitting the ports to be continually open, only laying on such a protecting duty as would enable the agriculturist to grow his produce on such terms as to stand the conflict with the foreign grower. He was not prepared to contend that lowering price would not lower rents, he would not utter one word that should encourage any delusion of that nature; but he conceived that the corn laws, if they gave high rents, caused extensive fluctuations in them, and he supposed that repealing them would give permanent and steady prices, lowering rents, but preventing fluctuations. But with lower rents, he hoped there would be lower wages; at least with one class of labourers; he hoped that the high wages for public services, the high salaries of public men, settled at a time when every thing else was high, would be lowered when every thing was lowered. (Here the house grew impatient.) They were increased a few years ago, and he hoped they would be revised and diminished, thereby affording relief to the landed gentlemen (coughing), by lessening the public burdens. They would, if the corn laws were repealed, derive relief from diminished poor rates, from diminished county rates, and from a lessening of the public burdens; and, expecting to be relieved of all these, the landed interest, under such circumstances, might wish the question set at

rest as speedily as possible, and would, like him, vote for the motion of his hon. friend. (The house had betrayed signs of impatience before the learned gent. concluded, and as he sat down, loud cries of "question" resounded from all parts of the house.)

Mr. *Whitmore* said a few words in reply, and the house divided—

For the motion, 81—Against it, 250—Majority, 169.

### *Bonded Corn.*

THURSDAY, APRIL 27.—Mr. *Leycester* wished to know whether it was the intention of Government to allow any of the foreign corn now in bond in this country to be brought into the market? He thought that as corn was now rising, and considering the distress which existed in several parts of the country, that a partial relaxation of the corn laws might take place, so as at least to allow some of the foreign corn in bond to be brought into the market.

Mr. *Huskisson* said that he had already stated that it was not the intention of Government to make any alteration in the system of the corn laws in the present session.

### *Warehoused Corn, and Importation of Corn Bills.*

LORDS, MONDAY, MAY 1.—Lord *King* presented a petition from the weavers of Manchester; and, coming from those persons, it was, on account of the present state of the times, and the circumstances under which it was signed, deserving of most serious consideration. It likewise merited attention on account of its great good sense and moderation. The petitioners condemned the conduct of their fellow-workmen in Lancashire, in destroying machines. They stated their belief that the distress to which they were reduced was not owing to machinery, but to the corn laws. They said that the injurious operation of the corn laws was two-fold. In the first place, they obstructed the supply of food to the working classes; and, secondly, they prevented the purchase of British manufactures by other countries, who had nothing to pay for them but corn.

The Marquis of *Lansdowne* was anxious to avail himself of the opportunity which this petition afforded, of pressing on the house and ministers the necessity of considering how far a provision might be made for the relief of the distress which so extensively prevailed; for when great and extensive suffering existed, it seemed impossible that parliament should do otherwise than inquire whether any alleviation was practicable. When it must be universally admitted that in the course of last year a most extraordinary and artificial stimulus was given to trade,—when a change (indispensable as he admitted it to be) had taken place in the currency, which was inevitably calculated to aggravate the present evil, by imposing a check on speculation,—he thought a case was made out, which called for interference. In the meantime, he felt the necessity of a vigorous interposition of the law, for the protection of that property, the security of which was as necessary for the interest of the unfortunate and misguided persons

who attacked it as for the proprietors. What he thought would be most advisable, was to place means of relief, to a certain extent, at the disposal of ministers. He was aware that by public and voluntary subscription much good might often be done, and some thought such a resource might be a remedy in the present case. He admitted that subscriptions for local calamities were better than any other measure that could be resorted to, and they had witnessed the advantage of such subscriptions applied to the relief of distress in a part of this metropolis—namely, Spitalfields. When, however, he looked at the magnitude of the present distress, he confessed that he was struck with the improbability of any relief being speedily obtained through the natural course of trade or exertions of charity. He might, also be told that relief would best be obtained by a diminution of taxation. He had always considered that kind of relief to be the best, the safest, and the most economical that could be adopted, and there was a time when he had urged it earnestly on their lordships; but he must acknowledge that much had already been done in this way, and he was not prepared to say that more might not be done; but, even assuming that by the further reduction of taxation relief might still be administered, their lordships need not be told that it would be too gradual in its operation to be available in the present case. No relief could be obtained from taxation by those who did not possess the means of purchasing commodities at any reduced price. He hoped, therefore, a disposition would be found to exist for making some provision against the extension of the distress, which might be done either by a vote of the other house, or—what would perhaps be better, as their lordships could concur in it—an address might be presented to the throne, pledging parliament to make good those advances which ministers might on their responsibility think it necessary to make for the limited purpose of rescuing the unemployed manufacturers from starvation.

The Earl of *Liverpool* said, that if the suggestion of the noble marquis were agreed to, it would be the first instance in the history of Parliament, of voting public money for the relief of local distress; except that which occurred in the case of Ireland. Their lordships would recollect, that there was in this country a system which had its inconveniences, and had been thought, by some, to have more inconveniences than advantages—he meant the poor laws, which provided relief for cases of distress; and if relief were also granted from the public purse—if done in one instance—he called on them to say where it would end; he conjured them to reflect on the consequences of claim coming after claim, and of parliament undertaking to relieve every distress from the public purse. There was also a great difficulty in applying relief by this mode. Some years ago, a similar application was made on behalf of the agricultural interest, but they found the difficulties so great, that the project was abandoned. The great consideration which induced parliament to interfere in the case of Ireland, three years ago, was, that Ireland had no poor laws; and besides, from the circumstances of the country, an opportunity was afforded of employing men on public works, and in ways not practicable in this country. Before parliament, then, should, for

the first time, have recourse to a draught for such a purpose on the public purse, he could not but look to the voluntary contributions of individuals in aid of the poor-rates as a far more salutary measure. If their lordships looked to the subscriptions which had been raised for Ireland, which exceeded 300,000*l.*, they could not but anticipate success from voluntary efforts of the same kind in the present case. He knew of nobody with whom such a power as that of administering charitable relief would be more improperly vested than the Government. It might be well exercised by leading persons in districts, or by subscription committees; but the greatest objections existed to its exercise by the executive Government.—He had, in the early part of the session, stated, that some alteration in the corn laws was necessary, but that the period had not then arrived when it was expedient to revise those laws. Recent events had not weakened but confirmed his objections to bringing forward any measure this session. But he had no difficulty in stating, that parliament ought not to separate without allowing the bonded corn to come into the market on paying a reasonable duty; without investing the King in Council with power to admit, if necessary, supplies of foreign corn at a certain duty, and for a limited time, such as for six weeks after the meeting of parliament. The last time that the question of the corn laws was before parliament, it was proposed that this very power should be given to the King in Council; but he (Lord Liverpool) objected to it, because he thought such a power ought not to have been combined with that measure, because he was of opinion that whatever determined the price of food should be founded on a fixed law. But there were special circumstances which might make it the duty of ministers to ask, and of parliament to grant this power.

The Earl of *Malmesbury* had on a former day signified his readiness to agree to the admission of bonded corn into the market, and therefore would support that measure when brought forward by Government. Nobody could feel more than he did for the sufferings of the distressed part of the population, but he lamented that they should be so deceived as to attribute their distress to the corn laws. It was stated in Mr. *Jacob's* report, that supposing a duty of 10*s.* or 12*s.* a quarter was imposed, to which he thought even the noble lord (King) would not object, that the foreign merchant could not introduce corn into this country under 60*s.* a quarter. Now, for the last three years, the price of wheat had been less than 60*s.* a quarter in this country. He must also observe, that the workmen at present employed must depend for the continuance of their employment on the home consumer, of whom the landholders were by some estimated to constitute four-fifths. He would, however, take them only at three-fifths; and supposing that proportion, what would be the consequence to the manufacturers, if the agricultural interest were pulled down? He believed they would find, that for one weaver starving now, there would then be ten. If the average prices of wheat for the last three years were examined, taking into consideration the value of money, it would be found that there could not be a more steady and equitable system than that which existed under the corn laws.

Earl *Grosvenor* wished to ask the noble lord

(*Liverpool*), if the power to be granted to the King in Council was to extend to admitting corn directly into the market, or only to allow it to be imported and bonded, and subsequently taken out of bond, under authority of parliament?

The Earl of *Lauderdale* thought it was indispensable, before they gave relief, that their lordships should understand what was the cause of the distress; for if they adopted the proposed measures, they would be holding out the idea that the distress arose from the extravagant price of food; which would be giving currency to a fallacy. From the best information he (Lord *Lauderdale*) could obtain, he believed there was no want of demand abroad for our manufactures; but the manufacturers could not employ the men, because they could not find the means of paying them. What caused this? Was the country in adversity? Had it met with any misfortune? No: till the meeting of Parliament had any such distress existed, or was there any expectation of it? No: the manufacturers he had conversed with, all said there was no such want of employment—no such distress, and that both had been occasioned by the alarm spread abroad by the new measures brought into parliament. The manufacturers, he could shew in evidence, were willing to employ their men; and they could find a market for their goods, but they could not find any means of paying them.—Rash or incautious measures might have the same effect on the landed interest; and if the noble earl determined to interfere in the management of corn, he might excite alarm among the agricultural interest, and by so doing he might put the agricultural in the same situation as the manufacturing labourers. He must say, that he had never known a more rash or imprudent measure than that of coming down to parliament, within a fortnight from the close of the session, and proposing a measure which was almost sure to create alarm, and which he could not but say at least presented appearances that might in some degree justify that alarm.

The Earl of *Liverpool* agreed that to ascribe the present distress to the state of the corn laws, was to blind one's-self to the state of the country for the last year. But as to the noble lord (*Lauderdale*) saying that this distress did not arise from want of demand, he wished to know what else did it arise from? If a man wanted a coat or shoes, he might put off, for a few days, the purchase of them; but he would ultimately have them; and the only difference would be in his having them a few days later or earlier. That was not so here. Labour was not merely suspended; it was absolutely at an end; and the cause was—and there need be no greater or more powerful cause—the system of over-trading which had been lately pursued. If there was a demand, there would soon be the means of supplying it; and the manufacturers might again be employed; but no such demand existed; and the cause was, a glut. No matter where this glut existed; if there was a brisk demand last year and none this, the fact could not be otherwise, than that the market had been over-supplied. That, however, afforded no argument against taking any measure that might, whether directly or indirectly, bring relief to the sufferers. And the cause to which he had alluded, though undoubtedly the greatest in producing the evil, might perhaps have been aggravated by the particu-

garding the state of the currency, and upon this point I may add, that I, too, am anxious to witness the restoration of a metallic circulation; but seeing what I see, when we make an approach to this desirable object, and remembering what has already occurred, I must repeat, what I expressed some years ago, my doubts as to the possibility of accomplishing it. I doubt whether the country be capable of passing through and recovering from the distress by which it must be inevitably preceded. I admit that faith with the public creditor ought to be kept by great sacrifices, if sacrifices are of avail for that purpose. But it is a sound maxim of law, that *nemo tenetur ad impossibile*, and if the Government be placed in a situation in which it is impossible to keep the country in a state of decent prosperity, it is not required to do impossibilities, and to throw the whole state of society into confusion by attempting them. The more I see of the situation of the country, after more than ten years of peace, suffering as it does at this moment so severely from the effects of an extravagant, and as I always contended, an ill-advised war, the more I am persuaded that no half measures will be of the slightest benefit. Government must take up the whole subject with a sincere desire to probe to the bottom all the evils that afflict us, and to propose those salutary reforms, which alone can restore us to health and prosperity. If only temporary palliatives are resorted to, distress will follow distress in succession, assuming a more aggravated form, until it at last hurries on a fearful convulsion, from which I hope the country will have strength to recover, but through which the present generation cannot pass without a degree of suffering too painful to detail. This I am most anxious to impress upon the King's ministers, that it is absolutely necessary for them at this moment to satisfy the people, not only by professions, but by acts, that they are anxiously disposed to relieve them from needless burdens of every description. They ought to adopt a decided and an energetic resolution to carry into effect every rational project of relief; if they do not, the result may be ruinous to a degree, the consideration of which I dare not approach. Here at present I shall leave this painful topic—it must be amply discussed on some future occasion, and I trust, that if Government neglects its duty, Parliament will not neglect theirs; but, by inquiry, sift thoroughly all the possible causes of the present calamitous state of public affairs. Let us face our dangers with courage—to meet, is half to overcome. If the result be absolute and complete despair, we shall have done our utmost to avert it; and if means can be devised to remedy the distresses, we shall have to congratulate ourselves and our country on the success of our patient and earnest endeavours" (much cheering).

Earl Bathurst said, that, as to the distress of the manufacturing districts, and the necessity of alleviating that distress, there was, he believed, but one feeling throughout the country. If he had any doubt of the wisdom of the proposition made by the noble marquis, it was founded on his belief, that if it were acceded to, it would open the door for applications of this kind from time to time; and they would press so frequently on the country, that in the end it would be found to be a great national evil. His noble friend (the Earl of Liverpool) did not attribute the distress of the manufac-

turing districts to the operation of the corn laws. His noble friend never stated that to be the cause; but, on the contrary, had always maintained, that that distress was mainly attributable to the immense extent to which speculation had been carried, by which the market became overstocked, while the demand was sensibly diminished. The measure now proposed by his noble friend was intended as well for present relief, as, if circumstances called for it, to ward off future distress. What his noble friend proposed was—that in the event of a rise in the price of corn, a power should be granted to check the increase of price by admitting a greater supply. He conceived it to be possible that corn might rise, after the close of the session, to what was stated to be a famine price, and he was anxious to provide for such an exigency. What did the noble earl (Grey) consider to be a famine price, taking into account the state in which a large portion of the manufacturing population was placed? Undoubtedly 80s. was a famine price, situated as the manufacturers now were; and yet, unless corn rose to 80s. per quarter, it was not in the power of the Government, as the law now stood, to let the corn at present in bond into the market. What was bonded previously to the passing of the act, might, by the measure of last year, be taken out when wheat had advanced to 70s. per quarter; but all that was bonded subsequently, could only be taken out when wheat had reached 80s. per quarter. Was that a situation in which any person who felt really for the suffering poor, could wish them to remain for one moment longer? With respect to the other, the precautionary measure of his noble friend, by which it was proposed that the Crown should be allowed to open the ports for the purpose of admitting a further supply of foreign corn, at a certain rate of duty—namely, 12s. per quarter—it was a power which, under the peculiar circumstances of the case, he thought every person must wish the Government to possess.

The Earl of Rosslyn argued, that the noble earl (Liverpool) had, in fact, attributed the existing distresses to the price of grain, by recommending, as a remedy, a measure to effect its reduction. Whatever professions he might make to the contrary, such was the inevitable conclusion. Thus he did all it was possible for a man to do to encourage clamour and delusion.—With respect to the second part of the scheme, it was impossible that it should be necessary in the present session more than in any other. When the noble earl (Bathurst) talked of a famine price at 80s. per quarter, did he not reflect, that to people who had no employment, and consequently received no wages, forty shillings would be as much a famine price as eighty?—It was the duty of the house to inquire: the necessity of relieving the people was not disputed; but the proper relief could only be applied by a full, fair, and fearless investigation.

The Earl of Liverpool said, that the measure proposed by him was not intended as a measure of relief that ought to supersede that species of assistance to which the noble marquis (Lansdowne) had alluded. He had objected to the measure of the noble marquis—not as one which, under no circumstances, should be resorted to, but as one fraught with so much public inconvenience, that nothing but overbearing necessity could justify its adoption;

and he came, in consequence, to the conclusion, that voluntary contribution was better than the measure which the noble marquis recommended.—As to the question of the corn laws, he had stated before that these laws were not the cause of the distress. They had, however, seen that the price of corn had been rising for some weeks past, and, without doubt, if it continued still to rise, that circumstance would act as a great aggravation of the present evil. When noble lords argued this question, they ought to take these facts into consideration,—that though there were individuals who had no employment at present, there were others who had some work, for which they received a small price. Now, no person could say that the amount of wages they paid for their bread was not to them a most material consideration. He would therefore contend, that the two measures,—the one admitting bonded corn into the market, and the other giving the king in council the power to open the ports, and to let in farther supplies,—precautionary measures, with a view to prevent any thing like a famine price, which at any time was dreadful to contemplate, but the effects of which would be terrible now,—were the best that could be devised under all the circumstances.

Lord Ellenborough observed, it was generally considered that the present moment was the worst that could be selected for considering the state of the corn laws, but ministers seemed to think that it was the most favourable time to put an end to them, without any consideration at all. It appeared to him, that ministers were endeavouring surreptitiously, under cover of those feelings to which the present state of distress had given rise, and not in principle,—not in consequence of inquiry, to effect an alteration in those laws in which otherwise the house, perhaps, would not be willing to concur,—an alteration which, he was convinced, were it once admitted, would be continued. He therefore hoped that those who were not hostile to the present corn laws would not allow that to be effected as a temporary measure, which, if once carried, would probably assume a permanent character.

The Earl of Darnley feared the noble earl was not aware of the mischief which must arise from the want of immediate assistance; and therefore he conceived it to be his duty, and the duty of the house, to call on the noble earl to adopt some more efficient measure than that to which he had adverted. It was absurd to talk of the danger of creating a precedent, when individuals were actually expiring from want. Ministers would not satisfy the public, the country, or the starving manufacturers, if they did not take measures of a different nature from those that were proposed.

Here the discussion terminated.

COMMONS. — Mr. Canning :—" I rise, sir, to give notice of my intention to submit to the house, to-morrow, a measure for some modification in the corn laws, with reference to the existing distresses in the manufacturing districts (hear, hear). The accounts received this morning of the sufferings of the people, in these districts, are such as must deeply affect every human heart not altogether callous to the distresses of our fellow-creatures. Whatever may be the expediency of interfering in this way for their relief upon general prin-

ciples, there are some cases of such peculiar hardship, that they call for extraordinary measures for the immediate alleviation of the calamity, as far as that can possibly be done by any regulations that can be adopted. The measure which I intend to propose appears to me the best calculated to meet the existing evil, and the least objectionable in point of principle that can, at present, be devised. In the neighbourhood of the places in which the distress is most severely felt—in the ports of Liverpool, Hull, and other sea-ports—there is a considerable quantity of bonded corn, which cannot, as the law at present stands, be brought out for sale in this country. When the question respecting the corn laws was lately brought before the house, ministers opposed any alteration in those laws, in the full persuasion that the present was a most inconvenient time for interference on the part of the legislature; in that persuasion they still continue; and the very existence of the present distress is, in itself, an argument that this is an inconvenient time for interference with the general question. What I propose, then, to submit to the house, is a measure somewhat similar to that which was adopted last year, but under different circumstances; a measure which may do good, and can do little or no injury to any class of men. What I propose is, that a law should be passed for enabling the proprietors of bonded corn to bring their grain into the market. The amount of bonded wheat is understood to be from 250,000 to 300,000 quarters; and the infusion of this quantity into the corn market may prove beneficial to the people, without any material injury to the agricultural interests. But it is even something to do away with the impression of people being reduced to such an extremity of distress with abundance of food locked up in their vicinity. So far, then, we may, I think, fairly and safely go, in affording such relief as lies in our power, to those on whom the distresses of the present crisis press most heavily. But as we cannot, at this time, be sure of the state of the next harvest, I mean further to propose, that in the bill to be submitted on this subject a clause should be inserted to enable his Majesty in Council to open the ports for the admission of foreign corn, either partially or generally, at the discretion of Government, during the recess of parliament, in case such a measure should appear to be necessary or expedient (hear, hear). With respect to the opening of the ports—if that shall be found expedient—I propose, that the minor duty of twelve shillings per quarter should be imposed upon foreign grain imported into this country. I believe the regular mode of proceeding will be, to move to-morrow that the house go into a committee on the Corn Act of 3d Geo. IV., with a view to the introduction of the measure now in contemplation; but I wish it to be distinctly understood, that I do not mean to propose any alteration in that act, beyond the two points which I have mentioned" (hear, hear).

Mr. Tierney rose to express his great gratification at the measure proposed, and his entire concurrence in its propriety.

Mr. Philips said, that he could not avoid stating what he had recently heard from an intelligent gentleman connected with the manufacturing districts—that his house was ready to go on with business, if there was any prospect of obtaining returns; but at present the state

of the exchanges was not favourable, and remittances could not be made without a loss. He added, that if an importation of foreign corn was allowed, it would afford an opportunity of obtaining a vent for their produce, and the advantage which the manufacturers desired by this was not so much the lowering of the price of corn here, as the obtaining a mode of disposing of their goods elsewhere. Though he (Mr. Philips) would not offer any objection to the temporary measure now proposed, yet he thought the most effectual way to prevent a recurrence of the calamities under which the manufacturing districts were suffering, would be to allow permanently the importation of corn under fixed duties.

Mr. Ellice.—The mere act of making corn more plentiful and cheap would not relieve the wants of the starving manufacturers. They should be put in possession of the means of buying that corn. As far as information from the distressed districts might be relied upon,—and he had reason to fear that its accuracy could not be doubted,—the case had now arrived at that urgent crisis which fully justified the immediate interference of parliament by a grant of pecuniary aid.

Mr. Canning said, it was not at present the intention of Government to submit any other measure to the house than those of which he had already given notice.

Mr. James fully concurred in the observations of the hon. member (Mr. Ellice), that some immediate pecuniary relief should be afforded by parliament. It would be absolutely useless to throw a supply of corn into the market, if some means were not afforded to the starving poor to purchase it. Ministers would do well to imitate the excellent example of his Majesty, and give up a part of their large salaries to prevent their countrymen from starving: they ought to review the estimates, in order to ascertain what sums might be saved, in order to rescue thousands of poor starving manufacturers from destruction. Was this a time to lay out such a sum as 9000*l.* in the purchase of three pictures, when the inhabitants of whole districts were dying of hunger,—when they were told of one unfortunate woman, who had stolen a joint of meat, and who, being pursued by the owner, was discovered in the act of dividing it uncooked among her half-famished children,—when they heard of another female, who continued for twenty-four hours, after giving birth to a child, without being able to obtain food of any kind,—when they heard of some unfortunate men lying under the feet of the horses belonging to the troops sent to repress their violence, and praying that they might be trampled to death, rather than that they should perish through hunger,—when they heard of other wretched men feeding on cats—(Here there were evident symptoms of impatience)—He hoped the house would hear him for a short time. It was the last time which he would ever address them; for if his constituents were to give him 1000*l.* a-year, he would not consent to sit any longer in that house (a laugh). He must say, that any man who did not deeply feel for the distress which now existed in so many parts of the country, did not deserve the name of Englishman (hear, hear). Why, if the unfortunate people now suffering were blacks, the house would never hear the end of it (hear and laughter). The table would have been loaded

with petitions to the very ceiling (hear, hear). Why did not the Saints come forward on this occasion (hear, hear), and exert themselves in the mitigation of human suffering which existed almost at their own doors? Why did they not get rid of their colonial, or rather anti-colonial office (hear, hear), and send down part of the large sums subscribed to the sufferers at Blackburn? Half the sums which they had expended in printing, would, if sent down and distributed among the distressed districts, do more good in a day, than they with all their printing and parchment would be able to effect during their lives (hear, hear). It was not yet too late for ministers to review the estimates, and try what sums might be reduced, in order to save starving multitudes.

Mr. T. Wilson said, that while he concurred with ministers in the propriety of the measure of which they had given notice, he also agreed with the hon. member (Mr. Ellice), that that measure alone would not be sufficient. It was not a want of corn, but a want of employment, and consequently of the means of purchasing food, which caused the distresses now felt in the manufacturing districts. He had every hope that the meeting to be held in the city to-morrow would be productive of much; but still he could not anticipate that its result would be sufficient to meet the evil to its whole extent. He would suggest, that if pecuniary aid were afforded, it might be advanced to the parishes in the distressed districts in aid of the poor's rates, and the application of it confided to the local authorities, who would have the best means of knowing cases in which relief was most required.

The Chancellor of the Exchequer rose for the purpose of expressing a hope that the citizens of London would not be damped in their benevolent efforts to relieve the misery which unfortunately existed among so large a portion of their countrymen by any considerations of what might be done elsewhere. In submitting any proposition to parliament, the thing which of all others the Government deprecated was, that what they felt themselves bound to do should have the slightest tendency to damp that generous ardour in the cause of humanity which had hitherto been, and he hoped would always continue to be, the characteristic of this country, and the ready means of animating all classes of his Majesty's subjects to the performance of their public duties (cheers).

Mr. Peel:—It had been his painful duty to receive reports of the distress which existed, and of the disorders which arose out of it, and to take the most effectual steps in his power to repress those disorders and to prevent their recurrence. Yet, while he did this, he could not withhold the expression of his deep commiseration at the severity of the distress, or his admiration at the patience and forbearance with which (with some few exceptions) that severity of suffering had hitherto been borne in the manufacturing districts. He had every confidence in the effect of the measures now proposed, and of the exertions which he had no doubt would be made to render them still more effectual; and he hoped that this occasion would be the means of strengthening those bonds which united the higher and the lower classes in this country, by affording additional manifestations of great liberality on the one side, and of a grateful sense of it on the other (hear, hear).

Sir J. Wrottesley remembered that a few

to great distress existed in the county (Staffordshire). The re-entry subscribed most liberally towards relief; but all their efforts would have been ineffectual, but for the aid they derived from a committee sitting in London for the purpose of receiving subscriptions. The cause of the disturbances was at length removed by the exertions made to relieve them had been a degree of kindness and of respect to the lower classes to the higher, which had been the conduct of the former most excellent, and these good effects continued up to the present time.

*Mr. Smith* said that there existed in the general sentiment, that on such occasions of the meeting to be held to-morrow, the proprietors of London were not efficiently supported by persons of rank and fashion at the time. He did not make this remark with a view to censure, for he himself had witnessed it in many instances. He hoped, however, that those whom he alluded to, who could spare some time to attend at the meeting of to-morrow, they who might not be able to attend, and their liberal subscriptions.

*Mr. Curtis* expressed his concurrence in the views of *Mr. Smith*, which would, he had no doubt, give him relief. At the same time he hoped that the government would, in carrying it into effect, keep within the limits prescribed. He lamented the existence of the distress in the north; but he could assure the hon. member that there also existed a considerable distress among several of the agricultural districts.

*Mr. Canning* assured the hon. member, that he considered himself as acting most unbecomingly, particularly after the very handsome manner in which he tendered his support of the measure, if under cover of a temporary absence he should either now, or at any future meeting, audaciously carry it farther, so as to affect the question, with which he would admit of some degree allied.

The motion was then put and carried, that the house should resolve itself into the committee to-morrow.

THURSDAY, MAY 2.—The Earl of Derby moved for returns of the average price of wheat for the years 1823, 1824, and for the first four months of 1825. He had already intimated his assent to the first two measures proposed by ministers. He was, however, as he did to the first measure bringing into consumption corn now, he did not think that the house ought to assent to the second proposition without some reason for believing it would be found that there was no necessity for granting the required authority for the importation of foreign corn, and certainly the present distress was owing to the price of corn. He therefore gave notice, that he would on Monday move a resolution, which, admitting that it was proper at the present moment to agree to the importation of the bonded corn, at a certain rate, when wheat had fallen yesterday, the minister gave his notice, 10s. the bushel would be for their lordships well to consider that duty should be—would declare any farther change without inquiry.

*Earl of Limerick*:—The measures proposed by ministers could not operate as any

remedy to the existing distress. What relief would it be to offer a quantity of corn for sale to people who had no money to buy it? The effect, however, of these measures on the agricultural interest was to be dreaded. The noble lord near him had just stated that corn yesterday fell 10s. the load, which was equal to 2s. the quarter.

*Lord Ellenborough* cautioned the house against trusting too much to *Mr. Jacob's* report. That report was a very entertaining book of travels, but not a sufficient authority to enable their lordships to legislate on the corn laws. Whatever might be the character of the information it afforded respecting the countries on the borders of the Baltic, something more was wanted to enable their lordships to come to a decision. It was impossible for any one to look into the history of the corn laws, without knowing that the countries on the Baltic afforded only a small part of the supply of corn introduced into this country when importation was permitted. Their lordships must know that corn could be equally imported from France, the Netherlands, Portugal, the shores of the Mediterranean, America, the countries on the Black Sea, and other quarters. What reliance then was to be placed on a document, the whole information in which was confined to Poland and Pomerania?—He wished the noble lords also to consider, that by agreeing to the first of the two measures proposed by ministers, the second was likely to be more easily carried. This would be obvious, when it was considered that allowing the bonded corn to come into the market would occasion a considerable fall in price, which would again cause an increased consumption. Now if there should happen to be an unfavourable harvest, the consequence of the increased consumption would be to render that importation indispensable, which might otherwise be avoided.

*Lord Teynham* observed, that the depression of the agricultural interest would take away the only means that remained of giving employment to the labouring poor.

COMMONS.—*Lord Milton* presented a petition from *John Hill*, of Manchester, praying that the house would take into consideration the distressed state of Manchester and Salford, and that they would pass an act for bringing the bonded corn out for consumption, and also for the admission of foreign corn at a reasonable duty.

*Mr. Brougham* said, that there could be but one opinion as to the prudence of the measure which was to be carried into effect with respect to bonded corn; but he had, he confessed, some doubts as to the propriety of that proposal, which would give the Crown a power of permitting the importation of foreign corn during the recess of parliament, whenever it might be considered expedient, at a duty of twelve shillings a quarter. One thing seemed certain, that whatever that duty might be, whether twelve shillings or any other sum, that sum would be ultimately taken as a minimum of any future arrangement, when the subject came to be more deliberately investigated.

*Mr. Canning* observed, that the sum of twelve shillings had been taken simply as the sum which stood in the act of last year, and not with reference to any future resolution. If they were about to name, for the first time, an arbitrary sum, they might lay themselves open to such an inference; but they had chosen the sum

in the bill of last year, that they might not subject themselves to any such inference as the learned gent. would deduce from that proposition.

On Mr. Canning's moving the order of the day for the house resolving itself into a committee on the 3d Geo. IV. cap. 60, respecting the corn laws,

Sir T. Lethbridge said, it gave him great pain to offer any opposition to the measure which he understood was to be submitted to the house by the rt. hon. gent. (Mr. Canning). He knew the extent of the responsibility which every gentleman must incur who ventured to put himself forward for such a purpose at this moment, when the country was looking to the proposition of the rt. hon. gent. as the means of imparting relief to the distresses of a large class of the community, whose sufferings no man deplored more sincerely than he. But awful as the responsibility was, and great as might be the blame which he should incur, he was impelled by a sense of duty to object to the mode of relief which was proposed. To the first proposition of the right hon. gent.—that of letting out the corn in bond on paying a duty of 12s. per quarter, there might be no objection; but it was to the next proposal, that of enabling Government to permit the importation of foreign corn at their discretion, that he wanted now to call attention, because it involved the whole principle of the corn laws. But a little fortnight ago, when an hon. member (Mr. Whitmore) had proposed, to deal with the whole system of the corn laws, the proposition had been overruled by a large majority. The argument by which it was attempted to support that proposition was, the possibility of a scarcity. If that fact could be proved, it would furnish a very forcible reason against the principle upon which the corn laws rested. But what was the opinion then expressed by Government? Did they not say that the proposal was ill-timed—that in the existing circumstances of the country, such a question ought not to be disposed of in such a manner? He would ask what had arisen since to justify the alteration which had taken place in the opinion of ministers? The distress now complained of existed then, and it was only because it had been of longer duration, that it was now greater. There had been no rioting then, and he had heard, he did not pretend to say how truly, that the cause of the riots since, might be in a great measure attributed to the manner in which that question had been treated in the house. He, however, was much more disposed to attribute those riots to the distress.—Much was to be hoped in relief of the present distress, from the charity of individuals. The poor-rates were also available; for if a parish were unable to support its poor, it had a right to call upon the adjoining parish for aid; and this mode might be safely resorted to for the relief of the existing distress. Even, if it were necessary, a pecuniary grant might be proposed, in aid of the poor-rates; and for his own part, he was of opinion that it would have been a much more rational and justifiable course than that which was now contemplated: for would the right hon. gent. venture to say, that the high price of corn was the cause of this distress (hear, hear)? He could not believe that so great a fallacy would prevail in that house (hear, hear). He knew that, elsewhere, the notion had been promulgated by persons of great talent, and that it had been

used as a pretext for coming at the landed interest, and destroying them at one blow. He, however, knew that the cause of the distress was to be looked for in various other sources, and therefore it was that he resisted the present motion. He knew that ministers avowed no intention of interfering with the corn laws; and if this representation had been such as he could have given credit to, he might have been content to offer no opposition to the measure. It was stated by the right hon. gent., that the quantity of corn now in the country under bond consisted of 250,000 or 300,000 quarters. He had reason to suppose that the quantity was underrated: and from the account given by Mr. Jacob, he found that 600,000 quarters formed about one week's consumption in England; whence, supposing this statement to be correct, it was obvious that the introduction of such a quantity as was said to be in bond, could have little effect in alleviating the present distress. He therefore thought that under the pretext which was held out, the real object was to get rid of the corn laws by a side-wind. He was sure that imposing a duty of 12s. a quarter on foreign corn, would have the immediate effect of throwing out of cultivation a vast quantity of land, and that distress similar to that which had been felt in 1821 and 1822 would again be experienced. This was a state of things which every one would admit ought to be avoided if possible, and the house need not be told that the distress of the agricultural classes was not less poignant than that of the manufacturers, although, unlike that of the latter, it did not break out into open violence. The manufacturers were congregated together in large bodies. The physical force which they were capable of presenting, had always the effect of intimidating; and in the present reduced state of the military establishments, this consideration had a greater weight than at other times would have belonged to it. He cautioned the house against being led into the adoption of any measure in which this feeling of intimidation might have any share, because it must not only be fallacious in the prospect which it held out, but, as an example to other classes of the community, must be highly dangerous. The house were not called upon to afford protection to one class or to another, but to make laws for the benefit of the whole country (hear, hear). Would it be said, then, that the manufacturers were entitled to the protection which it was now proposed to give them, at the expense of other and not less important interests? It was plain, from Mr. Jacob's report, that the continental growers of corn regulated all their operations by the state of the British market. So long as they could command high prices in the markets of this country, the corn growers of the Continent encouraged their crops. When, in 1821 and 1822, their importations were checked, the cultivation of corn was given up, and wool was grown to a great extent instead. It appeared by the returns, that in 1821, 7 millions of pounds weight of wool were imported; in 1822, 11 or 12 millions; in 1824, 18 millions; and in 1825, 42 millions. Who then could doubt that the immediate consequence of the proposed measure must be to reduce the importation of wool, and to increase the importation of corn? He (Sir T. Lethbridge) could not have supposed, after the fate which the motion of the hon. member (Mr. Whitmore) had experienced, that after only ten days, ministers would themselves

posed what was equal to an annihilation of the whole system of the corn laws.—He had heard a great deal respecting principles of free trade, and had taken pains in consequence, the result of which so clearly appear to be beneficial. On his own part, he was of opinion that those who were carrying ministers out of their country for it was not from the persons interested in the corn alone, but from those concerned in the sugar and commercial quarters, that the most complaints which had not yet been uttered. He hoped the right hon. gentleman (Mr. St. John) would be prepared to refute these statements. From his talents and acquirements, his might be expected; and although he was that the right hon. gent. was only in all his measures to do good, he was less compelled to look at the effect of his measures had produced abroad and

It was yet to be shown that the result of which so much had been said tended its advantage to us—while while we had given advantages to other countries, those countries had not been unwilling in extending similar advantages to us (hear). Without, however, going into the principles of free trade than as to corn, he contended that it was impossible to put that upon the footing of other things until it had been relieved from the burthen it at present bore to the same extent the house look at the expenses which they had to pay. Look at the amount of the national revenue; look at our immense estates, and say whether it was possible to have corn cheap. They must consider that £30 millions to pay the public creditor; would rather sell the coat off his back than be should be defrauded of what was due to him. The nation was bound to the debt, and the credit of the nation destroyed by the slightest infraction of the right hon. gent. was bound to look at these things, and he would do well to consider the danger in which the measure he was about to propose might place the importers he had alluded to.—He wished it to be gone into before passing the measure. If he should agree to them, he should be admitting, what he denied, that the high price of corn was the cause of the distress. He should therefore, as an amendment, "that a select committee be appointed to inquire into the cause of the distress in the manufacturing districts of the best means of applying a remedy."

Mr. St. John said, that even those who advocate the measure did not pretend that it would be a remedy. If, then, it was not likely to be a remedy, what could be said to induce the house to adopt it? He was much disposed to attribute the distress to the depreciation of the currency than to the corn laws. The price of corn was not greatly reduced, and the present measure would not alleviate the distress, and if it should be reduced to a consistent extent, it would transfer the distress from the manufacturing to the agricultural districts.—He was the more opposed to the measure because it seemed to admit that the corn was producing or tending to aggravate the distress. Once get this opinion fixed in the minds of the manufacturing labourers, and they would proceed to destroy agricultural pro-

perty, in the same way that they were now destroying their own machinery and tools—a course about as rational as that of the Irish, who had burned the bank-notes wherever they found them, in order to injure the bankers by whom they had been issued.—Upon the subject generally of the corn laws, his personal opinion had always been in favour of admitting corn conditionally—without regard to home prices—at a protecting duty: as to the amount of that duty, he agreed with the late Mr. Ricardo, that it ought to be just so much as would compensate the land-owner for the share he was compelled to bear of the public burdens, and not one shilling beyond; but he had voted against the motion of the hon. member (Mr. Whitmore) a few evenings since, both because he thought the time unfavourable for discussing the question, and the duty proposed insufficient. The duty, however, at which the right hon. gent. desired to let the bonded corn into the market, was 12s.; and they justified it upon the ground that it was the duty put on (when the ports were opened) by the existing law. But, though 12s. was the ultimate duty at which the corn was to come in, yet for the first three months, it should be recollected, there was the imposition of an additional 5s., making 17s. Therefore, if we were to assimilate the new measure in any degree to the existing law, it was at 17s. the bonded corn ought to be admitted, and not at 12s.; and this, rather, because the difference in the home price at which the admission was to take place, was all in favour of the higher duty: if a duty of 17s. was necessary when corn was 80s. surely a greater duty rather than a less would be requisite when it was at 60s. or 65s. The least that the house could do in justice to the agriculturists, was to make the importation duty 17s. for the first three months, as it stood by the existing law; and, even then, he was convinced, in spite of all that had been said by the right hon. gent., that the quantity of corn in bond would have a very powerful effect upon the market.—He was decidedly in favour of the committee proposed by the hon. bart. (Sir T. Lethbridge): measures might there be taken for the relief of the distress, far more efficient than this change in the corn laws. Proper persons might be sent down into every district, to inquire what the suffering classes were actually receiving from the poor's rate, and to ascertain what was the best mode of administering further to their necessities. A sum of money voted by parliament might be sent down in proper proportions to different parishes, either to be distributed in aid of, and through the same medium as the poor's rate, or to be laid out in the purchase of corn which afterwards should be sold at a cheap rate to those who stood in need of it.

Mr. Canning assured the hon. member (Mr. Benett) that no man could think more unworthy of ministers than they would think of themselves, if there were any foundation for the charge, that they were attempting, by a side-wind, to alter the established system of the corn laws. For the present measure, he proposed it under peculiar circumstances, without the slightest reference to the merits of the general question: and he was sorry for the course which had been taken by hon. members who had preceded him, lest it should induce persons out of doors to unite two considerations, which in truth were—as he had intended to keep them—perfectly distinct. Now the argument of the hon. members was—

that, to touch the corn laws for the relief of the present distresses, was to admit that the corn laws had occasioned those distresses. He (Mr. Canning) did not think it necessary, in the first instance, to consider what had occasioned the distress. He might concede to the hon. member, *argumenti gratia*, that it arose from the system of free trade, or from whatever other causes he thought fit; but, let it arise from what it would, there being so obvious a remedy at hand, as the letting out of bond a quantity of corn, in the very neighbourhood of a crowd of persons who were afflicted with want, the propriety of resorting to that remedy, he thought, was too clear to be denied. To say that admitting this corn as a remedy for the evil was making the absence of the corn the original cause of it, was an argument, as it seemed to him, no more capable of being sustained, than if a man should say that because a particular medicine—bark or senna—had cured him of a particular disease, it was for the want of such bark or senna that he had first been taken ill. It would be too tedious to follow the hon. member (Sir T. Lethbridge) through the question as to what had, or what had not been, the real cause of the distress. Afflicting as it was, it was no more than, from time to time, the country had been subject to, nor than probably must still continue occasionally to visit us, so long as we remained a great commercial nation. Perhaps it would be impossible to trace the distress to any definite cause; but this the house knew, that it existed; and the only point that remained to discuss, was the mode of alleviating it. Then, for the proposal before the house, it consisted of two measures, different from each other in their extent and operation, and which would require to be supported upon different grounds. There existed in this country a large quantity of corn, which had been imported under a law which forbade its coming at present into circulation; upon the very site of the granaries in which this corn was lying, there was a grinding and destructive distress; then could there be a question as to the propriety of at once letting that corn into circulation, and so gaining a considerable immediate relief at little or no sacrifice on the part of the community? This was the first part of the measure proposed: the second was to give Government a power, prospectively, to admit foreign corn, in case an extreme necessity should make it, in their estimation, advisable to do so. Now, he was no alarmist as to the quantity of corn in the country, nor did he know how far prices were likely to rise; but, for the last six weeks, no matter from what cause, we had had a rising market; and there were symptoms of a rising market still. This was so clearly the case, that he thought that the bonded corn admitted would have no more effect than to prevent a farther rise. In speaking of prices, it would be understood that he did not speak of "high" prices, or "low" prices, because those terms were properly relative to the condition of the country. This time twelve-month corn had been at 67s.; now it was at 60s.: using the common terms, therefore, prices would seem to have been higher in the last year than they were in this; but looking at the comparative state of the country, there could be no doubt that the 60s. was a higher price now, than 67s. had been twelve months ago. He repeated, therefore, that he avoided using the terms "high" or "low," as regarded the price

of corn; the more so, because what was wanted in the price of corn, was not a high price, or a low price, so much as a steady price. But, suppose that during the absence of parliament, such a rise were to take place as would create great and imminent distress, what course was to be pursued? Would the house attempt to legislate beforehand as to the precise prices and rates of duty at which importation should be allowed? Certainly not; because mere price was not, without reference to circumstances, a measure of what would be high or low. As the law stood, if, between this time and August next, corn did not rise in price to 80s., whatever the distress or inconvenience, nothing could be done. It might rise to 79s., and the distress might be most pressing, and still no relief could be had. To provide against these contingencies, Government now desired to be furnished with authority. Personally, they felt the power to be an infliction, but it was one which they preferred submitting to, to incurring the risk of mischief.—The observations of the hon. member (Mr. Bennett), as to the amount of duty, seemed to him founded in error, because the question was not one of amount; a reviving trade, with a high price, would assist the country more than a modified price with the existing state of commercial affairs.—The hon. member had deprecated any suspicion of insensibility on his part, to the distress of the manufacturing classes, in the opposition which he gave to the present measure. Now whilst he (Mr. Canning) gave the hon. member credit for the absence of any thing like interested motives, he hoped that the hon. member, on his part, would acquit Government of any intention, under the mask of a distress which all parties must like deplore, to come down to the house with a measure which went, or was intended to go, one point beyond the limit which they affixed to it. The present measure, as he (Mr. Canning) believed, was calculated to do service to the whole country; and not least even to those very gentlemen who were the most strongly inclined to oppose it; for, if power were given to relieve the present distress, they might perhaps find the current of opinion settling so strongly against the corn laws, that they might be unable to maintain them.

Mr. Bankes said, that there was a prevailing opinion among the lower classes, that they were suffering from the operation of the corn laws; the rt. hon. gent., who denied that this opinion was well-founded, in words, admitted it in spirit; for it was by tampering with the corn laws that he proposed to relieve the distress. What would the letting in of the bonded corn avail? Suppose it reduced corn to 30s. a quarter, how would that help people who had no money to buy it at any price? The principle, too, was erroneous. It was bad policy to encourage the working classes to look always, in case of distress, for an alteration in the price of corn. At the same time, thinking the measure could have little operation in any way, he would not oppose it. The second part of the proposition, however, he certainly should resist. Much as he was inclined to give credit to the present Government, he would not entrust the power of altering the whole agricultural trade to any Government, without a stronger proof than had been given of the necessity of the case.

Mr. Robertson thought that the measure proposed would serve only to aggravate the exist-

ing evil. The distress arose from a failure of demand consequent upon the recent commercial distresses, and from the glut of British manufactures which existed in all the markets of the world. If the bonded corn was allowed to be brought into the country, the agricultural interest would take the alarm, and a panic would follow its introduction which it would not be easy to allay. He had a proposition to submit to the house, which would extend the most effectual relief to the distressed manufacturers, without injuring the interests of the landed proprietors. He proposed that the house should grant a sum of money—he would name half a million—which should be placed at the disposal of Government for the relief of the distressed districts. The way in which this relief could be best effected would be to let Government, with this sum, purchase the bonded corn, and the money collected in subscriptions throughout the country might repurchase this corn for the relief of the starving manufacturers at 30s., or less than half its present price; and not only would that measure produce the effect of alleviating the present misery, but it could be effected without injuring in any way the landed interest.

*Mr. Whitmore*:—Under the present afflicting circumstances, he was of opinion that the measure proposed by Government would have the best effect; and, looking at the existing distress, he was persuaded, that if parliament separated without alleviating that distress as far as might be practicable, consequences the most disastrous would follow. The stock of corn in bond was now comparatively small, and if the ensuing harvest should happen to be unproductive, the present measure would be absolutely necessary. He conceived that in the usual state of the country, taking one year with another, the produce was not equal to the consumption. If the contrary were the fact, and if the produce could be proved to exceed or equal the consumption, there would not be any occasion for a revision of the corn laws. He was borne out in his assertion of the deficiency of produce to meet the consumption by the progressive increase of importation, taken on averages of ten years, from 1780 to 1820. Now, from the year 1823, down to last winter, the harvests had been neither very abundant, nor very scanty, so that during that period, a period, too, of considerably increased consumption, it must be concluded that the stocks on hand had been rapidly decreasing, and that very little of them now remained. The hon. member, in proof of this part of his argument, went over certain returns from Mark-Lane, from Liverpool, and from the general accounts of sales, and went on to point out the gradually rising prices in our markets, which had crept up from 55s. to 56s. 58s. 59s. and 60s. and a fraction. Seeing this progressive rise in prices, and knowing the state of the money market, he was led to believe that the stocks on hand were very small. They were in the possession of a very limited number of persons, and he should therefore contemplate an unprofitable harvest with the greatest possible alarm. He thought, therefore, that a power such as that required, should be confided to Government, and he was by any means inclined to view the granting of that power as a cause for alarm. He did not think that the letting out of the bonded corn would lower the price of that article so much as some gentlemen seemed to apprehend. The

corn-holders would not rush into the market all at once, but if they felt their own interest they would feed the demand sparingly. On the other hand, he owned he did not feel any confidence that it would afford any permanent relief. It would, however, have the effect of proving to the people that Government and parliament were disposed to give relief by the only practicable means which had been within their power.

*Col. Wood* said, that in answer to the hon. gent.'s (*Mr. Whitmore's*) observation that this country had hardly grown corn equal to its consumption, he would state that for the last seven years the country had been living on its own produce, and no importation had taken place.—He had no objection to let out the bonded corn at 12s.; but he thought it impossible to look at the discretionary power which was proposed to be vested in Government with respect to the importation of foreign grain, without reference to the corn laws. He hoped, if ministers should be invested with that power, that they would acquaint the house what price it was intended to fix for English grain, before the foreign corn should be allowed to be imported. For his own part, he thought it would be better to make a change in the corn law itself, with respect to the importing price. Why were the ports to be kept shut until the average price of corn should be 80s.? At the time when that regulation was made, there was great agricultural distress, and it was thought that 70s. was too low to extricate the agricultural interest from the difficulties by which they were surrounded. But they were now on their legs again; and as it appeared that the average price of wheat for the last six years was 60s., he would say, let the ports be opened at 65s. He thought it would be wise if the agricultural interest would agree to that proposition.

*Lord Milton*:—Unless he was much mistaken as to these calamities and their causes, the remedy now proposed had no relation to them. It was not want of food which was the grievance. The manufacturing interests were now suffering the extremity of distress which had assailed every commercial house about six months ago. It was not a want of food, neither was it a want of capital in the country; the real want was a want of credit; and his complaint against ministers throughout the session was, that their measures had a tendency to destroy the remaining credit of the country, and to prevent its revival. He wished persons in the house and out of the house to comprehend that this measure was not—could not—be a remedy for the evils now existing in Lancashire. The speech of the rt. hon. gent. was calculated to impress the house with a belief that the price of corn might rise to a pitch, when it might be necessary that ministers should be invested with a power to obviate the evil. If this might be expected, ministers incurred a heavy responsibility in advising the Crown to dissolve the present parliament. With respect to the proposition for a vote of money to relieve the distressed population, his opinion was, that if private individuals were called upon to subscribe, the legislature should come forward. Paupers were entitled to parochial relief: in the present case, the manufacturers of Lancashire were the paupers, and the state was the parish (hear, hear).

*Mr. Philips* eulogized the manufacturing

population; and observed, that were some of the most sensible amongst them admitted into the house, they would puzzle some of the country gentlemen who held their heads so high. He referred to a meeting of artisans at Manchester, assembled to discuss the subject of the corn laws, at which many sensible speeches were delivered, especially one by an artisan named Hodgins. From those speeches it appeared that the artisans did not attribute their distress to the corn laws.

Mr. Calcraft thought that no measure was more likely than the present to create disunion between the agricultural and manufacturing interests. He had at the beginning of the session thought that it was proper to set at rest the important question respecting the corn laws. Ministers, however, thought it would be imprudent to agitate it; nay, no later than five or six days ago, when an hon. member (Mr. Leycester) inquired of the rt. hon. gent. (Mr. Huskisson) whether it was intended to let out the bonded corn, he replied that there was no such intention (hear, hear). To what occurrences, which were not then in progress, was it owing that ministers had so hastily abandoned their resolution (cheers)? But his chief objection was to the second proposition. What! trust ministers with such a power as they asked, when they did not know their own minds? He defied any man to point out, in the weakest administration that ever existed, a greater degree of vacillation than they had displayed on this important question.—Taking off the restriction on foreign corn would have no effect in relieving the distress (hear); neither could individual subscriptions do it. When it was recollected what had been done for the Russians and the Hanoverians, the artisans would think it strange that parliament did not do something for them. He hoped that ministers would not persevere in the second proposition, but that a vote would pass for the relief of the distressed manufacturers.

Sir J. Newport would vote for the committee on the express condition that it be an instruction to it, that after considering the question as to letting out the bonded corn, it should afterwards take into consideration the general question of the corn laws, in order to see how far the second measure proposed would be proper, under present circumstances.—He would add, that whatever might be expected from the issuing of bonded corn, it was his opinion that it would be ineffectual, unless accompanied with a pecuniary grant.

Lord J. Russell thought it was matter of just complaint against ministers, that they had a few days ago refused to interfere with the corn laws during the present year, and now proposed a direct interference, as a necessary means of relief. It was asserted by the rt. hon. gent. that it would be inexpedient to make an advance of the public money; that it would be setting a bad precedent, which would be afterwards urged in support of similar applications, when any class of the people were pressed down by any embarrassment. But how was that principle preserved on the present occasion? The house was told that the only remedy that could be applied was an alteration in the corn laws. What was that but saying to the country, that the corn laws were the cause of the evils for which this remedy was proposed? And when in addition to the letting out of the bonded corn there was the other measure proposed of enabling Government to open the ports during the

recess, should circumstances render that measure desirable, was not this establishing a precedent, of which the people would not fail to take advantage on occasion of any future distress? They would then say, "You have already made an alteration in the corn laws for our relief: our necessities now require that you should make a farther alteration." As to the letting out the bonded corn, the necessity of such a measure would of course depend upon the stock of corn now in the country. He was of opinion that the corn about to be brought into the market would not have much effect in lowering the price of corn. But if it were intended as a relief to the distress of the manufacturing districts, why was it not thought of before?—He would now come to the second measure—that of giving to Government the power of opening the ports during the recess. He for one would hesitate before he left such a power to the discretion of ministers—a power which, by opening the ports even at the duty of 17s., might in the course of a few months so fill the country with foreign corn, as to destroy the agricultural interests for years to come. If such a power were considered necessary, the measure should have been introduced long before, when the whole subject, in all its bearings, might have had that mature consideration which its importance deserved. This, however, was not done, and he must say of the omission, that it was a gross abandonment of their duty on the part of ministers. He had lately voted with them on this subject, on the understanding that in the present year nothing was intended to be done with respect to the corn laws; and he would gladly vote with them again if they proposed any fair measure which would set the question finally at rest.—If the present distress were caused by a want of credit, nothing would be more useful than an advance of money to the manufacturers; but if it arose from a want of demand for their produce, then a grant of money would be of no use; but the difference of opinion which existed as to these points was a reason why an inquiry should be entered into as to what were the causes of the distress, and what would be the most efficient remedy.

Mr. Huskisson said, that he was strengthened in his opinion, that the present was neither a fit nor convenient season for going into a consideration of the general question of the corn laws, both by his knowledge of what was taking place out of doors, and still further by what he had heard from hon. members in this debate. It was evident to him that the discussion of this question would have greatly added to the agitation which prevailed in the country.—When his rt. hon. friend (Mr. Canning) had last night opened as much of the details on this subject as could be known, until it went into the committee, he had met with a spontaneous concurrence, as general as could be desired on the opening of an important public question. More than this, there seemed to be a disposition in the house, not to mix up this question with any heterogeneous matter, which he looked upon as a good omen, and as a sign that the proposition would be well received. It seemed, however, that since yesterday new lights had been let in on this question. Whether they arose in that house, or were inoculated from another quarter, he would not say; but hon. members appeared to have caught the notion, that Government intended to proclaim to the country that the present distress arose from the

peration of the corn laws. Such a conclusion, from what had been proposed, was most illogical and unfair. He must repeat, what he had always said, that those laws were not the cause of the distress, and he should be able to satisfy a house that the present measure was not promoted on any such assumption. A few facts could be sufficient on this point, and he would, therefore, call the attention of the house to the state of the country at the corresponding period of last year. At that period, when the most active employment prevailed in the cotton trade—when every exertion was made to extend it—when the whole world was ransacked for materials for building new factories,—when credit was high, and the manufacturers in full work,—during all that period of prosperity, corn was 1s. or 7s. higher per quarter than it was at present. When corn was so much lower now, it followed as naturally as effect could follow cause, that its price had no direct effect on the condition of the manufacturers. When he said that corn was higher last year than at present, he meant that it was nominally so; but considering the difference in the price of labour and other commodities at present, from what it was then, the present price of corn was not much lower in reality. The price of corn, therefore, was not the cause of the distress. But it was said that want of credit was the cause: if so, how could that be remedied, unless by an increased demand? The want of a demand was the effect of a glut, which occasioned the present dearth of employment. Not that employment had actually ceased. Many were still at work, on reduced wages. Now if the proposed measure would so reduce the price of corn, or prevent its rising beyond its present price, as to enable those who were still employed to eke out the time until a more brisk demand arose, it would accomplish no inconsiderable good. A similar measure, in one respect at least, was proposed last year, and received the support of the landed interest and the sanction of the legislature; and it was not for a moment apprehended that it would have an injurious effect on the agricultural classes. In the six weeks before the measure to which he alluded the prices of corn were—in the first week, 69s.; in the second week, 68s. 9d.; in the third week, 68s.; in the fourth week, 68s.; in the fifth week, 67s.; and in the sixth, 66s. 6d. Now, under these circumstances of a falling price, the legislature sanctioned the letting out into the market between 4 and 500,000 quarters of bonded corn, not because the price was then considered too high, but to prevent the chance of its rising so high as to open the ports, and inundate the country with foreign corn. When this was done in 1825, for such motives, was it too much to ask in the present state of distress, to guard against the danger of corn rising to a very high price; especially when they considered that in 1825 corn was falling, whereas in the last six weeks it had risen? In proposing this measure, they were only doing what had been already done, not only without injury, but even with advantage to the landed interest, as he would show before he sat down.—He now came to the second, and as he perceived the more objectionable measure. In the absence of any exact statistical surveys on the subject, he would not hazard a statement as to whether the stock now in the country was sufficient to afford a supply until the harvest. But in the absence of such information, there were facts

Sess. 1836.

to which he could not shut his eyes. The price of corn had been for some time rising, and by the returns of the several towns from which the averages were made up, it appeared that the supply in the market was now less by several hundred thousand quarters, when compared with the same period of last year. Now let it be recollected what was done last year. Nearly 500,000 quarters of bonded corn were sent into the market between the month of June and the harvest. The harvest itself was earlier by nearly a month than it had been known for many years, and was gathered in under circumstances which made it available for consumption a month earlier than the usual period. Taking these facts, he would without hesitation assert, that they owed it to the supply of foreign corn then thrown into the market, that the ports were not opened on the 15th of last August. He would contend, therefore, that it was not a visionary assertion, that between this time and the approaching harvest, the country might be placed in difficulties of which the consequences might be most serious. Let it be borne in mind, that without the measure now proposed, corn might rise, not merely to 80s., but to 100s., and still the ports could not by law be opened before the first week after the 15th of August, unless parliament were called together in the interim. But suppose parliament were called together. Would that be a proper time to enter into a discussion on the corn laws, when famine stalked through the land? Was it not, therefore, better to provide in time, and not to depend on such contingencies. Let not gentlemen go away with the impression, that by the adoption of this measure, the ports must necessarily be opened. They would remain shut, unless such circumstances occurred as would render their opening necessary. If it should be thought right to add to the limitation of time and circumstances the limitation of price—as, for instance, that the ports should not be opened unless the price were at 65s.—he would say, that for that or for any other prudent limitation which parliament might give them in the exercise of the power which it intrusted to their hands, he for one should be thankful. Let parliament, however, consider, first, whether it would lock up this quantity of corn in the face of rising prices in the present distressed circumstances of the country, after it had liberated a much larger quantity last year under far more favourable appearances; and secondly, whether it would see the session terminate, under all the difficulties with which the manufacturing classes had to contend, and with all the feelings which those difficulties were likely to engender among them, without leaving to ministers, under some limitations, or with some instructions, the power of proving to the people that means of relief were provided for them in case corn, before the ensuing harvest, should amount to an inconvenient price—inconvenient, he meant, with regard to their means of obtaining supply. If parliament refused ministers that power, those who induced it so to act would incur a responsibility, of which they would do well to contemplate the extent. He protested beforehand against the consequences which must ensue, if, for three months or more, Government should be left without the power of relieving a starving population by the introduction of foreign corn.—He had now stated the grounds upon which he was inclined to support the motion of his right hon. friend.

2 Z

population, and observed, that were some of the most sensible amongst them admitted into the house, they would puzzle some of the country gentlemen who held their heads so high. He referred to a meeting of artisans at Manchester, assembled to discuss the subject of the corn laws, at which many sensible speeches were delivered, especially one by an artisan named Hodgins. From those speeches it appeared that the artisans did not attribute their distress to the corn laws.

Mr. Calcraft thought that no measure was more likely than the present to create disunion between the agricultural and manufacturing interests. He had at the beginning of the session thought that it was proper to set at rest the important question respecting the corn laws. Ministers, however, thought it would be imprudent to agitate it; nay, no later than five or six days ago, when an hon. member (Mr. Leycester) inquired of the rt. hon. gent. (Mr. Huskisson) whether it was intended to let out the bonded corn, he replied that there was no such intention (hear, hear). To what occurrences, which were not then in progress, was it owing that ministers had so hastily abandoned their resolution (cheers)? But his chief objection was to the second proposition. What! trust ministers with such a power as they asked, when they did not know their own minds? He defied any man to point out, in the weakest administration that ever existed, a greater degree of vacillation than they had displayed on this important question.—Taking off the restriction on foreign corn would have no effect in relieving the distress (hear); neither could individual subscriptions do it. When it was recollected what had been done for the Russians and the Hanoverians, the artisans would think it strange that parliament did not do something for them. He hoped that ministers would not persevere in the second proposition, but that a vote would pass for the relief of the distressed manufacturers.

Sir J. Newport would vote for the committee on the express condition that it be an instruction to it, that after considering the question as to letting out the bonded corn, it should afterwards take into consideration the general question of the corn laws, in order to see how far the second measure proposed would be proper, under present circumstances.—He would add, that whatever might be expected from the issuing of bonded corn, it was his opinion that it would be ineffectual, unless accompanied with a pecuniary grant.

Lord J. Russell thought it was matter of just complaint against ministers, that they had a few days ago refused to interfere with the corn laws during the present year, and now proposed a direct interference, as a necessary means of relief. It was asserted by the rt. hon. gent. that it would be inexpedient to make an advance of the public money; that it would be setting a bad precedent, which would be afterwards urged in support of similar applications, when any class of the people were pressed down by any embarrassment. But how was that principle preserved on the present occasion? The house was told that the only remedy that could be applied was an alteration in the corn laws. What was that but saying to the country, that the corn laws were the cause of the evils for which this remedy was proposed? And when in addition to the letting out of the bonded corn there was the other measure proposed of enabling Government to open the ports during the

recess, should circumstances render that measure desirable, was not this establishing a precedent, of which the people would not fail to take advantage on occasion of any future distress? They would then say, "You have already made an alteration in the corn laws for our relief: our necessities now require that you should make a farther alteration." As to the letting out the bonded corn, the necessity of such a measure would of course depend upon the stock of corn now in the country. He was of opinion that the corn about to be brought into the market would not have much effect in lowering the price of corn. But if it were intended as a relief to the distress of the manufacturing districts, why was it not thought of before?—He would now come to the second measure—that of giving to Government the power of opening the ports during the recess. He for one would hesitate before he left such a power to the discretion of ministers—a power which, by opening the ports even at the duty of 17s., might in the course of a few months so fill the country with foreign corn, as to destroy the agricultural interests for years to come. If such a power were considered necessary, the measure should have been introduced long before, when the whole subject, in all its bearings, might have had that mature consideration which its importance deserved. This, however, was not done, and he must say of the omission, that it was a gross abandonment of their duty on the part of ministers. He had lately voted with them on this subject, on the understanding that in the present year nothing was intended to be done with respect to the corn laws; and he would gladly vote with them again if they proposed any fair measure which would set the question finally at rest.—If the present distress were caused by a want of credit, nothing would be more useful than an advance of money to the manufacturers; but if it arose from a want of demand for their produce, then a grant of money would be of no use; but the difference of opinion which existed as to these points was a reason why an inquiry should be entered into as to what were the causes of the distress, and what would be the most efficient remedy.

Mr. Huskisson said, that he was strengthened in his opinion, that the present was neither a fit nor convenient season for going into a consideration of the general question of the corn laws, both by his knowledge of what was taking place out of doors, and still further by what he had heard from hon. members in this debate. It was evident to him that the discussion of this question would have greatly added to the agitation which prevailed in the country.—When his rt. hon. friend (Mr. Canning) had last night opened as much of the details on this subject as could be known, until it went into the committee, he had met with a spontaneous concurrence, as general as could be desired in the opening of an important public question. More than this, there seemed to be a disposition in the house, not to mix up this question with any heterogeneous matter, which he looked upon as a good omen, and as a sign that the proposition would be well received. It seemed, however, that since yesterday new lights had been let in on this question. Whether they arose in that house, or were inoculated from another quarter, he would not say; but hon. members appeared to have caught the notion, that Government intended to proclaim to the country that the present distress arose from the

operation of the corn laws. Such a conclusion, from what had been proposed, was most illogical and unfair. He must repeat, what he had always said, that those laws were not the cause of the distress, and he should be able to satisfy the house that the present measure was not proposed on any such assumption. A few facts would be sufficient on this point, and he would, therefore, call the attention of the house to the state of the country at the corresponding period of last year. At that period, when the most active employment prevailed in the cotton trade—when every exertion was made to extend it—when the whole world was ransacked for materials for building new factories,—when credit was high, and the manufacturers in full work,—during all that period of prosperity, corn was 6s. or 7s. higher per quarter than it was at present. When corn was so much lower now, it followed as naturally as effect could follow cause, that its price had no direct effect on the condition of the manufacturers. When he said that corn was higher last year than at present, he meant that it was nominally so; but considering the difference in the price of labour and other commodities at present, from what it was then, the present price of corn was not much lower in reality. The price of corn, therefore, was not the cause of the distress. But it was said that want of credit was the cause: if so, how could that be remedied, unless by an increased demand? The want of a demand was the effect of a glut, which occasioned the present dearth of employment. Not that employment had actually ceased. Many were still at work, on reduced wages. Now if the proposed measure would so reduce the price of corn, or prevent its rising beyond its present price, as to enable those who were still employed to eke out the time until a more brisk demand arose, it would accomplish no inconsiderable good. A similar measure, in one respect at least, was proposed last year, and received the support of the landed interest and the sanction of the legislature; and it was not for a moment apprehended that it would have an injurious effect on the agricultural classes. In the six weeks before the measure to which he alluded the prices of corn were—in the first week, 69s.; in the second week, 68s. 9d.; in the third week, 69s.; in the fourth week, 68s.; in the fifth week, 67s.; and in the sixth, 66s. 6d. Now, under these circumstances of a falling price, the legislature sanctioned the letting out into the market between 4 and 500,000 quarters of bonded corn, not because the price was then considered too high, but to prevent the chance of its rising so high as to open the ports, and inundate the country with foreign corn. When this was done in 1825, for such motives, was it too much to ask in the present state of distress, to guard against the danger of corn rising to a very high price; especially when they considered that in 1825 corn was falling, whereas in the last six weeks it had risen? In proposing this measure, they were only doing what had been already done, not only without injury, but even with advantage to the landed interest, as he would show before he sat down.—He now came to the second, and as he perceived the more objectionable measure. In the absence of any exact statistical surveys on the subject, he would not hazard a statement as to whether the stock now in the country was sufficient to afford a supply until the harvest. But in the absence of such information, there were facts

SESS. 1826,

to which he could not shut his eyes. The price of corn had been for some time rising, and by the returns of the several towns from which the averages were made up, it appeared that the supply in the market was now less by several hundred thousand quarters, when compared with the same period of last year. Now let it be recollected what was done last year. Nearly 500,000 quarters of bonded corn were sent into the market between the month of June and the harvest. The harvest itself was earlier by nearly a month than it had been known for many years, and was gathered in under circumstances which made it available for consumption a month earlier than the usual period. Taking these facts, he would without hesitation assert, that they owed it to the supply of foreign corn then thrown into the market, that the ports were not opened on the 15th of last August. He would contend, therefore, that it was not a visionary assertion, that between this time and the approaching harvest, the country might be placed in difficulties of which the consequences might be most serious. Let it be borne in mind, that without the measure now proposed, corn might rise, not merely to 80s., but to 100s., and still the ports could not by law be opened before the first week after the 15th of August, unless parliament were called together in the interim. But suppose parliament were called together. Would that be a proper time to enter into a discussion on the corn laws, when famine stalked through the land? Was it not, therefore, better to provide in time, and not to depend on such contingencies. Let not gentlemen go away with the impression, that by the adoption of this measure, the ports must necessarily be opened. They would remain shut, unless such circumstances occurred as would render their opening necessary. If it should be thought right to add to the limitation of time and circumstances the limitation of price—as, for instance, that the ports should not be opened unless the price were at 65s.—he would say, that for that or for any other prudent limitation which parliament might give them in the exercise of the power which it intrusted to their hands, he for one should be thankful. Let parliament, however, consider, first, whether it would lock up this quantity of corn in the face of rising prices in the present distressed circumstances of the country, after it had liberated a much larger quantity last year under far more favourable appearances; and secondly, whether it would see the session terminate, under all the difficulties with which the manufacturing classes had to contend, and with all the feelings which those difficulties were likely to engender among them, without leaving to ministers, under some limitations, or with some instructions, the power of proving to the people that means of relief were provided for them in case corn, before the ensuing harvest, should amount to an inconvenient price—inconvenient, he meant, with regard to their means of obtaining supply. If parliament refused ministers that power, those who induced it so to act would incur a responsibility, of which they would do well to contemplate the extent. He protested beforehand against the consequences which must ensue, if, for three months or more, Government should be left without the power of relieving a starving population by the introduction of foreign corn.—He had now stated the grounds upon which he was inclined to support the motion of his right hon. friend.

2 Z

He did not mean to say that these measures would afford immediate relief, for he knew that the existing difficulties were not connected with such causes. He knew that there had been a glut of our manufactures in all the foreign markets, and also that if any thing greatly depressed the price of corn in the home market, it would only lead to a further aggravation of the distress. But if parliament allowed this corn to be taken out of bond, the parties to whom it belonged would send abroad to purchase more, and would so create a demand for our commodities; that demand would create credit, and the beginning of credit would be the termination of distress. It was in the cotton manufacture that a market was most particularly wanted. Now he believed he might say that two-thirds of our cotton manufactured goods were made for the foreign market. If, therefore, an increase of the foreign demand could be created by the purchase of corn, relief would be administered to the cotton manufacturer. He should not have troubled the house with any further observations, had he not felt himself bound to notice a circumstance which had been commented on with a severity, of which he did not complain, by the hon. member (Mr. Calcraft). On the presentation of some petition, an hon. member (Mr. Leicester), without any previous intimation of his design, had asked him if he intended to put any more of the bonded corn into circulation. He (Mr. Huskisson) did not tell the hon. member that he had any such intention either one way or the other. His answer, *en passant*, was, that it had been decided by Government, that the general question of the corn laws should not be decided that session. He did not mean to say that his answer was prudent (loud cries of hear, from the opposition); but what would the hon. gent. have thought of his prudence, if on a question so full of delicacy, and leading to so many important considerations, he had answered either that it was, or that it was not under consideration, but that the result of it could not be disclosed (hear, hear)? He could have given no other answer without leading the country to suppose that some immediate measure was in the contemplation of the Government.—He concluded by observing that recourse to the poor laws,—whose utility in crises like the present in a great measure reconciled him to that system, and atoned for many of the abuses to which it was liable—and the measures which had been proposed that evening were, in his opinion, the only measures by which they could hope to see the distress relieved, and the people obtaining their subsistence once more by their own industry, without the compulsory aid of the law or the benevolence of individuals.

Mr. John Williams addressed the house amidst cries of "question," which rendered his speech scarcely audible.—He said, that the house appeared to him to be placed in a situation of some embarrassment. If the amendment were carried, it would appear as if it were indifferent to the general distress; and if it came to the conclusion to which ministers wished to lead it, it would agree to a measure which could not hold out either immediate consolation or immediate relief to the manufacturers. He had heard nothing in the speech of the right hon. gent. (Mr. Huskisson) but a dry discussion on the corn laws, which came with a very ill grace from him, considering the manner in which he had deprecated such a discussion not more than

fourteen days since. If it were true that it was unfit to hazard a discussion on the corn laws at the time when the hon. member (Mr. Whitmore) brought forward his motion, it was still more unfit to allow ministers on their own discretion to assume the command of the corn laws during the recess of parliament. They had failed in their duty of proposing any measure for the immediate relief of the country, and yet they asked to be trusted with a power which would leave the property of every country gentleman at their mercy. He could not consent to grant them such a power; and he should therefore support the amendment.

Mr. E. Wodehouse said a few words, inculcating of Mr. Jacob's report.

The house then divided.

For the amendment, 82—Against it, 214—Majority against the amendment, 132.

The house then went into a committee,

When the resolutions were proposed as follows:—

1st. "That all foreign corn, meal and flour, which was secured in warehouse in the United Kingdom on the 2d May, 1826, shall be admitted to entry for home consumption on payment of the following duties (that is to say):

|                                                | s. | d. |
|------------------------------------------------|----|----|
| For every quarter of wheat                     | 12 | 0  |
| For every quarter of rye, pearl,<br>and beans  | 8  | 0  |
| For every quarter of barley,<br>bear, and bigg | 6  | 0  |
| For every quarter of oats                      | 4  | 0  |
| For every cwt. of wheat, meal,<br>and flour    | 3  | 3" |

2d. "That it is expedient to empower his Majesty, by any order of his Majesty in council, to permit under certain regulations and for a time to be limited, the entry for home consumption of an additional quantity of foreign corn, meal, or flour; subject to the duties which may be imposed by any act to be passed in this session of parliament."

Sir J. Sebright declared that he would oppose the second resolution, because he considered that it involved the whole question of the corn laws.

Sir T. Lethbridge wished the right hon. gent. would add 5s. to the 12s. which he proposed to affix as a duty on the corn bond (no, no). He would not press this point, as he saw it was against the sense of the house: and he was disposed to support the first resolution, because he thought that it would palliate the existing distress.—He hoped, however, that the house would reject the second resolution. He could consider that resolution in no other point of view than as an attempt to get rid of the corn laws. If the resolution should be agreed to, he was convinced that the ports would in future be open to the introduction of corn at a duty of 12s. If it should be carried, good bye to any future protection to the landed interest (hear, hear).

Mr. Canning:—The duty of 5s. was imposed in addition to the permanent duty of 12s., expressly for the purpose of preventing an unlimited influx of foreign corn. On the present occasion, however, no dread could be entertained of an excessive influx of corn, because the whole amount of that which was in bond was well known. With respect to the second resolution, he could assure the committee that he had no objection, but, on the contrary, he should be very glad, to have the power conferred by it

limited in an any which parliament might deem proper; and if 65s. should be considered a fair price, he had no objection to consent that the power to be vested in ministers should not come into operation till corn reached that price.

*Mr. Bennett*:—If the committee should give ministers the power which they asked for, he would have it conferred upon them unconditionally; for if the price of 65s. and the duty of 12s. should be given to them for their guidance, he felt persuaded that those sums would always be followed as precedents.

The first resolution was then put, and agreed to unanimously; and several members desiring that the second resolution should not be passed without further discussion,

*Mr. Canning* consented to adjourn the committee.

THURSDAY, MAY 4.—*Lord Folkestone* presented a petition signed by several thousands of the inhabitants of Paisley, praying that Parliament would extend to Scotland a sterling gold and silver currency. The petition was entitled to the serious consideration of the house,—not merely from what it said, but also from what it did not say. The petitioners, though they described themselves as suffering great distress, did not even allude to the corn laws. They did not utter a word which would tend to keep up the delusion that those laws formed one of the causes of the distress now felt in the manufacturing districts,—a delusion which he thought ministers were extremely culpable in endeavouring to foment by such measures as they had lately proposed to the house.

*General Gascoyne* said, that no inference favourable to the corn laws could be fairly drawn from the silence of the petitioners. The petitioners did not allude to them, because, like the petitioners from several other parts of the country, they found it would be useless, as no attention would be paid to their prayer. He hoped that ministers would persevere in the measures they had proposed (hear, hear).

The petition was then ordered to be printed.

*Sir T. Lethbridge* then presented a petition from *Mr. William Phillips*, a corn-dealer, of London, stating, that the petitioner was the holder of 4000 quarters of wheat, which had been imported previously to the 15th of May, 1822, and on which a duty had been paid to Government of 10s. per quarter; that he had kept the wheat under the hope that it would arrive at a higher price, but that, owing to the measure now before the house, he was likely to sustain a very serious injury; and praying, either that no alteration should be made in the corn laws during the present session, or that a proper compensation should be allowed to the petitioner for the loss which such alteration would occasion him. The hon. bart. said, that the petition seemed to him of great importance, inasmuch as it showed the situation in which corn-dealers, as well as corn-growers, would be placed by the contemplated measure. Ministers had already carried their proposition so far as to let loose between 3 and 400,000 quarters of bonded corn at a very low duty, which had caused such a stagnation in the trade, as to do away with any chance of corn attaining a high price; indeed, ministers could not seriously entertain any apprehensions of this: if they did, it was but right that they should candidly state to the house the grounds on which they entertained them. The passing of

this measure would, in effect, place the price of every man's quarter of corn at the will of ministers. He hoped that ministers would be satisfied with having carried the first part of their proposition, and would put off the second altogether.

*Mr. Brougham* rose to explain the grounds on which he had voted the night before last. It had been said, that those who on that evening had voted against the amendment, proposed by the hon. bart. (*Sir J. Lethbridge*) were unwilling to inquire into the cause of the distress, for the purpose of applying the proper remedy. He must totally disclaim any such unwillingness; but it must be recollected that the hon. bart.'s proposition had, at least in his opinion, been made for the purpose of getting rid altogether of a measure, which he admitted was only a provisional one, but which, if it could not alleviate the distress, would at any rate prevent its augmentation. Under such circumstances, he conceived himself bound, in common consistency, to oppose the amendment. For his own part, he thought the corn-trade ought to be open with a fixed duty, and that the averages should be got rid of altogether.

*Sir J. Sebright* said, that his own view of the corn laws did not differ much from that of the rt. hon. gent.'s. He did not at all approve of them—he wished to see the ports open at a fixed duty. But he was placed in an awkward situation, for he had been in the constant habit of crying up the ministers, and praising them for what he thought he had particularly discovered in their conduct—namely, decision. Now, at every turn he took, he was taunted with the question, "Well, what do you think of your rt. hon. friends now (a laugh)? Pretty decision, indeed (much laughing). One time they cry out, they would not for the world make an alteration in the corn laws, and the moment the people began to attack the power-looms, oh! then the corn laws must forthwith be regulated" (cheers). Ministers, in his opinion, did not know what they wanted.—He cautioned those who thought the corn laws should be preserved, to look well to what was now proposed; for they might be assured, that if ministers succeeded in prevailing upon the house to adopt the second resolution, there would be an end at once, and for ever, of all the protection which had been thought necessary to the grower of corn. Those, if there were any such, who thought twelve shillings a sufficient protecting duty, might with safety give their consent to it. But it was the bounden duty of all who did not think so to oppose it (loud cries of hear, hear).

*Lord Althorpe* said, that he had, at one time, in common with the rt. hon. gent's., considered the present an unfit time for the discussion of the corn laws. But, after what had been already said and done, and when the house was actually, after all their declarations, in a committee on the corn laws (hear, hear), he could not abide by that opinion, but would, notwithstanding the late period of the session, earnestly recommend them to settle the question at once, and to abandon all temporising and partial propositions (loud cheers).

*Mr. Whitmore* thought it important to observe, that whoever might suffer from a change in the corn laws, the petitioner, at all events, had no reason to complain (hear, hear). When the permission of taking out bonded corn, upon the payment of ten shillings, was given last

year, it was with the plain understanding that the question of the corn laws was to be decided during the present session; and, therefore, if he should suffer from any change in the laws, he could not say now he had not received sufficient notice.

Upon the petition being laid on the table,

Mr. *Baring* said, that if ministers met the real proposition as it ought to be met, they must go into a consideration of the whole question of the corn laws. If they did not, they would leave the country in a state beyond all measure alarming. No farmer, no landlord, would know how to regulate their concerns, and the whole frame of society, both agricultural and manufacturing, would be disorganized by uncertainty. There was no doubt, as had been well observed by the hon. bart. (Sir J. Sebright), that if they consented to the duty of twelve shillings as a temporary expedient, it would be taken afterwards as a precedent for a permanent settlement. How, he would ask, then, could it be considered expedient to adopt either of these resolutions, without a full inquiry into the whole system?

Mr. *Leycester* said, that the imposition of the twelve shilling duty would prove a waste of the resources of the country, for the foreign corn venders would immediately raise the price of their grain from twenty shillings to thirty, and the whole difference would be thus put into the pockets of foreigners, to the loss of the English farmer.

The petition was then ordered to be printed.

FRIDAY, MAY 5.—Lord *Stanley* presented a petition from the clergy, gentry, and inhabitants of Bury, in Lancashire, praying that for the relief of the distressed manufacturers, the corn now in bond, and about to be admitted into the market, might be admitted duty-free. The noble lord observed, that he could not concur in the prayer of the petition. The only effect of allowing the bonded corn to come into the market duty-free, would be to put the duty into the pockets of the importers. The only way in which it could be done so as to give effectual relief, would be to take the duty, and afterwards transmit part or all of it, as it might be considered necessary, to the committees sitting for the relief of the distressed districts.

The petition was ordered to be printed.

Mr. *Heathcote* presented a petition from certain persons engaged in the corn trade at Boston, against the corn bill now before the house. The petitioners stated, that in their opinion this measure would have no other effect than that of putting money into the pockets of foreign dealers; that they themselves were considerable holders of corn, in the purchase of which they had been induced to embark a large portion of their capital by the repeated declarations of ministers that they would not, during the present session, agitate the question of the corn laws; that the measure now before the house, if it should pass into a law, would have the effect of confiscating one-half of their property; that they did not conceive that the present distress was owing to the price of corn, but to the want of confidence, which prevailed throughout the country. The hon. member said, that the indecision of ministers on this subject had caused great inconvenience, and would, he feared, be productive of serious evils to the community.

Upon its being moved by Mr. *Canning* that the Speaker do leave the chair,

Sir *T. Lethbridge* said, that he should not oppose the Speaker's leaving the chair; but should bring forward the objections which he entertained against this measure in the committee.

Mr. *Calcraft* trusted that ministers would meet with a stubborn opposition to the proposition which they now sought to carry. No qualification, or modification which could be proposed should ever induce him to accede to it; it was in reality an indirect way of deciding the question respecting the corn laws. If ministers would go into the full consideration of this subject, he would agree to that mode of proceeding.

The house then went into a committee.

Mr. *Canning*:—"Before I proceed to an explanation of the resolution which I am about to propose, I will clear away some general objections to which the whole of the measures have been subjected—objections which, although they might not, if left unanswered, prejudice the principle of these measures, might, nevertheless, excite some prejudice against them by throwing blame on those whose duty it was to propose them. I am further anxious to say a few words on that subject, because it is my earnest desire to free my rt. hon. colleagues and myself from any thing like any breach of faith, such as has been more than once attempted to cast upon us in the course of these proceedings. Most undoubtedly, I did, on the first day of the present session, make a declaration, which I have often renewed since, that I was of opinion that the present was not a convenient season to enter into a consideration of the corn trade, with a view of making any alteration in the laws which affected it. Upon that opinion I have acted throughout the session; and I now declare without hesitation that it still remains unchanged (hear, hear). And still more, that if any one will consider these resolutions without prejudice, he will find that they are characterised by a strict conformity with such an opinion, and solely intended to enable ministers and this house, without inconvenience, to postpone any consideration of those laws until another session (hear, hear). I am ready to admit, that if any thing had been done by us to prejudice the question of the corn laws, after the declarations we have made to the house, it would be, and would deserve to be, considered a breach of faith upon our part. I confess, after the professions and opinions to which we have given utterance, that it would be our duty to remove any impressions which have arisen from such an accident, and to conciliate, to the utmost of our power, the prejudices which may have been excited by it; but I not only believe most sincerely that this measure is calculated to do away with any inconvenience which might attend at this season a general discussion upon the corn trade, but I am also of opinion, that so far from its being a breach of faith, it is a preservation of faith; and while it is calculated for the benefit of all classes, that it is, above all others, adapted to the preservation of the interests of that class whose rights are said to be most peculiarly affected. If, on the one hand, I am ready to acknowledge that any attempt upon our part to prejudice the general question would be unfair as regards the agriculturists, and as

unwise measure of policy, I hope I do not ask too much, if I wish to get credit to Government for a conscientious desire to do their duty to all classes, and to guide their councils so as to preserve the interests of every portion of the community, whether commercial, manufacturing, or agricultural (hear, hear). In addition to the imputation of a breach of faith, there has been another charge brought against us, less serious I confess, but which I am still anxious to refute—I mean a something which has been presumed, of some sudden change in the councils of ministers with respect to the corn laws, since that question was brought under consideration by the hon. member (Mr. Whitmore). It is stated, that my rt. hon. friend (Mr. Huskisson) gave, in his place in this house, such an answer in reply to a question from an hon. member (Mr. Leycester), as led to the belief that the bonded corn would not be meddled with this year. I do not presume to say that this account of that answer may not be correct, not having been in my place at the time when it was given; but I say broadly, that if that answer was such as left the matter in doubt—if it was worded in general terms, and so as to avoid the possibility of my rt. hon. friend's being committed to any specific course—then it was unfair to draw from it any such inference as has been used against us on the present occasion. I would contend, even, that the rt. hon. gent. did what was perfectly right and consistent with the practice of this house in the manner in which he worded that reply. Nothing is more common than for a responsible minister of the Crown to evade a question by such expedients; and I am quite certain that the hon. member (Mr. Leycester) cannot be so innocent as not to see what consequences might result from such unguarded declarations. Would he consider it to be consistent with the duty of a minister, at the head of the trade of this country, to give answers upon the subject of his intentions with regard to a particular commodity, which would have the effect of raising that article perhaps 50 per cent. by the very next post? He would, I conceive, feel it to be perfectly justifiable for a minister, in such a situation, either not to answer at all, or to give such a reply as would avert consequences so injurious to those engaged in the particular trade to which his question might refer. Questions are put every day in this house, the bearings of which are perhaps very little, if at all, understood either by those who put them, or by those who are called upon to answer them. I myself have been required to give replies, on various occasions, to questions of which, perhaps, I saw the full consequences better afterwards than at the moment when I was called upon to speak; but I have no hesitation in saying, that had I not evaded them, or refused a direct reply, I might have affected the pecuniary interests of individuals in a degree which might hardly be credited. By the effect of inadvertently saying "Aye," upon one of these occasions, I might have created a rise in a certain species of property to the extent of full twenty per cent.; and, perhaps, by a simple "No," I might have depreciated it to a similar extent (hear, hear). I say, therefore, that questions upon such subjects cannot be fairly asked—and that when asked, it would be difficult to give any other answer than an evasive one, if a minister would fulfil properly the duties incumbent upon his situation. If I

regret any thing upon this occasion, it is that my rt. hon. friend did not remain altogether silent; but of this I am perfectly sure, that there was nothing in that answer which he intended to leave open to the inference which has been drawn from it. I hope I have now cleared the question from some of those impediments, with regard to its proposers, which stood in the way of a free and impartial discussion of its merits, and that the proposition will now, at least, be allowed to stand upon its own grounds, unconnected with the private views or pledges of those who are called upon to submit it to the consideration of the house.—I do not mean to say, that if I only thought the principles upon which I call for an assent to this measure were right, that I would not be prepared to uphold it upon that right; but I have the satisfaction to say, that we have now something more than mere theoretical right to support us, and that we have, even in the very short period which has elapsed since this question was agitated, gained the accession of some experience in defence of our principles. I hope it will not be considered an unfair inference, that if I shew what we have already done, and the expectation of what we are about to do, to be producing great good, I may be allowed to anticipate still greater from the consummation of our intentions. The account of what we proposed upon the subject of the corn trade reached Liverpool on Wednesday morning; and on this day there are letters in town, one of which was put into my hand just before I came down to the house. It is not from any friend of mine, nor an acquaintance, nor a political supporter either of mine or of my rt. hon. friend, who succeeded me in the honour of representing that city in this house; but, on the contrary, from a gentleman decidedly opposed to me in the principles of party. I know him, however, to be a man of high honour, unquestioned integrity, and possessing great estimation as a mercantile character in the city where he resides. In this letter, dated from Liverpool, an extract of which I shall take the liberty of reading, he says, there has been a slight improvement to-day in Manchester goods, but the moment it became known that it was the intention of ministers to introduce a measure for relief, by removing the restrictions which kept the bonded corn out of the market, cotton could not be obtained at an advance of 5 per cent.; and there seemed to be a very general restoration of confidence, arising from the feeling that Government would do all in their power to relieve the sufferers (hear, hear). This is the language of one letter. Since I entered the house, however, I have received another, which is also not addressed to me, or to any friend of mine, and (although I am not quite certain) I believe the writer to be opposed to me in politics. I know, however, that he is a person of respectability. His letter, dated the 3d of May, runs thus:—"The account of what has been proposed by ministers has made us all alive, and led to a very general improvement in trade. Holders of cotton are all speculating upon a rise, and there are no sellers to-day" (hear, hear). Surely it cannot be said, after this, that the measure recommended is not founded upon good principles; and even if the practical effect may be in some measure over-rated, it must be a matter of congratulation to its proposers, and an encouragement to their perse-

verance, when they see that the expectation of its effects is likely to produce a return of that confidence, without which the manufacturers cannot hope to be rescued from their present difficulties. I am quite prepared to admit that, because there is so much good anticipated from the first proposition—that of the admission of bonded corn—we are not therefore to infer that this is an argument for the second proposition. The good of the first proposition is plain and immediate; that to be anticipated from the second is distant, and depends on contingencies; but, although the second may rest upon a somewhat different foundation, they tend to the same ends. If I were prepared to affirm either of two propositions—either to say, that the present system of corn laws ought to remain unaltered as the permanent system of the country; or that the present period is the period in which to alter it; a period which every body admits to be one of general distress, of great excitement, and of the highest anxiety;—if I were prepared to affirm either of these propositions, the case would be very different from what it is. But the very circumstances which render a temporary measure necessary,—the distress, the excitement, and the anxiety,—are the circumstances which disqualify parliament for making any permanent settlement of the corn laws at present with any hope of a satisfactory result. Thinking, then, as I do, that the corn laws must undergo a revision in another parliament—thinking as I do,—and so far as the debate has yet gone I have heard no one maintain a contrary opinion,—that it would be a dreadful misfortune to the country, if the existing corn laws were to be carried into their full operation, what remained for me to do, but to advise a temporary measure, which would avoid for a time a permanent settlement of the question, and would guard the country against the mischief which every body agrees would ensue from a strict enforcement of the existing laws? As yet these laws are almost a dead letter; as yet the contingency has not arisen which is necessary to bring them into operation; but any man of feeling, who looks at their origin and provisions, and compares them with the circumstances of the present times, would recede with horror from the idea of pushing them to the extent to which they could be pushed by a rigorous interpretation of them. An hon. bart. (Sir T. Lethbridge) has asked what circumstances have induced us to meddle with the corn laws this session, and more especially what circumstances have grown up since the motion of the hon. member (Mr. Whitmore), to lead us to our present determination? Why the circumstances have grown up I cannot pretend to say; that they have grown up, I have no occasion to tell the committee, for every member knows them. Every one knows that, for three weeks before the hon. member made his motion, there had been a gradual inclination to a rise in price; for three weeks since there has been the same; so that for six weeks—with the exception, I believe, of the last few days, when we can mark a slight decline—a constant tendency to rise has been visible in the corn market; and that rise has been accompanied by a state of terror and alarm, which, although I do not mean to make any prophecies of famine, indicates an approach to a state which no man can contemplate with satisfaction. When we consider that the consumption of the last year began even before the getting in of the harvest,

and that the harvest of this year may be a month later than the last, I say, that there is ground for an apprehension which would not exist in ordinary times. Let us take with that the circumstances which have occurred in the manufacturing districts, and there, I say, we may find that there are matters of more than ordinary importance, which did not exist when the subject was discussed before, and which, although they may not change our opinion as to the expediency of altering the corn laws at the present moment, point out to us the propriety of making such an amendment, as may guard against possible consequences. How far those consequences may operate I do not pretend to predict—a fortnight of mild weather and a west wind may avert all probable danger; while half the time may be the parent of famine. In a former year (1816) a change of one night destroyed our expectations, and the promise of the Monday was totally blighted by the succeeding Wednesday. Are we then, with such experience of the past, and with such a prospect before us, to be deterred by the paltry charge of vacillation or varying councils, to sit down, seeing all this, and to do nothing? Would it not shew a base dereliction of principles, if, with the knowledge of these facts, we were—because there had been, for the last few days, some circumstances of a more mitigated character; but which the slightest rumour of a bad harvest would put to flight—to avoid taking those measures of prevention which a wise foresight renders justifiable. It is as much the duty of Government, I contend, under such an apprehension, to provide for probable consequences, in the manner I propose, as it is the duty of this house to give their assent to them; and the more readily, as we are not called upon to provide a remedy for an evil which exists, but to guard against a danger which it is in our power to avert (hear, hear). I would call upon the house to consider what Government has done on somewhat similar occasions; and I mean, for that purpose, to take a very remarkable occurrence of the last century—not more to be held up as an example to this house, than to be contemplated, with attention, as a warning. In the beginning of 1766, Lord Chatham, the most distinguished man of his day, was the leading member of the Government in this house; while Lord Camden, the most popular lawyer who ever sat upon the bench, appeared at the head of the peers. Never had this country seen so popular—never so commanding an administration; scarcely any who could lay claim with such apparent hope of escaping censure in exercising that power which has been, I think, a little too loosely stated by some hon. members, when they advised us to take measures for infringing the law, under the pretence of the *salus populi*, as inherent in the Crown. Those great men, however, relying on their high favour with the nation, did take this course; and, by an order in council, took upon themselves the responsibility of giving their resolution the effect of law. The course which they pursued was very different from that which we are called upon to adopt. The harvest had proved a bad one; there was an apprehension of a famine, and they had, in the performance of their duty—for this occurred during the recess—to do the very reverse of that for which we require the power of parliament—they had to shut those ports which it would be necessary for us to open. By the

law, as it then stood, grain could be exported to foreign countries until it reached a certain price, and the measure which these ministers adopted was to lay an embargo on all grain in the kingdom at the time when the first apprehensions were entertained of the possibility of a scarcity. This was, under the circumstances, a wise and prudent precaution; but what were the consequences? When parliament met, the exercise of such a power by this popular ministry, produced the most violent debates; and while every man who took any part in them, admitted the absolute necessity of what had been done, the greater portion regarded it as a violation of the principles of the Constitution, as an extension of the prerogative of the Crown, without a proper regard to the privileges of the people, and without a sufficient sense of what was due to its representatives in parliament; and these attacks, sir, were actually successful in both houses (hear, hear). Here, then, is a warning to us; and though the circumstances are not quite the same, are we, after this, to be blamed, because we do not think our course sufficiently secure without subjecting it to the approbation of parliament? There are gentlemen who say we have not done right to come before parliament, and that we ought to wait the possibility of any contingency which may happen, and then act upon our discretion. They say to us "Go on—let the circumstances arise—then use the power of the Crown in the emergency, and come down to us for a Bill of Indemnity" (hear, hear). If then, I ask, those circumstances had happened, and we, relying on the precedent before us, had exercised this power—would this Bill of Indemnity, I ask, have been readily granted (hear, hear)? Who that has witnessed the spirit in which we have been catechized here for the mere attempt to ask for that power—can say so (cheers)? What earnest have we here, I ask, of the spirit and the tone in which we should be treated, if, instead of asking for permission to exercise that power, upon a contingency which may never arise, we were now beseeching this house to grant us indemnity for having exercised it upon a contingency which had arisen, and without that permission which we now call upon it to confer (loud cheers)? Would it not be the first question asked of us, "Had you no apprehensions of this from the six weeks rising of prices previous to the separation, or perhaps the dissolution of this house (hear, hear)? Were you quite ignorant that there was a small stock on hand? Was there no disaster which made it somewhat perilous to hazard the chance of a good harvest? Was there no danger to be apprehended from famine acting upon an excited and disaffected population?" (loud cheers?) I ask, sir, if there would have been no language of this kind, and if we should not have to encounter still greater opposition than that which bore down men so much greater than we can ever hope to be considered, and if their fate should not at once operate as a warning to deter us from a confidence which might prove fatal, and as a light to guide us to that course which is justified by experience (hear, hear)? Should we not, I ask, be worse than madmen, if, notwithstanding what we see, and what we know from the records of history, we were to plunge blindly into a difficulty from which it would be vain to call upon our advisers to extricate us (cheers)? No other course, therefore, remained to us, but to come at once for

the sanction of parliament. Our mere love of what we consider legal and constitutional, constitutes all the difference between us and our opponents. We may come at last, I know, to that crisis which we dread; we may be compelled, if parliament refuses its consent to the measure we propose, and throws us back on the power of the Crown; we may be forced to make use of the very means which we deprecate; but if we do, the responsibility rests not on us, but on the heads of those who not only desert their constitutional principles by refusing to enact the law, but even seem to think they have a sound argument in their desertion (hear, hear). It is not my desire to agitate the country by any unnecessary apprehension; the time for the exercise of such a power may have never been more distant; but it is the desire of ministers, founded on a sound precaution, to receive such a license as they may exercise for the benefit of the community, should the necessity arise in those six weeks, when, perhaps, from a dissolution of this house, they might be unable to apply to it as the repository of that power, and when the danger might be too imminent to endure delay; and never let it be said, that it was a crime in a British minister, that he prefers the sanction of parliament to an arbitrary exercise of the prerogatives of the Crown (cheers). I say, therefore, that those who now refuse us their sanction, must take on themselves the consequences of whatever license we may be compelled to usurp. It may be said, we have the corn laws; but is there any one gentleman who can say, that those laws should, in the present state of the country, be carried into full operation? I say, therefore, that this law is for the protection of the interests of the agriculturists as well as of the other classes of the community, because the corn laws must remain for the present a mere dead letter; and I maintain, that, if we do good now, by interposing this measure against the probability of any scarcity, we do equal good by interposing it between the agriculturists and the extreme operation of the corn laws. These are the persons for whose sake we propose to ask the house for its sanction in granting us the exercise of that responsible discretion which we require; and that responsibility with which we seek to be invested, is no more than must be admitted to exist in the power of the Crown to confer on its ministers in case any emergency may render necessary its assumption and exercise. As to the extensive discretion which this measure proposes to give, I can safely assure the house that there is no mode of limiting that discretion on one hand; and on the other of maintaining a faithful adherence to the assurance which has been given, of not discussing this session, and not interfering with the principle of the corn laws, which we would not gladly adopt and which we do not anxiously solicit. As to the responsibility which the act would confer, there are three modes by which its exercise may be regulated: the first by the imposition of a duty; the second by a restriction of price—that is, the price at which importation should be permitted; the third by a limitation of quantity (hear, hear). When first I brought forward this measure, I was inclined in favour of the imposition of a precise duty of 12s. But it has been objected to that course, that it would have the effect of fixing 12s. as a duty in future when it was intended only to apply to the present case. It was also urged that we had taken too

low a *maximum*. I admit that there is a great deal in both these objections; and feeling their force, I consent to sink the limitation of duty (hear, hear). As to the limitation of price—by which it was meant that the importation should not take place until corn had reached a certain price—it was suggested 65s.—it was liable to the same objection, that it might be assumed hereafter as the importation price. Besides, the fixing any absolute price was liable to this further objection, that what was a fair price at one period might not be so at another; 65s. or any other sum, might be a proper price when the country was in a flourishing state, though when the country was in a depressed condition it might by no means be entitled to be so considered. In relation to the state of the country, 65s. or any absolute sum, might be sometimes high and sometimes low. For this reason, and for the purpose of maintaining thorough good faith with those who might think the fixing a price would be the infringement of the conditions of any previous pledge, or understanding, I consent to place no restriction upon it. There remains but one other mode—that relating to quantity; and on the quantity of imported grain, and on nothing but the quantity, do I propose to place a limitation (hear, hear). A discretionary power, so limited, will leave the future debates on the corn laws, as free as if no discussion had now taken place, and as if no temporary measure had been resorted to, to relieve a temporary distress. This will be a measure which will not affect the general question—which will, let me hope, answer its own purpose, without leaving a sting behind it (cheers).—In proposing any limitation of quantity, there must be always something arbitrary in affixing such limitation. I propose to admit something more than half the amount of the largest quantity that has ever been imported in one season—that is, 500,000 quarters, exclusive of what is now in bond. The principle upon which I propose this is, that as the warehouses are cleared, they may be again replenished; and that, ultimately, the same quantity may be admitted in bond as is now in the country. The act, then (independent of the bonded corn which has been disposed of by the first resolution), will render it lawful for his Majesty, at any time from the close of the present, and until the commencement of the next session of parliament, by the advice of his Majesty's Privy Council, to issue any order for the permission of importing wheat, meal, or flour, into the different parts of this kingdom, provided the whole quantity so to be admitted do not exceed 500,000 quarters; and further, that any order so issued shall not continue in force more than two months from the time of its date; and that none of the benefits provided in the act shall accrue to the party to whom the order was granted, unless it were executed according to the specified terms, and on the performance of such conditions as were directed by it. This is the outline of the provisions of the act. The quantity, which is the material point of consideration, is limited to that amount which is deemed capable of meeting any possible wants that may arise in the intervening period between the close of the present, and commencement of the next session of parliament. It is not in our power to anticipate what exigency may arise to require the exercise of the provisions of this bill. In shaping its provisions to encounter such an exigency,

we are, I think, free from the imputation of bad faith to the landed interest. It was our duty, as ministers, to provide for every possible—for every probable (and in whatever degree probable) contingency that might occur; and it would not have been consistent with our character and our duty as British ministers if we had preferred to assume the power we now solicit nakedly of ourselves, and on our own authority; or if we did not, having a foresight of the contingency, apply to parliament to arm us with means to meet and to prevent it (loud cheers). The rt. hon. gent. concludes by moving the second resolution\*.

Sir T. Lethbridge said, that the rt. hon. gent. had shown no reasonable ground for apprehending any danger of famine during the recess, before the next meeting of parliament. Surely 65s. was not a famine price; at any rate, if ministers thought so, their opinions differed widely from those entertained by Government in 1822. If the average price during the recess should amount to 65s., he supposed they would consider themselves at liberty to open the ports to foreign corn, to the tune of 500,000 quarters. Upon the back of that was to be placed the quantity now in bond, which he believed had been under-rated at 400,000 quarters. Thus there would come upon the market little short of a million of quarters at a duty of 12s. the quarter. He put it to the Government, whether, if such a quantity of corn was imported at this duty, they could ever after look for a higher duty? He pressed this on the particular attention of the house, for he believed if they lost sight of it now, they would have to repent it ever after (hear, hear).

Mr. Portman did not believe that the high price of corn was in any degree the cause of the distress, which he attributed to the want of employment for the manufacturer, and the depression of general credit. With respect, however, to these resolutions, speaking in the name of persons who were largely connected with the agricultural interests, and for himself, as an agriculturist, he must say that he was not disposed to take upon his shoulders, either for them or for himself, the responsibility which they must incur by such an opposition to this measure as the principle of it deserved. That responsibility belonged to the Government, and to the Government alone: upon them he threw it back, and if the measures which they were now bent upon pursuing should, as he believed they were calculated to do, inflict a serious injury upon the whole of the agricultural interests, on them let the consequences rest (cheers).

Mr. H. Sumner could not understand what circumstances connected with agriculture made it necessary to go into a discussion of the corn laws now, which had not existed eighteen days ago, when ministers had declared their intention not to go into any such discussion. The fact was, that the distresses of the disturbed districts, which they had not thought it necessary to provide for a fortnight back, had now gone so far that they were obliged to do something. But he did not think that the course which they were taking was the right one; and if the hon. member (Mr. Portman) would not take upon himself the responsibility of opposing their measures, he (Mr. Sumner) would. He admitted, that letting in the bonded

\* *Ante*, p. 354.

corn last year had produced no ill effect; but the present price of corn was not more than a remunerating one; under 60s. corn could never be grown permanently in this country.

Mr. Peel:—So far from seeing any inconsistency in the course which Government had pursued, with all the experience of that which had occurred since the hon. member's (Mr. Whitmore's) motion, if that motion were capable of being renewed, it would meet with his assent again. Hon. members asked what was that ministers had learned since the 18th of last month? They did not suspect a failing harvest; they did not foresee famine, and starvation, and death; but they thought it possible that such events might arise as would lead to a considerable rise in prices, and to great consequent distress; and they desired to be armed with powers to meet that distress, to be exercised only in case of necessity. The two branches of the measure proposed, rested upon the same foundation: the first went to meet an existing evil, and the second one which it was thought might possibly occur.—Hon. members had argued, that it was of no use to lower the price of corn, for the distressed manufacturers had no means of purchasing it at any price. Did they imagine that there was no class in the country between one who abounded in wealth, and those who were in the opposite extreme? But, with reference even to those who were deprived of the means of purchasing corn at any price, were they not supported by the contributions of the affluent?—and if the affluent were to support the distressed, was it of no consequence either party, that the price of corn should be reduced?—Ministers were accused of an intention to invade the corn laws. Now, the 9,000 quarters of corn mentioned in the resolution were not all to come in of necessity; it was a quantity was the *maximum*, and was to be sought in as occasion might require. For any justice to the general question, he denied that it could result, even in idea, from such a measure: the very duty which was to be paid upon the importation was affixed arbitrarily, in such a way as to make it impossible that it should be construed into a principle,—still less could he attach any weight to the argument that the present measures were dangerous, inasmuch as they might seem to be extorted by clamour and the violence of the people. No man could be more disposed than he was to meet resistance, at all hazards, to clamour; there were two kinds of courage—the courage to refuse that which was wrong, and the courage to do, in spite of misrepresentation, that which was right. For the clamours of the mob, he had no apprehensions from them; there was a moral energy in this country, that would always suppress the violence and defeat the designs of a mob. Where knowledge was extensively diffused throughout the population of a country, a mob could never acquire any permanent ascendancy. Let not, then, the use of Commons forbear to do that which was left from any pusillanimous apprehension that its motives should be misconstrued; and let the people have justice. It might be necessary to restrain the riotous; and even to punish the riotous; but the privations in the main, to which the manufacturing classes had been subjected, had been borne with infinite firmness and endurance. The disturbances at Manchester and the neighbourhood had been greatly

SESS. 1825.

over-rated. He had seen accounts in public papers, stating that for months past riots had been foreseen, and that applications had been made to Government for military assistance, which were said to have been treated with neglect. These imputations were unfounded. Some time since, he had doubled in those districts the military force that was stationed there a year before; and no application had ever been made for military force which had not been instantly acceded to. But, as he had said, the extent of the disturbances had been exaggerated. It was in the power of a very few men to do a great deal of mischief in destroying power-looms. A hundred men broke into a factory two or three miles from any town where soldiers were quartered, and with a few hammers, in half an hour all the power-looms (which were made of cast-iron) were demolished. But where had these disturbances taken place? In a small part only of the manufacturing country. At Leeds, at Huddersfield, throughout all the clothing towns of Yorkshire, (with the exception only of Bradford), there had been no tumults; and yet there the people were suffering great privation and distress.—The hon. member (Mr. Sumner) complained that ministers had shown no facts. They had not; they stood less upon facts than upon contingencies. But if facts were desirable, he (Mr. Peel) could show the hon. gent. that with reference to the price of other articles, corn even now bore a price which was contrary to all proportion. Let the house look at some of the prices of the past and of the present year, and compare the alteration which had taken place in many material articles, with the equal rate which had been kept by agricultural produce. In 1825, the price of cotton had been from 9d. to 1s. a pound; now it was from 4d. to 5d.—something less than half; Pernambuco, 19d. to 20d.; now down to 10d. and 1s.; Jamaica coffee, sold last year from 84s. to 86s., was now 48s. to 52s.; Jamaica brown sugars were down from 70s. to 50s.; Havannah, from 50s. to 35s.; rum, from 2s. 2d. to 1s. 8d.; tallow, from 41s. to 32s. These were great depreciations (hear, hear); whether from the change in the currency, or from whatever other cause, the fall had actually taken place; and how was it, that amid this general depression, if there was such an abundance in the country, that the price of corn remained so high? Ministers did not anticipate famine; but they thought such a material rise in the price of corn possible, as would lead to severe privation. The nominal price at which foreign corn could come in was 80s.; but it might be at 100s.—even at 120s.—before the ports would be open. A long run of averages was necessary before the ports could be opened, during which the most serious evil might exist, before the law applied any remedy. He could perceive, from the manner of the hon. member (Mr. Baring) that he thought this a reason why the corn laws should at once have been altered. If no other remedy could have been devised, he (Mr. Peel) should have been prepared for such a proposition. But he thought otherwise; and he was convinced, that if any course was likely to procure a cool and impartial discussion of the corn laws next session, it was the success of the measure now before the house. Looking back to the case of 1766, which had been quoted by his rt. hon. friend, he found the circumstances connected with that occurrence

3 A

peculiarly analogous to those belonging to the present. In June, Parliament had been dissolved; and it had been found necessary to call it together again in November. In June those difficulties had been suspected, which afterwards fell out. The preceding harvest had been bad, the exportation had been considerable; the Lord Mayor had written to the cabinet ministers, stating his apprehensions that a scarcity might take place. Of all this the Government took no notice. They allowed parliament to dissolve. A scarcity attended with considerable tumults arose; and the royal prerogative was resorted to, for the purpose of stopping exportation. On this occasion, Lord Mansfield was represented to have expressed himself thus:—"I will say, in general, that he is not a moderate minister who will rashly decide in favour of prerogative, in a question where the rights of parliament are on the side; and I am sure he is not a prudent minister, who, even in a doubtful case, commits the prerogative by a wanton experiment, to what degree the people will bear the extent of it. But, my lords, rashly and wilfully to claim or exercise as prerogative, a power clearly against law, is too great boldness for this country; and of all things in the world, the suspending or dispensing power—that edged-tool which has cut so deep—is the last that any man in his wits would handle in England;—that rock which the English history has warned against with such awful beacons;—an attempt which lost one prince his crown, and another both his crown and his head, and that at length expelled their family out of this land of liberty to the regions of tyranny, as the only climate that suited their temper and genius;—a power, the exercise of which stands branded as the subversion of the constitution, in the front of that truly great charter of your liberties—the Bill of Rights. A minister, who is not afraid of that power, is neither fit for the sovereign nor the subject. I love a bold minister, when he keeps in the true sphere. In times of distress and danger, boldness is a jewel; and with joy I have seen bold, even wild enterprises succeed, though hardly within the die when undertaken. But the enemies of our country are the proper objects of our boldness, not the constitution" (hear, hear). Now the power which ministers asked for was one that could be exercised without apprehension; which, in fact, might possibly not be resorted to at all!—Looking at the subject in every point of view, he conceived that the rejection of the present measure would be fraught with serious mischief.

Lord Althorpe opposed the motion, because its effect would be to leave every man's farm at the discretion of ministers.

Colonel Davies expressed his intention of voting for the motion, although he did not approve of the conduct of ministers. He wished the corn laws to be repealed; and to effect that object, the question ought to be met fairly and openly.

Mr. Bennett said the rt. hon. gent. (Mr. Peel) had stated, that wheat was, in May last year, 67s. per quarter; while in the present month it was 60s. Now he did not think it just to compare the alteration which had taken place in cotton and coffee with that which had occurred in corn. Those articles had before risen much higher than wheat had done. He would read a few items for the purpose of showing that wheat was now comparatively cheaper, with reference

to the prices of other articles, than it was in 1792. The rise in wine was 140 per cent.; in shoes 130 per cent.; in livery cloth, 80 per cent.; other cloth, 100 per cent.; hats, 90 per cent.; glass bottles, 80 per cent. He could swell out this list much farther, and the result would show, that corn had not, in comparison with other articles, arrived at that extravagant price which some gentlemen had described.

Mr. Whitmore said, that he had been censured by ministers for introducing his late motion; but after what had occurred, he hoped other gentlemen would not be deterred from introducing beneficial measures, because ministers resisted them in the first instance.—He trusted they would give some explanation as to the mode in which they meant to exercise the power they now called for; because he thought, if the proposition were left in its present naked state, it would create considerable alarm amongst the agriculturists.

Lord Milton must say that the hon. member (Mr. Whitmore) had some reason for complaining that the measure had not been introduced earlier. He and the house had reason to complain of ministers, for not being acquainted with their own minds. He thought it would be much better for the house and the country that this question should be decided at once.

Mr. Calcraft admitted that the present modified measure was far less objectionable than the original plan. It was no longer a settlement of the question of the corn laws by a side-wind. It had nothing to do with the duty or price; but it gave ministers a power to do a certain definite act, in the contemplation of a state of affairs which probably might exist during the recess of parliament, instead of requiring them afterwards to call upon both houses to grant them indemnity for a course which they had been imperatively called upon to pursue. He saw, however, vast difficulties in the execution of the plan, but he waited for the details before he came to any final decision. From this time forth, ministers took into their hands the power of settling the price of corn; the directors of the Bank had the power, by law, of settling the value of the currency; and the value of bread, by law, was to be confined to the directors of the Treasury. If his friends would now take his advice, it would be not to divide upon this stage of the proceeding, but to wait for the whole measure, and to contemplate it in all its bearings, recollecting, that to ruin the manufacturing interest was to ruin the agricultural interest also.—The rt. hon. gent. (Mr. Peel) had mentioned a great fall in different articles—cottons, Pernambucos, and other things, of which he (Mr. Calcraft) did not even know the name; and had observed, that there had not been a corresponding depression in the price of corn. The truth was, that the speculators in cotton and other articles had gone wild; and if the same course had been pursued in wheat, the same consequences would have followed.

After a few remarks from Col. Trench and others, the resolution was agreed to.

LORDS, MONDAY, MAY 8.—Lord Alag said, that he had lately seen in a printed pamphlet, a statement which was a gross and scandalous libel upon the house. He did not mean to say that it was also false. But then their lordships knew that in the eye of the law the fact of a libel being true was only a proof of greater malice. The libel, no doubt, would have—as

had been said of libellous publications in another place—the effect of making their hair stand on end. It was a passage in a memoir circulated among the land-owners of a part of the continent (Appendix 9 of Mr. Jacob's Report). Alluding to the postponement of the corn question by parliament from session to session, it was said—"Our ardent hopes for a rise in the prices of corn, founded on the expectation that England may open its ports, have unhappily again vanished. The new liberal policy adopted by England, with regard to commerce, has not been extended to the corn trade; and the motions of Mr. Huskisson and Mr. Whitmore, as well as the numerous petitions that were laid before parliament, did not meet with any success. It is doubtful whether they will have a better fate next session, should even a new parliament assemble; the influence of the members of the House of Lords, whose interests (in this instance) are at variance with those of the community at large, being too prevailing." He did not know whether it would be proper to call the printer to the bar and make him answerable to their lordships for the libel, as it appeared that the pamphlet was published by the House of Commons.

The Earl of *Limerick* congratulated himself that for once he should agree with the noble lord. He did really think that the paragraph which had been quoted contained a libellous insinuation.—"The country was at the eve of a general election; their lordships knew the state of distress into which the manufacturers were plunged, and he was afraid that measures were now brewing which would place the agriculturists in a similar situation."

**COMMONS.**—Sir *T. Lethbridge* presented a petition signed by the committee of the Norfolk Agricultural Society, stating that the measure now before the house relating to foreign corn, would, if it should become the law of the land, virtually repeal the corn laws—that the petitioners, confiding in the assurances of ministers, and the resolutions of majorities in parliament, that no alteration should be made in the corn laws during the present session, were taken by surprise, and deprived of all opportunity of opposing so effectually as they might have done what they could not but consider as an impending evil,—that if the poor manufacturers stood in need of relief, it ought to be afforded to them in the same manner as it was afforded to the other necessitous classes of the community,—that the petitioners were willing to contribute their proportion towards such relief, but that the whole burthen should not be allowed to fall on them,—that the distress had not arisen from any excessive high price of corn, but that even if it had, the remedy ought to be such as would afford relief to the distressed persons alone, and not like the present measure, which would afford an advantage to the whole community, at the expense of the agricultural interests; and praying that no alteration might be made in the corn laws which would increase the facility of importing foreign corn until taxation should be reduced at least 50 per cent. (cheers).

On the motion that the report of the committee on the corn laws (Act 3 Geo. IV. c. 60) be now brought up.

Mr. *Heathcote* opposed the motion, repeating his former arguments against the second resolution.

Mr. *Catercraft* said, that although many of the

objections which he entertained to the original proposition, were removed by the omission of the words price and duty, still the original sin of the measure was, that the agricultural interest was held up by it to the manufacturing interest, as the barrier which existed between them and subsistence, and as a barrier between them and that increased demand which was declared necessary to relieve their distress. He was satisfied with what had been done on the former occasions when this subject was before the house, and he should recommend that the sense of the house should not now be taken.

Lord *Belgrave* said, that he could not approve of the motion. It had been shown, that if the Government should give the manufacturers the whole quantity of corn which it was proposed to admit, it would afford them no relief; to sell it, therefore, even at a reduced price, would be only to mock their sufferings.

Mr. *H. Sumner* objected to the motion. The *rt. hon. gent.* (Mr. Canning) had stated that 500,000 quarters, together with the quantity now in bond, made rather more than half the greatest quantity that had been imported in any one year: he found, however, that in the year 1819, in which the greatest quantity of corn ever known had been imported, it amounted to 1,582,000 quarters. And what had been the effect on the agriculturists? It had plunged them into the greatest distress for three years. It was the duty of every member connected with the land to resist the measure, and he should oppose it in every stage.

Mr. *Stanley* said, that if the *hon. gent.* had lately come, as he (Mr. S.) had done, from the distressed districts, and seen, in those places where there was absolutely the least suffering, weavers working 15 hours a day for 5s. a week, he would hardly be disposed to resist any course which was likely to give them even temporary relief (hear, hear). He had seen these weavers bearing their privations with a resolution which deserved the highest praise; and subsisting, with their families, upon one scanty meal of oatmeal a-day rather than apply to the parish for relief (hear, hear). He did not believe that the present measure could cure these distresses; but it might alleviate them; and if it would alleviate them ever so little, he would vote for it.

Colonel *Wood* was anxious, for the sake of the manufacturers themselves, not to ruin the home market by distressing the agriculturists. He wished that a price should be fixed—say, for instance, 70s.—at which ministers should at once have the power of opening the ports to the 500,000 quarters of corn.

Sir *M. W. Ridley* saw no peculiar necessity for the second branch of this measure now; as far as his information went, there had never been less likelihood of any approach to scarcity in the country.

Mr. *F. Lewis* thought the measure likely to produce great immediate relief to the manufacturer, and incapable of doing the slightest injury to the agriculturists. It would doubly assist the trading interests; because it would render food cheap, and lead to the export of commodities.

Mr. *J. Smith* said, that they who declared that the proposition made by ministers would injure the agricultural interest, were bound to take a more extended view than they had done of the relation which that interest bore to other classes of the community. Particular inter-

rests ought to be forgotten, in order to prevent the confusion which might arise under the circumstances which might occur before the harvest. He felt it, therefore, to be his duty to support the proposition of ministers, without considering whether they might or might not have brought the subject before parliament at an earlier period—or whether they ought, or ought not, to have discussed the whole question in the present year.—He was glad to hear from different gentlemen that there was no likelihood of a scarcity. On this point it was generally supposed that ministers always had the best information; and, if a shadow of doubt arose as to the correctness of the information they had received, ministers would be guilty of an abandonment of their duty, if they did not examine into the fact, for the purpose of preventing any mischief to which their misinformation might happen to lead. He must say, that he approved of the measure originally proposed, more than of the present. By the present measure, it might be found that the quantity of corn allowed to be imported would be insufficient to meet the demand. In that event, he knew of no mode by which ministers could meet the exigency, except by violating the law, under the hope of receiving indemnity by an act of the legislature.

Mr. Baring could not agree to leave in the hands of Government the power of shifting the price of corn. Distress might arise in one place, this day, and in another, the next; and the object of this proposition was to enable Government, at its pleasure, to shift the price of corn to meet those partial circumstances. His opposition to this measure did not rise from any attachment to the corn laws, but from an unwillingness to place in the hands of ministers the power which was now demanded, when no person could possibly know how that power would be exercised. By the course proposed, neither the grower, the dealer, or the consumer, would know what was to be the price of corn; it was left entirely at the will of his Majesty's government. Now, the manner in which they had, day after day, dealt with other questions of great importance—questions also connected with the corn laws—lowered his confidence with respect to the way in which they would exercise this power. They began the session by meddling with the currency, which they should have left alone (hear, hear); and if they had left it alone, all the difficulties and all the distress would long since have subsided. They would have heard nothing of want of food in Manchester and other parts of the country, and next year they might have safely retraced their steps with respect to the 11. notes. Instead of that, ministers came down prematurely, and by the measures they proposed, knocked from under the small trader the little capital he possessed, and destroyed that confidence which had before prevailed. The reason the ship did not right herself—the reason the country did not at once get over its difficulties—the reason those difficulties had lasted so much longer than they had done on former occasions—was the unfortunate meddling with the currency at the most inauspicious moment that could have been selected. The country was, in fact, suffering under the doctor rather than the disease (hear). Instead of adopting measures to meet the present moment, it was necessary that they should adopt a uniform system. Speaking of the country gentlemen, he must say, there never was a

time when that class of individuals was more disposed to be reasonable. At no time were they more disposed to go into a committee on the subject. There was, he believed, scarcely one of the country gentlemen in that house who did not think that the corn laws required revision. In the first place, it appeared to be the feeling of almost every body, that with open ports and a permanent duty, the corn trade might be safely and beneficially carried on; the only difficulty would be, to fix the amount of duty to be exacted, and the rate of price to which that duty should be applied. Now, though he was inimical to the present corn laws, he was not an enemy to a considerable degree of protection: and, with respect to the extent of protection, it must, after all, be a matter of experiment. He would suggest, that a duty of not less than 15s., or more than 18s., which would give protection to wheat at from 55s. to 60s. per quarter, might be found sufficient. In the early part of the session, the state of the currency was urged as a reason for not considering this question. The necessity of introducing gold to meet the deficit occasioned by the withdrawal of the 11. notes, was strongly dwelt on; and it was said, "if you introduce corn, you cannot import gold." This argument could not now be put forward; because the taking out of the bonded corn would set the merchants to fill the warehouses with fresh corn. The moment these 300,000 quarters of corn were sent out, the warehouses would be again filled—and it was desirable that it should be so. And why? Because the secret was now out. The corn dealers of Germany were apprised of the fact, that these kingdoms did not grow corn enough for their own consumption (hear, hear). Last year there were 400,000 or 500,000 quarters let out of bond, and there was also what was called (and he believed truly, though it might have partially failed in some places) a fine harvest. Yet they had, in the face of these circumstances, a certain evidence, not of an absolute scarcity—nor yet sufficient to produce a just alarm of scarcity—but quite sufficient to prove that this country did not grow enough for its own consumption. He wished to point out one considerable advantage which would accrue from beginning the experiment in the corn trade in the present year. It was evident from Mr. Jacob's report—the merits of which he would not enter into—although he did not consider it to be a production on which, as a whole, he could place great reliance,—that the supply which could now be sent to England from the Continent was not very great. In making the experiment on the corn laws, a new rate of duty must be imposed; and if that duty were very low, the foreign merchant had it not in his power this year to take advantage of it, and to inundate the English market. But when the foreign growers put their seed in the ground next year—and in their power of supplying this country he differed from Mr. Jacob—knowing that England could not do without them, they would take care that there should be an abundant supply. His advice, therefore, was, that ministers should take the question up boldly, and that they should adopt some permanent principle, instead of having recourse to vacillating measures, as they had hitherto done. This was what ought to be done, and what must be done; for he would defy any man to say, that this country was not in a predicament that required an alteration of the

corn laws, even for the benefit of the country gentlemen themselves. The necessity for a permanent measure was equally evident in respect to the bonded corn. The letting in corn in this way reminded him of the annual gaol delivery of debtors, before the Insolvent Act. Those annual acts became necessary from the defect of the law; and the same thing would happen from year to year with respect to the bonded corn.—With respect to the duty to be imposed on this bonded corn, he could see no reason for adopting 12s.; and when the bill was in the committee he meant to move that it should be 15s. instead of 12s. He would do so because he did not wish for a duty below that which he thought would be safe as a permanent one. He believed that if they even put on a duty of 25s. the corn would still come in; but he was quite sure that 17s. or 18s. would not interfere with the supply (hear, hear).

Mr. W. Whitmore must admit that the investing Government with such a power as that of admitting 500,000 quarters of corn, without check or control, was calculated to produce very serious effects upon the agricultural interests. He feared that the knowledge of such power being placed in their hands, might produce unfortunate results amongst the farmers. The farmers, who were, comparatively speaking, ill informed, might be seized with a panic and rush into the market, to the injury of themselves, and eventually of the public. He acknowledged, therefore, that every fresh circumstance only tended to strengthen his conviction of the necessity of a reform in the corn laws.

Mr. Irving concurred in all that had fallen from the hon. member (Mr. Baring) as to the causes that had produced the late calamitous distresses. Long before the month of November, or December, ministers ought to have taken some measures to prevent the evils not arising from what had been called over-trading, or speculation, but from a great and rapid reduction of the currency (hear, hear). As it was, ministers had contributed to the danger instead of endeavouring to avert it, and it was not owing to their exertions that the ship had not foundered.—He could not agree with the hon. member (Mr. Baring) as to the operation of the corn laws, and doubted whether the opinion he had stated was that of the country. Sure he was that it was not the opinion of the agricultural interest. If he (Mr. Irving) understood their sentiments, the farmers were well satisfied with the law as it stood: it had worked well for them and for the country. The corn laws might not, indeed, square with the present fashionable system of political philosophy—they might not accord with the fanciful theories of the metaphysicians and reviewers of Edinburgh (hear, hear); but, as a plain practical man, he could not help rejoicing in the continuance of a system which had benefited one class without doing injury to another (hear, hear). It appeared from the report of Mr. Jacob, for whose character he felt great respect, but with whose facts he could not concur, and from whose arguments he dissented—that the rent of land in countries bordering upon the Baltic was 1s. 3d. per acre for the best, and 6d. for the worst land, while labour was only 5d. per day; the food of the peasantry was cabbage and black bread, their clothing rags, and their cottages wretched. The soil also was productive without limit. Now, in this kingdom, and he hoped it always

would be so, the agricultural labourers lived in comfort, and had more wants than the peasantry of any other quarter of the world. He trusted in God that they would always have those wants, and the means of gratifying them; because, to gratify them, they must be virtuous and industrious. He could not see, therefore, how Great Britain could enter into any competition with foreign countries, like those he had described, and no duty of any amount could give adequate production to the agriculturists of England. He felt no reluctance in giving ministers the discretionary power they demanded; although he should prefer another mode, which he would take the liberty of mentioning. The rt. hon. gent. (Mr. Huskisson) had stated, as one of the inconveniences of the corn laws, that if a scarcity were to happen, for instance, in August next, three months must elapse, by the present mode of ascertaining the averages, before the ports could be opened. The remedy he (Mr. Irving) proposed was to open the ports whenever the average price of wheat reached 70s. per quarter: the average might be taken on the quotation of one day.

Mr. Huskisson:—A variety of opinions had been started, and a number of suggestions offered, to meet an exigency, the existence of which every gentleman more or less admitted. His hon. friend, if he might be permitted to call him so (Mr. Whitmore), seemed to fear that the suggestions of Government would occasion great alarm, and depression of prices. But there might be another ground of alarm—that they should not have a sufficient supply of corn to carry them on to the next season, and this would occasion a rise of prices. But alarm from an opinion of abundance, and an alarm from apprehension of scarcity, were incompatible. He had stated on a former occasion, that the corn in bond proposed to be admitted into the market would not materially affect the prices. The great alarm, however, appeared to arise from the introduction of the 500,000 quarters. But gentlemen appeared to forget that it did not follow, from the vesting of this discretionary power in the Government, that they were bound to admit this quantity of corn. No foreign corn would be admitted, unless the necessity of it should be evident. He begged to recal to the recollection of the house what had happened in 1816: and then they could not but be sensible of the expediency of vesting this discretionary power in the hands of Government. In that year the harvest was very deficient; and yet the ports were not opened till November, although the price of wheat was at 100s. per quarter. They remained shut during August, September, and October, notwithstanding the great advance of price; and then, when the ports were at length opened in November, other countries in which the harvest had been also deficient came into competition with this country in the market, and prevented that ample supply that might otherwise have been obtained. He was as sensible as the hon. member (Mr. Baring) of the inconvenience of this occasional legislation. But he challenged the staunchest supporters of the corn laws, to say, that under the present circumstances, these laws ought to be allowed to come into full operation. No one would venture to say so; and they were bound, therefore, to give this discretionary power to ministers, or adopt some other measure that might obviate so great a calamity. With respect to

the general question, he had only to repeat what he had often said before—that it could not be conveniently brought under discussion till the arrival of a period of less distress and difficulty; and as to the proposition of the hon. member (Mr. Baring), for going into a committee on the corn laws, that hon. member would do well to consider whether the adoption of such a course at the present moment, would tend to allay the alarm and relieve the calamity under which the manufacturing districts were labouring. In his opinion the effect would be the very reverse.

Sir E. Knatchbull said, that reflections had been made in the course of the debate, that the landed interest were backward on the present occasion in coming forward to second a measure of relief. That charge was unfounded and unjust. The landed interest had come forward on every great occasion to give their support to the Crown when the true interest of the country was concerned. He, for one, would have agreed to let out the bonded corn, in consideration of the present distresses; but representing a large portion of the landed interest of the country, he should consider that he compromised his duty if he gave the measure his full support.

Mr. Canning must say, that even those who had entered into the greatest length of discussion on this subject, had kept far wide of the practical question. That question was this:—Here was a law for regulating the trade in corn, enacted under peculiar circumstances, such as perhaps justified the act, but a law of which the extreme provisions had never been suffered to come into operation. It was notoriously the fact, that the country was at present in a situation exactly the reverse of that in which it was placed at the time when that corn law was passed; and no man, however attached to the corn restrictions, had ventured to say, that the extreme provisions of that law could be brought into operation in the existing circumstances of the country, without producing a high degree of apprehension and alarm. Why, then, if it were granted, he had every thing that was necessary to support his view of the subject; and it was clearly the duty of Government to oppose the prejudices of those who objected to the proposed measure, although it was not necessary to combat their arguments, for no arguments had been adduced. Even those who were most decided in the support of the corn laws, and who said that they ought to be maintained as a permanent system, admitted that, for the purpose of maintaining them, some alteration ought to be made, *pro hac vice*. The opponents of the measure asked from what could the exigency arise which called for the present measure; did it arise from the high price of corn? He answered, no such thing—and having answered their question, he would, in his turn, put it to them, for all admitted the existence of the exigency, since they all prescribed a remedy. Those who admitted that the price of corn ought to be lowered, and those who agreed with him on the propriety of receiving the bonded corn, equally admitted its existence. They must, therefore, think the measure proposed a measure of necessity. If there was a necessity for any measure, that measure must be either by the alteration or the suspension of the law. Some members had spoken for an alteration. He thought otherwise. The very existence of any reason for preventing the law from now coming into

full operation, was a reason, as it seemed to him, why it would now be inconvenient to make any alteration in the law; and that inconvenience would be principally felt by the landed interest. He protested, that, whatever might be the construction put on this measure by the landed interest, if he were called on to describe it, he should say it was a bill for the protection of the landed interest (cheers). He had no hesitation in saying, that he could bring forward arguments which would fully make out that description; but he would not now go into them, as they might be liable to misconstructions, some of which, especially at the present moment, it was peculiarly desirable to avoid. Well, then, if an alteration of the law were not advisable, how were they to provide the means for meeting the exigency? On looking at the debates which had taken place on the corn laws formerly, he found it urged over and over again, as a reason why the ports should not be opened, that if an exigency should occur, ministers might open the ports on their own responsibility, but he found also that Government had constantly refused that power; and on looking to history he found that where Government had exercised such power, it had always been attended with great inconvenience. All he asked, then, now that Parliament was sitting, was, the means of providing for such an exigency, leaving it to Parliament itself to limit the exercise of the power to be conferred. The whole question was this—on the one side was a measure fraught with much inconvenience and mischief; on the other, one by which the same end might be obtained without incurring the mischief. One was to enter upon a discussion of the corn laws, at a time when the country was in that state which would preclude the chance of a sober and unprejudiced consideration of them—the other was to leave the whole matter to the discretion of ministers. They did not wish to resort to the royal prerogative. They rather chose to come to parliament for a limited power, and that power they asked under circumstances in which, in his opinion, parliament would not be justified in the refusal (hear, hear).

The house then divided. For bringing up the report, 185—Against it, 58—Majority, 127.

On the question that the resolutions be read a second time,

Mr. Baring observed, that it would be better, under all the circumstances, to go at once to a committee, where the whole subject might be considered in all its bearings. The fact was, that ministers put it off from year to year, because they were afraid to meet their own friends in parliament. In order to afford an opportunity for reconsidering the whole subject, he should move as an amendment, "That the resolutions be recommitted."

Lord Milton seconded the amendment.

The house divided, when there appeared—For the amendment, 51—Against it, 167—Majority in favour of the resolutions, 116.

The report was then agreed to, and two bills (the Warehoused Corn Bill, and the Importation of Corn Bill) founded thereon, were then read a first time.

TUESDAY, MAY 9.—Mr. Phillips presented a petition from the cotton-spinners of Manchester against the corn laws, to which they traced a great part of their present sufferings.

The petition was ordered to be printed.

Mr. Huskisson moved the order of the day for

the second reading of the Warehoused Corn bill.

Lord Milton was anxious to take the present opportunity of asking the rt. hon. gent. (Mr. Canning) whether the two bills now before the house were intended to include the whole of the measures intended by Government for the relief of the distressed districts? It was well known, that a subscription for the relief of the distressed manufacturers had been sanctioned by ministers, thus obviously admitting that relief of a pecuniary nature was necessary. He felt convinced that the distress was now of that urgent nature which would justify parliament in voting pecuniary assistance.

Mr. Canning:—When the motion on this subject, of which an hon. member (Mr. P. Moore) had given notice, should be brought forward, he would be prepared to give the noble lord an answer.

Mr. H. Sumner having pressed the question of adjournment,

Sir T. Lethbridge expressed a hope that his hon. friend would allow the first measure to go on.

Mr. H. Sumner replied, that all he would say in answer to the suggestions thrown out was, that they who thought this bill of no importance might vote for it. For his own part, he thought the measure was uncalled for—that no case had been made out to prove its necessity—and that it would be extremely injurious to the landed interest. Having these sentiments, he must act for himself; and if he stood alone, he would take the sense of the house on it.

Mr. Tremayne concurred with the hon. member (Mr. Sumner). There was nothing in the state of the country since the 18th of April which could render the measure necessary, and after the full discussion, and the solemn decision to which the house then came, he thought no alteration ought to be made in the corn laws. He would therefore support the amendment.

The house then divided:—For the original motion, 174—For Mr. H. Sumner's amendment, 1—Majority against it, 172.

The bill was then read a second time, and ordered to be committed to-morrow.

The Importation of Corn bill was then ordered to be read a second time on Thursday next.

**LORDS, THURSDAY, MAY 11.**—The Earl of Malmesbury, in rising to introduce a resolution against any alteration in the Corn laws at the present moment, assured their lordships that he felt great pain and embarrassment in addressing them,—great pain, because he differed from persons whose opinion on public affairs had, on other occasions, been the same as his own, and for whom he felt the greatest personal regard,—and great embarrassment, because of the state of the country, which was suffering under an enormous extent of distress. He also lamented that some one of their lordships, better able to execute the duty he was attempting to discharge, had not undertaken the task. It appeared from the votes of the House of Commons, that there were two measures connected with the subject of the corn laws before that house. The first was for allowing the corn now in bond to come into the market, which he did not intend to oppose. By the second it was proposed to place in the hands of ministers the power of introducing, during the recess of parliament, 500,000 quarters of foreign corn.

It might be that the other house would think fit to pass a bill authorizing the importation of such a quantity of corn, without making it subject to a duty, or imposing any limitation as to time. On the contrary, it might be the opinion of their lordships that there ought to be a fixed duty, and a limited time of importation. The necessity, therefore, of previously considering the subject before the bill came up from the other house, was obvious; because no alteration could be made in a bill of this kind, by that house, without causing the measure to fall entirely to the ground. He did not mean to pursue the subject to a great length, but wished to call their lordships' attention to the state of the corn question. Their lordships might recollect, that in March 1825, a rt. hon. gent. (Mr. Huskisson) declared that, although he thought a revision of the corn laws necessary, it was not intended to agitate the subject that session: it was understood to be postponed to the present session; but, notwithstanding, two minor questions were brought forward at the close of last session, both of them bearing on the corn laws, and both of them involving a violation of the principle of those laws. By one, 433,000 quarters of bonded corn were thrown into the market; the other proposed to establish a free trade in corn with our North American colonies. To the first bill no opposition was given, but the second was seriously resisted in that house. The noble earl (Liverpool), notwithstanding he had agreed to putting a duty of 5s. on Canada wheat, at the same time declared his opinion that there ought to be no duty, but that the trade should be quite free. Their lordships, however, thought differently. It was at first proposed, that the bill should be extended to three years, but the period of its duration was afterwards reduced to one year. In the beginning of the present session the noble earl again postponed the consideration of the question of the corn laws, on account of the great commercial distress, and the measures which it was thought necessary to adopt with regard to the currency. About ten days ago, when the distresses which prevailed in the manufacturing districts assumed a more alarming character, a noble marquis (Lansdowne) suggested a vote of money to be applied towards the relief of the distressed. The noble earl (Liverpool) stated that Government had no intention of granting money. They relied, he said, on private charity and the poor-rates. Now of the poor-rates, it was not stating the proportion too high when he said that the landed interest already paid at least 7-10ths. In addition to this, Government proposed the two measures which were now before the other house. Of these he certainly saw objections to the first measure; but he would not occupy their lordships' time in stating them, as he did not mean to oppose it. But if their lordships would have the goodness to indulge him so far, he would state how much foreign corn had—in violation, as he contended, of the existing corn laws—been introduced into the home market since the 21st of last June. Of bonded corn there were 433,000 quarters; of Canadian corn, 95,000 quarters; and, by the first of these measures, there would be, further, 300,000 quarters; altogether making 828,000 quarters in eleven months. Then, if to that were to be added the 500,000 quarters to be introduced by the second measure, they would have a quantity of 1,328,000 quarters of foreign corn introduced into the home market within one year.

Now, the annual average importations had been about 450,000 quarters, including years of war as well as peace; so that this year they would have admitted a quantity greater than the average amount of  $2\frac{1}{2}$  former years.—Looking at the question, with a view to the probability of a scarcity, he would first consider the average prices of past years, and then the average price of this year. He would not look back to a period of war, but he would take the years 1816 and 1817, which had been two of the worst years ever remembered. In November, 1815, the price was 36s.; in May, 1816, it was 75s.; in November, 1816, it was 98s.; and in May, 1817, it was 105s. In this year the quarterly averages ran thus:—In May, 1825, it was 60s., which was 45s. less than in 1817. On the 14th of November, two months after the harvest, in 1825, it was 64s. 5d.; in the following February, which was five months after the harvest, it was 60s. 5d., which was less by 5s. than it had been in two months after the harvest; and in May, which was eight months after the harvest, the price was 60s. 4d.; so that it was now full 5s. less than it had been two months after the harvest. There was, therefore, no great probability of high prices this year. Now, it was said that the stock in hand was deficient; but that he begged leave to deny. It was very well known that the farmer could sell a necessary quantity from time to time, and he would still have as much as would last him to next harvest. He had no documents to prove this to the house, but such was his information on the subject; and this was the case in Norfolk, Sussex, and other counties. He did not pledge himself, however, to this fact; but he argued from it to show that though the warehouses might not be so full as they ought to be, that was no proof that the stock in hand was not sufficient.—Now, with respect to the noble earl's measures, he (Lord Malmesbury) must first beg leave to ask one thing—what was the cause of the distress? The master-manufacturer said it was the combinations of the workmen. The workman said it was the machinery. Old-fashioned people like himself (Lord Malmesbury) said it was the free-trade principles. Some attributed it to the state of the currency; others to the corn laws; whilst some again attributed it to the excessive speculations of last year. Whatever it was, he believed in his conscience that the corn laws had nothing to do with it; and that being the case, their lordships should prove it to the world. When the cry against the corn laws was, he would not say encouraged, but countenanced by the measures proposed by Government, he thought it incumbent on the house to adopt some steps to disabuse the public mind on the subject. He would only ask one week, and would undertake in that time to prove, by the testimony of five or six honest manufacturers, that not only their present distress was not attributable to the corn laws, but that any alteration of them would be calculated to increase that distress; for if it increased the distress of the other class of the community, it must of necessity increase theirs. On that ground he took his stand.—Another reason why he was anxious for inquiry arose from rather a singular circumstance—namely, an expression which dropped from the noble earl in introducing these measures—the words, “famine price.” Now, how could that price, which, in 1822, was fixed by ministers, in four

short years become a famine price? He must do the noble earl the justice to say, that when he used the expression, he added, that what might not be a famine price one year, might, owing to a change of circumstances, become a famine price the next; but the proposed duty of 12s. was liable to the same observations; for this also might in time become a famine duty. He contended, therefore, that there was good reason to go at once into an inquiry; for it would be impossible to let a farm, or form a contract, if the price of corn were to be left depending upon the opinion of ministers as to what might constitute a famine price. If the word famine price applied to corn, so did it apply to other articles of life, which were equally dear. Hats, coats, shoes, might be said to cost a famine price; as the noble lord might see, if he had time to look into his tailor's or his shoemaker's accounts. The same observation applied to education and to tea, which had now almost generally become a necessary, and which was as high as it was in 1822. If, therefore, one thing was at a famine price, so was every other. Having mentioned education, he would observe that he was partial to the education of the lower ranks; he always rejoiced at what was called the march of intellect, because it enabled the people to overcome prejudice; and if the present subject were fully understood, he was convinced that the prejudice which now clouded the public mind would be removed, and it would be universally allowed that protection must be given to the landed interest. They were taxed in a way in which no other class was taxed; they could not avail themselves of the aid of machinery, and they could never have more than the mere interest of their money.—He would now only refer to one point—namely, Ireland, which afforded one of the greatest resources to this country against scarcity. The average quantity of corn which had been imported from Ireland, according to the statement of Mr. Tooke's book, during the first three years after 1806, when the importation duty was taken off Irish corn, was 63,000 quarters; and in the last three years down to 1822, beyond which the tables did not extend, it averaged 484,000 quarters; equalling in amount the former importation of foreign corn. But their lordships had a document lately laid before the house, which put this in a stronger point of view. From that it appeared, that the quantity of meal, flour, and grain, imported from Ireland in 1815, was 1,600,000 barrels; in 1823, it increased to 3,700,000: so that the greatest dependence might be placed on the supplies of that country.—If the power of importing these 500,000 quarters of corn could be intrusted in any hands, it might be in those of the noble earl. But it was too great a trust for any hands. What would be the effect of this measure upon the market for the next eight months? No man would buy wheat for what he might purchase it for to-day, if he expected that 500,000 additional quarters would be brought into the market to-morrow. Suppose 200,000 pair of shoes were imported here from France, and placed in the hands of the noble earl, to be brought into the market when he thought fit; it would immediately produce an insurrection amongst the shoemakers of the metropolis. The noble earl might say to them, that 200,000 pair of shoes bore no proportion to the quantity required for this great metropolis; to which they would

instantly reply, no; but so long as the public expected this additional supply to be thrown into the market, they would not buy any shoes from them; and thus the uncertainty which the anticipation of that supply produced destroyed their sale. So it would be with the anticipation of these 500,000 quarters of foreign corn; it would completely destroy the home-market. The noble lord concluded by moving a resolution to the following effect:—"That this House, although most anxious to contribute to the relief of the suffering classes of the community, is of opinion that it would not be expedient to make any alteration in the existing system of the corn laws, with regard to the importation of foreign corn, without instituting a previous inquiry as to the necessity of such alteration, and the effects which it might produce upon the interests of the grower and consumer of British produce."

Earl Bathurst:—His noble friend wished the House to make a declaration of their sentiments, even before the proposed measures were brought under their consideration. But certainly the resolution proposed by his noble friend would not declare their sentiments: it was a resolution on which no two individuals would be agreed as to its meaning. Those who thought that there should be an alteration of the corn laws, but that it should be preceded by inquiry; those who thought there should be an alteration without any inquiry; those who thought there should be no alteration, nor even inquiry, this year, but that both inquiry and alteration should be postponed to next year; and those who thought there should be no alteration at all—might all put their own construction on the resolution. What did the noble earl mean by "the present system of the corn laws?" In 1815, the law, until wheat reached 80s., prohibited the importation of corn; at 80s. it was admitted free of duty. In 1822, it was determined that foreign corn should be admitted when the market price was 70s.; at then it was to be subject to a duty of 17s. for the first three months, and of 12s. afterwards, until it was at 80s., when a proportionate reduction was to be allowed, and it was then to pay a graduated duty. In addition to this, there was a provision that this law was not to come into operation until the market price arrived at 80s.; the effect of which was to suspend the law until corn should rise to 80s. a quarter. Now, then, what was the existing system of the corn laws? He (Earl Bathurst) said that foreign corn was to be admitted when the market price arrived at 70s. Now, if that were so, according to his noble friend's proposition, that part of the law ought to be repealed; but, on the other hand, those who could say that 80s. ought to be the protecting price, were pledged against this alteration, unless they first went into inquiry.—His noble friend wished the House to declare against any alteration in the corn laws; yet he was willing to allow the admission of bonded corn. This was a complete infraction of the laws; but, though he admitted this, he was unwilling to go any step farther, and admit foreign corn under any exigency. He (Lord Bathurst) would ask, did noble lords reflected what might be the state of the country in such a case? The noble earl said that the farm-yards were full of corn, if the granaries were not. He did not know from what authority the noble earl drew his statement, but he (Earl Bathurst) knew that

Edin. 1826.

last year there had been a very early harvest, and there was the prospect of a very late one this year.—(Earl Grey said, that that was not the case.)—Perhaps the harvest was much earlier in Northumberland (a laugh): but, supposing the promise of the crops now to be fair, even then it did not follow that the harvest might be got in so well as last year; and if that was not the case, corn might rise within six weeks to such an extent, that any one who thought of the state of the labouring classes must be convinced they could not exist. What was the remedy for such a contingency? Was parliament to sit up to the 14th of August? The averages were struck every three months, and one was on that day. Now, at that period the price might be below the protecting price; and the consequence would be, that they could not allow the importation of foreign corn for the following six weeks, and during that time it might rise to a famine price. If, then, the measure now proposed was not carried, what was to be done? Was parliament to be adjourned, and then re-summoned, without any thing being done in the interval? And if they were re-summoned, was such a moment propitious for the discussion of the principle of the corn laws? And yet, if parliament should be summoned under such circumstances, they must go into the discussion. Some persons were of opinion, that the power of the Crown should be exerted in case of necessity—that corn should be imported—and that ministers should then come to parliament for indemnity. Something like this had once been done by Lord Chatham; and when he afterwards came to parliament for an indemnity, it was asked, "Why did you not foresee this necessity before parliament had separated?" Let their lordships, therefore, give ministers some discretionary power to provide against an emergency.—He should now move "That the House do adjourn."

The Marquis of Salisbury was willing to place a proper degree of confidence in ministers, and he would have readily done so in the present instance, but that there was something in the manner adopted, and the time chosen for bringing forward these two important measures, that rendered them extremely exceptionable (hear, hear). From an opinion often expressed by a right hon. gent. (Mr. Huskisson) that the corn laws should be revised with a view to their being ameliorated, if not totally repealed, it was generally thought that it was the intention of Government to abolish the corn laws altogether. Added to this, a belief had gone abroad, that the corn laws had been so long kept up, in order to support the landed interest. This was an unfounded calumny on the land-owners; and if a proper investigation were gone into, with respect to the cause of the present distress in the manufacturing districts, an opportunity would be afforded to the land-holders to repel that imputation by proving that the distresses of the manufacturers arose from the adoption of the principles of free trade, and the dangerous delusive speculations which those principles had given rise to (hear, hear). Whatever might be the theoretical objections to the corn laws, they had had the practical merit of securing low prices, and thereby contributed most materially to the interests and well-being of that very class of persons who were led to view them as an evil,—he meant the manufacturing interests (hear, hear). He should vote against the

3 B

resolution of the noble lord (Malmesbury); but he thought that ministers should take immediate steps to inquire into the existing distress, with a view to its effectual relief.

The Earl of *Limerick* had on many trying occasions been zealous in support of ministers. In storm and sunshine, in good and bad fortune, he had given them his aid. Of all of them he had a high opinion—to many of them he was personally attached, but, considering as he did, that the present measures were likely to be injurious to the country, he was obliged to withhold his concurrence. It was argued against inquiring into the cause of the distress, that it would occupy too much time. Why this was but the beginning of May, and their lordships' time could not be better occupied than by endeavouring to prevent a famine (hear, hear).—Like other measures of magnitude, the present could only be justified by the plea of necessity; and, accordingly, they were told that corn was at a famine price. Now what was the last price? It was 58s. 6d.; and for the last four months the markets had been falling. Could there be any apprehension of a famine-price while the average was 58s. 6d. with a falling market, and the certainty of 300,000 quarters being brought into consumption? The agriculturists were the only class that had survived the general wreck: they were interested in this question; for they had a considerable quantity of corn still on hand. There was also a very great stock of corn in Ireland; and if ministers persisted in their measures, that corn would go to a bad market, and the consequences would be ruinous to the landed interest of that country.—The noble earl then alluded to Mr. Jacob's report, of which he had not the patience to read more than half. He believed Mr. Jacob to be a respectable man; but he ridiculed the idea of his being sent on a six months' tour to examine the state of land in the principal countries in Europe.—He should vote for the resolution.

The Earl of *Harewood*:—Qualified as the measure respecting the importation of foreign corn had now become, and stripped of its alarming consequences, he did not think that the agricultural interests had any just grounds of alarm. He regretted the necessity of resorting to any measures of the kind, because he was fearful that in the distressed districts it would be thought that the corn laws had been a boon granted to the landholders, which they were now called on to give up (hear, hear). He denied that such had been the case. It was totally impossible to separate the manufacturing from the agricultural interests, and although England was a commercial country, the interests of all parties were inseparably joined.

The Earl of *Rosebery*:—If the proposition of ministers had been confined to the letting out the bonded corn, they should have had his support; not with a view to relief, because he should have been aware that the measure could not have alleviated the distress; but in order to show the distressed manufacturers that parliament was willing to do all in its power to assist them. With regard to the introducing 500,000 quarters of corn, at the discretion of Government, he thought it a measure pregnant with evil; and he thought that there was as much mischief in asking for, as in exercising that power. By asking for such a power, Government seemed to consider it as an act of prudence to alarm the agricultural interests, for he

was certain that alarm would follow.—The corn laws could have no effect on the distress of the manufacturing interests, for the poor manufacturers were starving for want of employment, and not from the dearth of bread. If corn were lowered to 38s. it would not remedy the distress of those who had not the means of subsistence. When Ireland was obliged to appeal to this country for relief, was it not said that the principal cause of her distresses was that the population of that country was starving in the midst of plenty? The same might be said of the present distress. If he conceived that either or both of the measures proposed by Government could be the means of affording relief to the distressed manufacturers, he should not now stand opposed to them; but believing that those distresses were attributable to other causes than those assigned, and feeling convinced that the present measures were inadequate to afford the desired relief, he opposed them as strongly as he should otherwise have given them his support.

The Earl of *Aberdeen*:—Notwithstanding all the sneers and jests which he had heard directed against the landed interest, both in and out of that house, he was still of opinion that on that interest was founded the constitutional Government of the country. He had yet to learn what had occurred to induce men to change the opinion, that the land-owners, the yeomanry, and the peasantry, formed the most valuable part of the population. These being his sentiments, he would not be backward to resist any measure which appeared calculated to injure the landed interest; but he thought that no friend of the land-holders who impartially considered the subject could think that these measures would injuriously affect their interests.—The noble earl (Liverpool) had been accused of inconsistency in bringing forward these measures after having stated that the corn laws would not be discussed this session. It was clear that the noble earl (Liverpool) did not consider the two measures which had been introduced into the other house as any interference with the great question. It was rather singular, too, that those noble lords who were loudest in condemning ministers for agitating the subject at all, were the first to propose a full inquiry into the whole system of the corn laws.—Some noble lords were disposed to consent to the admission of bonded corn, but objected to the discretionary power. There, again, was an inconsistency; they consented to the direct interference with the corn laws, and objected to that which was only contingent; for it was possible that the power which ministers demanded might never be called into exercise. For his part, not only was he willing to grant the discretionary power which ministers asked for; but he was not sure that it would not be wise to intrust it to every administration.—It would be wise on the part of the landholders not to put forth a strong opposition to these measures. They were bound to make some sacrifice, if it were only to the prejudices of that large class who were looking forward with anxiety to the decision of this question. Their lordships possessed as great a share of the love and respect of the people as the more popular branch of the legislature. By the nature of their constitution they were more exempt from the influence of popular clamour and prejudice than the other house. He was the last man that would yield any thing to clamour or intimidation.

he thought that their lordships had opportunity, without compromising dignity, and by giving up little or to remove from themselves the odium many persons were anxious should them. This view of the question, he trusted, he over-looked by their

Ellenborough observed, that the resolution had been complained of as ambiguous. The motion appeared to be one of the that had ever been submitted to the House, in substance, that only four of their lordships, after full inquiry and deliberation, passed a bill relative to the corn law, and it called upon them to consider whether circumstances had arisen since the passing of that act which called for an alteration of the measure. The noble earl (Bathurst) did not know what was meant when the noble earl said the corn laws were spoken of. Who was it that the system meant so well as the noble earl introduced it? It was the noble earl and his colleagues who introduced the measure, and it was they who introduced the measure in 1822. The system, then, was established by the noble earl, and if there was any absurdity in the measure, it was introduced by the noble earl, who had all his declamation in abusing a system owed its origin to himself and those who he acted. Ministers had stated that a great reason for apprehending a famine, was that persons having the experience in public affairs which ministers ought to have, should set up a cry of famine, which was as dangerous as the cry of fire in a theatre. If he looked at the average price of corn the last two years, or at the increase of Ireland, he saw no ground for supposing an unusual scarcity. It appeared to him that ministers had neglected to refer to the channels of information, when they made predictions of a famine. When the noble earl last year proposed the measure for the reduction of bonded corn, he (Lord Ellenborough) voted for it; but the circumstances which that measure was proposed, were not from those under which the present measure was introduced, that he wondered the noble earl (Aberdeen) should consider that the measure with respect to the former was a precedent for agreeing to the latter. The measure of last year was confined to the period previous to May 1822. A great deal of corn was in a very bad condition, and the measure was in fact an act of relief to the importers. The price of corn too was 6s. or 7s. higher than at present, and had been rising for two years. There were circumstances to justify the present measure.

He begged their lordships to recollect that what was innovation one year became a rule the next year, and rule the next. If the measure should be agreed to, the result would be, that we must always admit foreign corn. He thought the landed interests would be every encouragement consistent with the interest of the country. He objected to the free trade in corn—he desired to see our granaries placed in the hands of those who were jealous of our national interest (hear, hear).—The manner in which the measure had been brought forward would induce him to oppose them were it not so good in themselves. The faith of the noble earl had been pledged, not once but re-

peatedly, and very recently—that there should be no interference with the corn laws during the present session. He knew of no circumstances which had occurred since the noble earl (Liverpool) last made that pledge, which should induce him to depart from it. He was not disposed to grant as a premium to insurrection that which it was not thought proper to grant as an alleviation of distress. With reference to that distress, the most unfounded calumnies had been circulated against the agricultural interest, and those calumnies received a sort of confirmation from the introduction of the present measures.

The Earl of Westmorland observed, that the house had been told that there was no dearth; without entering into calculations as to the probability of a dearth, he thought no man could look at the state of the country, and not think that the price of corn was even now too high, which was itself an alarming circumstance. Yet it might happen that three months would elapse, whilst corn was 80s. per quarter, before the ports could open. A low price of corn in May was no reason why there should be a low price in October. Corn had been at 60s. or 70s. in the month of May, and had reached 100s. or 110s. in October. Ministers, therefore, thought it to be their duty, in the existing circumstances, to apply to parliament for a power which, if the house should concede it, would only be exercised in extreme cases.

Earl Grosvenor was of opinion that the proposed limitation as to quantity was objectionable, because if a scarcity arose, or any necessity for the exertion of the power, the limitation would destroy the benefit expected from the measure.—As to ministers, so far from deserving confidence, their conduct would afford abundant reason for withdrawing it. If these measures had been brought forward earlier in the session, every country gentleman in parliament would have got up, and insisted upon a reduction of the expenditure, and a diminution of taxation. They would have answered the ministers with—"No; we insist upon your reducing the expenditure to the lowest ebb, which you ought to have done ten years ago."

The Earl of Darnley regretted the manner in which this subject had been brought forward; and much as he regretted the principle of the measure, yet with the possibility of corn reaching a famine price, and the chance of a starving population, he could not bring his mind to reject the proposition of ministers. With respect to the corn laws themselves, he had been a friend to their introduction; he had strenuously advocated them, and he thought they had operated much benefit. But what might be good in 1815, was not therefore good in 1826; circumstances had totally changed. Whatever might be said of the opinion of parliament, the opinion of the country was to be regarded, and that was decidedly against these laws.

Lord King did not wish to detract from the merit of the noble lords opposite; he believed the members of his Majesty's cabinet were possessed of great experience, and understood pretty well the nature and constitution of noble lords (a laugh). Still he thought, that, as a skilful practitioner, who understood the constitution of his patient, when he altered his diet, would furnish something like a reason for it; so ministers ought to satisfy their patients as to the change they now made in their treatment. The noble earl (Malmesbury) wished

for an inquiry: but an inquiry would last for a year. The house knew enough of inquiries from one which had taken place elsewhere. And who were the persons who stood up for inquiry?—the friends of the corn laws.—He thought that after the changes which had taken place during eleven years—after the experience we had gained in that space of time—after the alteration in the currency, and other material changes, it was mere drivelling to say that the corn laws required no change. The freedom of the corn trade was necessary to the prosperity of our manufactures. Every quarter of corn imported from abroad purchased British manufactures of equal value. Unless foreign corn was admitted into this country, our own commodities could not be purchased by foreigners. No steady system of prices could be hoped for until the scheme of our corn laws was altered, and our prices of grain assimilated more nearly to those of the continent.

The Earl of *Caernarvon* considered the whole policy of ministers upon the present question to have been vacillating and unintelligible. For the "possibility" of failing crops, to which they adverted, when was it that such "possibility" would not be capable of being made an argument? The true secret of the change in ministers' opinions—and they might as well speak openly and say so—was the partial tumults which had taken place in the country; and though no one could be disposed to feel more for the distresses of the unemployed manufacturers than he did, yet it would be just as reasonable to try to alleviate that distress by breaking the power-looms, as by altering the corn laws. Ministers did not act openly, in refusing to connect that with their motion which was known to be connected with their motives; and what was still more, they were taking a course which could afford the distressed parties no relief. It was said by some that if this measure would not relieve the manufacturers, it would conciliate them—that it would remove a load of public odium from the shoulders of the agriculturists: what was this but to say that it was a popular humbug? He desired to purchase no such popularity. If the measure now proposed was carried, the effect would be to throw the whole country into confusion. The value of all property—instead of giving men a fixed beacon which all might look to—would be entirely in the hands of ministers. No transfer could take place—no dealing;—what surveyor would venture to value—what farmer to take a lease—or what landlord could expect to sell one, under such a system? His decided opinion was against the present measure.

Lord *Dudley and Ward* said, that if he were governed by the dislike which he felt to the corn laws, he should certainly oppose the measure brought forward by ministers; because he was sure that it was only by the aid of occasional alterations that those laws could possibly continue. It would be well for noble lords, however, to consider in what condition Government would be left by a refusal of the power which it now demanded. It would be a very different state of things, the not having provided such a power, and the having asked for it and been refused. Suppose the most serious scarcity, and consequent distress, to arise? All that ministers could say would be, that parliament had refused to interfere, and that they could not presume to do it. Government would

stand in this curious predicament; it might call out the troops—proclaim martial law—and fire upon the populace, or leave them to die of starvation; but it must not take the very course which would at once put an end to the danger; it must not let in corn to save a starving, and perhaps insurgent, people. In such circumstances, he trusted that the *salus populi* would always be superior to every other consideration. He hoped, that should such pressure arise, ministers would spurn all barriers, and do, at all hazards, that which seemed to them to be for the advantage of the country. But he would ask the house this,—must not ministers be disposed to hold out longer than they would otherwise have done, to let the mischief go further before they ventured to apply the remedy to it—under the circumstances of having consulted parliament, and been met with a negative, than they would have been if no application had been made? For the sake of the cause which the agriculturists themselves supported, he hoped that parliament would run no such dangerous risk. Ill as he thought of the corn laws, he did not wish to see them swept away on the sudden; and he was convinced that, in case any difficulty did occur during the period of dissolution, it would be impossible, in the excited state of public feeling necessarily attendant upon such a state of things, to come coolly and deliberately to their consideration in the next session. For these reasons he should oppose the resolution.

The Earl of *Liverpool*:—If noble lords meant to say, that because he (Lord *Liverpool*) thought the corn bill, which had passed in 1815, was not now applicable to the circumstances of the country—if, because he thought that measure required alteration in 1822, and that the measure of 1822 was not adapted to present circumstances, he had changed his opinions—he would admit it. The question was in its nature variable, and it was not in the power of parliament to fix it by permanent enactments. If it were true that the circumstances of the country were now very different from what they were in 1815, when they had fixed the importation price at 80s.; if it were true, that since 1815, twenty-seven millions of taxes had been reduced; if the property tax had been abolished; if the tax on horses, the tax on houses, and several other taxes, which pressed heavy on the agricultural interest, were repealed, could any gentleman say, that 60s. or 65s. was not now as adequate a price, as 80s. was in 1815? and would any person say that the law of 1815 was applicable to 1826? He thought it was not; and if noble lords called this changing his opinion, he must acknowledge the charge. Having said thus much, he would only observe, that though he thought the corn laws should be altered, he had declared again and again, that the measures now under consideration in the other house had nothing to do with these laws; nay, he would say that those who wished those laws to be permanent, must think one of these measures, as they had thought a similar measure last session, would tend to give stability to them, and would be rather a security than an injury. He had, early in the present session, stated with perfect good faith, that he thought the present period unfit to go into the question of the corn laws; that opinion he still entertained; and it was chiefly on that account that he objected to the present motion, because if it should be carried it would be absolutely necessary to go into the question: he wished the measures which were now in con-

temptation for the relief of the distress to stand upon their own merits; and he desired their lordships, before they adopted a course which would at once prevent any investigation into their policy, to see how they would be sent up from the Commons, and then they might dispose of them as they appeared to deserve. Noble lords asked, where was the necessity for these propositions? The necessity was to be found in the condition of the country; the time, the circumstances, the aspect of the harvest; the consequences which might follow if Government were unprepared for the difficulties they might have to encounter: all these things, while they stimulated Government to persist in the course they had proposed, offered at the same time an unanswerable proof of the necessity which noble lords seemed to require before they could satisfy themselves to grant the powers which were demanded. He must admit that the distress in the manufacturing districts had increased until it had arrived at an almost unprecedented height, and assumed so serious an appearance, that it became at last imperatively incumbent on the Government to see if some specific remedy could not be devised for its alleviation, or at any rate to prevent its spreading wider. Now he by no means thought the high price of corn was the origin of the present distress: he considered that the present calamities had arisen from over-trading, and an abuse of the prosperity which the country had lately enjoyed. But at the same time it would be absurd to say that the high price of provisions was no addition to the evil. Every one who had examined this matter must have ascertained that this country grew scarcely sufficient corn for its own consumption. There certainly were shades of difference in the opinion of individuals on this point; but it was admitted by all, that England, Scotland, and Ireland, grew very little more corn than what they could consume themselves, even when there was a prosperous crop and a favourable harvest. If such, then, were the case, what would be likely to occur, if there should happen to be an unfavourable harvest? We were not without sad experience on this subject. If the accounts of the various harvests for a period of 32 years, commencing in 1791, and ending in 1822, were examined, it would be found that there had been eleven defective harvests. There was no trusting to first appearances or fair prospects in this matter: a single week, nay, a single day might blast the fairest hopes, and turn an apparent abundance into scarcity. He himself recollected an instance. In June 1816, there was every prospect of a most abundant harvest, when one single day entirely destroyed this prospect, and caused an excessive scarcity: so that the price of corn rose from 53s. to 100s. and 110s. per quarter. If such a calamity were to occur, in the existing state of the country, what terrible consequences might be apprehended? In the first place the ports could not open until the 14th of August, and even then, if the averages should happen to be against us, we should have to wait three months longer until the 14th of November. This was the case in 1816. There was no evil which would bear any comparison with this: it operated as a most enormous tax upon the community, and especially upon the lower orders. But, it would be said, this evil might not happen; and why should this power be required now more than in any other year? He would

make no scruple in saying that he did consider it a defect, and a very great one, in the present system, that it should require such a power to be lodged any where at any time, in order to correct the evils which might otherwise arise from it; but he conceived this power was peculiarly called for at present under the existing circumstances.—It had been urged against this measure, that people wanted work, not bread: yes, they did want work, but they wanted wages too. Did noble lords recollect that those who in other times earned eighteen or twenty shillings a week, could now scarcely obtain, with the most indefatigable exertion, six or seven shillings? Let them but reflect upon the state of the manufacturing population, with a descending rate of wages and a rising price of bread. When they allowed themselves to recollect, that famine, in all times an evil, was to be aggravated probably by the total stagnation of commerce, producing low wages and destroying all demand for labour—then they wanted not only work, but they wanted bread too at the lowest possible price at which the prudent regulations of the Government might enable them to procure it.—When he explained what the present state of the country actually was, and what it was considered the duty of the Government to guard against as a probable consequence from that state, and when he asked for a power which it was as unusual for that house to give, as it was irksome for the Government to receive; he was asked, if we grant you this power, what security have we that you will not wantonly use it to the injury of the landed proprietors? The question was not to be tried by the confidence which they would repose in one administration or another; for they must repose, under such circumstances, the same confidence in what they might consider the very best as well as the very worst of administrations. They were not, he repeated, to try the question of confidence by the character of the ministry, but by what they considered to be most conducive to the interests of the country (hear, hear).—A noble lord (Ellenborough) had insinuated a suspicion that these were not his (Lord Liverpool's) measures. Now, he begged to say, most distinctly, that if any man was more culpable than another, with regard to bringing forward these propositions, he was that man; and he was ready to claim his full share of all the odium which might attach to them. He could not look at the probability of such a state of affairs in the country, as he had endeavoured to paint to their lordships, without coming to one of two determinations—either to do the best they could under their present circumstances, by entering into a detailed inquiry upon the subject of the corn trade, and by that means to effect some general and permanent alteration of the corn laws—a measure to which he still at the present moment saw great objections; or to adopt some temporary expedient which might enable them to adjourn the consideration of the question till a more favourable time in the succeeding session of parliament.—Before he concluded, he wished to answer an observation of a noble earl, who had accused ministers of bargaining away the trade of the country, for the purpose of carrying into execution some visionary and theoretical views upon the subject of trade. Now, in the negotiations with the different powers who had felt it their interest to accept the benefits of a system of reciprocity, and among others with Prussia, the country

most feared by the agricultural interests, there undoubtedly had been, very naturally, a wish to enter into a bargain for the admission of corn, which was with her an important export, into the ports of this country; but so far from ministers sanctioning any such proposal, or displaying any disposition to enter into a compact which would have the effect of committing them upon the subject of the corn laws, he would read to their lordships an extract from an answer of Government to that proposition, to be found in the papers connected with the negotiations, the whole of which he would not hesitate to produce; in which they distinctly refused to encourage any such proposal for a moment. The extract was this—"The tendency of the proposition now submitted to the undersigned is of such a nature, that he feels convinced the Government of his Britannic Majesty never could entertain it for a moment. Any proposal for altering the corn laws of the country—laws so closely connected with the welfare of all the other branches of our commerce and manufactures, must be decided by circumstances arising within the British dominions, under authority and with the consent of those immediately interested in them." Their lordships would see that this paper, dated Feb. last, established the sincerity of the professions of ministers, with respect to the protection which they held necessary for the agriculturists, and how solemnly and sacredly they adhered to their declaration in the most important treaties, when they not only refused to barter one iota of that protection, but even to permit it to be made a matter of contingent negotiation. He hoped he had freed himself from all imputation upon that head, and that even the most decided enemies of all legislation on the corn laws could not now accuse him of any disposition to refuse the agriculturists a fair protection; that protection, however, he hoped to see fair, just, and reasonable, and he trusted, that when they ultimately came to that arrangement, which they must come to at last, and which the present measure would render more secure and satisfactory, that they would obtain a law as permanent as such a measure could be, and one which would prove agreeable to all parties, agricultural and manufacturing.—The noble lord concluded by saying, that the present regulations were devised under special circumstances to meet a special emergency. They might never be called into action; but the discretionary power was demanded under the prospect of circumstances, which rendered it as painful to the feelings of the Government to be refused, as it was onerous to them to accept it; and he could only say, that if their lordships persisted in that refusal, on their heads would rest all the responsibility and all the consequences (cheers).

The Marquis of Lansdowne said, that either the noble earl intended by these regulations to effect an indirect, though nominally, a temporary alteration in the corn laws; or there existed apprehensions in the mind of the noble earl, the grounds of which he had not stated fully to the house. He thought, however, that it would be much better that ministers should act on their own responsibility in case the anticipated emergency should occur, than that they should call on the house to legislate on this subject in the dark, without being made acquainted with the circumstances which rendered it necessary. It seemed to him that all

the arguments which had been adduced by the noble earl in favour of this power being lodged with Government, would apply to any other time quite as well as to the present; or in fact that they might be advanced as reasons why this, instead of being a mere temporary measure, should become a permanent law. Indeed, the inconvenience in the latter case would be much less than in the former; for then every farmer would take his farm with a view to such a law. From some artificial system respecting the corn laws, it was not possible for us to escape. Every thing must, in the present state of society, be artificial, and in taking the protection of such a system, we must submit to the inconveniences resulting from it: but he would tell them that such a system was better far than that which it was wished should supersede it. There might be a system bad in itself, but he could tell them one which was much worse, and that was an unsettled system—varying with accidental circumstances, adopting the views of one party to-day, and of another to-morrow—altering all ideas of expenditure and all outlay of capital, and unhinging and overturning all the plans and speculations of private life and public commerce (hear, hear). Was it not enough that the agriculturist was subjected to the winds of Heaven? Was it not enough that he was influenced by the rain and the sunshine, but they must also make him subservient to the rain and sunshine of political events, or party squabbles (hear, hear)? He was an advocate for a permanent system—for a permanency which was even then within their reach—and he looked with the more hostility at these measures, that they did not pretend to settle any thing advantageous; but, after producing effects upon prices and upon agricultural property, hardly to be conceived, they would allow them to come back again to the place from whence they set out, with the mischief they might carry along with them, without having any justification from policy or necessity. Nothing, therefore, could be, in his opinion, wiser, than to leave the power and the responsibility where it could be exercised and accounted for, and avoid giving a consent to any measure which affected the corn trade, until they came to determine upon that definitive regulation, which, he trusted, would not be much longer delayed. When the noble earl attempted to point out to them the consequences of a famine in the country, and the necessity of guarding against such a frightful evil, did he think that they had lived, or were about to live without a Government in the country? He would say that no man deserved to be entrusted with power, who would not, on the slightest appearance of the approach of a famine, be prepared to avert its consequences, by taking all the responsibility of the most energetic measures (hear, hear). The transactions of the year 1766 had been misstated in a most extraordinary manner. What was the blame really imputed to Lord Chatham and Lord Camden at that time? It was not that they had no claim to indemnity, but that they claimed a dispensing power, and refused to acknowledge that they had exceeded the just bounds of their authority. The great men of that day thought that recourse ought to have been had to the constitutional advice of parliament; the answer was then that there was not time, but how little could it apply now? Then parliament could not be called together in less than 40 days, and now, by the

alteration of the law, it could be brought together even in 14 days. The noble earl had talked of the possibility of a rise to 120 and even to 130s. but could it be imagined that such an alteration could take place in prices before parliament might be brought together? or would it not be more reconcileable to policy and to precedent, to leave the Government to provide for such an emergency in the ordinary method, than to determine to take a course upon an uncertain contingency, which operated most prejudicially upon the whole of the agricultural interests? Nothing, indeed, could be worse than to reason before-hand upon any thing connected with subsistence, and thereby incur all the risk which attended a rise in the price of grain in consequence of these operations; for until the alarm was sounded by ministers there and elsewhere, he would venture to say that no man ever thought of there being any probability of the evils they predicted (hear, hear). It was in vain to say that this measure was not intended to affect the question of the corn laws; people would not credit it: it unavoidably created a very extraordinary excitement. He felt convinced that, under the responsibility he had mentioned, the country might proceed safely until the next session of parliament. As the question had been generally disclaimed, he would not enter into any argument respecting the corn laws; but he felt persuaded that the opposition of interests, which was at present supposed to exist between the agriculturists and the manufacturers, would gradually disappear; and that each party would, at last, become convinced that it would be impossible to establish any permanent system which could be injurious to one without also at the same time being prejudicial to the other. If the legislature should be composed either wholly of agriculturists or wholly of manufacturers, and it should wickedly endeavour to fix an unequal burden upon the other class, he had no doubt but that it would at last find the burden to fall on its own shoulders. Indeed, both these interests had, and necessarily must have, the same common object; and he trusted that when parliament next met, a final arrangement, founded on fair and equitable principles, would be made in this respect (hear, hear).

The house then divided, when the numbers were—For the motion, Contents, (proxies 18) 67—Non-contents, (proxies 70) 166—Majority against the motion, 99.

**COMMONS.**—On the question that the Importation of Corn bill be read a second time,

Sir T. Lethbridge said, that he must continue to oppose the bill: first, because it was a covert invasion of the corn laws; and, next, because no sufficient grounds for it had been alleged by ministers.

Sir W. Wynn said, that considering this merely as a temporary measure, and believing that it would evince to the manufacturers the kindly feelings which parliament entertained for their distress, he would vote for the second reading; but he would reserve himself as to the details of the measure, until the bill should be in the committee.

Col. Wood, thinking that the general question would lose much in the opinion of the country by frequent divisions on this bill, would vote for the second reading. He would, however, propose in the committee, that foreign corn should be imported, with a duty of 65s. This he

thought would satisfy the country, and be a most important alteration in the corn laws.

Mr. Bankes said, that notwithstanding the alterations that had been made in the measure, he still thought it extremely objectionable. This was no fit moment for the agitation of the corn laws. What, he would ask, had occurred since the 18th of April, when the house decided not to agitate that question? Ministers had at that time no apprehension of a scarcity; but the rt. hon. gent. (Mr. Canning) had brought an easterly wind to their assistance—

“Et conjurati veniunt ad classica venti.”

What did ministers expect from this measure? In what degree did they expect that the liberation of the bonded corn would lower prices? Was it 8s. or 10s. per quarter? If it were lowered 10s. or even 20s. per quarter, would it afford any relief to the manufacturing districts? If it would not, how could they lend themselves to a delusion so perilous, as the present was, in every respect? Did they not see that those who were without money, and without employment, could not buy corn at any rate whatever; and then how were those unfortunate individuals to be benefited by the present measures? Let ministers answer this question plainly, and not talk about such solemn nonsense as their “moral effect” (hear, hear).—He had another great objection with regard to time—

“Probitas laudatur et alget,”

was an observation of some antiquity, and had been verified in the present instance. Whilst the people were quiet, no aid had been administered to their distress; but as soon as they grew riotous, measures were devised for their relief.—On these grounds he retained all the objections which he had originally felt to this proposition. He gave credit to ministers for the alterations which they had made in it—but he was convinced that whatever was founded in deception and delusion must end in frustration and disappointment. He should therefore move that the bill be read a second time “this day month.”

The Chancellor of the Exchequer said, that the first objection of the hon. member (Mr. Bankes) was, that Government had acted with inconsistency in proposing this measure at all. Now that might be a good argument against the Government—but it was no argument against the measure. The hon. member had also told them that this measure would confer no benefit on the distressed manufacturing districts. Ministers did not pretend that it would be a panacea: it would not cure evils which had no more their origin in the corn laws than they had in any road bill; but would any body pretend to say, that when thousands of our population were starving, or at least were only saved from starvation by the poor laws or by voluntary contributions, that the price of corn had nothing to do with the means of obtaining subsistence for them? The hon. member had talked of these measures having been adopted by ministers through fear. He had admired the patience with which the distressed manufacturers had endured their sufferings; and when it was found that they had been driven to commit some outrages from the excess of those sufferings—for it was excess of suffering, and not political disaffection, which had led them astray—it would have been the extremity of fear on the part of the Go-

verment if it had abstained from proposing any plan of relief for those sufferings merely because some individuals had been driven by their distress from that forbearance which it was the duty of all men to shew to the property of others (loud cheering). The course which Government had taken, in order to suppress the outrages which had occurred in the manufacturing districts, proved that they were not under the influence of fear; for, on the first appearance of them, they had poured into those districts a body of troops sufficient to protect all good and terrify all ill-disposed persons. He was sure, therefore, that nobody who rightly considered the matter would attribute the concessions which Government were inclined to make to the suffering subjects of his Majesty, to a timid policy. The hon. member had desired ministers not to talk about the solemn nonsense of "moral effect." Who had used the phrase he did not know, but if the effect of the measure were to soften any exasperation of feeling which existed in the manufacturing districts, if it tended to prevent agitators from turning that exasperation to any political purpose, he should not be inclined to shrink from the phrase; on the contrary, he was prepared to contend that Government would not be acting wrongly in consulting the feelings of those with whose interests it was charged (hear, hear). Why the hostility of the landlords should be so strongly directed against this measure, he could not well understand, for he believed no measure was better calculated to promote their interests. The country gentlemen could not take a course more calculated to prejudice themselves on any future consideration of the corn laws.

Lord Clifton hoped this measure would be merely temporary, but confessed that he felt himself bound, in the choice of evils which were before him, to vote with ministers. So far was he from thinking that there was any "solemn nonsense" in the "moral effect" which this measure was described as likely to produce, that it was on account of that very "moral effect" that he voted for it. If it tended in any degree to satisfy the public mind, it was at any rate one advantage gained.

Mr. Bennett declared the cause of the existing distress to be the recent tampering with the currency, and not the corn laws. The relief which this measure professed to give to the manufacturers would be quite inefficient, if it were not attended by a paper currency. Besides, the effect of this measure must be either to reduce the market price of corn or not. If it did not reduce it, it would not benefit the manufacturers: if it did, it would involve the agriculturists in distress, and thus would ultimately prove destructive to the manufacturing interests by annihilating the home market, which was infinitely more valuable to them than the foreign.

Mr. Stanley gave notice that, in the committee on the Warehoused Corn bill, he would move the introduction of a clause, empowering the local committees for the relief of the distressed manufacturers, on producing a certificate that they had purchased corn in bond for distribution, to recover the amount of duty from the treasury.

Lord Milton observed, that they who supposed that this measure could get through the house without bringing on a discussion of the corn laws, would find themselves mistaken. The very proposition of the measure was a distinct proclamation by Government that the

corn laws were incapable of being retained as a permanent system—that they were only fitted for fair weather, and that as soon as the storm arose they must always be reconsidered. He was not absurd enough to suppose that the corn laws were the sole cause of the distress, but he had no hesitation in saying that in one respect they had a great effect in producing it, and that was in the interruption which they gave to the commerce of our manufacturers with foreign countries. Hon. gents. might depend upon it, that the corn laws would be settled in one way or another before long: in his opinion they could only be settled in one way; and that was upon the principles of free trade. With respect to the measure before the house, he did not think that it would be of any effect; neither did he suppose that ministers thought that it would be of any effect, except in preventing an aggravation of the existing distress (hear, hear). Ministers must, however, give him leave to say, that the time at which they had proposed this measure, had led, in certain quarters, to the opinion, that they had other views than those which they professed in proposing it. He was bound in justice to say that he did not entertain such an opinion—he gave ministers credit for the views which they professed to entertain—although it would give him great pleasure to know that the present measure would not be merely temporary. In whatever view this question was taken, it resolved itself at last into the amount of the burdens which the different classes of the community bore. Now he maintained that the landed gentlemen formed that class of the community which had the least cause to complain of these burdens (hear, and cries of no). He said "yes;" for who were the chief cause, who the great instigators, who the main supporters of the late war, which had imposed such a weight of taxation on the nation, but the country gentlemen (loud cries of hear, from various quarters of the house, echoed back for some time, accompanied with cries of no, no)? He should not be put down by cries of "no, no." He said "aye, aye," and he defied hon. members to prove that he was incorrect (cheers). The country gentlemen were the cause—the instigators, and the promoters of the late war. He did not say that in so doing they had acted wrongly—he knew that members of his own family had supported it as strongly as any persons; but he repeated that it was the country gentlemen, who had pledged themselves to expend life and fortune in support of that war. What was the case now? When the fortune became really affected—he said nothing of the life—by the diminution of two shillings or even one shilling in the rent of the acre, they declared that they had already paid for the war in the shape of direct taxes, and ought not to suffer any further diminution of their income. Now he could shew that the corn laws, which were the creature of the war, added 10s. to the price of every quarter of wheat grown in this country; and as the consumption of the country amounted to 14,000,000 or 15,000,000 annually, they inflicted an annual tax of 7,000,000l. on the people of England, for the benefit of the landowners and of the landowners alone (hear, hear). Let the landowners controvert that position if they could; and when they could, then, but not till then, they might say that they had expended their fortunes in support of the war (hear, hear). The plain fact was, and it was impossible to disguise it, that they had raised

their fortunes instead of having spent them in the war, and they now endeavoured by the operation of the corn laws to keep up the high prices which they had contrived to get during the period (hear, hear). It was not, however, that view of the question that he considered the corn laws most impolitic. Their great mischief was in their acting as a non-intercourse bill with other countries. He would gladly support any measure that was calculated to remove the fetters which they imposed upon the country, and conceiving that the present measure would have that effect, he gladly gave it his support (cheers).

Mr. Peel regretted that the noble lord had made a speech, which, with whatever good humour it might have been delivered, was calculated to interrupt the temperate course in which the debate had hitherto proceeded. An opportunity had been taken by the noble lord to involve the house in an important discussion, which, however fit for consideration on another occasion, was certainly rather ill-timed on the present (cheers, with cries of no, no). When he heard it preferred as a charge against the country gentlemen that they had supported the Government with life and fortune in the last war, he must be permitted to say that they had right to look back at their conduct with pride and satisfaction, and to exult in the glory which it had reflected on the country (cheers).

The noble lord had said that the country gentlemen were opposed to the reduction of rents; if they were at this moment in possession of high rents: whereas it was a notorious fact, that rents at this moment were not high, and that it was not more than three years since the agricultural interest was involved in the severest distress. During the whole of the time since, corn had never borne an exorbitant price, and the landlords were now only beginning to recover from the great depression under which they suffered in 1821.—He would not enter at any length into the question then before the house; if he wished to say one word on an hon. member's (Mr. Stanley's) proposition, that the duty could be remitted on the liberated bonded corn, if it were purchased by the local committees. He would not at that moment enter into the question, whether it was fitting that it should be given to the distressed manufacturers; but if public aid were to be given, he would rather that it were granted directly than indirectly. His first objection, however, to the proposition was, that there would be the most difficulty in carrying it into effect. His second was, that it would give a preference to one district in the neighbourhood of the warehouses; and his third, that it would give a premium to the holders of bonded corn over the free growers, which he did not wish to extend to them (hear, hear). Besides, if it was adopted on this occasion, it would form a precedent for any future occasion.—The rt. hon. gent. proceeded to say, that he had never given a vote with a stronger conviction that it was for the interest of the whole community, and more particularly of the agricultural classes, than that which he was about to give, and then repeated the general defence of the measures which ministers had advanced during the discussion.

Mr. H. Sumner next addressed the house, amidst incessant noise and confusion.—He said, that his objection to the bill was, that no case of necessity had been made out from the existing state of the market. It had been said by

the supporters of the bill, that it was not the amount of the price, but its invariability, which they looked to. Now, for the last seven years, the price had been free from any great variations; but the introduction of the corn in bond was likely to produce a greater fluctuation than any which the market had recently witnessed. He contended likewise, that if the price of corn was further reduced than it was at present, the farmer would not be adequately remunerated (great impatience). He maintained that the landed interest had done themselves immortal honour in voting for the last war, to which they were not led by any consideration of any paltry interests of their own, but by the willing and unanimous voice of the nation. He contended, in opposition to the noble lord (Milton), that there was not a single member in that house whose rents were not at this moment 30 per cent. lower than they were during the war. There were no gentlemen who had a more national character than the landlords, or who more deeply sympathized with the distresses of the community.

Mr. Wharton felt bound, as a country gentleman, to observe, that he had opposed the late war from the outset—that he had supported every motion for terminating it, and that, whatever the consequences of that war might be, he held himself innocent of them (hear, hear).

The house then divided.—For the second reading, 189—Against it, 65—Majority in favour of the second reading, 124.

FRIDAY, MAY 12.—The house having resolved itself into a committee on the Importation of Corn bill,

Colonel Wood said, that he should prefer that the power of importation should not be unlimited, provided importation were not permitted until the average price was 65s.; but he would not move it as an amendment, as it appeared not to be the general wish.

Lord Milton was glad to find his hon. friend would not move his amendment, as it would have led to some discussion; but it seemed that this declining of the combat at present was made with a view of renewing it at some other time, when it might be fought to more advantage. He (Lord Milton) did not wish to be enrolled in the ranks of those who contended for the average of 65s.; because, when it was taken into consideration what a great weight of taxation had been taken off since the period when the corn laws passed, he looked upon 65s. as a greater remuneration now than 80s. were then.

Mr. Calcraft, after stating that there were many country gentlemen whose feelings were wounded by the course adopted by the noble lord, proceeded to defend the landed interest from his taunting attacks. The corn laws were introduced more with a view of promoting the production of corn in the country than of putting money into the pockets of landlords. He was himself an advocate for a free-trade in corn—that was, with a protecting duty. Any other species of free-trade would be impossible in this country, on account of the 63,000,000l. of taxes to which it was liable.

Lord Milton disclaimed any intention to wound the feelings of any gentlemen in the house, but maintained that no class of men had a right to hold themselves above all observa-

tions on their conduct. In reply to the remark, that the corn laws were intended to promote the production of corn rather than the benefit of the landlord, he referred to the publications in defence of the views of the landed interest, which one and all stated that the corn laws were enacted, and ought to be continued, for the benefit of that interest. He confessed that he had formerly entertained different opinions from those which he now held on this subject. He recollected that the first time he opened his mouth on it in the house, he had stated that it was necessary to the independence of the country that all the food of its population should be raised within itself. Of the fallacy of that opinion he was now convinced, and he had consequently abandoned it, and with it the corn laws. If his hon. friend (Mr. Calcraft) thought that all the food of our population should be produced in the country, then he ought to have such an importation price as would amount to a prohibition: but if his hon. friend did not entertain such an idea, then he abandoned the only argument on which the corn laws rested. He was told, however, upon all occasions, that it was necessary that the landed interest should have a remunerating price. Now, what did a remunerating price mean? Ample rents to the landlords, and ample profits to the farmers (no, no). Then, what did it mean? By a remunerating price, he repeated, was meant, that ample profit should be secured to the farmer on the outlay of his capital. Now that evidently depended on the amount of his rent. The whole question referred to the advantage of the farmers and landowners, or rather of the landowners entirely. A remunerating price, let it be considered as it might, resolved itself into the attainment of ample rents (hear, hear).

Mr. N. Calvert strongly objected to the conduct of the noble lord, for encouraging the cry which had recently been raised against the landed interest.

Mr. Calcraft wished to remind his noble friend, that if no class were so high as to be above the reach of observation, there was no class so low as not to be entitled to defend itself from attack. He would tell the noble lord what a remunerating price was:—it was 3 per cent. on the money vested in land, and 5 per cent. on the capital expended upon it. Surely that was not an extravagant rate of remuneration.—After a few other remarks, the house resumed, and the report was ordered to be received on Wednesday next.

The order of the day was then read, that the house resolve itself into a committee on the Warehoused Corn bill.

On the question that the Speaker do leave the chair,

Mr. Bennett moved that the house resolve itself into a committee, on the 3d Geo. IV. c. 60, for the purpose of raising the duty from 12s. to 17s. per quarter on warehoused corn. He contended that the difference between the two rates of duty, which would amount to 75,000*l.*, would all go into the pockets of gambling speculators, if some such measure were not adopted.

Mr. Portman seconded the motion.

Mr. Huskisson said, that 12s. a quarter was the duty contemplated by the corn laws on corn of this description.—He contended that the parties who held the bonded corn, did not deserve the title of gambling speculators, which

had been applied to them. They had vested their capital, like other merchants, in a commodity which seemed likely to yield them a fair return.

Mr. Baring said, that if there were the slightest chance that any farthing of the difference between 12s. and 15s. would go to the benefit of the distressed manufacturers, he should have no hesitation in voting for that rate of duty; but as he believed that 3s. per quarter would merely be put into the pockets of the corn-dealers,—a respectable set of men, but a class whose gains he was not absolutely desirous to increase by legislation—he certainly should prefer a duty of 15s. Taking the price of the corn in bond at Liverpool to have been 32s., as it was said to have been, the 12s. duty would raise it to 44s. Now a further addition of 3s. would still leave a large room for profit to speculators, between the 47s. and the price of corn at present; and if the sum which that additional duty would supply could be put into the Exchequer without the public suffering by it, it would be better that that course should be pursued.

Mr. Ellice thought that a great deal of the corn in bond was of so inferior a description, that 12s. duty was as much as it could bear.—He fully agreed in the propriety of postponing the consideration of the corn laws. Until the operation of our late measures with respect to the currency was seen, legislating upon the corn laws would only be legislating in the dark—an observation in which

Mr. Monck agreed.

Mr. Bennett's amendment being negatived, the house went into a committee.

Mr. Chaplin did not understand why the oats in bond were to be admitted as well as the wheat. The manufacturers did not want the oats.

Mr. Huskisson said, that a vast quantity of the relief which had been given in the distressed districts, had been given in the shape of oatmeal.

Mr. Stanley proposed an amendment, the adoption of which would promote the object of the measure—the giving effectual relief, and also reconcile, in a great degree, the landed interest to the measure itself. The amount of relief to be afforded by it, it was true, was small; but that was a reason why they should render it as effective as possible. For this purpose, he thought it would be right to localize the relief to those districts where relief was required. As it at present stood, it extended to counties where distress did not prevail. The amendment was—“That on a certificate by three members of a local committee, stating that bonded corn, with a specification of the quantity, had been distributed for the relief of persons in the distressed districts, the lords of the treasury be empowered to remit the whole of the duty thereon; the duty to be applied to the relief of those districts, where it might be wanted.”

Mr. Huskisson:—There were other parts of the country besides Lancashire which felt the pressure—Shropshire, Warwickshire, Somersetshire, Gloucestershire, Nottinghamshire, the whole of the west, and great part of the north-east coast of Scotland, which ought properly to be called manufacturing districts: and although it would be necessary, it would be very difficult to extend to them the relief which the hon. member's measure was meant to afford.

If any such power should be given to charitable committees, it must be universal; and a committee in the West of England purchasing corn in their own markets, would be as well entitled to the allowance as the purchasers of that which was under bond. The measure, too, would interfere with the poor-rates, and it would be impossible to put it into practice without an inquiry into the relative proportions which certain districts bore in this respect to others. At Manchester the poor-rates were considerably less than in many other places where similar distress prevailed. In Sussex, where there was nothing like manufactures, but where distress prevailed in consequence of excess in the agricultural population, the poor-rates were four times as much in amount as in any part of Lancashire. He was reluctant to acquiesce in any change in the system of the poor-laws, because, objectionable as they might be, and subject as they were to abuses of various kinds, it was better to trust to a system which had been tried, than to hazard an experiment objectionable in its principle, and, he believed, difficult, if not impossible, in practice.

Sir John Wrottesley expressed his conviction that if the currency had not been interfered with, the present distress would not have existed. He was sure that if an immediate return to the former system were not adopted, greater and more general distress would be felt.

Mr. Peel opposed the clause, on the ground that it was likely to afford opportunities for numerous frauds, and that it would not reach the distress of the interior of the country, without doing, at the same time, considerable mischief. He objected also on the ground, that if any public aid should be granted, it would afford a precedent which would always be resorted to, and the amount of the tax on corn would always be looked to as a fund for relieving any temporary distress.

Mr. Stanley withdrew his clause.

The report was ordered to be brought up on Wednesday next.

WEDNESDAY, MAY 17.—On the order of the day for bringing up the report on the Importation of Corn bill,

Sir T. Lethbridge said, he did not rise for the purpose of offering any further opposition to the measure, which would be both useless and vexatious; and he must, therefore, submit to the superior wisdom of Government, supported by a large, a most respectable, and most powerful majority of that house; and he might add, which had been supported by a majority equally strong in another house. But he took his opportunity of calling for a pledge from Government, that nothing which had been done respecting this measure—to meet an emergency, as it had been called—should be considered as pledging either this or the other house towards supporting any proposition respecting the corn laws; a question, he understood, which was to be fully adjusted in the next session of parliament (hear, hear). He wished now to enter his solemn protest against any thing that had been done being taken to affect the measure on a future occasion, and he did this in spite of all the intimidations he had received from quarters which he despised from the very bottom of his heart, and which intimidations he now had been sent to him in order to stop the honest expression of his opinions, which he had

presumed to utter in the full discharge of the duty which he owed the country at large. No degree of intimidation, however gross, personal, or dangerous it might be, could ever deter him from the discharge of his conscientious duty (cheers). He was, therefore, the more earnest in entering this solemn protest, from his having been personally insulted by persons, whose menaces he had treated with the most profound contempt (cheers). He therefore hoped the Government would give such a pledge; and, as the parliament had thrown the responsibility on them, he trusted they would use their power with discretion, in the event of the contingency occurring which they contemplated.

The Chancellor of the Exchequer said, he could have no sort of hesitation in declaring, that it would be the shabbiest conduct which any Government had ever pursued, if they departed one single iota from the pledge, which he would now repeat, that nothing which had taken place ought or could be taken to prejudice the decision of the house as to the main question of the corn laws (hear, hear). With respect to the intimidation alluded to by the hon. bart., it was quite consistent with his character to treat it with the contempt it deserved (hear, hear).

Mr. H. Sumner concurred in the general measures of Government, because he considered them characterized by wisdom and candour; but the present measure he considered unwise and uncalled for, and he only regretted he had not pushed his opposition further, in order that the country which he had the honour to represent might have had an opportunity to petition the house on the subject.

Sir R. Heron said, that one of the evil consequences flowing from these discussions, was to generate a belief that the interests of the agriculturists and the manufacturers were opposed; whereas, in fact, they were one and the same. If he yielded his consent to the bringing up of the report now, it was certainly most reluctantly. The landed gentlemen would have consulted their own interests by having opposed the measure in every stage, and if he saw any encouragement, he would divide the house now.

The report was then brought up, and the bill was ordered to be read a third time to-morrow, (when it passed).

The order of the day was then moved for bringing up the Warehoused Corn bill.

Sir R. Heron:—It was extraordinary that the country should be deprived of the bonus which was to go into the pockets of the holders of bonded corn, and which ought to be applied to the distresses of the people. It could not escape observation, that the greater portion of this benefit was to go to the people of Liverpool (a laugh).

Mr. Huskisson said, that if he were to act according to the spirit evinced by the hon. bart., he should say that his two speeches would almost justify a suspicion that he was about to stand for some great agricultural county. With respect to the statement of the hon. bart., he could only say, there was a larger portion of this corn in the port of London than in Liverpool; and all the property of the hon. bart. would not cover the losses which these parties would suffer, even with the duty of 12s.

After a few words from Mr. J. Bennett, the report was received, the resolutions agreed to,

and the bill ordered to be read a third time to-morrow, (when it passed).

FRIDAY, MAY 12.—Lord Milnes said, that a motion, of which hon. gent. (Mr. P. Mowbray) had given notice, "For giving a grant of Public Money for the Relief of Local Distress," not being likely to come on, he wished to ask the rt. hon. sec. (Canning) what answer ministers would have given to that motion had it come on? It was necessary that, upon a question of such vast importance, some definitive answer should be given to the country, before parliament separated.

Mr. Canning said, that he was far from saying, that, under any circumstances, it would be inexpedient on the part of Government to come forward in aid of public distresses; but he was sure that an over-ruling necessity must be made out,—a necessity for which there existed no other remedy, before they would be justified in doing so (hear, hear). He trusted that the house would go with him in thinking that such was not the case upon the present occasion (hear, hear). That great and severe distress had existed was undeniable; and that it had, generally speaking, been borne with patience and mildness, he felt it his duty thus publicly to state (hear, hear). This alone ought to lead Government to afford relief even at the expence of principle, were there no other inducement. But he perceived, in common with the house, that the stream of public and private charity had flowed bountifully to the relief of those distresses; that stream of public charity had hitherto little more than commenced its course, and he and several others knew that many were only restrained from contributing to it from the impression that Government would step forward and afford relief. Under these impressions, he felt it necessary explicitly to state, that it was not the intention of Government to propose any grant for the relief of the existing distress. He felt that any such grant would have the effect of stopping the current of public charity (hear, hear). Government had availed themselves not only of all public information, but also of the communications made to them by private individuals, who very laudably interested themselves in the sufferings of their fellow-townsmen and neighbours. From these different sources, he felt justified in stating, that the worst was past; and that, though things had by no means arrived at such a state as he could wish, yet that not only there did not prevail that over-ruling necessity, which would compel Government to sin against the rule they had laid down for themselves, but that a slow, progressive improvement was visible. The house must perceive the evil which such a precedent would give rise to, in the event of any future distress arising, and going to an extent which was more easily imagined than described (hear, hear). Let them look to the late agricultural distresses—let them consider the impossibility of giving public relief to those distresses—and then consider, whether the efforts of Government (except in cases of the last necessity) would not be productive of much evil, and of little general benefit. Ministers had considered, and very much felt for the public distresses; and the house and the country would give him credit, when he stated, that insensibility to those distresses formed no part of the character of Government (hear, hear).

LOREDS, THURSDAY, MAY 23.—The Earl of Liverpool rose to move the second reading of the Importation of Corn and Warehouse Corn bills. He had had, on the occasion of his noble friend's (Lord Malmesbury's) late resolution, such an opportunity of stating his sentiments on these bills, that it was unnecessary for him to preface his motion with any further arguments.—He might, however, observe that a bill similar to one of these had been introduced last session, and the agricultural interests had not suffered from it. If, indeed, they could exclude foreign corn at all times, and under all circumstances, and thereby establish for themselves an exclusive monopoly, they might naturally condemn any interference with their prerogative. But he believed the agriculturists were neither so unwise nor so unjust, as to dream of any such monopoly—they felt that the people were entitled to look for an importation for home consumption, when it was found necessary. When circumstances called for a temporary change, it was natural for the agriculturists to consider what measures were likely to operate least to their disadvantage. A limited importation was evidently one of this description; for while it served the country in general, it was so far from being disadvantageous to the agriculturist, that it might prove most beneficial to him. In the years 1816, 1817, and 1818, events had occurred which clearly established that fact. In 1816 the country had been visited with a defective harvest. This was known in July; and yet on the 15th of August prices remained a few shillings below 80s.; the consequence was, that the ports remained shut until the 15th of November, and when they were then opened, the winter had closed the Baltic Sea, and it was not till the beginning of the following year that any available importation arrived. Prices had risen from 53s. a quarter to 110s.; and this great rise had led to, and stimulated the most extensive speculations. The consequence was, that the market became completely glutted, and the re-action was severely felt by the agriculturists. All this would have been spared, if a moderate importation had been allowed in August; it could then have done no injury to the agriculturists, while it would have served the country generally, and averted all the ruinous speculations which followed. The system of allowing, therefore, a moderate and limited importation was the best under all circumstances for those engaged in agriculture. The present measure owed their origin to the peculiar situation in which the country had been suddenly placed; and he wished them to be judged of on their special grounds, and apart from the general question of the corn laws.

The Earl of Malmesbury said, that his objections to the second bill remained wholly unshaken. It was well known that farmers were under the necessity of preparing to meet the hay and corn harvests by the sale of their produce. At the present time these farmers would have to sell their wheat at from 6s. to 8s. a quarter less than what they would have been able to have got for it if this measure had never been agitated; and they must in consequence make up for this loss either by debarring themselves and their families of some necessities, else they must reduce the wages of the labourers. In order, therefore, to provide remedy for an emergency which might arise, the legislature were inflicting a positive

and serious injury upon the class of individuals who had mentioned.

The *Lord Chancellor* said, that he should think that the ministry were committing one of the gravest possible offences against the state if they were to propose measures calculated to injure the landed interest, for he was most fully persuaded that every other interest in the country was so interwoven with this, that all classes of the community would be sufferers by any neglect on the part of the Government to protect the agriculturists with the most fostering care; but he did not see that the present measures were likely in any way materially to affect the landed interest. With respect to the measure for letting out the bonded corn, he could see no objection to it: indeed, if corn were to advance to a certain price, the bonded corn would be brought out under the existing law. On the other bill more might be said. No one could be more averse than he was to the exercise of acts of power against the law, but under certain circumstances, the exercise of such a power might be rendered necessary: there ministers, however, could foresee that such circumstances were likely to occur, generally speaking, it would be their duty to provide against the emergency, by applying to parliament for the power of remedying it when it should occur. But this rule must be received with some qualification, for if the applying for this power, which he would term an indemnity in advance, were likely to be more mischievous than the acting without it, no doubt it would be the duty of Government to pursue the latter course, and come to parliament for an indemnity afterwards—for a tyranny in this country, whether for forty days (as Lord Camden had called the exercise of the prerogative in 1766) or one minute, could never be endured. This bill provided that his Majesty should be able to do certain acts by an order in council. This, however, did not relieve the parties who should advise these acts from any responsibility—they might still have occasion for an indemnity. As to the objection which had been urged against this measure, that it was an interference with the corn laws, it was without the slightest foundation: this bill had no connexion with those laws; and he would assert with the utmost sincerity, that if he thought it would at all affect them, nothing on earth should induce him to vote for it: for the support of the landed interest was in substance and effect, the support of the constitution of the country.

Earl Grey said, that the learned lord had styled this an indemnity in advance, and had laid it down as a principle, that where Government could see a probability of their having occasion to resort to the exercise of a power contrary to the law, it would in general be their duty, where they had an opportunity of so doing, to apply to the legislature to intrust them with such a power; and he himself would admit that if it could be clearly made out that such a necessity was likely to arise, that it might be right that Government should be armed with such a power; but the necessity ought first to be proved; indeed so clearly as to render it almost criminal in parliament to refuse placing this power in the hands of Government. But where was the necessity in the present case?—when did it arise? On the 18th of April last, although ministers then stated that

the country was in a state of great distress, they also expressly declared that any proposition which would materially tend to diminish the price of corn, would considerably aggravate the distress. No one lamented the progress of the distress more than himself, or felt more compassion for the sufferings of the misguided individuals whom it became necessary to put down by the strong arm of the law; but he must say that ministers ought, when the distress arose, to have foreseen that it might be necessary for them to have recourse to the measures they were now proposing. Most certainly their conduct in this respect had produced great evils. But at any rate, said the learned lord, these measures were not intended to affect the corn laws: but must they not necessarily have such an effect? When Government declared that they saw no means of alleviating the distress but by adopting measures for the reduction of the price of corn, what was this but holding forth an idea, that the corn laws were the cause of the calamities? Could it be possible, after this, that a cool and unprejudiced consideration of that great question could be entered upon? The landlords were held up, by these measures, as selfish and oppressive persons, who prevented the poor from having that relief which the repeal of the corn laws alone could give. He (Lord Grey) had no wish to make professions, respecting his sense of public duty; but for his own part he disclaimed any sordid or ungenerous sentiments in defending himself and his interests from those who attacked them. He would appeal to his whole life whether he had suffered views of personal interest to bias him! But he would not deny that he felt a natural anxiety to preserve that property to his family which had been handed down to him from a long line of ancestors (hear, hear). This was the feeling of their lordships generally: and although no man was more willing to make any personal sacrifice for the good of his country, he felt it was a hardship that the house should be so placed by the acts of Government, that for the part they might take in that debate, they should expose themselves to obloquy, for having openly, honestly, and fairly, proposed their opinions and defended their rights. Whatever might be the odium attached to opposing the present measure, he was prepared to encounter it. If he thought it likely to produce even any temporary relief, he would assent to it; but he was convinced the measure was illusory as regarded the present, and would be mischievous with reference to the future. Even in the course of the recent discussions, the justification of the measure had shifted its ground most peculiarly. First, parliament had been told of probable evils,—of cold winds, bleak nights, and the strong prospect of a late harvest in the present year: now the excuse dwindled down to an allegation of merely possible dangers, dangers which were no more likely to befall us in this year than in the next, or in any of the 20 years next to come. And the truth was, we had had some weather which might be unpleasant to the senses, but he was happy to say that, upon the corn crops, the cold weather had produced no effect at all. On the contrary, he gathered from the best authorities, that there was not only every prospect of a full, but of an early harvest. With respect to the stocks of corn on hand, his information was directly in the teeth

of the statements which had been made by ministers. From two friends of his, likely to be peculiarly acquainted with this fact—an hon. member (Mr. Coke), and a noble lord connected with the same county (Norfolk)—from both these hon. persons he was assured, that they had never, within their memories, known a larger stock of wheat on hand. In the county of Northumberland he was informed that things were in the same situation: there was universally a large stock of corn in the hands of the farmers and of the merchants. In Ireland, he had it from the best authority, that there was an abundance of corn in hand. With such facts before him, he was bound to say that ministers had made out no case; and the mischief which the proposed measure would do was enormous. He should have been much better pleased, and much less injury would have been done to individuals, if they had been silent until the necessity came, and then acted upon their own responsibility. Constitutionally, too, he objected to the present course—to parliament's arming ministers prospectively with a power to dispense with the laws; not to speak of the measures conveying an authority, moreover, to raise 400,000*l.* (by the duty) if it was carried into effect—after the supplies for the year were granted, and on the eve of an election. Certainly he could not consent to do all this without inquiry; and he thought the condition of the country never demanded inquiry more. Ministers had been latterly engaged in making many alterations in our commercial system, in order to increase our means of prosperity. He confessed, that as far as his judgment went, the more he saw of the new principles, the less he liked them (hear, hear). He would not attempt to dispute the pretensions of the teachers of political economy; because, in all humility, it became him to acknowledge that their doctrines were in many instances quite above his comprehension. The theory indeed was so perfect, that no sufficient objection could be stated to it in argument; but it generally happened that some little circumstance or other occurred in practice which overturned all theoretical calculation, and ended by producing some great national calamity. There was, now, ample time for inquiry; but it was to be refused on the ground of confidence in ministers. In his opinion they were not entitled to confidence. He had long disapproved of the course followed by the noble earl (Liverpool). He therefore insisted upon inquiry. He was not averse to a revision of the corn laws, and to fixing the importation average at a lower rate, or even to a general admission subject to a fixed duty, though he distinctly denied that the laws, as they stood, had done any thing, during the last six or seven years, to prejudice the country;—but he opposed, beyond any course, that uncertainty which the present measure would introduce—that constant liability to change, which would leave every man in doubt and anxiety as to his daily transactions. He had not taken part in this debate from personal considerations, though he knew not why a candid avowal of regard to private interest should not be allowed to those belonging to the land as well as to members of all the other classes. It was by the care which each class bestowed on itself, that the welfare of the whole was best promoted.—He should decidedly oppose the measure in every stage.

The Earl of *Harroby* observed, that it had been asked when it was that the new lights upon which they were acting had broken upon ministers? That was a question which, from the nature of it, it was impossible to answer. It was the accumulation of distress which had determined them finally as to the course they should follow. Hopes had been entertained that the distress would have subsided more rapidly than it had done. But it ought to be stated distinctly, that nothing like intimidation at the late disturbances had weighed with the ministry in its determination. The noble earl (Grey) had asked whether more mischief would not be done by introducing these measures, than if Government had stood still; inasmuch as that which had been proposed by ministers would have the effect of prejudging, in a certain degree, the question of the corn laws. Now, in his opinion, the noble lord, if he had not actually prejudged those laws, was at least now ready to do so than he and his noble colleagues. There were circumstances in the present state of the country which induced ministers not to stand in the way of allowing the supply of bonded corn, but it did not therefore follow that at all times foreign corn should be admitted when the price was 60*s.* For the same reason, they had acquiesced in allowing corn, to a certain extent, to be imported at a duty of 1*l.* They allowed this at the present moment; but they were not prejudging the price, prospectively, at which corn might hereafter be admitted. In acquiescing in these measures, the only object of ministers was to afford present relief. But the noble earl contended, that those measures would produce no relief. Why, by the first measure, a certain relief, to the extent of 300,000 quarters, would be given; and by the second, a relief, probably, to the extent of 500,000 quarters. Whether the relief which they would effect would be sufficient or not, he could not say; but if the pressure grew more severe, recourse must be again had to Parliament.

The Earl of *Lauderdale*:—Before he proceeded to investigate the subject, he requested that the two first paragraphs of his majesty's speech on the 3d of Feb. 1825, should be read.

[The paragraphs were read as follows:]

"We are commanded by his Majesty to express to you the gratification which his Majesty derives from the continuance and progressive increase of that public prosperity upon which his Majesty congratulated you at the opening of the last session of parliament.

"There never was a period in the history of this country when all the great interests of the nation were at the same time in so thriving a condition, or when a feeling of content and satisfaction was more widely diffused through all classes of the British people."

Here there was a most flattering picture of the prosperity of the country; and yet wheat was actually 6*s.* 4*d.* a quarter dearer than then it was now, when the measure before the house was proposed. Now, he must distinctly object—not, perhaps, to the first measure—which came with a good grace—and he never did object to any measure that seemed likely, however remotely, to benefit the people; but he did object to the two measures combined; and further, he must object to the language used by the noble earl (Liverpool), in giving up the principle on which the corn laws of this coun-

try stood. In 1815 the noble earl was in favour of the corn bill; and yet he might, at that day, have arraigned that measure on the very same grounds which he now advanced. The noble earl declared that this was a measure of relief. Surely it was not a measure of relief for the manufacturers; because, when they had no money, they could not purchase corn. No; it became a measure of relief, it appeared, for the charitable subscribers, because it would make their money go a little farther. What was the price of wheat in November last? It was 10s. per quarter dearer than now. At that time, too, ten months must intervene before the harvest could be brought to market; whereas, at the present moment, the harvest was but three months distant. Those, it should be recollected, were summer months, when it was more easy to subsist than during the winter and spring. At this time last year wheat was 8s. dearer than it was when the noble earl proposed this bill; but in neither instance did he think it necessary to ask parliament to pass such measures as these. Looking to these circumstances, and considering the situation of the times, it did appear to him that this was an attack upon the corn laws. The noble earl (Harrowby) said, he meant no pre-judgment of those laws. He did not care what the noble earl meant; but there was no man in the house, or out of it, who saw the public newspapers, or who knew what was passing in the streets of the metropolis, and throughout the country, that must not feel that the introduction of these measures was received as a pre-judgment of the corn question. Nay more, he did not know how he could now come to the consideration of that question, with equal calmness and patience, with the same dispassionate wish to view it in all its bearings, as he could have done before those measures were introduced. In his opinion, whatever might be said to the contrary, the line of policy adopted by ministers would have the effect of setting the manufacturers against the agricultural interest, and would prevent, for years to come, a temperate discussion of that great subject. What possible reason could the noble earl advance, to shew that the present was not as fit a moment for inquiry as any other? Let him look to the committee on the corn laws of 1814. That committee was not appointed until the 17th of June; and yet, with this fact before him, the noble earl rejected inquiry in the middle of May.—The noble earl had said, that no person entertained any objection to the Warehoused Corn bill. He (Lord Lauderdale) did, however, object to it, when combined with the provisions of the second bill. What, he demanded, was the reason for sending Mr. Jacob abroad? No man could read the instructions given to Mr. Jacob, without perceiving that those who sent him to the continent, had determined, in future, to place their reliance on the foreign corn-growers for the consumption of this country. The noble earl, it seemed, had found out that Great Britain could not rely on its own agricultural industry for corn. Now he must declare, that this was one of the most dangerous doctrines that could be laid down. All the evidence went to prove that Great Britain and Ireland could, on all ordinary occasions, grow sufficient corn for their own people. The most mischievous principle that could be adopted by this country was, to rely on foreigners for a supply of grain. If it were true, that when

the crop was small in one part of Europe, it was sure to be great in another, then there would be some certainty about the matter. But the fact was not so. If they looked to the corn-trade throughout Europe, they would find that, when there was a bad season here, there was also a bad season on the continent, especially in the north of Europe, whence the great supply was to come. Therefore, they would be inundated with corn in a year of plenty, but in a year of scarcity they would not be able to procure the requisite supply. The law of nature was opposed to such a system; but, independent of that, it would be affected by municipal laws. If they examined the law of France, the law of Sweden, and the law of other countries, on this subject, they would find that provision was made to prevent corn from being exported when it was at a certain price. It was not the cause of the landholders, but of the consumers, that he now advocated. He was not actuated by any petty motive; and he defied any one to say that his opposition to this or to any other measure of Government, ever originated in any other feeling than an anxious desire to discharge a public duty. When he wished to acquire knowledge on any subject of this kind, he always looked to the experience of past times, and that experience shewed him that the constant admission of a foreign supply of corn was calculated, beyond all other measures, to create frequent alterations in its price, without sensibly diminishing its value. It would be found in the history of this country, that by an efficacious law, passed in 1670, in the reign of Charles II., before foreign corn could be admitted the price in the market here must have risen to 50s., which, with a duty of 11s., brought the importing price to 31. 1s. Looking to the value of money at that day, that sum was equal to 81. 4s. at the present time. During the first thirty years after the passing of that act, they had wheat at 11. 19s. per quarter. That system was continued down to 1765, and during the last thirty years of that period wheat was at 11. 14s., shewing, that during the whole of that period, a low, and indeed a declining price, under those restrictive regulations, was constantly maintained. It was also a curious circumstance that, during the whole of the period he had mentioned, the highest price was never more than two-thirds of that to which it rose when the system was changed to that of a free trade—not such a system of free trade as that which was so much boasted of at present—which was too ridiculous to be talked of—and of which the silk manufacture afforded a good specimen—a free trade with a protecting duty of 30 per cent. *ad valorem* (a laugh). At the period he had mentioned, a really free trade was allowed; and, at the end of eight years, the average price of grain was found to have been 21. 10s. 10d. a quarter, being 15s. 11d. higher than it had been for the long period under the formidable protection that had been granted in the time of Charles II. In 1774 another law was passed, fixing the importation price at 50s.; and again, in 1791, a law was enacted, admitting the importation of foreign grain at 21. 8s. If they looked to the average of wheat, from the time when the act of Charles was given up, to the end of the year 1791, when the act of 1774 was repealed, they would find the general average to be 31. 2s. a quarter, and during a considerable portion of that time this

was actually an exporting country. In 1792, a new act was made, which continued till 1804, by which wheat was admitted to be imported when it had reached the price of 21. 9s. at a duty of 2s. 6d. Under that protection wheat rose to 31. 14s. 6d. After 1804, another scale of protection was adopted. It was then thought proper to go back to the protection of Charles II., and the average was struck at 51. 4s.; being considerably greater than that recently imposed. The effect of all this was to create a variation in the price of grain, which was most injurious to all classes of society.—The noble earl then proceeded to argue that it was better for the country at large to have steady and moderately high prices, than fluctuating low ones. If grain were too low, the agriculturist, to pay his rent, his taxes, and his poor-rates, had no other resource but that of dispensing with the labour of those workmen whom he had not the means of paying. The consequence was, that a number of individuals were thrown on the parish. In the present state of the country, many of those persons would find no difficulty in applying themselves to the working of machinery used in manufactures at a low rate of wages, and thus a superabundant supply of manufactures was forced into the market. A great deficiency in the amount of wages would compel those new workmen, in order that they might procure the comforts they formerly possessed, to undertake much additional labour, and thus distress was created amongst the established manufacturing workmen. This would not occur if the price were kept up at a just rate, so that the labourer could be profitably employed. Extremely high or low prices of grain were equally injurious to the country. What was wanted was equality of price.—The noble earl then proceeded to contend, that the landed interest were subjected to peculiar burdens to a great extent. The land-tax, called 4s. in the pound, in fact, amounted to about 10 per cent. on the value of the rent. Did the silk manufacturers, who had obtained a protection of 30 per cent., labour under any such burden as this? The poor-rates and tithes taken together amounted to about 33 per cent. on the value of the rent. This was not all; the landed interest were obliged to furnish the means of forming roads, bridges, &c. and to indemnify the owners of property for all losses occasioned by the riotous proceedings of distressed manufacturers. In addition to all these disadvantages, the exportation of wool—one of the staple commodities of the agricultural interest—was prohibited, in order to favour the manufacturers. (The Earl of Liverpool observed, that the exportation of wool was now permitted). Then, leaving that out of the question, the landed interest was subjected to exclusive taxation amounting to more than 50 per cent. on the value of the rent. It was under these circumstances that the present measures were brought forward, and discussions elicited which were more mischievous even than the measures themselves.

The Earl of *Liverpool* would tell the noble lords, who complained of the injurious effect which the present measures would have on the general question of the corn laws, that if any such effect was produced, it was the fault of those who opposed them. It was well known that when the measures were first proposed in the other house, they were hailed universally as well by those who supported the agricul-

tural interest as by those who supported the manufacturing interest. It was owing to the opposition offered to the measures in the House of Lords, that the opposition exhibited in the other house took place. Those who introduced the measures stated that they were not intended to have any effect on the question of the corn laws. The opposers of the measures, by putting it into the heads of people that they were connected with the general question, had done that which they alleged ministers to have done.—The noble earl (*Lauderdale*) had gone into a long history of the corn laws previously to the year 1765, and since that period. He was not going to follow the noble earl through his statement, but he could not help observing, that he had omitted to notice, as the advocates of the agricultural interest always did, the great growth of the manufacturing interest and increase of population since 1765, and to inquire whether the increase of produce had been proportionate. The noble earl was not correct in stating, that previously to 1765 there were no great fluctuations in the price of grain. In the beginning of the last century (1706), wheat was 23s. per quarter; in 1708 it was 36s.; in 1709 it was 69s. Thirty years afterwards, in 1740, wheat was 45s.; in 1741 it was 41s.; in 1742 it was 28s.; and in 1743 it was only 22s. He did not state this as an argument for one system or the other, but merely to shew that there had always been great fluctuations in the price of corn.—The noble earl had accused him of inconsistency in having supported the corn-bill in 1815, and now advocating the present measures. It was true that he did support the corn-bill of 1815: he said then, that he wished Great Britain and Ireland to produce corn enough for their own consumption. He said the same thing, and felt the same wish, now; but he could not shut his eyes to the fact that the imports of foreign grain proved that Great Britain and Ireland had not produced sufficient for their consumption. Whether the growth of population had been more than proportionate with the growth of produce, was a question which he could not undertake to determine. He supported an import price of 80s. in 1815, because he thought that it suited the then circumstances of the country. He was not now going to discuss the question, whether 80s. was at present a fair price; but when the noble lord talked of the burdens to which the land was peculiarly liable, he thought it necessary to remind the house, that the property tax, the agricultural horse tax, the salt tax, the leather tax—all pressing on the landed interest—had been repealed, whilst the taxes bearing upon the poorer classes, which had been repealed, were few in proportion. The noble earl could not deny, that at the present moment 60s. or 65s. were as fair a remunerative price as 80s. in 1815.—The noble earl said, that as the manufacturing population was out of employment, and had not the means of purchasing bread, it was of no use to make that article cheaper, or to prevent it from becoming dearer, which was, in fact, the only object of the proposed measures. It might be true that some proportion of the manufacturing population could get no work, but the great mass were working at reduced wages—some getting 7s. per week, others 5s., and some 2s., out of which, in many instances, large families were to be supported. Would any man, then, tell him, that to these people it was of no conse-

whether the loaf was a shilling or a penny? The corn laws, he repeated, & the cause of the distress; but the distress in existence, it must be of material use to lower the price of the principal of food. That being the case, the question to a mere matter of form—how was it to be administered? This was a birth the friends of the agricultural interest to consider well before they offered opposition to the present measures (were).

Earl of Limerick complained of the which had been created in Ireland by measures. All bargains had been shaken, facts dissolved, and the farmers and driven to a state of the greatest distress the merchants of this country were not, indifferent to the movements of the world. Every post carried out orders to Germany to buy up all the grain could be procured; and the intelligence speculations increased the apprehensions of the agriculturists. These measures also, have the effect of diminishing the home, because they would drive lands into cultivation. The Canada Corn Bill, indeed had that effect, to a certain extent,

King congratulated the noble earl (Limerick) on the signal success which he had obtained the great domestic enemy (a laugh). Nobody must have observed the reluctance which had been given to the measures in the secular quarter; indeed, it was more opposition than support:

“——— ira leonum  
Vincula recusantum.”

glad that of the two modes of proceeding were open to them, ministers had not the course of acting on their own responsibility, because then nothing would have been said and speaking on the subject of the law did good. Many people in that were inimical to free trade,—there were who were enemies to free air, and to silence—

ang wolves, whose conscience is their

best would shut out corn, another wool, utter. This was the essence of the old *codex agrestis* of the members for and Suffolk. All their arguments upon a supposition that we were to be buyers and not buyers; but how could we, unless we allowed other nations to: noble earl (Lauderdale) said he would paradox, and argue logically (a laugh); directly after said that low prices would distress, which was as great a paradox as ever uttered. If foreign corn was imported it was because it was lower than our price; if it was excluded, we were to eat corn at a higher price than we were summing up the burdens on the interest, the noble earl had mentioned the tithes were paid on produce, and paid by the consumer, as much as if the holder collected them at the oven's end. The noble lord concluded by stating, indeed this bill because it made an inroad on the corn laws, and because his object was to bring corn to a moderate price.

Earl of Caernarvon complained of the

difficulties in which ministers were likely to be placed by these bills, when they had tempted speculators to fill their warehouses with large quantities of foreign corn, for which they would find it impossible to procure a market. The course now pursued was tempting these corn factors to utter ruin. The corn trade depended now, day after day, upon the opinion of ministers—so that the price of 60s. to-day might be 50s. to-morrow. These measures had been introduced to their lordships by the noble earl, in a speech by no means complimentary nor constitutional,—a speech, that amounted almost to menacing their lordships with the public execration, should they refuse to pass these measures; but, notwithstanding that speech, their lordships would do their duty to the country—without any sordid motive or self-interest, but voting without any bias, as they thought was best for the welfare of the whole community.

Lord Redesdale felt no disinclination to relieve the manufacturers; but a partial tax on the agriculturists, for their relief, was an unjust tax. Every buyer of corn—all engaged in trade and manufacture, were to be benefited at the expense of the grower of corn. He should, therefore, oppose the measure: for we were not to steal leather to make poor men's shoes. This country could not be a great manufacturing country unless its agriculture supported it, and the distress of the latter would bring on that of the former. What was the cause of the late agricultural distress? Nothing but importation, which had ruined many farmers, and in the county of Dorset had caused the prices to fall one half. If there was now any difficulty in this country supplying itself, it was entirely owing to importation. He had lately conversed with a gentleman who had made inquiries in different parts of the country as to the means which farmers possessed of paying their rents. From this gentleman he learned, that out of 200 capital farms, not more than ten were fully stocked, and that 100 were only half stocked. This want of stock must produce a defalcation of corn. Some noble lords thought that poor lands ought not to be cultivated. But what would be the effect of throwing them out of cultivation? According to Mr. Ricardo, these lands consisted of one half of the soil in cultivation. Their produce was perhaps not one-third of the whole produce of the country. It might be one-fourth, but taking it at only 600,000 or 700,000 quarters, by throwing those lands out of cultivation, the production of the country would be rendered that much less than it now was. It was by cultivation that the country had been made to flourish, and if cultivation were discouraged, the injury would be irreparable. Their lordships must now experience the unfortunate effects of free trade. Under such a system every thing ought to be free, and commerce in every country should be on an equal footing; but such a state of things never had yet existed, and never would exist.

The Earl of Darnley thought that it would have been much better that the measures never had been brought forward: but after they had been introduced, after the people had looked up to them as sources of relief, he could not bring his mind to vote against them.

The Earl of Malmesbury:—An observation had fallen from the noble earl (Liverpool) that these measures would have passed over with silence, unless for the opposition in that house. The opposition arose, on his (Lord Malmesbury's) side.

bury's) part, from a wish to discharge his duty as a peer of the realm.

The Duke of Somerset opposed the measure, and was for inquiry into the corn laws generally.

The house divided on the second reading of the Warehoused Corn Bill—For the measure, 84—Against it, 23—Majority for the admission, 61.

They then divided on the Importation of Corn Bill—For the bill, 78—Against it, 28—Majority for the measure, 50.

WEDNESDAY, MAY 24.—The order of the day being moved for committing the Corn Bills,

The Marquis of Landsdowne observed, that as he had not had an opportunity of being present at the discussion yesterday, he was willing to take advantage of the present moment, to say a few words. He thought that both the measures proposed by the noble lord were called for by the circumstances of the country. He thought some change of the present system of the corn laws necessary, and he felt the less inclination to object to the measures, after the majority of that house had declared that that system was unsafe, unless it was accompanied by a palliative, and unless ministers were entrusted with a power to suspend it when they should see it necessary to do so. But the landed interest deceived themselves, if they thought the country would be satisfied with a mere temporary measure. Indeed, the present measures rather shewed the necessity for some alteration, than afforded the means of relief; for it would be preposterous to say that the introduction of 500,000 quarters of corn would afford any effectual relief to the country, in the event of the price of corn rising to a great extent. He did not know of a more important duty to be performed by Government, than that of bringing forward a complete revision of the existing corn laws; and, till that revision took place, he was convinced a great degree of irritation must and would exist in the country. He believed that it was the interest, not only of the manufacturers, but of the landholders themselves, that this alteration should be made; for, if corn should ever rise to a famine price, they would not only suffer all the obloquy arising from such a circumstance, which would be almost universally attributed to them, but they would, in fact, be injured by the loss of those consumers, from whose numbers, and whose means of consumption, they should most confidently look for the increase of their wealth.

The house then went into a committee. The report was agreed to, and ordered to be received to-morrow, (when the bills were passed).

Earl Fitzwilliam asked whether it was intended to propose any grant of public money for the relief of the distressed manufacturers.

The Earl of Liverpool said, that a very special case must be made out to induce him to consent to give relief out of the public purse. The proper source was the poor-rate; and, whatever farther aid might be necessary, would be better supplied by private benevolence than by public money. He did not say, that in no case ought an advance of public money to be made for the relief of local distress, but, to do so now, would be to establish the first precedent of the kind in England. He had anxiously considered the subject, and the more he considered it, the more he was confirmed in this opinion.

### *Silk Trade.*

COMMONS, THURSDAY, FEB. 9.—Sir Thomas Lethbridge presented a petition from certain silk-throwsters in Somerset, against the admission of French silks.

Mr. Robertson was astonished at the apathy of the house at the approach of this measure for admitting foreign silks at 30 per cent., or that any one should suppose that wrought silks could be produced as cheap here as in France. With respect to the silks of India, it must be well known that they could be imported so that, with the duty paid on them, they would cost less than the silks of the English manufacturer would cost here on putting them into the loom. The free trade in silk would immediately extinguish a branch of national industry, which had been fostered for ages in this country. It was utterly impossible that they could compete with French silks. The very material used by the French manufacturer would secure him the advantage. It was an article of a different, and of a higher quality than that used by the English, and was considered of such importance by the French, that they would not suffer any of it to go out of the kingdom. With a load of debt, hanging like a mill-stone around the neck of the country, were they rational men who could propose a competition with a people whose debt was almost no burden at all?

The petition was ordered to be printed.

Mr. Baring presented a petition from 2000 persons engaged in the silk trade at Taunton, against the introduction of French silks, which deserved the deep and serious consideration of the house and of ministers. The conviction on his own mind was settled long ago. What he wished to see was, whether or not the house were determined to support ministers in their desperate resolution. They all knew that great anxiety existed among the silk manufacturers, and that great hopes were entertained by them that the house would defend them against the ruin which awaited them from the plans of Government. He had no decided confidence in that source of relief when he recollected how his own objections to the measure had fared two years ago. But the public mind should be set at rest. The master silk-weavers could not find any employment for their people until their own fate was known. Whether they were right or wrong, they were unanimous in their opinion, that if French silks were let in, there was no chance of selling a single yard of English silk. The question ought to be set at rest, and it must be set at rest by a bill. The conduct of Government had justified a suspicion that they would not scruple to take liberties with the law. The late order sent to prevent the issuing of stamps from the Stamp-office was a direct violation of the existing law. The conduct of ministers might be justifiable, but they should have paid that reasonable respect to the legislature, to state the urgency of the occasion which induced them to contravene the existing law, and not leave it to the accidental explanation of the Secretary of the Treasury. He had to complain of a similar infraction with respect to the silk laws. A duty of 7s. 6d. a pound had been laid upon thrown silk. He himself had said at the time, that every penny of that protecting duty on thrown silk, must so far sacrifice the interest of the manufacturer. An order had lately gone down to state that it was the intention of Government to reduce that duty 2s. 6d., or from that to 5s., as they feared

was a sufficient protection for the v—so completely ignorant were the of the proper nature of that interest which they were so ready to advise ta. As if the law and the parliament nothing compared with their own no—y undertook to arrest and change the ad by the wisdom of parliament, and k to accept 5s. per lb. upon an article s to have paid the state 7s. 6d. This a strong case: like the other, it might able by circumstances. But if so, it ouden duty of ministers to have stated arliament, and to have sought protec— the offended law in a bill of indemnity. tioners had requested him to remove mon which had been made by the hon. T. Lethbridge) that they were satis— the existing state of the corn laws. not wish on the present occasion to ad any thing unconnected with their case, but they had directed him to t that statement if correctly repre— them. Their impression was, in the of their petition, that the principle of must be greatly injurious to the ge—reals, unless it were extended to corn t instance.

utison said, that the Board of Trade, bled themselves that 5s. was a suffi— cion, had directed so much of the re taken, and that bonds should be the excess of 2s. 6d. per pound, should t not concur with the Government. : would see at once that the whole of as secured to the public, should par— ink proper to exact it, and that mid by no means assumed an independent a dispensing power. His hon. friend ware that it was not unusual to take duties likely to be remitted by parlia—

sempert took the opportunity of im— inisters to take this subject again into as consideration. The consequences asures were just as he had predicted ago. He had told the house—open o foreign silk, and the home manufac— t be ruined. He called upon the l manufacturing interests to do justice ves and the country by inducing mi— orengo a plan which must ruin them all. Lethbridge, in reply to what fell from ember (Mr. Baring), observed, that rre of the observations which were be report of the address he (Sir T. e) had stated that which he believed perfectly correct—that the great body nufacturers took a more chaste view ra question than before. That was sion which had been given to his conversing with the manufacturers; ot object to the present price of pro— t to the probability of their trade be— yed. He found no direct complaint e prices of provisions among the facturers. Their distress was great, e felt severely at any prices. Yet, id, he could not but look upon this of the silk trade as an outwork to a eration in the corn laws, which if not ched, were so by implication and s—wind, tending at no distant period trade in corn. If the distress result— manufacturers from this first attempt ure it, the house might be called

upon to consider of a similar alteration in the corn trade. He thought that if the intentions of Government bore that way, the more manly and proper course would have been to begin with the corn trade (loud cries of hear, hear). For his own part, then, and on every occasion, he must oppose any proposition for a free trade of corn. As long as the national debt remained, no such thing could be listened to. When the time should come for discussion, and it was in his opinion likely to be soon, he would undertake to show that the country could not support competition in corn and its present burdens together. He would be as glad as any man to see low prices, but high prices there must be; agriculture could not go on without; and at all events, the prices must be kept up by an import duty, so as to amount to an absolute prohibition, so long as the interest of the national debt had to be paid. Such was the truth, and it was in vain to veil it from their minds.

Mr. Ellice said, that the hon. bart. was certainly right in considering this measure as the outwork of an attack on the corn laws; and in both plans, Government, he feared, would be found to be only too resolute. He intended shortly to move to have all the petitions referred to a committee. Much new and useful light had already been thrown on this subject, and much more might be expected from the daily course of their proceedings. A great deal of information had reached him from persons who had the best continental intelligence, that unless there was a very great improvement in machinery, and a great reduction in the price of corn, there was a moral certainty that they could not proceed with this bill, without throwing out of employment the great mass of people engaged in the trade. The bill had, notwithstanding, one good effect: those engaged in the trade had learned a good deal by their recent experience—they had had more time to see what they had to contend with, and to provide as well as they could against emergencies: if proper time were allowed them, then, indeed, could they better avail themselves of their own resources.

The petition was then laid on the table.

TUESDAY, FEB. 14.—Mr. Ellice presented a petition from the manufacturers engaged in the riband trade in Coventry, who employed upwards of 24,000 workmen, setting forth the apprehensions they entertained from the competition into which they would be forced with the French and Swiss trade next July, on the admission of the foreign article. In answer to the communications which had passed between this trade and the Lords of the Treasury, the latter declared their dissent from the alarms of the former, and expressed their conviction, that no greater importation of foreign goods would take place from the operation of the new measure, than at present occurred through the traffic of smugglers. The manufacturers, however, entertained very different feelings on the subject, and were fully impressed with the belief, that if the Government persevered in their intentions, the trade must necessarily decay, and they would be under the necessity of discharging their workmen.

Mr. Huskisson said, as to the observation that Government had stated in answer to the communications of the manufacturers, that they were satisfied the only alteration in the operation of the new law would be, the legalizing of the sale of a certain amount of foreign goods which

had previously found their way into the market by smuggling, he for one could say that he had never expressed any such opinion, nor was he aware that Government had ever held it out.

The petition was then laid on the table.

THURSDAY, FEB. 23.—After numerous petitions had been presented against the importation of foreign silks,

Mr. Ellice rose to move that the petitions relating to this subject be referred to a select committee. In bringing forward this motion, he could state, in the outset, that he was not acting in opposition to those principles which ministers had introduced with respect to trade. He had been a humble assistant in the application of those principles; but admitting their justice in general, there were exceptions which it was necessary for a practical statesman to consider. In acting on the principles of free-trade he did not think that ministers had begun at the right end. They should first have established the currency on a solid basis; they should have brought about a steady state of prices; they should have placed the labourer in a condition to compete with foreigners, by such an alteration of the taxes as would relieve the artisan, by throwing the weight of them on classes better able to bear it. Had they done this, they might have proceeded with less difficulty to the next step, an alteration in the corn laws. These points he wished to state, lest he should be accused of deserting his principles. —If the house examined the evidence laid before it, especially that taken before a committee in another place, and which formed the chief ground of the measure, he (Mr. Ellice) thought it would appear that the legislature had acted with less caution than it should have done. At that time little knowledge was possessed on the subject, except the general information of persons but little acquainted with it—chiefly the testimony of the Manchester people, who thought the country was better prepared for the measure than it was. Thinking, therefore, that the committee in the other house, and his Majesty's ministers, went too fast, was not subsequent experience sufficient to induce the house to reconsider the subject, and arrest the progress of a measure which the petitioners thought would be injurious? The petitioners, with a view of ascertaining the state of the trade abroad, had deputed experienced persons into other countries, whose reports had been laid before the right hon. gent.; and he trusted they would induce the house and ministers to arrest the measure. There were several branches in this trade—there were the Throwsters, the Dyers, (who he thought had not been fairly dealt with), the Broad Trade, and the Narrow Trade. He should first call the attention of the house to the case of the Throwsters. From all that had been communicated to him upon the subject, it did not appear that the Throwsters had any complaints to make with respect to machinery, nor did they expect any improvement to be made in their present machines. They had accurate knowledge of what machinery was in use in the principal manufactories upon the continent, and they were satisfied that, as far as machinery was concerned, they could compete with their foreign rivals, without fear of discomfiture. They also knew that their machinery was in such a state that it admitted of little or no improvement, and, in fact, no improvement was expected. This

branch of the trade had, however, made out a case, which entitled them to a protection from the competition of foreigners. The duty of 7s. 6d. in the pound was utterly inconsistent with a competition as to other branches of the trade. Two or three months ago, when this trade had suffered like all others—when the depression was extreme, and distress had arrived at its greatest height—when the manufacturers were throwing their workmen out of employ, from the fear of the effects which were likely to ensue from the introduction of foreign silks in the month of July; at that period the Government, without having the sanction of the legislature, or without any communication to parliament, reduced the duty upon thrown silk 2s. 6d. in the pound. This, of course, must have occasioned a considerable loss to every manufacturer in the kingdom; but, notwithstanding this obvious effect, the Government had pursued this measure without any previous communication whatever with the silk manufacturers. He could not be disposed to complain of Government's reducing a duty, the reduction of which would be indispensably necessary before any fair competition could be entered into with foreigners. But it was impossible that Government could justify their adopting a measure without the sanction of parliament, the effect of which was to interfere with the value of every man's property engaged in the silk trade, by depreciating the value of that article. The Throwsters had set forth, that, notwithstanding the state of their machinery, labour entered so much into the necessary expenses of carrying on their manufacture, that unless they were able to procure that labour, at a price approaching that at which foreigners procured it, it would be impossible for them to continue their trade at all. Even with the protection that Government proposed to afford them, the Throwsters would be obliged to abandon their establishments, which had cost enormous sums; they would be obliged to throw upon the parish an immense number of apprentices that they had engaged in the preceding state of the trade. If this was an exaggerated statement, he should be glad to have it disproved; if it was true, it was of sufficient importance to authorize the Government to grant the committee of inquiry. The next branch was the Broad Trade, or Broad Silk. The statements that had been made to him by the Broad Silk manufacturers, were, that the cost of labour in France was so low in proportion to that of England, that it made, upon an average, a disadvantage of from 45 to 50 per cent. to England, upon the general branches of the trade. According to the statements made upon the subject by Mr. Dext, who went into all the details relating to it, the expenses of the manufacturers in this country beyond those of France, were from 55 to 60 per cent. Under these circumstances, it was evident that the proposed protection of 30 per cent. would be perfectly nugatory—it would be no protection at all. Unless the protection amounted to what really brought the competitors into the markets upon equal terms, it was altogether a mischievous delusion to talk of protection. Comparing our expenses to the costs of silks from India and China, it would be an utter impossibility to enter into any competition with these latter producers, unless a greater protection than 30 per cent. was granted. The price at which China Silks could be brought into our markets, would almost justify

air total exclusion, unless, indeed, it were a secret intention of Government to ruin the English Silk Trade. One object of the proposed alterations was, to encourage an export trade, in the China and East India Silks could be brought into the European markets at half the price of the English Silks; and all the markets of the world would be open to them. The difference between the prices of the commodity in China and in England was enormous, and would destroy the slightest chance of our having any foreign trade, and thus, one of the principal arguments for the measure totally failed. Every nation in Europe could produce the article cheaper than this country. During the 30 years, to which the Silk Trade had been subject to the experiments of Government, no export trade had been acquired, and it was a proof, that at present, our manufactures could not find their way into the Continental markets, in competition with the manufactures of France and India. We had now procured perfect samples of Silk manufactures from all countries in the world—from India, China, Switzerland, Germany, and France; and a committee would be able to judge from comparison and actual experiment. Hitherto, they had judged from mere hearsay of two American gentlemen, who had stated the difference between the cost of the English and Foreign Silks to be from 25 to 30 per cent., and that was what the Government called evidence. One very important branch of the Silk Trade was that of the Dyers, who had been very unfairly treated by the Government. During the time that the Silk Trade had been subject to these experiments, a great proportion of the former duties continued upon all the articles used in dyeing. Soap and barilla were articles very much used, and ashes, with a long catalogue of things, upon which the duties were enormously heavy. He knew no reason why the duty was so heavy upon barilla, excepting, that a certain person of landed property in Scotland had contrived a duty upon foreign barilla, so that the barilla from his own country might enjoy a monopoly of the market. The principles of free trade must be applied generally. To talk of applying them partially was ridiculous (hear, hear). There was a duty of 4l. 10s. per cwt. on foreign soap, which operated nearly as a prohibition; and the excise duty on soap manufactured here was 28s. per cwt. The foreign manufacturer had not to encounter such duties as these; and therefore the introduction of his goods was peculiarly unfavourable to the British manufacturer. The dyers stated in their petition, that their machinery was as perfect, and their skill quite equal to that of foreigners. They had introduced foreign workmen into this country, and found they had nothing to learn from them; but on the contrary, that they were able to instruct them in many things, and the foreigners confessed that we had the advantage over them in skill, and in many chemical processes. The petitioners said, in effect, "We do not feel any alarm as to a competition with foreigners," in point of expense, with reference to the necessities of life and the materials used in our trade, we were placed on a footing with those foreigners. We feel no hesitation in saying that, with respect to the beauty and fastness of our colours, and our general expertness in our trade, we do not fear to compete with any set of men on earth. But, when we consider the cheapness of necessities on the continent, we

feel that it is out of our power to meet such fearful odds." Having stated the case of the dyers, and of the broad trade, as it was called, connected with this manufacture, he would now call attention to a nice and difficult part of the subject—he meant the situation of the Narrow, or Riband Trade. No complaint was made by the Broad Trade—no complaint was made by the dyers—of the inferiority of the machinery used by them in their respective branches: but when the committee made their report on this subject (which was adopted by the house in 1824, and on which ministers proceeded), they were little aware of the whole of the details of the case, especially as they related to this branch of the silk manufacture. He was almost afraid to quote the statements made to him on the subject; because they might be supposed to be a little exaggerated, when the feelings of the parties who communicated them were considered. Less faith would therefore be placed in those complaints, when stated to the house; and on that account he wished them to be sent to a committee for rigid examination. It had, however, been stated to him, that in Switzerland, where this branch of the manufacture was extensively carried on, the same quantity of silk was manufactured for 63s. which, if manufactured in England, would cost 77s., or nearly that sum. This statement, he believed, was true, as applied to fancy ribands, and some other branches of that manufacture; but he did not know what was the average with respect to what was called satin riband, much of which was, however, manufactured in France and Switzerland. With respect to the state of the machinery used in this country in the riband trade, some very important information had been elicited in the last two years. In the city of Coventry there were 9700 looms, 7500 of which were the property of the operative weavers, who applied their manual labour as well as their machinery to the manufacture of ribands. Those looms were for the most part of the worst possible construction; and it would be scarcely believed, that the improved loom in France would in a given time produce five times as much riband as the common loom in England, with the same degree of manual labour. If the French manufacturer could thus, with the same portion of labour, send forth five times the quantity of riband which the English manufacturer could produce, what chance was there for competition? Was it not clear that this whole branch of trade must be carried away? But if time were given for the introduction of new and improved machinery, they might indulge a well-founded hope that the British manufacturer would soon be placed in a situation to meet his foreign opponent. What he had stated was, however, only half the case. It had been said by those who were friendly to the introduction of foreign silks, that France would not be able to supply this country with riband. They now had an opportunity of examining the truth of that statement. He could state, that, at present, there were not less than ten thousand looms in actual employ in Switzerland, for the manufacture of common riband alone, and three thousand of these could, if actively worked, supply England with common ribands. At St. Etienne, and at Lyons, there were no less than twelve thousand looms for the manufacture of fine ribands, and it was calculated that, of these, three thousand were sufficient to supply all the markets of Europe. But there are other im-

provements in machines applicable to another article, which had been produced in this country. He alluded to the making of velvets and velveteens. With respect to this manufacture, he could state, that there now existed an improved machinery in Germany, by which one man could make 48 times as much as could be made in an equal time by an English machine. He should be fully able to substantiate his statements in a committee up stairs.—Much had been said of the superiority of this country in point of capital; but from information which he had derived from the persons who had put him in possession of the facts which he just stated, that boast did not appear to be well-founded. The silk manufacturers in Switzerland and in France had very large capitals embarked. He was informed, that in one little town in Switzerland more real capital was embarked in this branch of manufacture than was employed in it throughout the whole of this country. They did not deal in bills and other securities of that kind, as was the case here, and which had lately led to such calamitous results; no, they traded on actual *bonâ fide* capital (hear, hear). The manufacturers went over the mountains to Italy; there they bought raw silk, which they manufactured; and they took care to sell their goods for ready money. It was known, that at the present moment there was a stock in the warehouses of Switzerland sufficient for the consumption of this country for four years to come. There was another subject which Government had overlooked, and to which he wished to call the attention of the house. He alluded to the custom of granting patents to the importers of machinery, who were not the inventors of what they introduced. The importer had the exclusive patent-right, and although he was the mere carrier, and might be incapable of either using or improving the machine, no manufacturer could use it, and no machinist could improve upon it for fear of infringing the importer's patent (hear, hear). Although a knowledge of the improvements made in French machinery had recently been obtained, such was the alarm existing in England as to the present measures, that there had not been a single attempt made to put up one of the improved machines in this country. No man would venture to embark his capital in any such undertaking, unless he could obtain some assurance from Government that he would be protected, or that he should not be exposed to the dangers and vicissitudes arising from the perpetually varying theories of trade. Government ought to hold out to them some advantage. Both the broad trade and the narrow trade complained that Government, in holding out to them a nominal protection of 30 per cent., held out expectations that could not be realized. Five shillings duty on thrown silk was equal to  $7\frac{1}{2}$  per cent. of the 30 per cent. to be levied on foreign goods. The balance of  $22\frac{1}{2}$  per cent., if fairly levied, was as much as could be levied without giving a great encouragement to smugglers.—He would now ask, whether the state of things he had described was not sufficient to justify an inquiry? Ought not the complaints of the silk manufacturers to be investigated, before the arrival of those evils which they were satisfied must ensue from an obstinate adherence to the system which ministers had introduced? First of all the silk-throwster complained, that it was impossible he could live, with the small protection afforded to him; next, the manufacturer of broad silks, looking to the protection

afforded to the throwster, declared that he could not compete with the manufacturers of France, and certainly not with those of China and India; thirdly, came the riband weaver, to whose case he most particularly called the attention of the house, because he was the most likely to suffer severely by the execution of this measure. How would this measure affect the great body of individuals connected with the silk trade—that body whose case would and ought to be looked at with more feelings of tenderness and commiseration than that of the master manufacturers, disagreeably situated as they were? What was the case with respect to the great body of operative weavers? He thought the house did not require much information on that subject. If they looked to the scenes which were passing around them—if they considered what had already occurred in every place where the silk manufacture was carried on—they would at once see the vast extent of misery which the approaching consummation of this measure had produced. Two-thirds of the operative weavers had been thrown out of employment. But this was not all; they would find that the remaining third were in a state almost of destitution for the want of full employment. It would be for the legislature to inquire, in the first place, how that reasonable state of prices could be re-introduced which prevailed in this country prior to the establishment of a paper currency—how a state of prices could be brought back something analogous to that which prevailed in other countries before the breaking out of the late war. The weekly average of wages in the neighbourhood of Macclesfield in 1792 was 9s., it was now about 13s.; meat was then from 3d. to 4d. per lb., it was now from 7d. to 8d.; and, looking to the whole catalogue of necessities which the labouring population required, he perceived the same disproportion throughout. Could they go back to the rate of wages which prevailed in 1792? Could they introduce the same scale of prices? If they could not, how could the manufacturer compete with the foreigner? Or were they willing that the support of the operative weavers should be derived, one-half from the manufacturers, and the other half from the poor-rates (hear, hear)? Were the landed interest prepared to take the whole population of the country off the hands of the *rt. hon. gent.*?—The *rt. hon. gent.* had made the evidence given on a former occasion, by Mr. Hale, the basis of the policy introduced in 1824. He had, in addition to that, the statement of some foreigners, who were of opinion, that with a protecting duty of 25 or 30 per cent. the manufacturer of this country could compete with the foreigner. Thus, also, the persons engaged in the silk trade at Manchester came forward and said, that if they were allowed only two years of preparation, there was no doubt that they would make the silk manufacture of England compete with that of any part of the world. They stated, that the old persons engaged in the trade did not understand it—that in the course of two years, machinery might be made as applicable to the working of silk, as of any other article—and that once done, there was no fear of any competition from foreigners. Well, the two years were now elapsed, and they had the experience of that period for their guidance in future. Suppose, that at this moment, Mr. Hale, and the other parties who gave those opinions, were now ready to come forward and state, that the result of two years' experience

they were mistaken; suppose they say, at the bar of the house, that motions with respect to a competition in silks were entirely altered (hear, suppose this could be proved, would the right hon. gent. still refuse the appointment of a select committee of inquiry? Such, however, was the case with respect to the silk manufacturers' meeting. Two years ago they entertained expectations, and he was free to confess, as one of those who, looking to the industry of the Manchester manufacturers, entertained great expectations from them. He thought that an improved system of machinery having been introduced, much was to have been expected, promoters would follow up their plans by rational measures as would give the manufacturer a fair opportunity of dealing with foreign markets; but this had not been done, and the result was, the distress and want which at present existed.—He said in that house, and also by many of the doors, that the distresses which had been in the country, but more particularly among the manufacturers, whose cause he was pleading, were to be attributed to over-trading and over-speculating. Well, supposing that was the case—not to mention that the distress was in truth attributable to Government Bank,—supposing that the master manufacturers did indulge in such speculations, working classes to be visited by the distress that spirit now produced in the country.

Were they to be consigned to misery because their employers had pursued a wrong course? The increase of trading gave a new direction to their labour which it did not require; the re-action necessarily produced by the change of things—was the culpable conduct to be attributed to those who, offering most by its effects, were innocent of any participation in it?—If that had stated were true—if the country was now in a state to meet foreign competition with protection of 30 per cent.—what necessity was there for precipitating a change at the present moment? In saying that the advantage which would be derived from every species of monopoly when done with safety: but during the time in which they were preparing to carry it into effect, he should like to know what reciprocal advantage had been conceded to this country? If he could bring it to the conclusion that no sacrifice made by this measure, then he would be able to alter it; but if, on the other hand, a sacrifice would be incurred, he said that it would be a very great hardship manifest so much generosity without any reciprocal benefit. He stated the view that the right hon. gent. should take time for the consideration of this in all its bearings. He should therefore propose that a select committee be appointed, to go into and examine the statements contained in the various petitions from persons in the silk manufacture; and to report conclusions and observations thereon to the

*Williams* understood it to be always that experiments in the way of trade were made when countries were in a state of tranquillity, and not in times of diffi-

culty and danger like the present. As he was desirous, however, of occupying as little of the time of the house as was consistent with the importance of the subject, he should at once proceed to the situation of the silk interest, and to that which would be the effect of a perseverance in the contemplated measures. To begin, therefore, with the town of Macclesfield—that town, under our old and erroneous system, had increased, since 1780, from a population of 4000 persons, to a population of 23,000. It might be that the right hon. gent. would think this an increase more rapid than desirable; but famine was not a mode of thinning the numbers which would be found consistent with the peace or safety of the country. In Macclesfield, however, in 1825, there had been employed in all branches of the silk trade 22,000 persons. The number now in employ, and in scanty employ, and at low wages, was only 8700; being 14,000 thrown out of work, by the operation, as the silk manufacturers contended, of the new measures. Sixteen hundred families, in Macclesfield only, were supported by voluntary contributions, upon potatoes and oatmeal; and the fund which so supported them was rapidly exhausting, and in a few weeks it would be at an end. This was independent of parochial relief, which oppressed the trading interest; and orders of removal were signing every day to throw part of the burden on the land. In Manchester the state of things was scarcely less calamitous than at Macclesfield. Of 10,500 looms which had been at work there, in the broad silk trade, in the spring of the last year, the number left, last month, was only 4100, being a reduction of upwards of 6500. In the parish of Bethnal Green, no less than 1000 silk workers, of various kinds, were sustained by parish relief, and it was said that the numbers were daily increasing. But, notwithstanding the extent and variety of this distress—notwithstanding the probability of its increase, and the certainty that a portion of the population must be driven to ruin and despair—notwithstanding all this, he would not oppose the measures of the right hon. gent. if he would shew to him the great countervailing benefits they were to produce in the country. Let him but prove this—let him but shew to that house that benefits would be derived to the country greater than the evils which it was suffering, and also those which were apprehended, and then let him by all means persevere in those measures. But he called upon the house in the meantime to weigh well the complaints and the apprehensions of the suffering manufacturers, before they gave their assent to those theories which were considered injurious, but which the right hon. gent. shewed his consistency by a determination to persevere in. It was their duty to have full and clear evidence before them, before they took a course which would have the effect of bringing the most serious and lasting evils upon the country. The whole of those distresses had been attributed by the right hon. gent. and others to the spirit of over-trading and over-speculation, which had seized upon the manufacturers, as well as almost all other classes of society. And how did the right hon. gent. propose that the evil should be cured? By leaving all to the natural course of things. But did not the right hon. gent. perceive how this must aggravate the distress by compelling the manufacturer to sell his stock at a loss, in order to get the superabundant stock out of the market,

and regulate the supply to the demand? The silk manufacturers, however, did not admit that their distresses had arisen from over-trading or over-speculation. This was a period of the year, when the demand for goods was usually greatest upon the manufacturer; it was, at present known, that the stock on hand with the warehousemen and merchants was much below par, and yet the demands upon the manufacturer for a fresh supply were entirely at a stand. How was this to be accounted for, unless from a feeling that, after the 5th of July, supplies of silks would be obtained from abroad, at a cheaper rate than the English manufacturer would be able to make them? The petitioners feared, and justly, that the ports, once open, the supply of the foreign article would go on, to the exclusion of the English manufacturer; so that the measure would operate only as a benefit to our foreign neighbours. The business of silk throwsters occupied about one-third of the capital of those engaged in the trade. The quantity of manual labour, as distinguished from machinery, was less in proportion than that used in weaving and winding. It was said that, amongst silk throwsters, there were four-fifths of manual labour. Now, the price of labour must be regulated by the price of provisions. He held in his hand a return, made by a gentleman upon whose accuracy he had every reason to rely, during his travels on the continent in July last. It stated, that at Lyons, the price of bread was three sous per lb. while in England it was 2½d. per lb. or nearly double. This alone would make the comparative value of labour in England and in France as two to one, or nearly three. The same gentleman stated, that the value of labour in England was 44½ per cent. dearer in England than at Lyons, and 60 per cent. dearer than at Zurich. Was it likely, with such a disparity in the value of labour, that the British manufacturer could compete with the produce of foreign markets? He considered that the immediate tendency of the right hon. gent.'s measure was to suspend the demand for goods, which was the only remedy for the evils that this numerous and meritorious body of men, engaged in the silk trade, were now suffering; and also, on the other hand, to create a demand, not for the product of the labours of the artificers of this country, but for those of foreigners, who possessed advantages that would enable them to beat us even in the English market; advantages which no protecting duty that the right hon. gent. might uphold, would enable us to meet; for the larger the amount of that duty, the greater would be the chance of throwing the trade into the hands of the smuggler (hear, hear, from the ministerial benches). Be it so—he would not retract his argument—he still contended, that if the duty was large, the trade would be thrown into the hands of the smuggler, and foreign goods would be introduced, to the injury of the fair trader and of the industrious English manufacturer. What the present petitioners asked was, that the minister would reconsider the measure he had proposed, and that he would delay its execution till a more convenient opportunity—till the hospitality he was ready to exercise towards foreigners was in some measure met by them—till that system of reciprocity, of which he had spoken so much and so triumphantly, had been established. When that was done, opposition would no longer be offered; but till that time, he (Mr.

Williams) should have the pain of appearing to oppose measures of liberality, with the principles of which he fully agreed. The system of reciprocity to which he had alluded, was that system mentioned with so much praise by the right hon. the Chancellor of the Exchequer, when he described the flourishing affairs of this country—affairs which, since that time, he was sorry to say, had not continued in quite so flourishing a state.—In the spring of 1824, the right hon. gent. had said, certainly in a very oratorical manner, and in a most metaphorical style, that “it was high time to cut the cords which fastened commerce, which bound her, as it were, to the earth;” and consequently, to make the metaphor complete—to enable her to soar to heaven (a laugh). He doubted not that while the right hon. gent. was dealing out the hospitality of this country, he had found plenty of people to accept of it; but was there any body who had sent him an invitation in return? Had any foreign nations performed one single act—had they acknowledged one principle of reciprocity to justify the present measure, or the conduct of the right hon. gent. who was now urging this measure, to support his own principles, and to shew that we understood political economy better than our ancestors?—He had now only to advert to one other point. It was said that this measure was only in furtherance of others of a more general nature, which had received, in a great degree, the approbation of the house. Whether the minister had been led on or supported by the cheers of those who surrounded him, or whether all he had done was upon his own responsibility alone, he was equally bound now to hesitate before he pursued his present course any further. The people of England had a right to look to the ministers for an account of those measures which they either produced or supported; and it was no answer to the people, when a disadvantageous measure had been passed, to say that it had been done with the approbation of parliament. He confessed that if it was a proof of stupidity not to see the value of general principles in the abstract, he must plead guilty to the charge; but at the same time, he would say, that there was no quackery more common and notorious, nor any more injurious—no theory, nor want of theory, when reduced to practice, so dangerous, as to attempt to reduce every thing to certain general principles, without having recourse to the particular circumstances, or the particular times in which those principles were to be called into practice. It was the consideration of these which constituted the difficulty in the present case, and it was trifling with us to say that the principles stated were true, if the times and the circumstances were such as to render it improper to bring those principles into practice. It was in the application of principles that the great difficulty consisted. When they came to apply general principles to a country of such great and multifarious interests as this—to a country so peculiarly circumstanced, it was not at all surprising that ministers should find themselves in the midst of difficulties—that they should discover they had been entrapped into dangers, and that they could have no other consolation than that of not having seen the dangers before encountering them, and of having no remedy to afford to them. The circumstances of this country, under which they now attempted to introduce these measures, ought to have been well considered—they ought

not to have been taken by surprise, or to have acted incautiously on such a subject. "Ye gods! annihilate both space and time," had been allowed under particular circumstances to be a comparatively reasonable petition. So he would say here; let gods or men destroy time, taxes, and poor-rates; and then let any newly-enlightened minister open his eager arms to admit the unrestricted commerce of the world. But until that were done, to talk of free trade, what was it but to propose that a man bound in fetters should try his strength or agility with one whose limbs were wholly free? Remove the triple necessity which he had mentioned, and then let the ports of Britain be opened to the whole earth. For his own part, he could not allow 500,000 persons to be sacrificed to abstract principles, however true those principles might be. If the authors of this measure were so strongly enamoured of their principle, that they were prepared to make that sacrifice in carrying it into effect, the strength of their resolution would, under present circumstances, only prove the quality of their hearts. Mr. Burke, with whom he fully agreed, had said, when speaking of those hard-hearted theorists, who pursued their abstract principles independently of any consequences, that they were actuated by "the quality of heart possessed by a perfect metaphysician, which exceeded that of the devil himself in malignity, and in contempt for the happiness of mankind." He must say, that in the present instance, he thought that the right hon. gent. had manifested an overweening attachment to abstract principle.—One word more, and he had done. Ministers asked parliament to take this measure on their responsibility—the request was useless, no gentleman could relieve them from it. The house might divide the blame, and so lessen it; but ministers, by the possession of their office, by their acceptance of place, took upon themselves a responsibility from which nobody could relieve them. But when the right hon. gent. knew of that distress, of which the house had heard to-night, when he knew that he had no remedy for this distress; when he knew these things, he would be guilty of extreme impropriety, if he refused the present motion, which did not ask for the final rejection of his measure, but which called on him to hesitate, to pause, to examine, to hear the facts which had transpired since that measure had been first proposed. Ministers had already incurred a responsibility, the extent of which he did not know; but he believed that if, between this house and the feelings out of doors there existed any analogy, he might say there was almost a certainty that they would not allow the present measure to pass (loud cheers).

Mr. Huskisson:—"Although the hon. member, who introduced the present motion, may be supposed to be under the influence of suggestions and views which have been furnished to him by his constituents, and from other sources out of doors, I am, nevertheless, ready to admit, that that circumstance ought not to detract from the weight which is fairly due to the hon. member's statements and arguments, in support of the motion which he has submitted to the house. But, sir, however true this may be, as far as respects the hon. mover, the same observation applies not, in the remotest degree, to the learned gent. who has seconded the motion; and who, acting I must suppose, under the influence of a connexion, certainly not po-

SEAS, 1825.

litical, but the more binding perhaps, as having been more recently formed, has thought proper to take a wider range, and to indulge in a higher tone of declamation:—or, it may be, that he looks forward to the expectation of becoming the colleague of the hon. mover; and, by his speech of this evening, proposes to declare himself a joint suitor with the hon. mover for the future favours of the good people of Coventry. Whatever may be the motives of the learned gent. I confess that I have listened with the utmost astonishment to the speech which he has just delivered (cheers).—Sir, in the course of that speech, the learned gent. repeatedly told us, that he was not authorised to make certain statements—that he was not at liberty to admit this, and to admit that. This, I presume, is a mode of expression, in which gentlemen of the legal profession are wont to indulge, to mark that they keep themselves within the strict limits of their briefs, and that the doctrines which they advocate are those prescribed to them by their instructions. However customary and proper such language may be in the courts of law, it certainly sounds new and striking in the mouth of a member of this house. With regard to the general tone of the learned gent.'s speech—the vehemence of his declamation, his unqualified censure, and his attempts at sarcasm, I can, with perfect sincerity, assure the house, and the learned gent. that I entertain no sentiment bordering upon anger, nor any other feeling, save one, in which I am sure I carry with me the sympathy and concurrence of all those who entertain sound and enlightened views upon questions of this nature—a feeling of surprise and regret, at finding that learned gent. now for the first time, launching forth his denunciations and invectives against principles and measures, which have received the support of men the most intelligent and best informed, on both sides of this house, and throughout Europe (cheers.) Having said thus much, I leave the learned gent. to the full enjoyment to be derived from the new lights that have so suddenly broken in upon him. I leave to him, and to his hon. friends around him, to settle, among themselves, the taunts, the sneers, and the sarcasms, which he has heaped upon their heads, as the friends of those principles which are involved in the present discussion—principles which it has been their boast that they were the first to recommend, and of which they have uniformly been the most eager advocates in this house.—In whatever quarter the statements and arguments of the hon. mover may have originated, they are entitled to the serious and attentive consideration of the house; more especially if derived from individuals now suffering distress from want of employment, and who may have been led to believe, that that want of employment has been caused by measures which have been adopted by this house. This circumstance adds to the difficulty in which I am placed, in rising to address the house on the present occasion. In opposing the proposed inquiry, I feel that I may be represented as insensible or indifferent to the sufferings of those on whose behalf it is called for. Sir, the learned member has, indeed, given countenance to this unjust imputation. He has not only chosen to assert, that I am mistaken in my views—he has not scrupled to insinuate, that I am without feeling for the distress now prevailing amongst the manufacturing classes—"

3 E

Mr. Williams:—"I never did say so."  
—"What, then, sir, did the learned gent. mean by his quotation? To whom did he mean to apply the description of an 'insensible and hard-hearted metaphysician, exceeding the devil in point of malignity?'—I appeal to the judgment of the house, whether the language made use of by the learned gent. with reference to me, was not such as to point to the inference, that I am that metaphysician—lost to every sentiment of humanity, and indifferent to every feeling, beyond the successful enforcement of some favourite theory, at whatever cost of pain and suffering to particular bodies of my fellow creatures? When the learned gent. allows himself to talk of 'hard-hearted metaphysicians, exceeding the devil in point of malignity,' it is for him to reconcile such language with the general tenour of his sentiments on other occasions—to explain, as he best may, to those around him, whether they are included in that insinuation;—and it is for me to meet that insinuation (as far as it was levelled at me) with those feelings of utter scorn with which I now repel it (repeated cheering). Still, sir, it sits heavily on my mind, that any individual, or any body of individuals, should in any quarter be impressed with the notion, that I, or any of my rt. hon. colleagues, could be capable of that which has been imputed to us; and it is but perfectly natural that I should feel anxious to shew, that my own conduct, and that of my rt. hon. friends, has not been such as, in some quarters, it has been represented to be. The hon. mover and the learned member have, by some strange perversion, argued the whole case, as if I, and those who act with me, were hastily and prematurely pressing on some new, and till this evening, unheard-of measure—as if we were attempting to enforce that measure by all the influence of Government: instead of which, we have proposed nothing, and are lying upon our oars, quietly waiting for the going into effect of an act of Parliament, passed more than eighteen months ago, with the unanimous concurrence of this house; an act which is now the law of the land; and of the enactments of which, all the parties concerned were as fully apprized on the day when it first passed this house, as they can be at this moment. In the view which I take of the speech of the hon. mover, of which I do not complain, and of the speech of the learned member, of which I do complain, the greater part of their arguments go to impugn those principles of commercial policy, which, under the sanction of parliament, have now prevailed in this country, for the last two or three years;—a policy, which has for its object gradually to unfetter the commerce of the country, by the removal of those oppressive prohibitions and inconvenient restrictions, which had previously existed; and to give every facility and encouragement, consistent with vested interests, to the extension of the skill, the capital, and the industry of the people of England. This, then, being the real drift of the argument especially brought forward by the learned gent., it is, with reference to a much greater question, that I find myself called upon to consider the present motion. The point at issue is, not whether we shall grant the committee, but whether we shall re-establish the prohibitory system? If we re-establish it in one instance, we shall very soon be called upon to do so in many others. If we once tread back our steps, we shall not be

able, in this retrograde motion, to stop at that point from which we first set out:—we must go farther, and, ere long, we should have in this country a system of commerce, far more restrictive than that which was in force before the late changes. Anxious as I am to persevere in our present course, I say that, if we once depart from it, we must at least be consistent in our new career; and that, to be consistent, we must impose restrictions and prohibitions, far beyond those which have been lately removed (cheers). The present question, therefore, is not simply the motion before the house—but, neither more nor less than, whether a restrictive or an enlarged system of commercial policy be the best for this country? In order to come to a sound decision upon so important a subject, it behoves the house to look back a little to the course of events, and to bear in mind some of the occurrences which have materially contributed to those relaxations in the restrictive system, of which it is now the fashion to complain. With this view, I must ask the permission of the house to call its attention to a petition, presented in May 1820, a period which, like the present, was one of great difficulty and public distress. The petition is somewhat long, but, I assure the house, that those hon. members who may favour me with their attention, will be well rewarded, by hearing sound principles laid down, in the clearest language, not by philosophers and unbending theorists—not by visionaries and hard-hearted metaphysicians, with the feelings of demons in their breasts—but by merchants and traders; men of the greatest practical experience in all that relates to commerce. This petition, sir, is a document of no ordinary interest. The house will see how decidedly the petitioners maintain the principles upon which Government have acted; and, when I have done reading it, I am sure they will admit, that those principles are therein expounded in words far more apt and forcible than any which I can command. The petition conveys to the house the deliberate judgment of the merchants and traders of the city of London; the result of their daily observation of the evils inflicted upon the country by the unnecessary restrictions imposed upon their industry and pursuits. The petition states—

'That foreign commerce is eminently conducive to the wealth and prosperity of the country, by enabling it to import the commodities for the production of which the soil, climate, capital, and industry of other countries are best calculated, and to export in payment those articles for which its own situation is better adapted.

'That freedom from restraint is calculated to give the utmost extension to foreign trade, and the best direction to the capital and industry of the country.

'That the maxim of buying in the cheapest market, and selling in the dearest, which regulates every merchant in his individual dealings, is strictly applicable, as the best rule for the trade of the whole nation.

'That a policy, founded on these principles, would render the commerce of the world an interchange of mutual advantages, and diffuse an increase of wealth and enjoyments among the inhabitants of each state.

'That, unfortunately, a policy, the very reverse of this, has been, and is more or less adopted and acted upon by the Government of

this and of every other country; each trying to exclude the productions of other countries, with the specious and well-meant design of encouraging its own productions; thus inflicting on the bulk of its subjects, who are consumers, the necessity of submitting to privations in the quantity and quality of commodities; and thus rendering, what ought to be the source of mutual benefits, and of harmony among states, a constantly recurring occasion of jealousy and hostility.

\* That the prevailing prejudices in favour of the protective or restrictive system may be traced to the erroneous supposition, that every importation of foreign commodities occasions a diminution or discouragement of our own productions to the same extent; whereas, it may be clearly shewn, that although the particular description of production which could not stand against unrestrained foreign competition would be discouraged; yet, as no importation could be continued for any length of time without a corresponding exportation, direct or indirect, there would be an encouragement for the purpose of that exportation of some other production, to which our situation might be better suited; thus affording at least an equal, and probably a greater, and certainly a more beneficial employment to our own capital and labour.

\* That of the numerous protective and prohibitory duties of our commercial code, it may be proved, that while all operate as a very heavy tax on the community at large, very few are of any ultimate benefit to the classes in whose favour they were originally instituted, and none to the extent of the loss occasioned by them to other classes.

\* That among the other evils of the restrictive or protective system, not the least is, that the artificial protection of one branch of industry, or source of protection against foreign competition, is set up as a ground of claim by other branches for similar protection; so that, if the reasoning upon which these restrictive or prohibitory regulations are founded were followed consistently, it would not stop short of excluding us from all foreign commerce whatsoever.

\* And, the same strain of argument, which, with corresponding prohibitions and protective duties, should exclude us from foreign trade, might be brought forward to justify the re-enactment of restrictions upon the interchange of productions (unconnected with public revenue) among the kingdoms composing the union, or among the counties of the same kingdom.

\* That an investigation of the effects of the restrictive system at this time is peculiarly called for, as it may, in the opinion of the petitioners, lead to a strong presumption that the distress which now so generally prevails is considerably aggravated by that system; and that some relief may be obtained by the earliest practicable removal of such of the restraints, as may be shewn to be most injurious to the capital and industry of the community, and to be attended with no compensating benefit to the public revenue.

\* That a declaration against the anti-commercial principles of our restrictive system is of the more importance at the present juncture, inasmuch as, in several instances of recent occurrence, the merchants and manufacturers in foreign states have assailed their respective Governments with applications for

further protective or prohibitory duties and regulations, urging the example and authority of this country, against which they are almost exclusively directed, as a sanction for the policy of such measures; and certainly, if the reasoning upon which our restrictions have been defended is worth any thing, it will apply in behalf of the regulations of foreign states against us; they insist upon our superiority in capital and machinery, as we do upon their comparative exemption from taxation, and with equal foundation.

\* That nothing would more tend to counteract the commercial hostility of foreign states, than the adoption of a more enlightened and more conciliatory policy on the part of this country.

\* That although, as a matter of mere diplomacy, it may sometimes answer to hold out the removal of particular prohibitions on high duties, as depending upon corresponding concessions by other states in our favour, it does not follow, that we should maintain our restrictions, in cases where the desired concessions on their part cannot be obtained; our restrictions would not be the less prejudicial to our own capital and industry, because other governments persisted in pursuing impolitic regulations.

\* That, upon the whole, the most liberal would prove to be the most politic course on such occasions.

\* That, independent of the direct benefit to be derived by this country on every occasion of such concession or relaxation, a great incidental object would be gained by the recognition of a sound principle or standard, to which all subsequent arrangements might be referred; and by the salutary influence which a promulgation of such just views, by the legislature and by the nation at large, could not fail to have on the policy of other states.

\* That in thus declaring, as the petitioners do, their conviction of the impolicy and injustice of the restrictive system, and in desiring every practical relaxation of it, they have in view only such parts of it as are not connected, or are only subordinately so, with the public revenue; as long as the necessity for the present amount of revenue subsists, the petitioners cannot expect so important a branch of it as the customs to be given up, nor to be materially diminished, unless some substitute less objectionable be suggested; but it is against every restrictive regulation of trade not essential to the revenue, against all duties merely protective from foreign competition, and against the excess of such duties as are partly for the purpose of revenue, and partly for that of protection, that the prayer of the present petition is respectfully submitted to the wisdom of parliament. The petitioners therefore humbly pray, that the house will be pleased to take the subject into consideration, and to adopt such measures as may be calculated to give greater freedom to foreign commerce, and thereby to increase the resources of the state.

—It will be clear to all who have attended to the very able document which I have just read, that it embraces all the great principles of commercial policy, upon which parliament has since legislated. Why do I lay so much stress upon this petition? For the purpose of shewing, first, that if the Government have pursued this course, we have done so, not on the recommendations of visionaries and theo-

rists, but of practical men of business: secondly, that the merchants of the city of London—the great mart of the commerce and wealth of the country—felt convinced, in 1820, that the distress of that period was greatly aggravated by the narrow and short-sighted system of restrictions and prohibitions which then prevailed; and that, in their judgment, the alleviation, if not the cure of that distress, was to be sought for in the removal of those restrictions and prohibitions. And, because we have followed up, cautiously and circumspectly, the recommendations of the mercantile community, are we to be told by men who know nothing of commerce, that we are unfeeling projectors and metaphysicians, insensible to the wants and the miseries of our fellow-creatures? If this be a just charge against us, what are we to think of the parties who could sign, or of the member who could present, such a petition as this? This morning I took the trouble to look at the names of the merchants who signed it; and the first signature I read is that of one of the most distinguished of that class in the city of London; a gentleman who was many years ago Governor of the Bank of England, who is now one of the Directors of that establishment, and who was, for a long time, a valuable member of this house; a gentleman, who, in the best sense of the word, is a practical man, and one whose conduct in private life would protect him (if any man can be protected by his conduct) from the suspicion of being a 'wild and unfeeling theorist'—a 'hard-hearted metaphysician'—'alike indifferent to the wants and the miseries of his fellow-creatures'—I mean Mr. Samuel Thornton. And, besides his name, the list contains the names of others, who, like him, have been Governors of the Bank of England; of several who are now in the direction of that great establishment; and of many who hold the highest rank in the commercial world. Let it not, however, be supposed, that I offer this petition to the house, in the way of an apology for myself and my right hon. colleagues—in the way of extenuation of anything which we may have done, to excite the wrath of the learned member. Sir, I think now, as I have always thought, that our measures require no apology. I believe now, as I have always believed, that they are calculated to promote the best interests of the people. I say now, as I have always said, that those who, either by their speeches in parliament, or the exertions of their talents out of it, have contributed to bring the people of England to look with an eye of favour on the principles recommended in this petition, have done themselves the greatest honour, and the country an essential benefit. If, however, I refrain from troubling the house with apologies, where I feel that they are not required, neither do I wish to claim for Government any participation in the merit of these measures, beyond what really belongs to us. By a reference to many other petitions and proceedings of a like nature with those to which I have already adverted, I could show that, in all these matters, the first impulse was not given by the Government. We claim for ourselves no such credit. The changes hitherto made have been the result of public opinion, sanctioned by the concurrence of practical men, and confirmed by the proceedings and inquiries of the two houses of parliament. We did not create that opinion: we did not anticipate it; we did not even act upon it, until it

was clearly and distinctly manifested. And, in what we have done, we have not exceeded the sober limits, prescribed by the authority of those, who, by the habits and pursuits of their lives, were most competent to form a sound judgment. But, when that judgment was pronounced and recorded, it was our duty to act upon it. From those who fill responsible situations, the country has a right to expect, not that they should be slow of conviction to important truths in matters of political economy; but that they should be cautious in deliberating, before they attempt to give them a practical application. The goad which is used to give increased impetus to the machine, is an instrument more properly placed in other hands; the care of Government should rather be to regulate the drag, so as not to check the advance, but to maintain a safe and steady progress towards improvement. Has this been the principle of our policy on the subject now under consideration? Before I sit down, I think I shall prove, sir, that the system upon which Government have acted, has uniformly been guided by that principle. Need I remind the house, how frequently, and with what asperity, we have been charged, from the opposite benches, with reluctance and tardiness in carrying into execution those principles of an enlarged and enlightened policy, in matters of commerce, upon which all parties were said to be agreed? Year after year, have we been urged, by the force of public opinion out of doors, and by the earnest remonstrances of hon. members within, to adopt the very measures against which a senseless clamour is now attempted to be excited. Who were the first, and the most earnest, in suggesting these measures—aye, and in wishing to push them to extremes—but some of those very persons whom we now find arrayed against us, and against those principles which they formerly supported? By whom was the petition which I have just read to the house presented? By whom was the prayer of it advocated? After great note of preparation—after a formal notice of what was about to come—this petition, sir, was brought down, on the 8th of May, 1820, by the hon. member (Mr. Baring). He it was, sir, who introduced it to the attention of the house, in a long, but able and elaborate speech; too long to be read by me now, as I have read the petition; although, by so doing, I should add a most luminous commentary in support of the doctrines of that petition, and should best show, by what force of argument and weight of authority, the hon. member then contended for those measures which the house is now called upon to condemn, and in which condemnation he himself appears disposed to concur. After mentioning the petition, and the great respectability of the gentlemen by whom it was signed; and after regretting, that 'there was in the then circumstances of public embarrassment much, to which no remedy could be applied, at least, no parliamentary remedy,' the hon. gent. went on to say, that 'the first desideratum was such security and tranquillity in the country, as would enable the possessor of capital to employ it without apprehension.' The house will recollect, that the period at which this petition was laid upon our table, was one of great public distress; and, in that respect, it but too much resembled the present time. Now, however, though the country is again visited with pecuniary pressure, and though the labouring classes

ty of them) are suffering great privations the want of employment, I feel confident we shall not witness the same danger toerty, or the same disposition to violence, hat that time prevailed in the manufacturistricts. I feel confident, that the unfortun individuals, who, in 1820, allowed themselves to be misled by unprincipled agitators, recollect how much their sufferings wereased by listening to pernicious counsels—sels which may prolong and aggravate, but h can, in no case, abridge or relieve their thens—and that they will not, a second, lead a willing ear to those who would lead on to their destruction. I trust they will duct themselves under their present diffices, as to conciliate the regard and sympathy every other class, and to excite in the ms of those, from whom alone they can ex-assistance, no other feelings than those of nens and benevolence. Sir, after 'secu-and tranquillity,' the hon. member (Mr. ng) proceeded to say, that 'the second deatum was, as great a Freedom of Trade as compatible with other and important con-utions.' In the opinion of the hon. mem-at that time, a free trade was the very eas of commercial prosperity; and, there-he pressed us to adopt, all at once, the m which we have since gradually intro-nd. The hon. member then proceeded—as s since done, upon several occasions, and rd, in this session—to tax my rt. hon. friend Chancellor the Exchequer) who then filled ituation which I now hold, and the other bers of Government, with apathy, and a indifference to the distressed state of the facturing districts. 'So far were they,' the hon. member, 'from being sensible of necessity of some exertion, that they went from year to year, trusting that the next would be spontaneously productive of favourable change, and, apparently, with indistinct notions of what the real condi- of the country was. Whenever a question between two classes of the community, stament, without seeming to have any lon of their own, stood by, until they ascer-nd which party could give them the most tual support. If the house looked back to arlier period of those which were still our times, they would behold a different pic-; they would find Mr. Pitt engaged in ing a commercial treaty; and, amidst diffi-ies of every description, boldly taking lever steps appeared to him to be the best elated to advance our commercial prospe-. He wished that he could see a little of same spirit in the present day; but, ind of that, ministers were balancing one y against another, and trying how they d keep their places from year to year; lecting, in the meanwhile, all those great mercial and national questions to which r most lively attention ought to be direct.—The hon. member then went on to say— I perfectly agree with him—that 'the doctrine which the petitioners wished to hat, was that fallacious one, which had, of years, arisen, that this country ought to ist on its own produce; that it was wise, the part of every country, to raise within lf the produce requisite for its consump-.'—'It was really absurd to contend,' tised the hon. member, 'that if a country, selling any article of manufacture, could

purchase the produce which it might require, at one half the expense at which that produce could be raised, it should nevertheless be precluded from doing so.'—This is unquestionably sound doctrine, and I readily admit it. But, how is it to be reconciled with the doctrine, which is now maintained by great authorities out of doors, as that which ought to be the rule of our commercial policy? According to these authorities, to which we have now to add that of the learned seconder of the present motion, prohibition is the only effectual protection to trade: duties must be unavailing for this purpose, because the influence of soil and climate, the price of labour, the rate of taxation, and other circumstances, are constantly varying in different countries, and consequently, the scale of protection would require to be varied from month to month. But, what is the legitimate inference to be drawn from this exclusive system? Can it be other than this—that all interchange of their respective commodities, between different countries of the world, is a source of evil, to the one or the other?—that each country must shut itself up within itself, making the most of its own resources, refusing all commerce with any other country, barbarously content to suffer wants which this commerce might easily supply, and to waste its own superfluous productions at home; because, to exchange them for the superfluities of that other country, instead of being an exclusive advantage to either party, would afford an equivalent benefit to both. This is the short theory of prohibitions, which these sage declaimers against all theory are so anxious to recommend to the practical merchants of this country. But, if this system be wise and just in itself; if, for the reasons alleged in its support, it be necessary for the protection of British industry, let us see to what it leads. Can this country command labour on the same terms as Ireland? Is the scale of taxation the same? Are the poor-rates the same in the two countries? Is there any country in Europe which, more than Ireland, differs from Great Britain in these and many other particulars, affecting their commercial relations? Does it not follow, that, if we admit the system of prohibitions now recommended to us by the learned member, we must prohibit all commercial intercourse with Ireland,—we must revive those laws which forbade the manufactures, and repelled the productions of her soil,—we must sacrifice the mutual benefits which both parts of the empire now derive from the unrestricted freedom of intercourse,—we must again revert to the prejudices of our ancestors? And for what?—because, from prejudices certainly less pardonable, if not from motives less sincere, than those of our ancestors, a senseless clamour has recently been raised against the present system of our commercial policy. I have no desire to disturb the partisans of the opposite system, in the enjoyment of their favourite theory. All I ask of them is, a similar forbearance towards us. Let each system be fully and fairly tried. For the sake of freedom of trade and industry, and for the sake of England, let England be the field of trial for our system. For the sake of prohibition and monopoly, let the system of our adversaries also be fairly tried; only let the trial be made upon some other country. But, can prohibition ever be tried under circumstances of greater favour than it now experiences in Spain? In that

flourishing country, prohibition has been carried to the very extreme. There, restriction has been added to restriction,—there, all the fruits of that beautiful system are to be seen, not yet, perhaps, in full maturity, but sufficiently mature to enable every one to judge of their qualities. Spain is the best sample of the prohibitory system; the most perfect model of fallen greatness and of internal misery, of which modern civilization forms an example,—an example to be traced, not only in the annihilation of her commerce and maritime power, but in her scanty revenue, in her bankrupt resources, in the wretchedness of her population, and in her utter insignificance among the great powers of the world. The commercial policy of Spain is simply this,—to admit nothing from other countries, except what the smuggler brings in. And the commercial wisdom of the learned seconder of the present motion is equal to that of Spain.—I must now beg the house to indulge me for a little, while I endeavour to go through the detail of the specific measures recommended in the speech of the hon. member (Mr. Baring) on presenting the London petition. It will be perceived how false and unfounded are all those clamours which have been heaped upon me and my rt. hon. colleagues, for having unnecessarily made those alterations in our system of commercial policy, which, if I am to believe certain gentlemen, have plunged this country into misery and ruin. The hon. member (Mr. Baring), who is so great a practical authority,—the greatest, perhaps, this country affords—did not content himself, in his speech, with stating general principles. He referred to details; and, as I have just observed, he proposed measures of relief of a specific and particular nature. These propositions the house, I hope, will permit me to go over, one by one, in order to show that Government have not been wanting in attention to the suggestions of the merchants of the City of London, nor backward in adopting their remedies, and recommending them to the consideration of the house. The first measure pointed out upon that occasion, and recommended in the warmest terms to the attention of ministers, for the relief of the country, was ‘an alteration of the duty on the importation of wool.’ ‘What can be so absurd,’ said the hon. member, ‘as a tax on the raw materials of our manufactures?’ Accordingly, he urged the abolition of the duty on the importation of foreign wool, dyeing drugs, and such other articles as are used in the great manufactures of this country. What, at that time, was our answer to this proposition? Why, this,—‘We have no objection to take off the duty on the importation of foreign wool, provided you will consent to allow the free exportation of British wool.’ ‘No,’ said the woollen manufacturers, ‘take off the duty on foreign wool, if you please; but keep in force the law which prohibits the exportation of British wool from this country.’ To this proposal we would not agree. We could not, upon any principle of justice, open our markets to an untaxed article of foreign growth, unless the manufacturer would concede his monopoly over the like article of our own growth. After years and years of struggle and conflict, we at last succeeded in convincing our opponents that the duty on foreign wool might be taken off, and the prohibition to export British wool be repealed, without endangering their interests. And what has been the result?

Where is the ruin that was so confidently predicted? I own I am more and more distrustful of the predictions of these practical authorities. Instead of our manufactures being ruined; instead of the fulfilment of the assurances, that all the British wool would be exported, to the utter destruction of our manufacturers, and that from their destruction the foreign wool would no longer be wanted in this country,—what has been the real effect of this measure? Why, that since the removal of the restrictions on the export, we have sent abroad the amazing quantity of 100,000 lbs. weight of British wool; while of foreign wool we have imported no less a quantity than 40,000,000 lbs. weight (loud cheers). This, sir, is not speculation. It is practice and result against speculation. We removed the restrictive and prohibitory duties, and the consequences were, that we imported an excess of the foreign raw material, while we exported, comparatively, none of native growth—because, we had a better market for it at home. Good or bad, therefore, the first measure recommended to the attention of ministers by the hon. member, has been carried into complete effect. The second measure proposed for our adoption by the hon. member, was a general revision of the revenue laws, with a view to their simplification. The hon. member stated—and he stated truly—that those laws were so numerous, so complicated, and so contradictory, that mercantile men could not understand them—that they were at once a great impediment to trade, and a source of vexation and oppression to all who were engaged in it—that no man, however innocent his intention, could escape their penalties; that, therefore, it was the bounden duty of Government to simplify and consolidate them. The task was one of great magnitude and difficulty; but we did not shrink from it. My rt. hon. friend, the Chancellor of the Exchequer, devoted a great deal of time and attention to the subject; but, I am free to admit, that we never could have succeeded in our undertaking, without the assistance of an official gentleman, in the service of the Customs\*, a gentleman of the most unwearied diligence, who is entitled, for his persevering exertions, and the benefit he has conferred on the commercial world, to the lasting gratitude of the country. Of the difficulties of the undertaking, the house will be enabled to judge, when I state that there were no fewer than five hundred statutes, relative to the Customs alone, to wade through; independently of the numerous enactments concerning smuggling, warehousing, the plantations, &c. In the performance of this duty, we had innumerable difficulties to encounter, and battles without end to fight. And now, sir, in one little volume†, which I hold in my hand, are comprised all the laws at present in existence, on the subject of the management and the revenue of the customs, of navigation, of smuggling, of warehousing, and of our colonial trade, compressed in so clear and yet so comprehensive a manner, that no man can possibly mistake the meaning or the application of them. I do not say this to boast of the successful result of our labours. It was the duty of Government to do what it has done. I only adduce it to show, that this, the second

\* J. D. Hume, Esq. Comptroller of his Majesty's Customs in the port of London.

† Laws of the Customs, by Mr. Hume.

recommendation of the hon. member, as the organ of the commercial world, has not been disregarded. Then comes the *third* recommendation of the hon. member; namely, that we should do away with prohibitions altogether; and substitute, in all cases, protecting for prohibitory duties. I will beg leave to read a short extract from what I consider a very accurate report of this part of the hon. member's speech: 'Another desirable step,' said he, 'would be to do away totally with prohibitions, as much as possible.' To be sure, sir, it may be difficult to reconcile 'totally' and 'as much as possible' (a laugh); but, I have no doubt, the hon. member's meaning was to express his thorough detestation of the prohibitory principle. 'Where,' he continues, 'protection for particular manufactures is considered to be necessary, it ought to be in the form of duty, and not in that of prohibition. Prohibitions had, no doubt, seriously injured the revenue, by the encouragement which they gave to smuggling. The customs had fallen off a million and a half, in the course of the last year. He was sure that a good deal of that defalcation might be ascribed to prohibitions' (cheers). I entreat the house to attend to what follows in the speech of the hon. member: 'Nothing could be more absurd than to suppose, that any prohibition would prevent the introduction of the articles which were in demand. The fact was, that at an advance of twenty or twenty-five per cent., all *light* prohibited articles might be had at our doors. He would not say which sex was most to blame, but such was the fact.' Now, here we have the opinion of a practical man, who had come to this conclusion, after collecting the best evidence upon the subject, during his repeated visits to Paris. Indeed, I cannot help thinking, that the hon. member had silk, and nothing but silk, in his view, at the time when he made these allusions. The hon. member has long been a professor of those doctrines, which he now reprobates me for upholding, as much as he then censured the Government for not more readily adopting. Even in the year 1817—also a period of distress—I find the hon. member declaring to the house, that, 'in the article of silk, smuggling was carried on to a very great extent; a proof of which was to be found in the fact, that although silks were in much greater use now than formerly, yet that the British manufacturer was ruined' (loud cheers). So that it appears, sir, that in the year 1817, the silk manufacture, which, according to the doctrines of the present day, can only flourish under a system of prohibition, was, in that year, in a state of ruin, owing to prohibition.—The stagnation and embarrassment of 1816 and 1817 were followed by a state of unusual commercial activity. In like manner, the depression of 1822 and 1823 terminated in the extraordinary spirit of speculation which marked the autumn of 1824, and the spring and summer of 1825. It is not irrelevant to the present discussion to compare these two periods, each commencing with commercial distress, and each ending in over-trading—each marked, in its first stage, by a great contraction of our paper circulation, and the accumulation of a vast amount of gold in the coffers of the Bank, and, in its second, by a great expansion of our circulating credit, and by the re-exportation of most of the gold which the Bank had previously accumulated. This comparison, whilst it connects itself with the

question now under our immediate consideration, is calculated to throw some light on the equally important question of the currency, which, at this moment, occupies so much of the attention of parliament and of the country. At the beginning of 1817, 'the Bank,' as we are informed by the Report of the Committee of 1819, 'possessed a larger amount of cash and bullion in their coffers, than they had been in possession of at any former period since their establishment.' With this accumulation, they gave notice of a partial resumption of cash payments, engaging to pay in gold all notes under 5l. From the beginning of 1817 till the month of July in that year, the whole demand for gold coin, under this notice, did not exceed 38,000l.; but in consequence of a great augmentation of Bank paper in August 1817 (exceeding, by upwards of three millions, the amount of the corresponding month in the preceding year), and of a like augmentation of country paper, the foreign exchanges were turned against this country; and, from that moment, the gold was withdrawn from the Bank with greater rapidity. In the course of the following eighteen months, many millions of coin were thus put into circulation, without any corresponding diminution in the amount of Bank notes;—or rather, to speak more accurately, these millions, as soon as they were taken from the Bank, were sent to France and other parts of the continent, till the treasure of the Bank was very much reduced at the beginning of 1819; and then the amount of their notes was again contracted. This contraction was followed by a great depression of commerce, and of prices, in the subsequent years. During this depression, the Government were frequently called upon, as they are now called upon, to give relief, by an issue of commercial Exchequer-bills; but our first object, then, was permanently to restore—as our first object, now, is effectually to secure—a system of cash payments; the success of which might have been endangered by this mode of relief. So much for the first period, as far as relates to our currency. In the first stage of the second period (1822, 1823, and a part of 1824), the Bank again accumulated an amount of gold, greater even than what it possessed at the beginning of 1817. Between September 1824 and November 1825, that gold was again taken out of the Bank, under all the like circumstances of the foreign exchanges being against this country, and with the like results as had occurred in 1818. Again, notwithstanding the issue of so many millions of coin, the amount of Bank notes and of country paper was increased: again, these millions so issued were, for the greatest part, exported; and again, in the autumn of 1825, the Bank was driven to take precautions, by contracting its circulation, in order to protect its remaining treasure. What has since occurred is known and felt by all.—So much for the currency; now for the trade. In 1816 and 1817, during the first absorption of treasure by the Bank, the amount of silk imported was, upon the average of the two years, 1,150,807 lbs.;—in 1818, during the first flight of our coin to the continent, that importation was raised to 2,101,618 lbs., being an increase of 81 per cent. Of sheep's wool, the average importation of the first two years was 11,416,853 lbs.;—in the year 1818 alone, the quantity was 26,405,486 lbs., being an increase of 130 per cent. Of cotton wool, the average

of the two first years was 423,580 bales:—the amount in 1818, was 660,580 bales, being an increase of 57 per cent. Let us now compare the import of the same articles in the years 1823 and 1824, with the import of 1825. It will turn out as follows:—Silk, average import of 1823 and 1824, 2,780,600 lbs.:—import of 1825, 4,231,673 lbs., being an increase at the rate of 50 per cent. Sheep's wool, average import of 1823 and 1824, 167,120,065 lbs.:—import of 1825, 222,437,616 lbs., being an increase at the rate of 33 per cent.\* I will not go more at length into this subject. It would lead me too far away from other topics, growing more immediately out of this debate, to which I have still to advert; but I have said enough to point out to those who take an interest in these matters, the intimate relation that exists between our currency and our trade; to show in what manner the expansion of our paper circulation, combined with an unfavourable foreign exchange, leads to over-trading, till over-trading again forces a contraction of the currency: thus producing those alternations of extravagant excitement and of fearful depression, which this country has so often experienced of late years; alternations, of which the consequences are at once so dangerous to men of capital—so distressing to the labourers who depend for employment on that capital—and so subversive of those principles of security to property on which the prosperity of every commercial state must ultimately rest. The immediate inference which I draw from this comparison is, that the present stagnation in the silk trade is more produced by the late alternation, than by any effect of the law which will come into operation next July.—To return, sir, to the speech of the hon. member (Mr. Baring). The fourth point to which he called the attention of Government, was, the state of the Navigation laws. The change which the hon. member recommended would, in fact, have amounted to the total repeal of those laws. He thought, 'that no restriction ought to be held on foreign ships importing into this country, whether the produce was of their own, or any other country.' Accustomed to look on these laws as the prop of our maritime power, and to watch with a jealous eye any encroachment upon them, we could not consent to this sweeping principle of innovation. On the other hand, we professed ourselves ready to inquire, how far some of their regulations, inconvenient to trade, might be dispensed with, without prejudice to the higher political objects for which these laws were originally enacted. This inquiry was gone into with great care, by a committee, over the labours of which my rt. hon. friend (Mr. Wallace) presided; and the result has been that, by his zeal and diligence, several measures have been introduced to the house which have led to a relaxation in those laws, highly beneficial to the commerce of the country, and in no way injurious to our strength as a maritime power. But the principle of those laws is still retained. In this instance, certainly, we have not been able to go all the

\* These returns for the years 1823 and 1824, are made up from January to January, and for 1825 from October 1824 to October 1825;—the return to January 1826 not being received.

lengths recommended by the practical men; but be it recollected, that the charge against which I am now upon my defence is, that we are theorists. The fifth point which was strongly recommended by the hon. member (Mr. Baring), was the removal of the transit duties on German linens, and some other articles of foreign produce. At the very time that the hon. member was pressing for this removal, he must have been aware, that ministers were sensible of the impolicy of these restrictions, and that they were desirous, not only to get rid of them, but also to revise the whole system of bounties and drawbacks. But he could not be ignorant of the complication of interests, and the difficulty of detail, which we had to encounter in every stage of this undertaking. He could not be ignorant of the prejudices by which this system was upheld. For the abatement of those prejudices, we thought it more safe and more expedient to trust to the influence of time and reason, than, at all hazards, to encounter them at once by an act of power. This was our theory in 1820; and I am now happy to add that, by adhering to it, we have been completely successful. The transit duties have been all removed; and the system of bounties and drawbacks has undergone an entire revision, and been remodelled on an improved plan. To come to the sixth recommendation of the hon. member. He told us that 'it was of importance that we should alter our commercial regulations with respect to France. It was desirable,' added he, 'that all restrictive regulations between the trade of England and France should be removed; but, to do so, we must begin at home. It would be unfair to attempt a negotiation for a commercial intercourse, while we kept our ports shut against them. Let it be considered, that it was not by a restrictive system that this country had grown to such a pitch of greatness; but on the contrary, that such a system was a bar to that greatness. It was necessary also to remove an impression which our system of commerce had made abroad. We were looked up to as the first commercial nation in the world; and it was therefore believed, that we had adopted our restrictive or protecting system, from a conviction of its beneficial effects on our commerce. This impression it was our interest, as well as our duty, to remove, by altering our commercial regulations with foreign powers.' This advice of the hon. member, Government have also attended to. What have we done in this case? We have 'begun at home.' We have set an example to the nations of the continent. We have put an end to the restrictive system affecting France, as far as we could put an end to it; and we have invited France to follow in our track, by doing away with the obstacles existing on her part to a greater freedom of trade. France has taken a first step towards placing the intercourse between the two countries upon a footing of greater facility. This is a practical approximation on her part to the principle of a more enlarged system of commerce; a principle equally recognized by the most enlightened statesmen and the most leading merchants of that country—a principle which cannot fail to make its way in France, as it has made its way in this country, by discussion and inquiry; and which, in proportion as it gains ground, will confer advantages upon France, and by her and our example, furnish a salutary lesson to the rest of the world. As I have adverted to this subject, I will beg leave

to my one word as to the convention of navigation, recently concluded between the two countries, upon which a misconception appears to have gone abroad. I allude to the decree of the French government against the introduction of the produce of Asia, Africa, and America, through his country, into France, for home consumption. The regulation of this decree has been mistakenly considered as the effect of a stipulation under the convention. This I beg leave to deny. The decree is an act of the French government, quite independent of the convention. It might, and probably would, have been passed, had no such convention been made between the two countries. A similar law was proposed to the Chambers last year, and then only postponed. It is a regulation of which we have no right to complain, and against which we have no right to stipulate; because the like restriction exists in this country. That for which we had a right to stipulate, and for which we have stipulated, is, that if, in relaxation of this decree, any of the productions of Asia, Africa, or America, are admitted into France for home consumption, from this country, they shall be equally admitted, and upon the same duties, in British as in French vessels. I do not deny, that, beyond what is provided for by this convention, much might be done to improve the commercial relations of this country and France; but the basis is laid down, and the contracting parties have expressly reserved to themselves 'the power of making, by mutual consent, such relaxations in the strict execution of the article, as they may think useful to the respective interests of the two countries, on the principle of mutual concessions, affording each to the other reciprocal or equivalent advantages.' The development and further application of this principle must be left to time, and to an improved state of public opinion in France. But I confidently appeal to the house, and to the hon. member, to say, whether the best course for doing away with prejudices and unfavourable impressions on the Continent, would be for us to retrace our steps, to re-enact the old prohibitions and restrictions, and to exclude foreign merchandise and foreign shipping, as we had formerly done.—Seventhly, and lastly, the hon. member recommended to Government 'an extension of our trade with British India.' In answer to this suggestion, it is only necessary for me to say, that our attention has been incessantly directed towards that desirable object. We have left no steps untried, to prevail on the East India Company to consent to an enlargement of the private trade. To a certain point we have succeeded, though not to the extent of our wishes. If all that the hon. member sought for has not been done, the fault is not ours: we have no means of compelling the Company to comply with the wishes of the merchants. The vested rights of that corporation have been conferred upon them by parliament; and, inconvenient or not, we are bound to respect those rights, till the expiration of that period for which they have been granted.—These are the principal improvements which were urged on the Government of the country, in the year 1820, by the hon. member (Mr. Baring); speaking, be it always remembered, in the name and on the behalf of the merchants of London. To all of these suggestions, I say, his Majesty's ministers have attended. My rt. hon. friend (the Chancellor of the Exchequer) Sess. 1826.

replied to the speech of the hon. member on that occasion. He repelled the accusation of the hon. member, that the Government were insensible to the sufferings of the people. He avowed his desire to proceed in the course that was recommended; but he, at the same time, represented the difficulties by which his endeavours had, till then, been opposed. Did the hon. member acknowledge himself satisfied with the assurance and explanation of my rt. hon. friend? By no means, sir. So eager was the hon. member for the immediate enforcement of these important changes, that he concluded his reply to my rt. hon. friend in the following terms:—'As to the petition itself, the principles which it contained had met with so unanimous a support, that he wondered whence that opposition could come, by which the rt. hon. the President of the Board of Trade (Mr. Robinson) seemed to be deterred from attempting any reform of our commercial system; and he could not help expressing a hope, that, for the future, that rt. hon. gent. would not listen entirely to the suggestions of others, but, in treating the subject, would rely on his own excellent understanding.' With this admission the debate closed. The recommendations of the hon. member—the great authorities from which they originated—convinced the Government that the time was come when they might go forward with measures to which they had long before avowed a friendly disposition. The consequence was, a determination, on their part, to institute an inquiry before a committee of this house, in order to ascertain how far, and by what course of proceeding, the steps recommended, and any others founded upon the same principles, could be acted upon for the general improvement of the commerce of the country.—In the other house of parliament, a committee was sitting, whose labours were directed to the same object. This committee had been appointed upon the motion of a noble marquis (Lansdowne), who had at all times taken the liveliest interest in whatever relates to the trade and commerce of the country; and whose principles in these matters, unlike to the grasshopper on the Royal Exchange, do not veer about with every change of the wind, or with every fluctuation in the speculations of those who transact business in that Exchange. One of the subjects which particularly engaged the attention of the noble marquis, and of the committee over which he presided, was the state of the silk trade. They heard evidence, they called for papers, and they examined witnesses from every quarter. What was the result of their investigation? Why, sir, they state in their report, that 'it appears to the committee, that there are no bounds to smuggling under the prohibitive system; and that, in the opinion of the committee, protecting duties might advantageously be substituted for prohibitive ones.'—Such was the view taken by the committee of the House of Lords in 1821. I will not detain the house by going at length into the course of inquiry by which they arrived at this conclusion. But some attempt has been made this night to undervalue the evidence of two merchants from the United States, who were examined before the committee; and examined, be it recollected, upon oath. These two merchants came to Europe for the purpose of purchasing silks. They first visited France, and then they came to England. They could be actuated by no other interest than that of

procuring silks on the cheapest terms. And what was their evidence? On being asked as to the relative cost of the silks of France and the silks of England, one of them said, that 'he had bought goods in France and in England; and that the difference, when the quality was equal, was from twenty to twenty-five per cent.' And the other said, that 'the difference did not exceed twenty per cent.' But both of them stated, that, in the article of silk hosiery, price and quality considered, they greatly preferred the English manufacture to that of France. The report containing this evidence recommended an alteration of the laws relative to the silk trade, by the removal of the duty on the raw material, and of the prohibition on wrought silks. Hon. members, however, are aware, that the House of Lords could not, from the nature of the proposed change, initiate a measure, to carry into effect the object of this report. Nothing further took place till 1823, when the hon. member for the City of London (Mr. T. Wilson) came down to this house with a petition from the master manufacturers of Spitalfields, praying for a repeal of what is generally called 'The Spitalfields Act.' Thus, as the house well knows, was a law for regulating the mode of working in that district, and for enabling the magistrates to fix the rate of wages to be given for each description of work: in short, a most unjust law to remain upon the statute book; but the professed object of which was, to protect the men against the exactions of their masters. The only possible excuse for having ever passed such a law is, that, when it was passed, the masters had a monopoly of the silk manufacture in this country. I will tell the house why I state this. A deputation of the weavers of Spitalfields waited upon me, and my rt. hon. friend the other day. They are a sincere, well-meaning, and, certainly, a well-behaved body of men. After hearing their representations, I was satisfied that if I had put it to them to make their choice between the revival of the Spitalfields act, or of the prohibitory system—if I had said to them, 'You cannot have both a prohibition and the Spitalfields act, but you may have either the one or the other; take your choice!'—they would have instantly said, 'Give us the Spitalfields act, and let the prohibition go to the winds.' As much for practical feeling, which is now urged in opposition to what is called theory! And here I must beg leave shortly to refer to the doctrine laid down in the petition presented in 1823, by the hon. member (Mr. T. Wilson), to which I have just alluded. The petitioners state, 'that with our unlimited supply of silk from our territories in India, we might be independent of the rest of the world; that with our great command of capital, and the unrivalled skill of our artisans, the manufacturers did not fear the competition of any foreigners; and that with a free trade, silk would become, like cotton, one of the staple manufactures of the country.' I do not mean to accuse these petitioners of making this statement, in order to entrap the public, and to induce the parliament to take measures, which they knew would involve their own manufacture in distress: but, I have a right to refer to their petition, as well as to the more general petition of the merchants of London, to show that the measures which ministers have taken, are neither the offspring of theory, nor measures which they carried in opposition to the prevailing

opinion of the country, or of the trade. They brought forward their measures, because they were convinced that they were founded in sound policy: but not till they were satisfied that they would meet with the concurrence and support of those who had a more immediate interest in their result. So far was Government from any precipitation in carrying them into effect, that it was not till the year 1834, that they determined to propose the repeal of the duty on the raw material, and to permit the importation of foreign manufactured silk, subject to a protecting duty. They were aware that, without taking the duty off the raw material, they could not attempt this improvement; but, as soon as my right hon. friend (the Chancellor of the Exchequer) was enabled, by the flourishing state of the finances, to reduce taxation, he did not hesitate to remove this duty, as the necessary preliminary to the removal of the prohibition. From that moment, we lost the support of the hon. member (Mr. Baring), to whom I have so often alluded; and his voice was only heard in opposition to measures, which he had so long been recommending for our adoption. My right hon. friend (the Chancellor of the Exchequer) having, on the 23d of Feb. 1834, stated generally to the house, what it was our intention to do, it fell to my lot, on the 6th of March, to open the measure more in detail. Then it was that I heard, for the first time, of the serious opposition which the proposed measure would receive from the hon. member (Mr. Baring). Then it was, that, seconded by the hon. member who opened the debate of this evening, he declared, that, by the end of the two years, which I proposed to allow before the prohibition should finally cease, the Silk trade would be destroyed. This delay I now consider to have been its greatest error that was then committed, and the origin of our present difficulty, as far as this trade is concerned. 'Thus,' said the hon. member (Mr. Baring), 'who propose this new plan, are completely ruining the Silk manufacture of England. The moment this plan is promulgated, the great object of all who have capitals embarked in the manufacture will be, to disentangle those capitals; and those who have no capital, except their labour, will be left to struggle for themselves, and probably to perish, for want of employment.' Such, in 1834, were the gloomy forebodings of the hon. member. Experience has made me rather obdurate to all such prophecies: for, so many are daily made by individuals whose fears are excited, or who, when they suppose their particular interests to be at stake, attempt to excite fear in others, that I must have abandoned every measure which I have brought forward for improving our commercial policy, had I allowed myself to be acted upon by such forebodings. Last year, for instance, I received representations from the Iron trade—day after day, and month after month: but I could not share in their alarm. I must state this, however, with one exception. There exists in this country one considerable establishment, in which iron is smelted by charcoal in great perfection, but at a heavy expense. This iron is held in equal estimation with the best from Sweden; but there was reason to apprehend, that it could not, under the reduced duty, maintain itself in competition with the latter. The establishment in question belongs to a most respectable and scientific gentleman, well known to many members of

this house—Dr. Ainslie. Having heard this statement, I told him that, although I could not alter a general measure to meet one particular case, I would endeavour to devise some other mode of relief, if he should be overwhelmed by the competition. And, what does the house think has been the result? Sir, within the last fortnight, that respectable individual has sent me word, through an hon. member of this house, not only that his fears have not been realised, but that my most sanguine hopes had been confirmed—that his trade, in fact, had in no degree suffered by those very measures which he apprehended would have been fatal to it; and that it was, upon the whole, in a very flourishing state. Let us now see how far the predictions of the hon. members (Mr Baring and Mr. Ellice) have been realised. These predictions were that the silk trade would be annihilated, in the course of the two years allowed to the manufacturers to prepare for the change. The bill passed this house in the Spring of 1824; and during the rest of that year, the silk trade went on flourishing and increasing, in the face of this threatening annihilation. In the Spring of 1825, there prevailed a degree of excitement—a spirit of speculation—an extension of demand in this manufacture—to a greater degree than had ever been witnessed before, in almost any branch of trade. It was in 1825, that so many new factories were erected; so many new mills set at work; so many new looms occupied. The old mills were not sufficient; many new ones were raised, the erection of each of which, I am assured, did not cost less than from 10,000l. to 15,000l. and several of these new mills have not even yet been roofed in. Thus, at the very time when, to satisfy the prediction of the hon. member (Mr. Baring) this trade should have been in a state of rapid decline, the manufacturers were building to an excess that had never been equalled in the periods of their greatest prosperity. The learned member (Mr. J. Williams) has alluded to the present condition of the town of Macclesfield. I know what misfortunes and bankruptcies have occurred there; and I feel the deepest and most undissembled sorrow for the sufferings of that population. I am aware of their distressed state at this moment. But I cannot help thinking, that the learned member, in stating their situation, should also have stated some of the circumstances which have aggravated, if not created, their present difficulties; for certain it is, that the spirit of speculation has in that town been carried to the greatest extravagance. According to the last census in 1821, the whole population of Macclesfield amounted to 17,746 souls. Now I will suppose that, between that year and the year 1825, it increased to 20,000. What then, in that year, was the demand for additional labour, in the silk manufacture alone, of that town? I have seen, and many other gentlemen have no doubt seen, in a Macclesfield newspaper, of the 19th of Feb. 1825, the following Advertisement:—‘To overseers, guardians of the poor, and families desirous of settling in Macclesfield. Wanted immediately, from four to five thousand persons’ (cries of hear, hear). The house may well express their surprise; but I beseech their attention to the description of persons required by this advertisement—‘from seven to twenty years of age’—so that the silk manufacturers were content to receive children of the tender age of only seven years

—to be employed in the throwing and manufacturing of silk. The great increase of the trade having caused a great scarcity of workmen, it is suggested, that this is a most favourable opportunity for persons with large families, and overseers who wish to put out children—(children of seven years of age)—as apprentices, to ensure them a comfortable livelihood. Application to be made, if by letter, post paid, to the printer of this paper.’ Humanity is not the least remarkable part of this precious document; and the house will not fail to observe, how admirably the cruelty of confining children of seven years of age, to labour in a silk mill, for twelve or fifteen hours out of the four-and-twenty, is tempered, by the inducement to parents to provide for their families for life. What sort of provision that has been, the present wretched state of those helpless infants will best evince. And here I cannot help observing, that, at the very time such an invitation was sent forth to overseers, and parents, by the owners of silk mills, this house was very properly occupied in passing a bill, to prevent the employment of children under nine years of age in cotton factories. Very soon after this advertisement, and before the mills were finished, in which these children were to be immured, there appeared, I have been assured, another advertisement, nearly in the same extravagant style:—‘Wanted to be built immediately, one thousand houses!’—doubtless, to contain the five thousand new inhabitants. Yet, all this took place in 1825; just one year, according to the hon. member (Mr. Baring) before the silk trade was to expire for ever. I ask then, what weight can be given to the predictions of those, who, in the face of these striking facts, continue to assert, that the silk trade of this country will be annihilated, before the end of the next twelve months? Can any man wonder, after such an enormous extent of speculation—after such inhuman efforts to induce so many destitute children to flock into the manufactories—after such an influx of population—can any man, I say, wonder—all branches of this trade being now in a stagnant state—at most of these new comers being out of work at Macclesfield—or at the fact stated by the learned member (Mr. J. Williams)—his hair almost standing on end with horror—that eleven orders for the removal of as many paupers, had been made out in one week? Under ordinary circumstances, it could scarcely have been expected, that the silk manufacture alone could have formed an exception to the general reaction, which has followed over-trading and speculation, in every other branch of commerce; but, under the circumstances of peculiar excitement, which I have now stated, it would, indeed, have been matter of surprise, had it escaped its full share of the common pressure.—Sir, I feel that, upon this occasion, a heavy burden is imposed upon me. I feel that I have not only to defend myself from the attack of the hon. member (Mr. J. Williams), but to say something in behalf of my rt. hon. colleagues;—something in vindication of the house itself, for the course which they have pursued, in the adoption of the system of commercial policy which we recommended. As the whole of that system has been so vigorously attacked, I shall, I trust, be excused, if I touch, very briefly, upon the proceedings of the last session of Parliament:—when, in furtherance of that system, and with the cordial concurrence of this house, I brought

THE QUESTION OF WHICH IS THE COUNTRY  
 WHEREOF I MAY BE THE MOST USEFUL IT IS DIFFICULT  
 TO DECIDE—BUT I AM INCLINED TO ATTRI-  
 BUTE THE ADVANTAGE OF SOME OF THE FOREIGN CUS-  
 TOMS, EXCEPT IN THE COMMON AND ANTIQUE,  
 TO THE COMMERCIAL MANUFACTURES, IN PARTICULAR  
 TO THE SPINNING MANUFACTURE. I AM HAPPY TO  
 SAY THAT WHILE THE DUTIES HAVE BEEN LOWERED  
 SINCE THE YEAR OF COMMERCIAL REFORM, THE REVENUE HAS  
 INCREASED INLY WITHIN THE COURSE OF MY PARTICI-  
 PATION IN THE ADMINISTRATION, WHICH IMMEDIATELY  
 FOLLOWED THE TERMINATION OF THE TREATY ON COFFEE.  
 THE CONSUMPTION OF THAT ARTICLE HAS NEARLY  
 DOUBLED, WITHOUT CORRESPONDING ANY DECREASE IN  
 THE TOTAL REVENUE OF THE T. IN WATER, THE DUTY  
 UPON WHICH WE WERE HIND, COULD NOT TO HAVE  
 BEEN REMOVED WITHOUT SOME CORRESPONDING TO THE  
 PROPORTIONS OF THIS COUNTRY, THE CONSUMPTION  
 WAS INCREASED IN AN EQUAL DEGREE. AND  
 THIS I WILL AFFIRM, THAT THE SAME AMOUNT OF  
 REVENUE HAS BEEN OBTAINED BY THE GOVERNMENT  
 FROM MANUFACTURES, BUT NOT FROM THE LEAVING  
 EFFECTUAL MEANS OF ENCOURAGING AND ENJOYMENT TO THE  
 INDIVIDUAL, AND NOW IN THE TRIUMPH OF THE SILK  
 QUESTION, AND WHEN I SAY IT WITH ALL DUE DE-  
 FERENCE TO THE HON. MEMBER AND SECONDARY OF  
 THE PROPOSED MEASURE—HAS NOT BEEN, IN THE  
 MEANWHILE, EITHER INCREASED UPON BY EITHER OF  
 THEM. IT IS COMMON TO ALL NATIONS, THAT SILK IS  
 AN ARTICLE WHICH CAN BE EASILY SMUGGLED, AND  
 THAT IT IS NOW SMUGGLED IN A VERY CONSIDERABLE  
 QUANTITY, IN spite of all the preventive measures  
 that have from time to time, been adopted.  
 Now the object of the British manufacturer is,  
 AS MUCH AS POSSIBLE, TO SHUT OUT THE COMPETITION  
 OF THE FOREIGN MAN. IF SMUGGLING COULD BE  
 PREVENTED, I WOULD CONcede TO HIM, THAT PROHIBITION  
 WOULD BE MOST EFFECTUAL TO THIS OBJECT.  
 BUT, I REMIND WHAT IS THE ADVANTAGE OF PROHIBITION,  
 OVER A PROTECTING DUTY OF 30 PER  
 CENT. I SAY OF 30 PER CENT. BECAUSE I NEVER  
 MET A MAN, WITH A SINGLE MERCHANT OR MANU-  
 FACTURER, WHO DID NOT ADMIT THAT, IF A HIGHER  
 PROTECTING DUTY WERE IMPOSED, THE SILENT  
 FLOW OF GOODS WOULD BE THROWN INTO THE  
 HANDS OF THE SMUGGLER. THE QUESTION, THEN,  
 IS, AS A MATTER OF PRACTICE, IS THIS:—IN WHAT DE-  
 GREE IS IT BETTER, AS AGAINST SMUGGLING,  
 THAT A MODERATE DUTY—20—BY WHICH I  
 MEAN A DUTY SUFFICIENT TO PROTECT THE BRITISH  
 MANUFACTURER, WITHOUT BEING SO HIGH AS TO AFFORD  
 A PRETEXT TO THE SMUGGLER. IN THE FIRST PLACE,  
 IT CANNOT BE DENIED, THAT THE FEELINGS OF MAN-  
 NED ARE MORE LIKELY TO RESTRAIN THEM FROM  
 COMMITTING A FAULT, THAN FROM VIOLATING A CUS-  
 TOM-HOUSE PROHIBITION. I AM SURE IT WILL BE  
 CONCEDED TO ME, THAT MANY HON. PERSONS, WHO  
 WOULD NOT, FOR ANY TEMPTATION, BE PARTIES TO A  
 CONTRIVANCE TO EVADE A TAX, AND THEREBY TO ROB  
 THE PUBLIC REVENUE, WOULD FEEL VERY LITTLE  
 SCRUPLE IN WEARING AN ARTICLE THAT IS ABSOLUTELY  
 PROHIBITED, AND THE INTRODUCTION OF WHICH IS NOT  
 IN OPPOSITION TO ANY MORAL DUTY. SO FAR, THEN,  
 THE ARGUMENT IN SUPPORT OF THE ASSERTION, THAT  
 A PROHIBITORY LAW IS THE BEST CHECK UPON SMUG-  
 GLING, MAKES DIRECTLY THE OTHER WAY, AND IS IN  
 FAVOUR OF PROTECTING DUTIES. BUT THE GREAT,  
 INDEED THE ONLY ARGUMENT IN FAVOUR OF PROHIBITION,  
 IN PREFERENCE TO A PROTECTING DUTY, IS THIS—  
 THAT AFTER THE FORBIDDEN GOODS HAVE BEEN  
 LANDED IN THIS COUNTRY, AND WHEN THEY ARE IN  
 THE POSSESSION OF INDIVIDUALS, EVEN FOR THEIR  
 OWN USE OR CONSUMPTION, YOU MAY FOLLOW THEM  
 INTO PRIVATE DWELLINGS, YEA, INTO THE VERY POCKETS  
 OF THE WEARERS, AND SEIZE THEM UPON THOSE  
 PERSONS, IN THE KING'S NAME, AT THE BARE OR-

gestion of any common informer. To what does this power of seizing and examining all who may be suspected of possessing prohibited articles amount? Sir, it amounts to this—that if any man—no matter what may be his rank, be he the humblest peasant or the highest peer in the realm—be suspected of wearing, or possessing, a silk handkerchief of foreign manufacture, he is liable to have it taken from his neck or his pocket, and to have his house ransacked, from the garret to the cellar, in quest of contraband articles. If, without such a subsidiary regulation as this—a regulation which encourages the worst passions, engenders the most appalling perjury and crime, and which opens so wide a door either to fraud and collusion, or to intimidation and personal violence—prohibition cannot be sustained; then, sir, I say, in preference to such a system, let us, in God's name, have a well-regulated duty. And here I hope I may be permitted to digress for one moment, to ask, how a great constitutional lawyer—a staunch advocate for the popular character of our constitution—a zealous stickler for the inalienable rights of the people—a watchful guardian of the sanctity of an Englishman's private abode—how he could so entirely discipline and subdue his warm and heated feelings for the liberty of the subject, as to pour forth the declamatory harangue which we have heard this night from the learned member, in favour of this system of prohibition? But, even with the aid of this power of search and seizure, is prohibition an effectual remedy against smuggling? I have lately taken some pains to ascertain the quantity of smuggled silks, that has been seized, inland, throughout the kingdom, during the last ten years: and I find that the whole does not exceed 5000*l.* a-year. I have endeavoured, on the other hand, to get an account of the quantity of silk goods actually smuggled into this country. Any estimate of this quantity must be very vague; but I have been given to understand, that the value of such goods as are regularly entered at the custom-house of France, for exportation to this country, is from 100,000*l.* to 150,000*l.* a-year; and this, of course, is exclusive of the far greater supply which is poured in, through all the channels of smuggling, without being subjected to any entry. In fact, to such an extent is this illicit trade carried on, that there is scarcely a haberdasher's shop, in the smallest village of the kingdom, in which prohibited silks are not sold; and that in the face of day, and to a very considerable extent. The hon. mover has mentioned the silk goods from India, as those against which any thing but prohibition would prove an unavailing protection. Now, in my opinion, it is scarcely possible to conceive a stronger case than those very silks furnish against the hon. member's own argument. I believe it is universally known, that a large quantity of Bandana handkerchiefs are sold, every year, for exportation, by the East India Company. But does any gentleman suppose, that these Bandanas are sent to the continent for the purpose of remaining there? No such thing! they are sold at the company's sales, to the number of 860,000 or a million of handkerchiefs each year, at the rate of about four shillings each. They are immediately shipped off for Hamburg, Antwerp, Rotterdam, Ostend, or Guernsey—and, from thence, they nearly all, illicitly, find their way back to this country. Mark, then, the effect of

this beautiful system—this system so lauded by the learned member. These Bandanas, which had previously been sold, for exportation, at four shillings, are finally distributed, in retail, to the people of England, at the rate of about eight shillings each; and the result of the prohibition is to levy upon the consumer a tax, and to give to those who live by the evasion of the law, a bounty of four shillings upon each handkerchief sold in this country. That nearly all the Bandanas sold for exportation are re-imported and used in this country, is a fact not to be denied, even by those who are now most clamorous for prohibition. In a printed letter from a manufacturer of Macclesfield to the Marquis of Lansdowne, I find the following anecdote: 'It is the custom, in the parterres of the theatres in France, to secure the place, by tying a pocket handkerchief on the seat. I had the curiosity at the Théâtre Français, to notice the appearance of them; and, out of twenty-five, immediately around me, there was not one silk handkerchief.' I should have little doubt, if a similar custom prevailed in the pit of our theatre, that this accurate observer would find most of the seats decorated with handkerchiefs of prohibited silk. Nay, sir, if strangers were, at this moment, ordered to withdraw from the gallery; and every member were called upon (of course in secret committee) to produce his handkerchief, with the understanding, that those who had not prohibited handkerchiefs in their pockets were obliged to inform against those who had—I am inclined to believe, that the informers would be in a small majority. Upon every information laid under this prohibitory law, the chances are, that the informer and the constable have Bandanas round their necks, and that the magistrate, who hears the charge, has one in his pocket! Upon the motion of this evening, then, we have to make our choice between a moderate protecting duty, which can be collected, and is likely to be available; and the going back to the system of prohibition, which I have shewn to be productive of such mischievous consequences. But, since the repeal of the old law, a further difficulty has occurred in respect to prohibition. Two years ago, when a piece of silk was seized as foreign, the British manufacturer could, upon inspecting it, at once say, 'I know, and can prove, that this is not of the manufacture of this kingdom.' If asked, 'What is your proof?' he would reply, 'The superior quality and workmanship of the article: it is quite impossible, that any thing equal to it should have been manufactured in England. It wants that stamp of slovenliness and indifference to improvement, which is the sure characteristic of all silk goods made at home.' This is a very natural answer for monopoly to make; but, it comes with a bad grace from a British manufacturer. But, it may be asked, if excellence of fabric was, at that time, the proof that the article was not British, why is it not so still? I shall give the best answer to this question, by stating what has recently occurred. Soon after the alteration of our law, an extensive French manufacturer removed from Lyons to this country. He brought with him his looms and his patterns. Under his management and superintendence, two establishments were formed, one in Spitalfields, the other at Manchester. At both of these places he set weavers to work; fully satisfied, that a duty of 30 per cent. would afford him sufficient protection.

His improved methods—with sorrow I state it—excited the jealousy, and drew upon him the persecution, of the English manufacturers. They charged this industrious foreigner, boldly, and rashly, and—as in the end it was proved—most unjustly, with carrying on his trade here, merely as a cloak to cover the smuggling of foreign manufactured goods. In their mortification at his success, they even went the length of charging my hon. friend, the Secretary of the Treasury, and the whole Board of Customs, with being cognizant of the fact, and parties to this nefarious scheme for ruining the silk trade of England. This accusation was not merely insinuated in whispers: it was contained in a published report, inserted in the newspapers, and thus conveyed from one end of the kingdom to the other. This was not to be endured. The Treasury determined to sift the matter to the bottom. They knew that, neither at the Board of Treasury, nor at the Board of Customs, could any countenance or facility have been given to smuggling; but they thought it not impossible, that this French house might have been guilty of the irregularities imputed to them, and that these irregularities might have been connived at by some of the inferior officers. The accusers, therefore, were called upon to substantiate their charge, and were distinctly told, that the inquiry should be directed in whatever mode they might point out as most effectual. They said, the clearest proof would probably be found in the books of the party accused, if they could be got at. The books could not, certainly, be inspected without his consent. Did he hesitate on this point? So far from it, his immediate reply was,—‘You are welcome to inspect all the books in our house; and, that there may be no suspicion of garbling or concealment, let an officer go with me *instantly*, and they shall all be brought here’ (to the Treasury) ‘in a hackney coach.’ This was accordingly done. His books were subjected to a rigid examination. Every transaction connected with his business was found regular—the names of the weavers employed by him, the work which they had in hand, and their places of residence, were all duly entered. Taking with them a plan of Spitalfields, and without the possibility of previous notice or concert, proper persons went round to the particular houses which these books had pointed out; and, in every instance, they found the names of the men at work, and the goods upon which they were working, to correspond with the entries in the books. All this was most satisfactory to the Treasury, and the Customs. But the accusers persevered in their charge. They insisted, that the whole was a concerted plot; and that many pieces of silk in the warehouse of this foreigner, which he asserted that he had manufactured here, were, in truth, the productions of France. The Treasury, in consequence, resolved to sift the matter still farther; and again, it was left to the accusers to point out the mode. In order to prosecute the inquiry, they selected from their own body, the person whom they considered the most skilled in the knowledge requisite for the detection of such articles as might be contraband. And what, towards him, was the conduct of the party accused? ‘Go to my warehouse,’ said the Frenchman, ‘turn over all my goods; select from among them whatever pieces you please; and, on the proof of their being of English or of French manufacture, let my guilt

or innocence be finally established.’ The offer was accepted. The person employed by the British manufacturers turned, over and over, several hundred pieces of silk; and at length, after the whole ordeal was passed, the Board of Customs made known the result, in an official report which they transmitted to the Treasury. That report I hold in my hand. What is the substance of it? Why, that thirty-seven pieces had been selected by this agent of the accusers, as being, beyond all doubt, of French manufacture. What followed? These thirty-seven pieces were seized; and the Frenchman was put upon his proof, that they were made in this country. How did he prove it? By producing, one after another, the very men by whom every one of these thirty-seven pieces had been made; who proved, upon their oaths, in the most irrefragable manner, that every inch of these goods had been woven by themselves—Where? Not at Lyons—not in France—but in Spitalfields and Manchester (loud cries of *hear, hear*). I have stated these facts with feelings, I own, bordering on disgust. I cannot but think it humiliating, if not discreditable, to my countrymen, that an unprotected foreigner should have been maligned and persecuted, instead of receiving countenance and encouragement, for having transported his capital and skill in this country, and for being the first to set the example of great and successful improvement in our silk manufacture. But, how does this detail, into which I have entered, bear upon the present argument? It shews, in the clearest manner, that, if you continue to seize silk goods, in private houses, in shops, or upon individuals, you have now lost your former test, by which you could prove them to be of foreign origin. The most expert judge of such articles, it is now legally proved, cannot discriminate between the British and the foreign manufacture. Prohibition, therefore, has lost its only recommendation; it retains no advantage over a well-regulated duty. But appeals have been made to our compassion; and our feelings have been alarmed by the statement, that above 500,000 individuals are at present engaged in the silk trade, and that ruin must inevitably be entailed on this large and meritorious class of the community, if the old law be not restored. Now, supposing the number of persons employed in the silk manufacture to amount to 500,000,—their wages, I assume, cannot be less, one with another, than 10s. a week for each person. I have been told, indeed, that a considerable portion of this number are children, some of whom do not receive more than 1s. 6d. a week; and for this pittance, the hours of work in the mills, when the trade was brisk, I have been assured, were, from five in the morning till eight or nine at night. If this be so, let us not talk of the difference in the expence of labour between this country and France. Will it be said, that a French child cannot earn in the silk manufactory 1s. 6d. a week; and that, without working from fourteen to fifteen hours out of the four-and-twenty? Certainly not. Supposing, however, the average earnings of these 500,000 persons—(an exaggerated number, I am convinced)—to be ten shillings a week, thirteen millions of money would then be the annual amount of wages alone in this manufacture. To this are to be added, the interest on capital, and the price of the raw material: so that the value of the goods sold could not be less than eighteen or twenty mil-

lions sterling. This, however, I consider too high a calculation. The Lords' Report estimates the whole amount at only ten millions; but allowing for increased consumption since 1821, it may, perhaps, be fairly rated at twelve or fourteen millions, exclusive of the quantity smuggled in from the continent. If, then, fourteen millions of silk goods are about the annual consumption of this kingdom, what would happen, if, according to the predictions of the hon. member (Mr. Baring), the British manufacture should be annihilated after next July? We should not, I take it for granted, consume a less quantity of silk goods: the only change would be, that we should have them, as it is alleged, of a better quality, and at a less price. But all the goods so consumed would, on this supposition, have paid a duty of thirty per cent. on their importation; and the produce of that duty, consequently, would exceed four millions sterling. This large sum would be levied, without, in the smallest degree, abridging the comfort or enjoyment of any other class of the community. It would bring with it no increase of burthen upon the consumer of silk goods, and consequently no diminution of his means of consuming other articles. It would simply be the premium of monopoly transferred to the exchequer; and the capital for which this monopoly was created, would be set free, to give employment to other branches of industry. Such, certainly, would be the ultimate result, if the speculative fears of the silk trade should be realised. But of such an issue, I am persuaded, there is no risk. The whole consumption of silk goods in France is not equal to the consumption in England. Now, supposing when the bill comes into operation, there should be a greatly increased demand in this country for French silks—this new and additional demand would produce a corresponding advance in the price of the goods, and in the wages of labour, in France. To a certain extent, there may be such a demand, especially at the first opening of the trade; but I am convinced that, with the attention to economy which competition excites, with our improved machinery, our industry and ingenuity, and perhaps with the lowered prices of labour and the means of subsistence—a protecting duty of thirty per cent. will be found to be sufficient. The house is called upon, by the motion of the hon. mover, "to inquire." Has it never inquired before? Has the house of Lords entered into no investigation of the subject? And did not that investigation take place at a period, when taxation and prices were very considerably higher than at present? The country, too, at that time, was labouring under much distress; and the silk manufacture was suffering its full share of the existing difficulties. Was that inquiry loosely conducted? Certainly not. A noble marquis (Lansdowne) presided over the labours of the committee, alike distinguished for talent, for diligence, and for the soundness of his views, on all subjects connected with the commercial policy of the country. It was the opinion of that committee, after taking a mass of evidence on oath, that a duty of fifteen per cent. would be an adequate protection, instead of a duty of double that amount, under which the experiment is now to be made.—I have stated, too much at length, I fear, the grounds on which it appears to me, that this house ought not to entertain the present motion. This statement, I feel, must have appeared unne-

cessary to those who think with me on the subject of our commercial policy; and I dare not hope, that it has made much impression on those who are the declared advocates of the restrictive system:—those who belong to the same school of political economy as the hon. bart. the member for Staffordshire. In his enmity to all improvement, he told us, the other evening, that the ministers of the present day were only fit to form a council for the island of Laputa. Since this intimation of the hon. bart.'s wish to see us banished to that island, I have turned in my own mind, what recommendation I could take with me to that land of philosophers. Not a letter from the hon. bart., I can assure him; for he has given me to understand, that in mind, at least, he belongs to the Brobdingnagian age of this country. But I think I have hit upon that which would infallibly make my fortune at Laputa;—I will tell the hon. bart. what it is. At the time of the great bullion controversy, in 1810-1811, the main question in dispute turned upon what was the real standard of our money? We wild theorists said, as our simple forefathers had always said before us, that the standard was, and could be, nothing else than the weight and fineness of the gold or silver in the coin of the realm, according to the commands of the sovereign, specified in the indentures of the mint. Had this definition been admitted by the practical men, there would at once have been an end of the contested point—whether our then currency was or was not depreciated? But for that very reason, the definition was denied by all who maintained the negative of that question. More than a hundred pamphlets were published on that side, containing as many different definitions of the standard. Fifteen of these definitions, most in vogue at the time, I have since retained, as a curiosity to laugh at: but they may now, perhaps, be turned to a more valuable purpose. Of that number I only recollect three at this moment. The first defined the standard to be, "the abstract pound sterling." This had great success, till another practical writer proved, that the standard was the "ideal unit." These two practical standards were, however, finally superseded by a third, of which the definition was, "a sense of value in currency (paper), in reference to commodities." This last standard was at once so perfectly tangible, and clearly intelligible, that I consider it as the parent of the famous resolution of this house, by which the question was to be finally set at rest. Now, if I should take with me to Laputa, this little, but invaluable collection of definitions, I have not the slightest doubt, that my pretensions to have the whole monetary system of that island placed under my direction—to be master of the mint—governor of the bank—and superintendant of all the country banks—would be immediately and generally admitted. It is true, we have had no authentic account of the progress of political science, in that celebrated island, for about a century past; but it is scarcely to be imagined, that it can have been so rapid, as to enable their greatest philosophers to challenge the pre-eminence of these definitions, on the score of abstraction, metaphysics, and absurdity: and, at any rate, if the philosophers should cabal against me, the practical men could not fail to be on my side.—I am not aware, sir, that I have omitted to notice any of the objections

which have been urged against the important changes lately made by parliament in our commercial system. That these changes are extensive, as well as important, I readily admit. Whether they will work ultimately, for good, or for evil, it becomes not fallible man to pronounce an over-peremptory opinion. That the expectation of those who proposed them, was, that they would work for good, no man will do us the injustice to deny. That, up to this hour, I am fortified in that expectation, by the deductions of reason in my own mind, by the authority of all who are most competent to form a dispassionate opinion upon the subject, by the beneficial result of every thing which has hitherto been done, for giving greater freedom to commerce in this country, and by the experience of the opposite effect which vexatious and unnecessary restraints are daily producing in other countries—is what I can most solemnly affirm. I make this declaration, I can assure you, sir, in all sincerity of heart, and, as far as I know myself, without any mixture of false pride, or any mistaken feeling of obstinate adherence to consistency. I am the more anxious to make this declaration, in the face of the house, and of the world, because, of late, I have been assailed, and distressed, I will own, by ungenerous appeals to my feelings, calling upon me to commune with my conscience and my God, and to say, whether I am under no visitations of compunction and remorse, at having thrown so many persons out of bread, in the trial of a rash experiment, and in the pursuit of a hollow theory. Good God! sir, that man must have a heart of stone, who can witness without sympathy and the greatest pain, the distress which now, unfortunately, exists in most of our other great manufactures, as well as in that of silk. But, whilst I hope that I am not wanting in the duties and feelings of a man—I have also a duty to perform as a minister. If immediate relief be, in a great degree, out of our power, it the more becomes us, as the guardians of all that is most valuable in civilised society, to trace the causes of the present calamities, and to prevent, if possible, their recurrence.—It is on this principle, that I am anxious to put an end to a system of currency, which leads to ruinous fluctuations in trade, and in the price of all commodities; which, whether in excitement or depression, is alike undermining the sober habits, and the moral feelings, of the community; which confounds honest industry with unprincipled gambling; which injures the poor man in the earnings of his labour, and takes from the rich man all security in his property—a system, which creates delusive hopes, only to terminate in aggravated disappointments—of which every succeeding convulsion must add to our inability to bear it—and of which the inevitable tendency is, to drive capital and industry to other countries; not in Europe only, but even across the Atlantic. The growing dread of instability here, the growing assurance of increased stability in those countries, would ultimately produce this transfer; and, with it, the further transfer of the rank and power which England has hitherto maintained among the nations of the world. If I have ventured to obtrude upon the house any allusion to my personal feelings, they will, I trust, make some allowances for the provocation which I have received. This is the only place in which I can properly reply to the unmanly appeals which have been

made to me through other channels. Such appeals, however painful to receive, have no influence on my conduct; neither can they detract from the sanguine hope which I entertain of better prospects and increased happiness for my country. I hailed with great delight, the other evening, the assurance of the right hon. member (Mr. Tierney), that he saw nothing in our present difficulties to create despondency or alarm. In this sentiment I most entirely concur. The existing pressure may, for a short time, bear heavily upon the springs of our prosperity; but if we pursue a temperate course, there is nothing to fear, and every thing to hope, for our future progress. With confidence I cling to that cheering hope; and without looking forward to a long life, I trust that I shall witness its realization. Whether in a public station or in retirement, my greatest happiness will be to feel assured, that the power and resources of this country have been increased by those measures of commercial policy which it has fallen to my lot to submit to parliament. That such will be their ultimate result, is my firm and conscientious conviction; and, in that conviction, I claim for those measures the continued support of this house.\* (This speech was followed by the most enthusiastic cheers.)

Mr. Baring rose, but the cries for an adjournment becoming general.

Mr. Canning said, that if the question before the house were confined merely to the resolution of the hon. member (Mr. Ellice), there could be no difficulty of disposing of them that night; but as the admirable speech of his rt. hon. friend had—most happily, he would say, for the country (cheers)—involved the whole of the principles on which the commerce of this country was to be conducted in future, he thought it would be impossible to finish the discussion on the subject in what remained of the night. He would therefore move, that the debate be adjourned to to-morrow. Adjourned.

FRIDAY, FEB. 24. — The order of the day having been moved for resuming the adjourned debate on Mr. Ellice's motion,

Mr. Baring said, that after the able and eloquent speech of the rt. hon. gent. (Mr. Huskisson) it was with great diffidence that he rose to address the house; but if hon. gent. would afford him a patient hearing, he did not despair of convincing them that that speech had touched very lightly indeed upon the main question before the house. The rt. hon. gent. had commented upon the petition which he (Mr. Baring) had had the honour of presenting from the bankers, merchants, and traders of London, in 1820, and also upon the remarks which he had offered to the house in laying it upon the table. As he (Mr. Baring) was not in the habit of speaking from written documents, and as he had never read any report of his speeches more than twice in his life, he did not feel that he was at all responsible for the words which had been put into his mouth upon that occasion; at the same time, he would admit there was nothing in either the speech or the petition to which the rt. hon. gent. had alluded.

\* This speech is published from the reports and a pamphlet called "Speeches of Mr. J. Williams, Mr. Huskisson, and Mr. Canning, on the Silk Trade." London: Hatchard, 1826.

luded, which he was not quite as willing to stand to now as he was in 1820. The country, however, was then in a very different condition from its present one, in consequence of the extraordinary war in which it had been so long engaged. The merchants were hampered by various regulations, which owed their existence to that war. The laws of customs and finance were in such a state of intricacy and confusion, so full of embarrassment and contradictions, and so productive of charge and trouble, that it was impossible for any man, without the study of a life, to know what he was entitled to do under them. The evil was so universally felt, as to render the application of some remedy a matter of urgent necessity; and, in consequence of the call made upon Government from various quarters, great improvements were made in our commercial code, a reduction was effected in the different charges to which commerce had been subjected, and a system of free trade was for the first time established in the country. He fully concurred in the petition which urged the Government to accomplish those changes; and there was nothing in it inconsistent with the view he was inclined to take at present of the condition and prospects of our trade. With respect to the principles of free trade, all that he had ever meant to say was, that they did not preclude the consideration of peculiar circumstances, and had nothing in them which prevented us, in their application, from yielding to the force of events, when the necessity of making an exception to the general rule was clearly proved. The burden of the proof belonged to those who claimed the exception; but an exception, it was evident, there must sometimes be, since it was impossible in this country to lay down a rule which admitted of no exception, especially in a state of things which was itself an exception to all ordinary rules. Our system was full of complexity and contradiction. No person could sit in that house for a single day without perceiving various circumstances which denoted a derangement in the system of our trade, and which rendered it impossible for us to adopt any general principle as a uniform rule of action. For the science of political economy he entertained a due respect: nobody could rejoice more sincerely than he did that an hon. friend of his had recently established a professorship of it in the University of Oxford. He trusted that a similar professorship would be established in the University of London, and that by such means it might become a part of public education. Not that it would prevent the house from having endless discussions about it; for gentlemen who had read the books of the political economists, could not fail to know how widely they differed even upon first principles. Instead of their demonstrations being gifted with any thing like mathematical certainty, no two of them drew the same inference from the same premises. It was a notorious fact, that there were scarcely any two writers, on the question of the corn laws, who did not differ radically from each other on the most material and important points. When this difficulty was obviated, and when the learned professors of Oxford and of London should have established the perfection of political truth, he would admit the force of all their conclusions; but until that consummation should take place,—until the theorists should cease to abuse each other as the greatest of dunces and fools, for not

SEAS. 1826.

drawing the same conclusions from the same facts, he should consult, before he legislated, the more humble practical man, who looked at the effect, whilst they were calculating upon the cause, and who told them that a thing was not so, when they proved by direct ratiocination that it must be so. His rt. hon. friend, who cared little for that alliance which he respectfully courted, had undertaken to entertain the house, by pointing out the inconsistency which prevailed between the sentiments which he (Mr. Baring) avowed at present, and those which he had expressed in 1820. He trusted that his rt. hon. friend would not think him deficient in respect, if he ventured to call the attention of the house to the inconsistencies which a more learned doctor—his rt. hon. friend himself—had displayed upon these questions. He (Mr. Baring) had always held opinions decidedly in favour of the principles of free trade, and he did not understand his rt. hon. friend to charge him with having abandoned them on any other topic than the silk trade. On the question of the currency, he only differed from his rt. hon. friend on the question of time. He wanted to arrive at the same point as his rt. hon. friend; but he could not travel to it either by the same road or at the same pace. His rt. hon. friend, who had charged him with inconsistency, had completely forgotten how open he himself was to a similar charge, and that, too, not upon trifling questions,—not upon matters where there was no occasion for nice discrimination, but upon leading principles. In 1810, at a time when the country was at war, when it was compelled to support an immense expenditure, with scarcely a guinea in its coffers, the rt. hon. gent. had recommended, both in speeches and pamphlets, that cash-payments should be resumed in two years' time, in case a peace should ensue—

Mr. Huskisson:—"Whether in war or in peace."

Mr. Baring:—"Yes; in two years' time, whether we were at war or peace. He should like to know whether the rt. hon. gent. would tell the house that the vote which he then gave he was now prepared to maintain?"

Mr. Huskisson:—"Entirely."

Mr. Baring:—"If such were the case, he would leave his rt. hon. friend to maintain his assertion as he could; but any man who mixed up a little practical experience with his theory, would see the absurdity of such a position. If any gentleman wished for proof that his rt. hon. friend was not a safe pilot for the vessel of state in a time of commotion, he would find it in his rt. hon. friend's recent assertion, that he was prepared to assert the entire maintenance of a system in time of war, to which they had compelled the Bank to return with extreme difficulty, and not with any thing like complete success, in time of peace. He had no right, therefore, to charge his rt. hon. friend with inconsistency on that head; but his consistency proved that he was any thing but a trustworthy pilot in an emergency like the present. The second point on which he should attempt to convict the rt. hon. gent. of inconsistency, was connected with the opinion which he had advanced in 1815, upon the subject of the corn laws. His rt. hon. friend was then the advocate for advancing the protecting duty from 66s. to 80s. per quarter. He (Mr. Baring) had opposed that advance as strenuously as he could; and although he had voted in a small minority on that occasion, it was a vote of

which he was not inclined to repent. Would his rt. hon. friend say the same of his own vote? Would he tell them that he was prepared to abide by that vote as entirely as by his vote on the bullion question? He should be very much mistaken if his rt. hon. friend did not tell them at an early period, that, instead of advancing the protecting duty on corn, the real question for the consideration of parliament was, how far it could be prudently reduced (hear, hear). He now came to a part of his rt. hon. friend's measures in which his inconsistency was particularly glaring, and which he alluded to with the greater readiness, as it was connected with the question before the house. His rt. hon. friend, in proposing the reduction of the duty on thrown silk from 14s. 8d. to 7s. 6d. per lb., had said, that it was necessary to continue it at that rate as a protection to the throwster. He (Mr. Baring) stated, that the other branches of the silk-trade would be sacrificed by the protection thus afforded to the throwster, and urged a further reduction. His rt. hon. friend maintained a contrary opinion, and carried it by a triumphant majority. His rt. hon. friend since that time had not only seen his error, but by a treasury minute had reduced the protecting duty from 7s. 6d. to 5s. per lb. What further measures his rt. hon. friend intended to take with it now, he did not know; for in the speech which he had made last night, there was no declaration as to what amount the throwster was to be protected in future, or whether he was to be protected at all. He therefore again asked his rt. hon. friend whether, in proposing to keep the duty on thrown silk at 7s. 6d. per lb., he had not acted with a degree of haste and carelessness of which he had since repented? If his rt. hon. friend had done so,—and it was impossible to deny that he had,—in a case where the bread of thousands was concerned, he for one could not see that steadiness in his rt. hon. friend's measures, which was necessary to induce him to follow his rt. hon. friend blindly as a guide, and to give up his own opinions, as wrong, without being convinced that they were so. The petition of 1820, which he (Mr. Baring) had presented to the house, and which had afterwards been referred to a select committee, had been productive in its results—for which he took no merit—of a series of measures, which, under the guidance of his rt. hon. friend, had been more effectual in improving the commerce of the country than any series of measures which had ever been proposed by any former administration. The manner in which they had been carried into execution reflected great credit on his rt. hon. friend. His rt. hon. friend seemed to have an idea that some of his measures had produced an hostile feeling towards him among the merchants of the country. Let him dismiss it from his mind as unworthy of him, and as unworthy of them. If they did not feel grateful to him for the great measures he had introduced on their behalf, they must be the most ungrateful of men. He had relieved them from all that was objectionable in the navigation laws; from the ancient formalities and charges of the custom-house; from transit duties, from bounties, from prohibitions; he had reduced the port charges in the port of London, and had rendered it of all the ports in Europe that to which foreign vessels came with the least possible charge. To sum up all in a word, it was impossible to say how much praise

was due to his rt. hon. friend and the Government for the improvements they had introduced into our commercial system (loud cheering). At the same time that he said this, he felt bound to say that the whole practical effect of their arrangements, however beautiful in theory, could not be precisely known till they were carried into execution. For instance, however fair the reciprocity charges on shipping might appear in theory, he was inclined to think that they required considerable attention to be paid to them in practice, from the extent to which the American shipping was gaining upon our shipping at Liverpool, and the Dutch and Prussian upon our shipping in the Thames. Such being the case, he (Mr. Baring) could not but complain, that in all cases which had recently come before them, ministers had displayed a wish to push theory beyond all proper bounds. In the case of the 11. and 21. notes, they had shown a disposition to come to a definite conclusion without consulting the practical men. In the present case, respecting the silk trade, they had shown a disposition for a free trade in it at all risks, without caring how many thousands of the population they threw out of employment, or what branches of the trade they destroyed by it. If he looked at their conduct with regard to the claim of the merchants for an issue of Exchequer-bills, he found the same spirit pervading their councils: the principles of the political economists were set in array against the distresses of the practical men, and the relief they applied for was withheld from them. In every case principles were pushed to the utmost extremity; and out of this mistake of the Government arose much of the distress of the country. We lived in times and amid relations which were of too complex a nature to suffer in safety the rigorous application of principles. There was no absurdity in which we might not be involved, if we permitted ourselves to be rigorously guided by them; and on the finest principles we might practically be led into the greatest dangers. He would give the house a few instances of the extravagance with which these theoretical men sometimes acted. The late Mr. Ricardo, for whom personally he had a high respect, and whose loss he sincerely regretted, had some of the most fancifully extravagant opinions on several practical subjects that had ever entered the brain of man. His notion of a compensation between the property of the country and the public debt, though fine in theory, and full of ingenuity, was utterly impracticable in execution. Mr. Ricardo had also propounded a system for a national bank; but it rested upon principles which were now universally exploded by all persons who wrote upon the subject. When his rt. hon. friend supported the proposition for advancing the protecting duty on corn from 66s. to 80s. per quarter, he took it into his head to defend it on a very curious position of a very ingenious writer, who was then deemed a great authority, Mr. Malthus—that the question of the corn laws had nothing to do with the question of rents. They had now gotten a great and illustrious doctor from Scotland, to prove that absenteeism was not an evil to Ireland. If ever there was an absurdity put forth by a learned and ingenious man,—and he believed Mr. M'Culloch to be such an one—ever there was a monstrous position which showed the wisdom of listening a little to the experience of practical men, and not depending

entirely upon theory, it was a doctrine of this extraordinary description (great cheering)—that it was no evil to Ireland that her landholders should spend their rents abroad, but rather a benefit, on account of their general character, which it would be indecorous to describe in the terms of Mr. McCulloch in the presence of so many Irish gentlemen (cheers and laughter). The doctrine pushed to its utmost limit, came at last to this staggering conclusion—that if it were no injury to Ireland that Lord Hertford should spend his rental of 100,000*l.* a year derived from Ireland, in Paris, it would be no injury to Ireland that the King of France should spend it there as tribute. That position, however, was so glaringly absurd, as to become what logicians called a *reductio ad absurdum*. He trusted that the house would take these points into consideration, and would reflect on them before they consented to allow ministers to guide them entirely upon theory. He was bound in candour to confess, that the errors of practical men were sometimes as absurd as those of theoretical. If theorists would add to their theory a little practical experience, if practical men would look a little more to first principles, and if each would act with a little less contempt for the other, he believed that they would speedily come to very useful and beneficial results. He begged pardon for obtruding upon their notice these observations, which some might conceive foreign to the question, but which he conceived necessary to it, as the general principles on which they ought to legislate upon commercial interests had been introduced by his *rt. hon.* friend into this discussion. The Government were evidently actuated by a dislike to practical conclusions, and by a passion for legislating upon principles alone. He wished, therefore, to caution the house upon the point, and having done so, he should now proceed to the more immediate question.—His *hon.* friend (Mr. Ellice), in asking them to refer this question to the consideration of a committee, disputed the principle on which the late regulations for the silk trade were founded. That trade had been in an artificial state, and under peculiar protection, in consequence of the superiority which it was long known that France enjoyed over us respecting it. The late regulations threw away the restrictions imposed upon it, and established a free trade in silk with a protecting duty of 30 per cent. It was said that we had laboured till the present day under a complete ignorance of the mode in which this trade was conducted in foreign countries. We had been told for some years past, that our capital and skill, would give us an advantage which, when the restrictions on the trade were removed, would be sufficient to ensure our superiority. The persons carrying on the trade in this country were as ignorant upon the point as the Government itself appeared to be. They sent, however, a deputation of well-qualified individuals into foreign countries, for the purpose of acquiring information as to the silk trade in those countries; and those individuals found to their surprise, that the silk trade in this country had no superiority of capital—that our workmen were inferior in skill—that we were behind them in machinery—and that with an inferiority of skill, machinery, and capital, it was not likely that we should drive their silk manufactures from any market. He had heard the observations made in the house last night with regard to the capital

employed in the silk trade in Switzerland, and from the inquiries he had since made, he was convinced that the capital employed in the town of Basle alone beat that employed in the town of Coventry out and out (hear, hear). An inquiry had been made respecting the silk manufacture at Zurich and at other places in Switzerland, the result of which tended to confirm the fact he had before stated. It appeared upon the whole, that at Lyons those manufactures were 45 per cent lower than in England, and that in Switzerland the average difference in favour of that country was from 50 to 60 per cent. on plain goods, and from 60 to 100 per cent. on figured goods. It was moreover a fact perfectly familiar to all persons acquainted with these subjects, that the protecting duty of 30 per cent which it was proposed to put upon all imported silk manufactures would in practice be reduced considerably below that amount. The goods brought in would be so undervalued and managed, that the nominal 30 per cent. would not really amount to more than 20 per cent. He had no hesitation, therefore, in saying, that with such a competition as he had stated, this protection would be wholly insufficient; and that it would be impossible for the manufacturers of this country to carry on trade, or to afford employment to their workmen, under the manifest disadvantages which would attach to them. Besides the advantage which the foreign manufacturers had over those of England, in the plentiful supply of the raw material—the manufacturers of Lyons being backed by the silk of Provence, and those of Switzerland by the silk of Italy—they had the great advantage of cheap labour. Not only was bread at a much less price, but the foreign labourer lived in a very different way from the English artisan. He had heard that the manufacturers of Lyons lodged and fed their workmen; and upon inquiry of a man employed in a manufactory there, he learnt that the master crammed 40 of his workmen into a long garret over his workshop, where they slept upon straw. This was a state of things which English workmen would not endure; but it was another proof in addition to the many which already existed on the same subject—so many indeed, that in his opinion they proved beyond the possibility of doubt, that it would be impossible for the English manufacturers ever to bring their goods down to such a price as would enable them to compete with the workmen of other nations. He did not believe his *right hon.* friend opposite was so great an advocate for all the dogmas of political economy, that he meant to set up the rigid doctrine, that if the trade could not support itself it ought to be destroyed; but he had expressed his belief that a duty of 30 per cent. would be enough to protect it against the competition of other nations; which was going quite far enough. After a trade had been fostered and nursed up to this state—after it had been protected for so many years by a system of prohibition, would the house now consent to a measure which must have the effect of driving all the workmen connected with it to the poor-rate for subsistence? He was sure his *rt. hon.* friend would be as slow as any man to agree to such a proposition if it were made openly, and yet such must be the result of the present law if it were carried into execution. In the whole of his *rt. hon.* friend's speech he had never touched upon the question of the possibility of carrying on the trade. Now the fact was, that the situation of this

manufacture opened a very serious case as concerned the country at large, and all the other manufactures which it contained: for what was now done with the silk, might be, and must be, done hereafter with respect to cotton and woollen. If things should remain in this state, the inevitable consequence must be, that the manufactures would leave us, and those which were most advantageous would lose even the home-market which they enjoyed at present. It was known that the seat of manufactures had several times been changed. It had gone from the Mediterranean to Holland, and after having there been established for a long time, the manufacturers were driven out of Holland by the tax upon bread. They had thence formed a station in England; and if the same causes were allowed to prevail here, the same result must ensue; and they must go on to America, or some other country, in which they could be carried on with comfort and prosperity. We were losing a little every now and then; and if the progress of our loss was not quickly and satisfactorily arrested, we should be left in the most miserable of all possible conditions—that of a nation, from which its wealth had departed. He had no wish to draw on the question respecting the corn laws to-night. He was sensible that it involved a great difficulty: but, however great that might be, and whatever might be the consequences, the country must some day, and that no distant one, look at it with a serious eye. He knew that the abolition of those laws could not be effected without doing great injustice to some particular classes of the people; but, nevertheless, if it should become necessary, it must be done.—It was true that there were many circumstances in this country which tended to the preservation of its manufactures. Amongst these, its naval superiority was a principal source. The history of Europe for the last two centuries presented a constant alternation of peace and war; the peace seldom lasting so long as for ten years at a time. The power which had the command of the sea must, in such times, have the command also of all the markets which could be reached by her ships. She enjoyed also the opportunity of getting the raw material from all such countries as produced it, and from the very beginning of the contest the enemies' harbours were blocked up so as to prevent any competition. This naval preponderance was of course lost to us when the war ceased; and although he should not be suspected of wishing to see the present tranquillity disturbed, he must remind the house that every day's continuance of peace helped to wear away the advantages which our manufactures had derived from this cause. The manufacture of silk in the south of France was, of all the continental manufactures, that which was least exposed to the inconveniences of a war; because, from its lightness, silk was capable of being much more easily transported, and the great consumption being upon the continent, it had not to encounter any of the danger attending the other articles of manufacture which were transported by sea. It had always been a favourite manufacture in France, and had been fostered by the Government at great expense, and by the enjoyment of uncommon privileges. It had thus obtained a vantage-ground, from which it could not be removed without great difficulty. The same might be said of any manufacture which had for a long

time enjoyed exclusive advantages. In the manufacture of cotton and of iron we had the pre-eminence—how long we might continue to enjoy them, he did not know; and the same difficulty would be felt by any country who should attempt to rival us in those branches, as we must experience in attempting to compete with the silk manufactures of France. If, however, his rt. hon. friend was resolutely bent upon applying those free principles which had been so much praised, to the silk trade, he must give them entire and universal operation, or he would do great injustice. He must take that other step, and must not refuse to the cries of the people whom this measure would throw out of bread, that without which they could not exist—a free trade in corn. This would raise a question of such magnitude, that it would force the Government to open their eyes to the real state of the manufacturing interests. In the present state of the subject, he did not see upon what ground his rt. hon. friend could refuse to go into an inquiry as to the fact whether the competition into which the manufacturers were to be forced would be so disadvantageous to them as they apprehended, and to enable the house to form a sound opinion, whether they were or were not doing injustice to these people, who exclaimed loudly against the proposed measure. Here were hundreds of thousands of poor honest men, knowing nothing in the world of political economy, who found on a sudden that because some very wise men had of late sprung up, they were to be ousted from the earnings of their industrious and patient labours. These people were loyal, orderly, and well-conducted, and yet they found themselves on the very brink of the most painful distress, owing to the discoveries of the political economists. If this had been done at a time when other manufactures were flourishing, the silk manufacturers might perhaps have had some relief. It might have been said that they could go from one trade to another and have found employment in the cotton-manufactories; but now the cotton-manufacturers were turning away their workmen rapidly, owing to the decline in that trade. It came, too, at this most unfortunate period, when the agitation respecting the paper currency and the general distress filled the whole country. At this period, if a mistake should be fallen into respecting the measure now under discussion, the confusion and distress would be augmented to a painful degree.—It had been said by his right hon. friend that the great cause of the inconvenience felt in the silk trade had been occasioned by over-trading; but no proof had been offered in support of this assertion. On the contrary, the stock in hand was not greater than usual—a circumstance which could not exist if there had been any thing like that over-trading which had been imputed.—He was led now to remark upon a statement which his rt. hon. friend had made respecting an advertisement issued by some silk manufacturers of Macclesfield, for 5000 men. By a letter which he held in his hand, he learnt that, in the early part of 1825, a great want of hands in the silk trade was felt at Macclesfield; and that the workmen, taking advantage of this, struck in large bodies, so that the masters were obliged to comply with their demands. Even children, who were hired for two or three years, left their service and went to other masters. In this state of things, a few throw-

sters met together and entered into resolutions, one of which was to advertise for 5000 hands, in order to intimidate the refractory workmen, as well to supply such as were really wanted. At the same time they entered into an agreement not to take each other's hired servants. These measures together had the effect of restoring tranquillity, and this was the true origin of that advertisement which had furnished his right hon. friend with so plausible an argument against the manufacturers (hear, hear).—With respect to the other story of the French silk manufacturer who had established himself here, and whose goods had been seized, the case had been stated to him (Mr. Baring) by persons of whose veracity he had not the slightest doubt, and who were the silk-manufacturers in London, to whom an informer came telling them that there was a large quantity of smuggled goods in a French house newly established. This man had been long employed as an informer for the Custom-house. They immediately sent to the Custom-house on the subject, and the answer which they received was, that the Frenchmen were privileged by the Government, and that orders had been sent to the Custom-house not to take cognizance of any information of this kind. Upon further inquiry, it turned out that this French house had made application to the Government, and, representing that great benefit would result from their trying the experiment of introducing their own method of manufacturing silk, had obtained permission to transport their stock hither free of duty. The silk which they had brought in consisted of thrown and dyed silk, upon which the highest duties were payable. Now he (Mr. Baring) could not understand how this was to enable them to try the experiment they intended, because, as the only question was, whether silk could be manufactured in England as cheaply as in France, that could not be ascertained but by the manufacturer having the silk upon the same terms in every respect as the other persons engaged in the same trade. The circumstance, when it got known, excited, as it naturally would do, great dissatisfaction in the trade; and this feeling was increased by the French proprietors opening a shop in the city, where they sold the same goods which other persons dealt in at much lower prices. An information was lodged that a large quantity of smuggled silk goods had been brought over, and some of them were in consequence seized, in the firm belief that the goods so seized were really of French manufacture. In this belief the persons engaged in the seizure remained to this day, and he (Mr. Baring) confessed that he had some doubts upon the subject himself (hear, hear, from Mr. Huskisson). It was at least not wonderful that persons should be deceived, as well because the materials and pattern were French, as because the marks of the machine and the width of the goods were such as would be made by French looms. It had been said, that the weavers who had been employed, deposed upon oath that the goods were manufactured in England. That he (Mr. Baring) positively denied. Thirty-seven pieces of silk were seized; nineteen of them were stated by the proprietor of the French manufactory to have been made in Spitalfields, and the rest at Manchester. At Macclesfield three English weavers made affidavits, but all the other depositions were made by French workmen. He desired to impress it upon the house, that there were

reasonable grounds for suspicion. He would state what those grounds were. At the time M. Poullé was in this country, he was also carrying on manufactories both at Paris and Lyons, and if it should be the pleasure of the house to appoint a committee, he (Mr. Baring) would bring forward a gentleman of character who would tell them that he saw M. Poullé in Paris, who offered to sell him silks, saying that they could be very easily smuggled into this country, and adding, that it would be done under the protection of the English Government. He put it to the house whether, under these circumstances, the English manufacturers had felt an improper degree of jealousy?—Now, with respect to the great question itself, the right hon. gent. said, it was important that the house should not take a retrograde step. In his (Mr. Baring's) opinion it was highly important that they should not take a wrong step. The right hon. gent. said, that if the house were to take a retrograde step, it would be looked upon as a failure of the liberal system of policy in which this country had embarked, and we must give up all prospect of seeing the example, which we had set, imitated by foreign nations. He (Mr. Baring) would, however, wish the house to consider the situation in which we should be, if we made the attempt and failed. What encouragement would then exist for adhering to the right hon. gent's liberal system? If there existed the slightest doubt in the minds of the house as to the policy of the measure proposed, it behoved them, considering the important interests which were at stake, and the number of poor people who would be thrown out of employment, to proceed no further with it. He thought the right hon. gent. was proceeding on wrong grounds with respect to the whole of his commercial system. The right hon. gent. ought to begin with the corn laws (hear, hear). Upon the price of corn depended the price of labour. So long as there was a monopoly with regard to corn, there could be no real freedom in any other branch of trade. The right hon. gent. knew that, and he wished to settle the question of the corn-trade as much as any man; but he could not do so at the present moment. The course which the right hon. gent. had pursued with respect to that great question was particularly inconvenient—it was that of throwing out intimations that it was the intention of Government to do something on the subject, which, however, they never did. If ministers would at once say that they did not intend to propose any alteration of the corn laws, their conduct would be intelligible; but whilst they continued to throw out intimations that the present laws could not be suffered to exist, without proposing any measures on the subject, and thereby shaking the value of all descriptions of property, they acted in a way which they were not justified in doing, either as ministers or men.—He would conclude by reading an extract from a letter addressed to the right hon. sec. for Foreign Affairs, which was applicable to the measures proposed by ministers with respect to the silk trade. (The hon. member then read the passage, which stated that the most enlightened men frequently fell into great mistakes in endeavouring to carry theoretical schemes into practice, and the consequence was, that the soundest general views, for want of a corrective practical knowledge, often turned out only schemes of derangement).

Mr. Huskisson:—All that he had stated last

night, with respect to the French house accused of smuggling, he had advanced, not from his own knowledge, but from the authority of public documents—namely, the report of the commissioners of Customs, signed by four members of the Board, setting forth that there had been a full inquiry on the subject, and that the parties had been examined on oath. He would set the statements upon oath against the assertions of disappointed individuals, who had aggravated their misconduct by persisting in a charge which had been so completely disproved.

Mr. C. Grant complained that his right hon. friend (Mr. Huskisson) had been charged with having wandered from the subject under consideration into a vast and comprehensive range of matter. If his right hon. friend had no other excuse for pursuing the course he adopted, it was fully justified, nay even called for, by the speech of the learned member (Mr. J. Williams). It was fortunate for the country, that his right hon. friend had been afforded an opportunity of stating the original principles on which his measures of commercial policy were adopted, and the happy success with which they had been followed. The hon. member (Mr. Baring) however, was himself guilty of wandering from the subject, and that without the same excuse as his right hon. friend. What had the dissertation in which the hon. member had indulged, with respect to Mr. M'Culloch, Mr. Ricardo, and Mr. Malthus, to do with the question before the house? The hon. member had thrown out his sarcasms unsparingly against the theorists of political economy; but he admitted the justice of their views, although he would qualify them with a greater portion of practical experience. Now, with all his admiration of the hon. gent.'s talents, he must confess that he did not see in his address any evidences of the practical experience which he recommended. The question was, simply, were they to continue a competition—for competition they would have—under the protection of the laws, or leave the same competition, as it had hitherto been left, to work its way in the dark, silently undermining the exertions of the manufacturer, and taking its course in crime, perjury, and deceit, to preserve a monopoly to the foreign manufacturer and the smuggler? The question presented itself in three views: first, how far the motives and measures of Government could be defended both upon theory and practice; how far the stagnation and distress in the trade had been the effect of those measures; and, how far they could look to an improvement in the future state of the trade, from a perseverance in their present determination? And, first, as to the propriety of the measure, which had been adopted as a practical remedy for an acknowledged grievance. It had been, he thought, proved last night, beyond all question, that the trade was in a state which required a total change of system. When its affairs had been under discussion in both houses of parliament, and when practical men from all parts of the kingdom had been examined before their committee, it was clearly established that the trade laboured under three evils—a heavy duty on the raw material; the baneful operation of the Spitalfields Act; and the prohibition of the importation of silk. Now, it had been proved that the duty upon the raw material added 30 or 35 per cent. to the first cost of the article, and including the duty on thrown silk, increased

the whole amount to the consumer to 70 or 80 per cent. Feeling, therefore, that the amount of the duty aggravated the evils under which the trade laboured, the committee recommended the reduction of that duty. The next point was the Spitalfields act—a question which had been so fully discussed upon a former occasion, that he need not enter into it now, but would pass at once to the last point—the question of the prohibition. Two years ago the act for the removal of the prohibition passed, by the concurrent suggestions of many eminent men, both theoretical and practical; and here he would take leave to remind those who talked of the question being hurried forward, that the act of repeal was no new measure, and that they had had two years' warning of the commencement of its operation. But it had been contended that the act had aggravated, if not wholly caused, all the distresses in the silk trade. That he positively denied. Let them look to the state of every other branch of their manufactures at the present moment. Let them look to the cotton trade—the timber trade—the tallow trade—all of which were suffering in an equal degree with the silk trade, although no legislative measure had been proposed with respect to them. In short, was there any portion of their commerce and manufactures which did not labour under the same distress as the silk trade (hear, hear). It was indeed lamentable, but too true, that there had been scarcely any trade so much subject to reverses and sudden changes as the silk manufacture; a consideration which led men to reflect whether the state of the law respecting prohibitions might not have had a material effect in producing such reverses. Scarcely three years had elapsed at any time without a recurrence of complaints of extreme distress among the weavers in Spitalfields. At Coventry, the distress had kept pace in time and extent with the distress in the metropolis. At one time, in 1819, so great had been the pressure, that the hon. member for Coventry, on bringing forward a measure for the regulation of wages among silk weavers, declared that two-thirds of the workmen were on the parish books, and that wages were no more than five shillings a week (hear, hear). Could ministers then be accused of creating all the distress? Had there been none before the appearance of their new-fangled principles on the subject of prohibition? In Macpherson's *Annals of Commerce* they would find, that at one time, in 1793, there were 4500 looms out of work in Spitalfields, which on an average employed eighteen thousand people. It was lamentable to measure the scale of misery at different periods; but it was necessary, in order to prove that the present state of the trade was not a novelty, and that it might result from other causes than the measures which had been adopted by parliament. In 1796 a meeting of the principal manufacturers had taken place on that account. In 1801, Government had advanced 20,000*l.* In 1816, the distress was extensive; there had been a meeting at the Mansion-house, at which an hon. gent. had expatiated upon the distress at Spitalfields, and expressly ascribed it to the enormous importation of foreign silk goods by smugglers. On that occasion a benevolent gent. had declared, that out of 15,000 looms, no less than 10,000 were standing idle. A respectable manufacturer, in 1817, had stated, before the Poor Laws Committee, that he had formerly paid 5000*l.*

and 6000*l.* a year in wages, and at that time did not pay 5*l.* a week; and he added, that there were several causes to be assigned for the stagnation of the trade—of which one was the duty on the raw material, and another was smuggling (hear, hear). It would seem, therefore, that without referring to the measures of Government, there would be found in the system which was formerly in existence, causes of distress as great, and even greater, in the silk trade, than were found to exist at the present day. Without denying that distress existed at present, and he regretted that it did, yet it was not so great as in 1817. In speaking of Spitalfields, he included Bethnal-green, and the whole vicinity of Spitalfields, which contained a population, not only of those who were engaged in the silk manufactures, but of many who could not properly be regarded as engaged in that line of business. Spitalfields and its vicinity might be looked upon as the gathering place to which persons out of regular occupation frequently resorted. When the business was brisk, those persons who could not be rightly regarded (if he might use the expression) as professional artisans, were employed; but on the decline of business, they were thrown out of employment, and subject of course to the inconvenience which want of employment occasioned. Many of those were certainly sufferers on the present occasion; although he did not mean to deny, that distress had reached many whose regular occupation was the silk business. In assigning the causes of the distress now prevalent, the first of them unquestionably was, as had been stated by his right hon. friend, overtrading. This, which operated as a cause of embarrassment in many branches of our trade, operated, in a remarkable way, to produce that embarrassment in the silk manufacture. By the returns, it appeared, that the quantity imported in the year, ending 5th of Jan. 1823, was 2,177,000*lb.*; 5th of Jan. 1824, 2,512,164*lb.*; 5th of Jan. 1825, 3,137,000*lb.*; and in the three quarters of a year, from the 5th of Jan. 1825, to the 10th of October, 1825, 3,431,000*lb.* (hear, hear). With respect to thrown silk, there was also a great increase of importation, far beyond the demand, and also far beyond that of preceding years. The increase was, from the ordinary amount of annual importation of 343,000*lb.* to the extraordinary one of 800,000*lb.* He had, indeed, understood, that on the prospect of the proposed changes, extensive speculations were entered into, and before the measures were fairly projected, a great quantity of thrown silk was ready to be brought into this country. The prices of raw silk, which in 1824 was only 9*s.* rose to 24*s.*, and China to 28*s.* per *lb.* Thrown silk, which at the close of 1824 was 33*s.*, rose in 1825, to 40*s.* then to 45*s.* and at last even to 53*s.* per *lb.* After this great demand for the raw material, it was not surprising, that when there was not a corresponding demand for manufactured silk, a great stagnation in the trade should altogether have taken place. In a statement addressed by a manufacturer to Lord Lansdowne, it was stated that the East India sale of 1825 took place under an excitement never known in the trade. "It was not, therefore, matter of wonder," the writer continued, "that establishments should increase, that operatives should enter into speculations with the surplus of their earnings, and occupy manufactories before the plaster of the walls was dry" (hear, hear). The writer added, that

an astonishing amount of capital had been introduced into the trade. Such was the opinion of a practical man; and it was sufficient to explain, in a great measure, the cause of the existing state of things. But this excitement was not the only cause. It was unpleasant to allude to particular classes; but there had been aggravations of the distress superinduced, in this as well as other trades, from particular causes. The hon. member (Mr. Baring) had explained the extraordinary demand for 5000 persons at Macclesfield, by stating that it was with the view of defeating the combinations amongst the workmen. Hence there was a rush into the trade from this contest between the masters and workmen. The alarm in the trade first took its rise among the master manufacturers. Whilst the winders of Macclesfield were receiving 18*s.* per week instead of 14*s.*, a meeting took place, at which it was resolved that the manufacturers of England were unable to compete with those of France. After this conflict between the masters and the workmen (which led to a measure they would not at other times have adopted), and after the statement of the manufacturers that they had no chance of competing with foreigners, could we be surprised that the mercers and others took the alarm, and suspended their demands? The manufacturers had retired from the market: they struck work in October, leaving the trade to the smugglers. The country had, therefore, to complain of the conduct of the manufacturers, though the Government did not complain of them. But it was due to the country to state, that there was one party, the purchasers and consumers, who were kept entirely out of this question (hear, hear). With deference to all those who supported the manufacturers, the mass of the people of England had some claims on the house to be protected from exorbitant prices for commodities. It was likewise due to the country that the experiment should be fairly tried. When his right hon. friend gave up the drawback on silk, he (Mr. Grant) remembered that the hon. member (Mr. Ellice), in presenting a petition against the measure stated that he did not coincide with the petitioners; that the people of Coventry were well satisfied with the measures of Government, and were willing that the experiment should be tried. But had the experiment been tried? Could it be said that it had been tried and failed, and that we were called upon to retrace our steps? He (Mr. Grant) thought, that after the master-manufacturers had taken from the poor workmen their charter—the Spitalfields' act,—a law as dear to them as the great charter of England; after they had procured the repeal of that law, it was hard to turn round and demand that the experiment should be arrested. On that account he thought the house had a right to complain of their conduct. They should have tried the experiment fairly—not by anticipation; they should bring their goods into the market, and then, if they failed, they might come before the house with some claim upon its justice. But the hon. member (Mr. Ellice) asked, do you mean to leave things as they are, without remedy? What, he would ask, was the remedy proposed by the hon. member? The appointment of a committee, which, with the laborious duties it would incur, comprehending the whole extent of the subject, would last the entire session. Its inquiries could not by possibility relieve

the persons now petitioning for relief from the state in which they were placed. The committee must enter into comparisons of the stocks, prices, and wages, at Lyons, at Paris, and at other places, and apply itself to every consideration that could be suggested. To the inquiry whether we could stand competition, he (Mr. Grant) would reply, that we could; and he rested his conviction on the conduct of the manufacturers themselves; he rested it on the report of the committee of the other house, and the evidence of those practical men who stated that they were equal to the French manufacturers. The lords' committee stated that a protecting duty of 15 per cent. was sufficient, and we had now 30 per cent. When the hon. member (Mr. Baring) brought forward a petition against this measure in 1823, he said that when the storm came, the parties must escape from it as well as they could. How many of those petitioners had attempted to escape from the storm? Which individual had withdrawn his capital from the trade? Which had not increased his capital, multiplied his establishments, and exhausted every resource of art and wealth to extend them? Hon. members said that fresh information on this subject had been obtained from the continent. Had that information been procured before the panic began? He (Mr. Grant) distrusted such calculations. It was easy to employ calculations so as to bring a person to any result he wished to arrive at. He (Mr. Grant) could show by calculation, that instead of from 45 to 60 per cent., the difference between the cost of manufacture in France and England was only from 10 to 20 per cent. It was not difficult to show that those calculations went upon general assumptions. All of them assumed, that excepting the law in their own case, all other circumstances should remain as they were. For example, in a statement circulated by a respectable gentleman, in comparing the expenses of manufacture at Lyons and London,  $1\frac{1}{2}$  oz. of waste was allowed at London, and 1 oz. at Lyons, in working raw into thrown silk. But what physical necessity was there that the waste at one place should be only two-thirds of the other? They asserted that the machinery was to remain the same—that wages were to remain at the same point, whilst France was to supply the raw material; thus uniting the maximum of demand with the minimum of wages. Throughout all these calculations, not only assumptions, but grave errors appeared. As in the case of dyeing: one statement alleged the advantage on the side of France to be equal to 50 per cent.; but he (Mr. Grant) believed that the cheaper cost in France for warping and dyeing was only 6 or 7 per cent. All dye drugs, he believed, were higher in France than here; and he had authority to state, that it was the intention of Government to inquire into the duties on these articles, with a view to further reductions (hear, hear). The duty on soap was severe; but that also was intended to be modified, in order to meet that difficulty. The duty on barilla was already in a course of annual reduction. The price of raw silk was given as lower in France than in this country; but in France the duty was 6d. per lb., in England, 3d. Then let the house consider the vast field opened in the East Indies. The silk of Bengal could be procured to any amount, and it had much improved of late years. The committee of 1821 stated that, for some goods, it was equal to Ita-

lian; that for tabbinets, the Bengal organzine was equal to any foreign thrown silk. It had been asserted, that in the sales of raw and wrought silks at the East India Company's sales, equal weights of raw and manufactured silks could be purchased at the same sum. But the fact was, that, in India, the silk was of two kinds—country wound and filature; the former was prepared by the natives, and used for the manufacture of Bandana handkerchiefs; the other was carefully prepared under the superintendence of the East India Company, who, in 1770, introduced into India the Italian mode of winding the silk. The latter was 14s. per lb. the former, 11s. The material was, therefore, not the same, nor was the price the same; one being a higher species of manufacture. That manufacturers and practical persons should not be aware of this, was almost incredible, especially when it was stated in the Company's sale books.—The rt. hon. gent. then adverted to the subject of the French house. It had been said that his rt. hon. friend had seen the French, but not the English parties. This, his rt. hon. friend had contradicted; and he (Mr. Grant) could confirm his statement. Neither of them had been aware of the charge of connivance on the part of Government for some time, until his rt. hon. friend, the master of the mint, communicated the report to the Chancellor of the Exchequer. Justly indignant at the charge, they instituted an investigation into the subject: both parties were heard, and the result of the investigation, conducted before both parties, had been stated in a printed circular. The hon. gent. (Mr. Baring) had, nevertheless, averred that he could bring forward a person who, at the bar of the house, would depose upon oath—

Mr. Baring denied that his statement had gone that length.

Mr. C. Grant certainly had understood the words to justify the construction he had put upon them; and he thought it unfair that the reputation of a man of character and a foreigner should be impugned upon the charge of an individual whose name was not mentioned. But the answer was short and sufficient—the law was open: there were persons enough ready to act upon it: why did not those who talked of these frauds prove them, and bring the parties to punishment.—To return, however, to the point from which this accusation had diverted him—the comparative expence of throwing silk in France and in this country. All hands were stating the expence of throwing silk in England at 7s. 6d. per lb. Now this was an unfair representation, for many manufacturers confessed they could throw it at 6s. per lb.; and some even agreed that it could be done at 5s. The duty on thrown silk had formerly been 14s. 7d. per lb. Before the Lords' committee, it had been distinctly stated that one-third of that duty would be a sufficient protection to the English throwster; and the more the question was pressed, the lower this seemingly immoderate cost of throwing silk in England was reduced. Ten years ago, it had been stated at 12s.; then it came to 10s. and 11s.; afterwards to 8s.; and now as low as 6s. and 5s. Now, it was said, that, in France, the cost of throwing silk was 3s. 6d. per lb.; but it so happened that ministers had the evidence of an English throwster of the highest respectability, who had gone to Lyons to investigate the fact, that silk could not be thrown in France

under 4s. For himself, he thought the protecting duty of 5s. ample; and that even a lower duty would be sufficient: it seemed to him, however, that the duty might be in some way regulated according to the qualities of organzine silk. He could not himself see what should make the cost of throwing silk in England so great as it actually was. It was an essential process towards preparing the raw silk for winding and weaving; but nine-tenths of the work in it was performed by machinery. Let it be recollected, however, that the throwing was a distinct and separate branch of the trade. If we imported all our organzine silk from Italy, it appeared the weaver would have it at a lower price than that at which it could be manufactured here. Now, the throwing trade, which was only one branch of our silk trade, might be destroyed, and yet the manufacture would continue; but if the manufacture was destroyed in an attempt to support the throwster, then the trade, throwing and manufacturing, must fall altogether.—Hon. gents. spoke of the state of our machinery in the silk trade: why should we not derive the same advantage from machinery in the silk trade that we did in other trades? Why was it that we did not do so?—because our prohibitory system had prevented the due application of industry and intellect. The trade wanted that incitement, and was ruined for want of it, which the new measures would give. He admitted that the looms of Coventry were inferior to the French, and he was ashamed that he was compelled to admit it; but once put them in competition, and the inequality would speedily be at an end. One hon. member, he believed, had actually brought it forward as an argument, had seriously told the house that the houses of Coventry were not capable of receiving the French looms (a laugh). In that case, all he could say was, that they must be rebuilt, which would be a great blessing generally to the city. We had always complaints of incapacity, until capacity was put to the trial: he understood that already, in the very prospect only of the trade being thrown open, improvements in the silk machinery were carrying into execution. According to a letter only yesterday received from Manchester, an attempt to weave by steam had been made, and succeeded. Two pair of gros-de-Naples looms, weaving each 108 yards of silk a week, were attended by a woman at 14s. a week wages: this was about 3d. a yard for wages; and the cost of house rent, with the interest of the value of the loom, which was 12l., might be taken at a farthing more; then the price at which this work was done was 3½d., which could not be done in France under 7d. What reason was there, that, with the system of importation, England should have any thing to fear? An hon. member had stated, that the capital in some small town in Switzerland was equal to the capital of any trading town in England. The house would not expect him to answer such a statement as that. He had stated, also, that the Swiss traders were in the habit of going over the mountains and purchasing the silk in Italy, which they paid for in specie, carrying the raw material to their own country to be manufactured; and upon this course of trade he expatiated with satisfaction, claiming for it an advantage over the usual mode of English traffic. If the hon. member's views were just,

SESS. 1826.

what were we to think of all the boasted advantages of the division of labour, the application of credit, and the powers by which industry was multiplied? The argument of the hon. member amounted to this—that England could never compete with Switzerland, or any other country, unless she was as poor and as ignorant. An hon. member (Mr. Baring) had said, that France possessed an advantage over us in the cheapness of labour; for the poor manufacturer in that country lived in the most wretched state of filth and misery—he would tell the hon. member to go to Ireland, where the population could vie in filth and misery with any population that ever had, or ever could exist. The hon. member might just as well argue that it was impossible for any country to compete with Ireland. The great object of the member for Coventry was to gain time. To the prayer for further time, he (Mr. Grant) was inclined to turn a deaf ear. Whatever time was proposed for any measure, was always the wrong time; and when a respite had been granted two years ago, had it been applied by the traders to any thing like making preparation? The very argument of the learned member (Mr. J. Williams) settled the question. He said that the prospect of the new measures had for six months past caused a stagnation in the market: now, to extend such a state of things, by making the prospect last still longer, could only do additional mischief. As it seemed to him, there was but one course for the house to pursue, which was, to come that very night to a vote which should put an end to discussion upon the subject for ever. Let them do this: let them declare definitively that there would be an end to prohibition; and they would soon find that there would be an end to the alleged necessity for it. In a short time, without the appointment of any committee, there would be an end to the apprehensions which traders were always sufficiently quick to entertain for the safety of their own interests; and, in defiance of the threatened alarming influx of foreign goods, there would be work enough again in our manufacturing districts.

Mr. Dickenson denied the excessive speculation for which ministers blamed the silk-manufacturers, and attributed much of the general distress of the country to their own unfounded and delusive statements as to its prosperity. We should get nothing by these new measures, or new principles: where was the reciprocity which had been so promised and talked about? Other countries said plainly that they saw how we had grown rich—by our system of exclusion; that they desired no participation in our liberal modern policy. It was the misery of England, that she was always run away with by some visionary speculation or other. One year, Mr. Owen figured with his parallelograms. The next, some other gentleman came from Scotland to prove that absenteeism was no evil to Ireland; and it was difficult to imagine any absurdity, however monstrous, which some philosopher might not be found, upon the most liberal and indisputable principles, to attempt to prove.

Mr. Warre said, that it did not seem to him that the hon. member (Mr. Ellice) had made out any case for his motion. If the introduction of French silks into the English market would have ruined our manufacturers, they would have been ruined long ago; for

our preventive service people frankly admitted that spirits might be kept out, but that the dry goods could not. He doubted moreover the capacity of France, when the prohibition was removed, to pour any thing like the quantity of silks into this country that was apprehended. The slightest reference to history was sufficient to show that commercial improvement in all times had been opposed by those who thought their interests attacked by it just as vehemently as the change now proposed was.

Mr. P. Moore, after describing the distress of the silk weavers, implored Government to abandon all principle, and think only of saving the people.

Mr. Palmer said, that at a meeting which had recently taken place, he had stated to his hon. friend (Mr. Ellice), that he felt inclined to support the motion for a committee, and would do so, unless something cogent was advanced which might induce him to change his mind. In consequence, he came down to the house last night, and heard what his hon. friend had said in support of the motion. But he would ask of the house, whether a speech had not been subsequently delivered, which proved to demonstration that his hon. friend was in the wrong,—a speech which had made a great impression on his mind, and of which he regretted that his memory was not sufficiently capacious to retain every sentence (hear, hear). He could assure his hon. friend that if going into a committee were likely to do even a trifling good to those individuals whose case he had so ably advocated, he would cheerfully vote with him; but feeling that, so far from doing good, it would effect much harm, by holding out fallacious hopes to those individuals (hear, hear)—he must oppose the proposition.

Mr. Canning:—“Sir, after the direct appeal made to me by several hon. members, I feel it necessary, before the debate closes, to state as fairly and as shortly as I can, the views and opinions which I entertain upon the present question. On the one hand, I am sure the house will believe that I cannot feel disposed to enter at large into a subject which has been already so fully discussed, and has, I may say, been disposed of so much to the satisfaction of this house and the country; to the satisfaction, at least, of those who had before approved of the principles on which Government has acted, and to the conviction of others, who, doubting the soundness of those principles, found their doubts set at rest by the powerful and unanswerable speech of my rt. hon. friend. As, I say, the house, on the one hand, will not suspect me of having the bad taste, after his luminous exposition, to intrude on their time, by discussing the whole of this vast subject;—on the other hand, it would feel that I did not do my duty by the house, by the country, or by my rt. hon. friend, if, leaving to him the whole weight of the debate, I omitted to claim for myself a full participation in the responsibility incurred by the introduction of those measures which he has so successfully explained and defended (cheers). It is for this purpose, then, that I now present myself to the house; and I do so because I have witnessed for the last six months,—I might, perhaps, say, during a longer period, but principally for the last six months,—the diligent, the systematic attacks

made upon the plans and measures, as well as upon the public character, of my rt. hon. friend; attacks made, no doubt, with the hope that they would prove injurious to his fame and subversive of the sound commercial principles which he has so long and so anxiously exerted himself to introduce and establish (cheers). I agree, that if there were any prospect that, by consenting to go into the committee for which the hon. gent. has moved, any thing could be done to soothe the feelings, or to relieve the distress, of those on whose behalf the committee has been required—or if it were merely a neutral measure—a measure in which parliament might innocently indulge the petitioners—or one calculated, perhaps, to give satisfaction to a few, though without benefit to any—I would even now forego my opposition to it. But it is because I feel that we shall practise a delusion upon the petitioners, at the expense of the interests of the country, if we were to hold out a hope, an expectation, of altering—nay, even if we were to utter a doubt of our determination to persevere in that course, which, after the most serious deliberation, parliament, in its wisdom, has resolved to pursue. What, I will ask, would be the effect of our going into the proposed committee? The question, let it be beaten out into as many shapes as you please, is simply this,—would a prohibition of foreign silks protect our trade as well as our moderate duty, such as that proposed by my rt. hon. friend? I will not fatigue the house by an unnecessary repetition of the arguments which have proved the negative of this proposition; but, to my mind, it is clear that a law of prohibition would fail as a measure of protection, while it would re-introduce into our system those vicious principles which we have found such difficulty in expelling from it. The evil which we have put down would re-appear, and, like a noisome weed, rapidly increase in growth, till it overspread the whole soil of our commercial industry (hear, hear). But, sir, this is not the point upon which I felt myself most immediately called upon to answer the appeal of hon. members—this is not the point upon which I feel called upon by my public duty to express my sentiments. It cannot be denied, sir, that, under cover of the measure which the hon. gent. (Mr. Ellice) has thought proper to bring forward; and that he has brought it forward in the sincerity of his heart, and with the view solely to the relief of the sufferers whose cause he advocated, the house must feel convinced (hear, hear); but it cannot be denied, that, under cover of that motion, an opportunity has been taken, not by the hon. member, but by others, to attack the commercial regulations now in progress; measures more seriously deliberated upon, and introduced with the more universal consent of all those whose judgments were likely to be best enlightened on such matters, than any other acts of our public policy within my recollection (cheers). The hon. gent. who introduced the motion was of opinion, that it was advisable to adopt a sound and settled system of commercial policy. But the learned gent. who seconded the motion (Mr. J. Williams), addressed you with a very different feeling, and in a very different spirit. That learned member, departing from those professional topics, in descending upon which he had so often arrested the attention of the house, disported himself upon this

to him novel subject, certainly with all the confidence of a novice, but at the same time in a manner which evinced a total incapability of using his weapons, as he was wont to do in his more practised exhibitions (cheers). The learned member has not disdained to call to his aid, in the course of his address, all the vulgar topics of ribald invective with which my rt. hon. friend has been assailed elsewhere; and in the spirit of these attacks, has attributed to him feelings unknown to his heart, and sentiments utterly alien from his nature (loud cheers). And why, I ask, has my rt. hon. friend been subjected to these attacks? Because, sir, with an industry and intelligence never exceeded, and rarely equalled, he has devoted his daily labour and his nightly toil to the improvement of the commercial system of his country (cheers). Sir, when this attack was made, the house felt, as one man, the injustice done to my rt. hon. friend (cheers); and if, in addition to the conscious rectitude of his own mind, and to the gratifying acknowledgment by this house, of his splendid exertions, he wished for another gratification, he had it in the universal feeling of indignation at the attempt so wantonly made to lower him and his measures in the public opinion (cheers). And then, forsooth, came the assertion, that nothing personal was meant.—Nothing personal, sir! Did we not hear mention made of hard-hearted metaphysicians, and of the malignity of the devil? Nothing personal!—certainly nothing personal to the devil (laughter), who, by the way, and it is a curious coincidence, is, according to an old proverb, the patron saint of the city (Lincoln) which the learned gent. represents (much laughter). But could any one fail to understand, that the fend-like malignity, the coldness of heart, the spathy of feeling, that all these abstract qualities, which the learned gent. had described as distinguishing features of those who indulged in abstract speculation, were intended by the learned gent. to be embodied in the person of my rt. hon. friend; qualities especially calculated to render a man contemptible in the performance of his public duties, and odious in the eyes of his fellow-citizens, for whose benefit those duties are discharged? These topics, sir, are as vulgar as they are unjust (hear, hear). Why is it to be supposed that the application of philosophy—(for I will use that odious word)—why is it to be supposed, that to apply the refinement of philosophy to the affairs of common life, indicates obduracy of feeling or obtuseness of sensibility? We must deal with the affairs of men on abstract principles, modified of course according to times and circumstances. Is not the doctrine and the spirit which now animate those who persecute my rt. hon. friend, the same which, in former times, stirred up persecution against the best benefactors of mankind? Is it not the same doctrine and spirit which embittered the life of Turgot (cheers)? Is it not a doctrine and a spirit such as these, which consigned Galileo to the dungeons of the inquisition (cheers)? Is it not a doctrine and a spirit, such as these, which have, at all times, been at work to stay public advancement, and to roll back the tide of civilization—a doctrine and a spirit actuating little minds, who, incapable of reaching the heights from which alone extended views of human nature can be taken, console and revenge themselves by calumniating and misre-

presenting those who have toiled to those heights, for the advantage of mankind (cheers)? —Sir, I have not to learn that there is a faction in the country (a cry of no, no, from the opposition benches)—I mean not a political faction—I should, perhaps, rather have said a sect, small in numbers, and powerless in might, who think that all advances towards improvement are retrogradations towards jacobinism (cheers). These persons seem to imagine that, under no possible circumstances, can an honest man endeavour to keep his country upon a line with the progress of political knowledge, and to adapt its course to the varying circumstances of the world. Such an attempt is branded as an indication of mischievous intentions, as evidence of a design to sap the foundations of the greatness of the country (cheers). Sir, I consider it to be the duty of a British statesman, in internal as well as external affairs, to hold a middle course between extremes; avoiding alike the extravagancies of despotism, or the licentiousness of unbridled freedom—reconciling power with liberty: not adopting hasty or ill-advised experiments, or pursuing any airy and unsubstantial theories; but, not rejecting, nevertheless, the application of sound and wholesome knowledge to practical affairs, and pressing, with sobriety and caution, into the service of his country, any generous and liberal principles whose excess, indeed, may be dangerous, but whose foundation is in truth (loud cheering). This, sir, in my mind, is the true conduct of a British statesman; but they who resist indiscriminately all improvement as innovation, may find themselves compelled at last to submit to innovations, although they are not improvements. My rt. hon. friend has been actuated by the spirit which I have endeavoured to describe. Convinced in his own mind of the justice and expediency of the measure which he has proposed for the improvement of our commercial system, he has persuaded the house to legislate in that sense; and, as the fruits of that legislation, I anticipate increasing prosperity and growing strength to the country (cheers).—Two objections have been stated to the course which ministers are pursuing under the guidance of my rt. hon. friend: we are charged with having abandoned the principles of Mr. Pitt, and of having borrowed a leaf from the book of Whig policy. If the latter accusation refers to the useful and honourable support which we have received on questions of commerce from some of those who are habitually our antagonists in politics, I have only to admit the fact, and to declare the satisfaction which I derive from it. God forbid, sir, that I should withhold due praise from those who, forgetting political animosities and the vulgar divisions of party, have concurred with us in attempting to do public good. But if it is meant to say that the commercial policy which we recommend to the country is founded on the principles of Whiggism, history proves that proposition to be untrue; I mean neither praise nor blame of Whig or Tory in advertent to matters which passed long before the political existence of the present generation; but, historically speaking, I must say, that freedom of commerce has, in former times, been the doctrine rather of Tories than of Whigs. If I look back, for instance, to the transactions between this country and France, the only commercial treaty which I can find, beside that

which was signed by me and my right hon. friend but the other day, since the peace of Utrecht, is the convention of 1786. But, by whom was the convention of 1786 proposed and supported?—by Mr. Pitt. By whom was it opposed?—by Mr. Fox (hear, hear). I will not go into the arguments which might be used on either side. I enter not into the question, who was right or wrong. I mention the circumstance only to show how easily facts are perverted for particular purposes of vituperation. It is an old adage, that when a man wishes to beat a dog he has no difficulty in finding a stick; but the stick, in the present instance, has been unfortunately chosen.—Equally false are the grounds of the charge brought against us of having deviated from the principles of our great master (cheers). Sir, I deny that we have departed from the general principle of Mr. Pitt. It is true, indeed, that no man, who has observed the signs of the times, can have failed to discover in the arguments of our opponents, upon this occasion, a secret wish to renew the Bank restriction; and it is upon that point, and with respect to measures leading in our apprehension to that point, that we are accused, and not unjustly, in differing from those who accuse us. We are charged with a deviation from the principles of Mr. Pitt, because we declared our determination not to renew an expedient which, though it was forced upon Mr. Pitt by the particular circumstances of the times, is one that ought not to be dragged into a precedent. It never surely can be quoted as a spontaneous act of deliberate policy; and it was an act, be it remembered, of which Mr. Pitt did not live to witness those consequences which effectually deter his successors from the repetition of it. But it is singular to remark how ready some people are to admire in a great man, the exception rather than the rule, of his conduct. Such perverse worship is like the idolatry of barbarous nations, who can see the noonday splendour of the sun without emotion; but who, when he is in eclipse, come forward with hymns and cymbals to adore him. Thus there are those who venerate Mr. Pitt less in the brightness of his meridian glory, than under his partial obscurations, and who gaze on him with the fondest admiration when he has accidentally ceased to shine (loud cheering). My admiration 'on this side only of idolatry' of that great man, is called forth by the glorious course which he ran, and the illumination which he shed over his country. But I do not think it the duty of a most zealous worshipper to adopt even the accidental faults of the illustrious model whom we vainly endeavour to imitate. I do not think it a part of fealty to him to adopt, without necessity, measures which necessity alone forced upon him. Treading, with unequal pace, in his steps, I do not think it our duty to select by preference, those footmarks in which, for a moment, and from the slipperiness of the times, he may have trodden awry (loud cheering).—If, sir, I have said enough to satisfy the house, that with my whole soul I adopt, with my whole strength I will endeavour to maintain the measures of my right hon. friend, I have said enough; and I will not detain them by going into the details of a question, of which he is himself a perfect master, and of which he has made the house equally master with himself. But I should have been ashamed to let this de-

bate go by without declaring that I will readily take my share of responsibility for his measure, leaving to my right hon. friend the full and undivided glory" \* (loud and continued cheering).

Lord John Russell could not give his vote for the motion without a compromise of those principles which he had, in common with most of his hon. friends, supported. The opinions upon which this measure had been carried, had been deeply considered, and well digested. Feeling the deepest sorrow for the distresses of these parties, he must declare, that there was much less hope of amendment by stopping, than by going on in the course already taken.

Mr. Ellice in reply:—The object of his motion was not to secure the internal prohibition of foreign silk. He entertained no view of preventing importation, nor did any of the leading persons connected with that great interest whose cause he had so unworthily advocated.—As to the general policy of ministers, he did not contend against them; but he must be allowed to say that every great branch of our manufactures must fall in turn before a partial application of those principles (loud cheers). He might mention the deterioration in our woollen manufacture, which now occurred day after day through competition with German woollens. It was painfully felt at Birmingham, that our North American colonies now derived hard wares, even down to the very nails they used, from the United States. Active competition was awakened in every corner of the world, and if the right hon. gent. would persevere in his system, he must first annihilate that most oppressive prohibition, which kept up the price of corn (loud cheers).

The house then divided—

For the motion, 40—Against it, 222—Majority, 182.

### Navigation Laws;—South American Treaties' Bill.

TUESDAY, FEB. 14.—Mr. Huskisson, in moving the order of the day for the house to resolve itself into a committee on the navigation laws, wished to offer a brief explanation. Two treaties were before the house, entered into by this country with the Independent States of La Plata and Colombia, in which treatise was inserted a stipulation that, for a certain number of years, ships not built in those countries, but manned by their subjects, should be allowed to hold intercourse with Great Britain upon the same terms as if they were in fact ships built in the ports of La Plata or Colombia. By the existing navigation laws, ships built in any foreign country, bringing the produce of that country, and manned by its subjects, were entitled to admission, and to certain privileges. That principle it was right to maintain; but when countries suddenly passed from the condition of colonies to that of independence, they could have few or no ships of their own, and they could have no reciprocal commerce, at least, with Great Britain, if the provisions of the navigation laws were rigidly enforced. It had, therefore, been thought a fair arrangement for a certain number of

\* See note, *Ante*, p. 408.

years, until the new States could build ships of their own, and place themselves on a footing with other countries, that they should be allowed to send their produce and manufactures in foreign bottoms, and that those foreign bottoms should enjoy the same privileges as national vessels. The alteration now proposed in the navigation laws, was to legalize this provision in favour of the states of La Plata and Colombia, making at the same time such arrangements as would require the due proportion of *bona fide* native crews. He proposed also to give the Crown a prospective power of making similar arrangements with other states that might establish independent governments under the same circumstances. He should move for leave to bring in a bill to enable his Majesty to carry these stipulations into effect.

Mr. Robertson contended that measures of this kind, which were every day rapidly pressed forward by Government, showed a total absence of that high national feeling which had heretofore always distinguished the councils of Great Britain, until these late times in which they lived had cast a new light upon the whole range of our commercial policy. It was a delusion to call the present project one of reciprocity—for England, overloaded with taxes as she was, was giving away a national advantage, without receiving the slightest equivalent. The repeal of so essential a part of the navigation laws must have the effect of throwing the trade of these new states into the hands of foreigners of all nations, of people from the United States, who would flock to those republican governments, where they could soon acquire the rights of citizenship, and establish themselves with sufficient shipping, which could be obtained from their greater exemption from municipal burdens, at one half the expense that the British could provide the same marine. Thus the carrying trade of Colombia, instead of being kept by England, would be flung, or at least its profit given away, into the hands of foreigners, contrary to the better national policy of former times. Thirty years ago, no British minister would have dared to have made such a proposition to parliament, and so opposed was it to the spirit of the people, from one end of the country to the other, that he still hoped the time was not far distant when no minister would presume to repeat such an application, in defiance of the direct interest and policy that had raised this country to its late pitch of greatness, from which he was sorry to say ministers were now daily doing all in their power to pull it down. Impressed with this conviction, he would give his strongest opposition to the present bill.

Mr. Heathcote was desirous of knowing whether the effect of these measures had not been to diminish the number of British seamen in the general British trade. From returns which he held in his hand for the shipping of the years 1822, 1823, and 1824, he saw that though the shipping had increased, the number of British seamen had diminished.

Mr. Huskisson replied, that in time of peace it was probable that the commercial interests, though they had increased their shipping, had not augmented the number of their seamen in the same degree. They might have economized in the latter, and perhaps had done so. There was, however, no alteration in the provision of the navigation laws which required the mas-

ter and two-thirds of the crew to be British subjects.

Mr. Hume rose to ask whether the *rt. hon.* gent. (Mr. Huskisson) meant to redeem the pledge which had been given in the last session, relative to a reduction in the duty on timber, and other articles imported for the purpose of ship-building. When he (Mr. Hume) and others, last session, agreed to what was called the reciprocity duties bill, they were assured that such a reduction would be effected, and it was on that ground that he supported the measure. The impression on his mind was, that if ministers did not remove the heavy duties on timber used in ship-building, as well as on canvas, cordage, and various other articles of a similar description, this country would lose her mercantile navy; and on the existence of that mercantile navy depended the equipment of our ships of war. There were many things on board a man of war, so unpleasant, that it was difficult to induce individuals to acquire a knowledge of seamanship there, although they were perfectly ready to enter on board merchant-ships. This country had now 500 ships of war, a greater number than was possessed by all the maritime states of Europe besides, and infinitely more than the exigencies of the country required. If ministers conceived that they were correct in keeping up our shipping to this extent, at a very great expense, it was right that the house should inquire whether they were taking proper measures to secure an ample supply of seamen.

Sir R. Ferguson:—The effect of the present system would be, that the whole of the ship-building of this country would be ultimately carried to other places. Merchants in England would send to the ports of Canada or New Brunswick for the tonnage they required. The number of ships constructed in those ports every year was so great, that it was difficult to procure sailors to man them. When, therefore, the merchants of this country sent a vessel out to any of these ports, it was customary for the men to leave her, and to go on board some of the newly-built vessels, which they navigated to England at a great advance of wages.

The house then resolved itself into a committee of the whole house, and agreed, on the motion of Mr. Huskisson, to a resolution for making application to the house, "for leave to bring in a bill to carry into effect treaties of commerce entered into with certain countries of South America, which are not at present provided with national mercantile shipping."

The house then resumed.—The bill was subsequently brought in.

WEDNESDAY, FEB. 22.—On the motion for the second reading of the South American Treaties' bill,

Mr. Robertson said, that these treaties were founded on the reciprocity system which it had of late been so much the fashion to praise. But would other nations reciprocate with us? The first treaty, purporting to be founded on this principle, was that made with the United States; and yet in that country it was openly stated in Congress, that no nation had ever advanced to a great height of prosperity and civilization, without commercial restrictions. The next treaty was with the powers bordering on the Baltic. These states had for exportation heavy

and bulky goods; they had a great command of timber, and could build ships at a cheap rate. They had, therefore, acted in a great measure on the principle of reciprocity, because such was their interest. Then came the treaty with the Dutch, affecting to be founded on the same system. They, with some exceptions, consented to reciprocate. Then we laid an additional duty on exported salt, whereupon the Dutch repeated their reciprocation act, and imposed a duty of 10 per cent. on our ships entering their harbours. It could not, then, but be obvious upon what an unstable footing this system of reciprocity rested. He wished to remind the house that the French had decreed, that after the 5th of April next, they would not receive any colonial produce from this country; and when it was considered that the warehouses of our merchants were at present filled with sugars and other merchandize, and that they would not be able to dispose of any portion of these amongst the French, as they had hitherto been in the habit of doing, it would easily be conceived how much our distress would be augmented by this decree. Let the British merchant look to it in time, and make an effort to prevent that ruin which ministers would soon bring upon the country, unless arrested in their progress. In these South American treaties, there was not a reciprocity, but a total abandonment on our part of the principle of the navigation laws. This country would be deprived, by these measures of ministers, of the warehousing system, and the carrying trade.

Sir Robert Inglis rose to advert to the 12th article of the Colombian treaty, in which he saw nothing like the reciprocity of which they had heard so much. By this treaty it was provided, that no subject of Colombia who might happen to be in this country, should be disturbed in the exercise of his religion, but that he should be permitted to worship God according to the dictates of his conscience, either in public or in private. But what was the case of British subjects in Colombia? They were indeed to be permitted to exercise their own religion in private, but there was no provision for allowing them this privilege in public. When he reflected on the favourable spirit as to religious toleration which was represented to prevail in Colombia, he thought more might have been effected than a mere permission to use our own form of worship in private. He was induced to make these observations, because four states still remained to be treated with, and in treating with them, at least, he hoped that a perfect reciprocity in these matters would be secured to the subjects of this country.

The Chancellor of the Exchequer regretted that the hon. member had not made his observations in the presence of his rt. hon. friend (Mr. Huskisson), who would, he had no doubt, have been able to satisfy him that there were good reasons why more was not exacted from the Colombians on this head. For his part, notwithstanding that spirit of religious toleration which had been said to prevail in the Colombian Government, he could readily conceive that it might not be possible so far to do away with the prejudices of the great mass of the people as to render it advisable to have adopted the suggestion of the rt. hon. member at present. But he should be happy if that spirit of toleration which had been alluded to, should be found to give more privilege in re-

ligious worship to the subjects of this country than had been secured to them by the treaty. He should also be happy if the hon. bart. would extend his views with regard to religious toleration, as well to Protestant as to Catholic countries (hear, hear).

The bill was then read a second time.

MONDAY, APRIL 17.—A petition was presented from the ship-owners of Sunderland, for a protecting duty against foreign shipping.

Sir M. W. Ridley supported the petition. It was not a little extraordinary that between 1821 and 1825 the tonnage of British and foreign shipping engaged in our trade having been doubled, the foreign shipping had increased in equal proportion with the British. Another circumstance worthy of remark was, that there was uniformly an increase in the shipping of those countries with which we had entered into commercial treaties, while there was no increase of the shipping of those countries with which we were not bound by any such treaties. The increase of foreign shipping was clearly calculated to injure our carrying trade, and the great nursery of our seamen.

Mr. Hume was sorry that ministers were not present, when a subject of so much importance was before the house. If they had been in their seats, he would have recalled to their memory, the speech delivered by the late Mr. Ricardo, when this subject was under debate. He stated distinctly, on that occasion, that if this country acted upon the system of reciprocity, without repealing the heavy duties by which the shipping interest were oppressed, the consequence would be, beyond all doubt, that we should lose that branch of our trade; and he voted for the bill only on the understanding, that in the ensuing session all those duties would be removed. He (Mr. Hume) entirely concurred in Mr. Ricardo's opinion. If the taxes on our navigation were repealed, he believed, that under the freest competition, British shipping would keep their ground against all their rivals from every part of the world; but for that purpose it was essential that the taxes should be abolished on hemp, timber, iron, tallow, and all other commodities consumed by the shipping interest.

Mr. Irving said it was a fact much to be deplored, but undoubtedly true, that the employment of British shipping was now greatly confined to the colonial trade; and he regretted to observe that there was a set of persons seeking, night after night, to destroy that interest. Almost the whole of the navigation with the countries that had adopted the reciprocal system, was carried on by foreigners.

The petition was then laid on the table.

FRIDAY, MAY 12.—Mr. Huskisson, on rising to move for returns relative to British Shipping, Seamen, &c., spoke, in substance, as follows:—

“Sir, in the course of the last session of parliament, an hon. member (Mr. Robertson) frequently took occasion to indulge himself in certain oracular denunciations, foreboding the ruin of this country as the result of the commercial and foreign policy of the Government. At that period, the commerce of the country, it must be allowed, was at least sufficiently active, and the demand

for mercantile shipping greater, perhaps, than had ever before occurred. Whether from these circumstances, or from the solemn tone of mystery in which the hon. member's denunciations were delivered, they did not, at the time, make any considerable impression, either in this house or out of doors. Recently, however, a variety of petitions has been presented to parliament, from persons connected with the port of London, and with several other commercial towns, expressing their apprehensions, that the shipping interest is in a state of decay, and that the foundations of the prosperity and security of the country are, in consequence, likely to be undermined. When such impressions have been created in quarters, where the authority of the petitioners, so far as their observations go, is entitled to the greatest consideration, I trust that no apology will be requisite for claiming the attention of the house—or at least that portion of it who are now present\*—to a subject of such vital importance to the maritime power and greatness of the country. I am well aware of the reluctance which hon. gents. must feel to a statement, from its nature necessarily dry and tedious; but I am also aware that the matter involved in it is of too much importance not to demand the deepest attention; for, if the fears expressed in the petitions on the table of the house be well-founded, it is scarcely necessary for me to say that the sooner an inquiry takes place the better.—The house, sir, is aware that our navigation laws have a two-fold object: first, to create and maintain in this country a great commercial marine; and secondly—(an object not less important in the eyes of statesmen)—to prevent any one other nation from engrossing too large a portion of the navigation of the rest of the world. Acting upon this system, the general rule of our policy has been to limit, as much as possible, the right of importing the productions of foreign countries into this country, either to ships of the producing country, or to British ships. There certainly have been exceptions to this general rule, but it is the broad principle upon which the navigation system of this country was founded; and it is obvious, that the motives for adopting that system were, first, that such portion of the carrying trade of foreign countries as does not devolve to British shipping should be divided, as equally as possible, amongst the other maritime states, and not engrossed by any one of them in particular; and, secondly, that countries entertaining relations of commerce with this country, and not possessing shipping of their own, should export their produce to England in British ships only, instead of employing the vessels of any third power. But, when I state that the first object of our navigation system was to create and uphold a great commercial marine, I think I may add, without fear of contradiction, that that object could not have been effected solely by regulations, restrictions, or prohibitions, however judiciously devised. The only true and durable foundation of a large commercial marine is to be laid in the means of affording to it beneficial employment. Without such employment—without, in short, extensive commerce, and great capital, to sustain and invigorate

that commerce—no laws, merely protective, will avail. Whatever, therefore, contributest to extend the general commerce of the country, must, incidentally,—I may almost say directly,—contribute also to improve and extend its navigation. These two great elements of our power and wealth are, of necessity, closely and intimately connected. I do not mean to say that their interests are always identified. I know they are not so. I know full well that every thing which interferes with the freedom of commerce is more or less disadvantageous to the capitals which are employed in it. I am ready to admit, as consistent with this general principle, that the regulations of our navigation system, however salutary they may be, must, more or less, act as a restraint on that freedom of commercial pursuit, which it is desirable should be open to those who have capital to employ. I am, however, at the same time, bound to say, that those regulations are founded on the first and paramount law of every state,—the highest ground of political necessity,—the necessity of providing for our own safety and defence; the necessity of being prepared to afford security to our numerous colonial possessions scattered throughout all the seas of the world; the necessity of protecting the different branches of our widely-spread commerce against all the risks attendant on a state of war; and, lastly, the necessity of preserving our ascendancy on the ocean, and thereby sustaining the high station in the rank of nations, which that ascendancy, more than any other circumstance, has given to this country. Entertaining these opinions, I am as ready as any man can possibly be, to say that it is our duty, on all occasions, to look to the peculiar nature of this state necessity; and that, whenever the interests of commerce and navigation cannot be reconciled, the feeling which ought to be uppermost in our minds should be,—(I, sir, have no hesitation in stating it to be my feeling)—that the interests of commerce, in all such instances, ought to give way, and those of navigation to have the preference.—I trust that I have, in this brief statement, now placed myself fairly before the house: and if the measures recently adopted by his Majesty's Government have laid this country open to the danger with which, according to some, it is threatened, certainly I have imposed on myself no light task, in attempting to vindicate and defend those measures. I begin with laying it down as a general position, that, in looking to the interest of the ship-owner, we ought not to cramp commerce beyond the degree which state necessity requires for the protection of our navigation. I say, that, apart from the considerations upon which the navigation laws were founded, we are bound not to depress one branch of industry, in order to give undue encouragement to another. The questions, therefore, which we have to consider are these:—First, whether the alterations which have been made in the system of our navigation laws have, or have not, exposed the great public interests, for the support of which that system was established, to jeopardy and hazard?—Secondly, whether those alterations are such as to have placed any particular branches of the shipping interest of the country in a situation of difficulty, such as to entitle them to specific consideration?—Thirdly, whether, in the alterations which have been adopted, his

\* It is worthy of remark, that during the whole of the rt. hon. gent.'s speech, which lasted two hours and a quarter, the house was extremely thin.—*Times*.

and bulky goods; they had a great command of timber, and could build ships at a cheap rate. They had, therefore, acted in a great measure on the principle of reciprocity, because such was their interest. Then came the treaty with the Dutch, affecting to be founded on the same system. They, with some exceptions, consented to reciprocate. Then we laid an additional duty on exported salt, whereupon the Dutch repealed their reciprocation act, and imposed a duty of 10 per cent. on our ships entering their harbours. It could not, then, but be obvious upon what an unstable footing this system of reciprocity rested. He wished to remind the house that the French had decreed, that after the 5th of April next, they would not receive any colonial produce from this country; and when it was considered that the warehouses of our merchants were at present filled with sugars and other merchandize, and that they would not be able to dispose of any portion of these amongst the French, as they had hitherto been in the habit of doing, it would easily be conceived how much our distress would be augmented by this decree. Let the British merchant look to it in time, and make an effort to prevent that ruin which ministers would soon bring upon the country, unless arrested in their progress. In these South American treaties, there was not a reciprocity, but a total abandonment on our part of the principle of the navigation laws. This country would be deprived, by these measures of ministers, of the warehousing system, and the carrying trade.

Sir Robert Inglis rose to advert to the 12th article of the Colombian treaty, in which he saw nothing like the reciprocity of which they had heard so much. By this treaty it was provided, that no subject of Colombia who might happen to be in this country, should be disturbed in the exercise of his religion, but that he should be permitted to worship God according to the dictates of his conscience, either in public or in private. But what was the case of British subjects in Colombia? They were indeed to be permitted to exercise their own religion in private, but there was no provision for allowing them this privilege in public. When he reflected on the favourable spirit as to religious toleration which was represented to prevail in Colombia, he thought more might have been effected than a mere permission to use our own form of worship in private. He was induced to make these observations, because four states still remained to be treated with, and in treating with them, at least, he hoped that a perfect reciprocity in these matters would be secured to the subjects of this country.

The Chancellor of the Exchequer regretted that the hon. member had not made his observations in the presence of his rt. hon. friend (Mr. Huskisson), who would, he had no doubt, have been able to satisfy him that there were good reasons why more was not exacted from the Colombians on this head. For his part, notwithstanding that spirit of religious toleration which had been said to prevail in the Colombian Government, he could readily conceive that it might not be possible so far to do away with the prejudices of the great mass of the people as to render it advisable to have adopted the suggestion of the rt. hon. member at present. But he should be happy if that spirit of toleration which had been alluded to, should be found to give more privilege in re-

ligious worship to the subjects of this country than had been secured to them by the treaty. He should also be happy if the hon. bart. would extend his views with regard to religious toleration, as well to Protestant as to Catholic countries (hear, hear).

The bill was then read a second time.

MONDAY, APRIL 17.—A petition was presented from the ship-owners of Sunderland, for a protecting duty against foreign shipping.

Sir M. W. Ridley supported the petition. It was not a little extraordinary that between 1821 and 1825 the tonnage of British and foreign shipping engaged in our trade having been doubled, the foreign shipping had increased in equal proportion with the British. Almost the whole of the navigation with the countries that had adopted the reciprocal system, was carried on by foreigners.

The petition was then laid on the table.

FRIDAY, MAY 12.—Mr. Huskisson, on rising to move for returns relative to British Shipping, Seamen, &c., spoke, in substance, as follows:—

"Sir, in the course of the last session of parliament, an hon. member (Mr. Robertson) frequently took occasion to indulge himself in certain oracular denunciations, foreboding the ruin of this country as the result of the commercial and foreign policy of the Government. At that period, the commerce of the country, it must be allowed, was at least sufficiently active, and the demand

terprize—were only met, on the part of the British Government, by a constant succession of new laws, enforcing still more restrictive regulations, framed in a spirit of still more vexatious interference. One instance of the character of that legislation will be sufficient; and I give it, as a slight specimen of the commercial jealousy which prevailed in our councils, in reference both to the colonies and to Ireland. A ship from our American possessions, laden with their produce, was stranded on the coast of Ireland. It will naturally be supposed, that the cargo was landed, and the ship repaired, in that country. No such thing. The law compelled the owners to send another English ship from England, for the purpose of bringing away the cargo:—a cargo which, not improbably, might then be wanted in the Irish market, and which was, perhaps, destined to be ultimately consumed there, after having been trans-shipped in a port of that country, landed in an English port, and again re-shipped to Ireland.—This is a sample of the real grievances under which our American colonies laboured. Such a state of law could not fail to engender great dissatisfaction, and much heart-burning. It is generally believed, that the attempt to tax our American colonies, without their consent, was the sole cause of the separation of those colonies from the mother country. But, if the whole history of the period between the year 1763 and the year 1773 be attentively examined, it will, I think, be abundantly evident, that, however the attempt at taxation may have contributed somewhat to hasten the explosion, the train had been long laid, in the severe and exasperating efforts of this country, to enforce, with inopportune and increasing vigour, the strictest and most annoying regulations of our colonial and navigation code. Every petty adventure in which the colonists embarked, was viewed, by the merchants of this country, and the board of trade of that day, as an encroachment on the commercial monopoly of Great Britain. The professional subtlety of lawyers, and the practical ingenuity of custom-house officers, were constantly at work, in ministering to the jealous but mistaken views of our sea-ports. Blind to the consequences elsewhere, they persevered in their attempts to put down the spirit of commercial enterprize in the people of New England, until those attempts roused a very different spirit;—that spirit which ventured to look for political independence from the issue of a successful rebellion. The result is well known. The country found itself engaged in a civil war. That war, in its progress, involved us in the greatest difficulty and embarrassment. It was terminated by submitting to humiliations such as, I trust to God, the Crown of Great Britain will never again be exposed to.—America was not the only part of our dominions in which we were called to pay the penalty of humiliation. Ireland, towards which we had acted in the same spirit of commercial jealousy as towards our American colonies, took advantage of our difficulties, and refused any longer to hold her industry and trade subject to our system of exclusion. To the parliament and volunteers of Ireland, we had also to capitulate. If the capitulation was mortifying to the pride of England, fortunately it neither compromised our honour, nor involved any concession beyond what was strictly a debt of

SESS. 1826.

justice to Ireland. The benefits of our commercial and navigation system were extended to her. She was permitted to trade direct to the colonies, and placed rather upon the footing of a partner than that of a dependent, in the concerns of the British empire.—If I have gone into this detail, I have done so, because it appeared to me necessary, as bearing, in a peculiar manner, upon the question now before the house. The immediate lesson which I draw from it is this—that it is a part of political wisdom, when danger is foreseen, not supinely to wait for its approach, but, as far as possible, to take timely measures for its prevention.—The peace with America gave the first great blow to the navigation system of this country. There had now arisen an independent state in the new world. Our colonies had fought for, and had taken, a station in the rank of nations. They had now interests in navigation to attend to, and a commerce of their own to protect. It therefore became imperative on this country, unless we were prepared to relinquish all trade with America, to conform to circumstances. It was impossible for us, in this new state of things, to enforce the system of our navigation laws, which, until then, we had so rigidly insisted upon. That part of the system which provided, that none of the productions of Asia, Africa, or America, should be imported into England, except in British vessels, could no longer be adhered to.—After the peace of 1783, and before the general congress of America had established that system of government, under which the people of the United States now live—a work which was not completed until the year 1787—each of the different States, then composing the union, was at liberty to act independently of the others, in matters relating to its trade with foreign countries. Accordingly, almost every state established a different rule of commercial intercourse with this country. The general character, however, of their legislation was conceived in a spirit of peculiar hostility (not unnatural, perhaps, so soon after the exasperation excited by civil discord) against trade with Great Britain. In some of those states, indeed, British merchants were prohibited from trading with them altogether; in others, heavier duties were specifically imposed upon British merchandize; and in all, a desire was manifested to give a decided preference to the goods of other countries. This state of things continued until the year 1787, when the general congress met, and one uniform system of commercial policy was laid down. By that system, a heavy blow was aimed at the navigation system of this country. It was resolved, that all foreign ships, trading to America, should pay half a dollar—which was afterwards raised to a dollar—per ton duty, beyond what was paid by national ships. And further, that goods imported in foreign vessels should pay a duty of ten per cent., over and above what was demandable on the same description of goods imported in American vessels. This system—in the adoption of which, the Americans had, in a considerable degree, followed the example of their English ancestors—was likely to become seriously prejudicial to the commerce and navigation of this country. The proper authorities, therefore, set about considering what was to be done in order to counteract it. The Board of Trade had recourse,

Majesty's Government have been actuated by a mere gratuitous desire to make experiments, and to try the effect of innovation; or whether those alterations, even if attended with some inconvenience to particular interests, were not called for by circumstances, in order to obviate greater inconvenience which might have arisen to the general interest, if we had rigidly persisted in the course which we formerly pursued?—Now, sir, before I join issue with those who call in question the necessity or expediency of the alterations which have been made in the system of our navigation laws, the house will, perhaps, permit me shortly to recal to their recollection the principal outlines of that system,—a course which is necessary, in order to mark more distinctly the alterations which have been made in it.—The great charter of the navigation system of this country is the act of the twelfth of Charles II. The different modes which that act provided for the encouragement of shipping, may be arranged under the five following heads:—First, the Fisheries. The ocean is a common field, alike open to all the people of the earth; its productions belong to no particular nation: it was, therefore, our interest to take care that so much of those productions as might be wanted for the consumption of Great Britain, should be exclusively procured by British industry, and imported in British ships. This is so simple and reasonable a rule, that, in this part of our navigation system, no alteration whatever has been made; nor do I believe that any will ever be contemplated.—The second object which the navigation laws had in view, was to give to the shipping of this country employment in what is called the Coasting Trade. When those laws were first passed, that trade was confined to England only; but, since we have become legislatively united with Scotland and with Ireland, it has embraced the whole of the British islands. In this important part of our policy also there appears to be no motive for alteration: I shall, therefore, dismiss it with a single observation. The law, in this respect, remains unchanged, and will remain unchanged, so long as we have a desire to maintain a great commercial marine.—The third object of our navigation system was the European Trade. The rule laid down, with regard to that trade, was—that the ships of the other states of Europe were to be at liberty to bring, from any port in Europe, any article of European production, with the exception of certain articles, since known in trade by the name of 'enumerated articles.' They amount in number to twenty-eight, and include those commodities which, being of the most bulky nature, employ the greatest quantity of shipping. With respect to these 'enumerated articles,' the exception was this—that they should not be brought to our ports in any other than British ships, or ships of the country in which they were produced, proceeding directly from such country to this. This was the general state of the law, in respect to European commerce, from the time of its enactment, in the 12th Chas. II. down to a recent period. Its provisions, however, were more rigorous and exclusive towards Holland and the low countries. The regulations of that period were not framed merely for the preservation and encouragement of our own commerce, but also to weaken the powerful marine of Holland. Guided by this policy, our an-

cestors applied more severe measures towards the Dutch, than they thought necessary towards any other nation. In this spirit it was that they prohibited the importation, generally, of the productions of the other countries of Europe from Holland; instead of confining that prohibition to the twenty-eight enumerated articles.—The fourth object of our navigation system was to regulate our commerce with Asia, Africa, and America. The rule of law on this head was, that no article, the produce of either of those three quarters of the globe, should be allowed to be brought into an English port, except in a British ship.—The fifth and last part of the system of our navigation laws related to our colonies. The principle on which we acted towards those colonies was strictly to confine them, in all matters of trade, to an intercourse with the mother country. They were not allowed to dispose of any of their produce, otherwise than by sending it in British vessels to this country. They were equally restricted from receiving any articles necessary for their consumption, except from this country, and in British bottoms.—This, I apprehend, is a fair summary of the main points of encouragement to the shipping interest of Great Britain, and of repression of the shipping of other states, aimed at by our navigation laws, as those laws existed from the twelfth of Charles II. down to the year 1788. In mentioning this latter period, I advert to it now as the commencement of that mighty change in the state of the world, the foundation of which had been then laid in the progress, and unfortunate issue, of the American war. But, before I state what that change has been, so far as relates to navigation and commerce, I shall, perhaps, be permitted briefly to notice some of the circumstances which had prepared the way for this calamitous contest:—the result of which, as I shall shew presently, rendered the revision of our navigation system a matter no longer of choice but of necessity;—a result, which, in its consequences, in less than half a century, has dragged after it nearly the whole colonial system of the old world.—Sir, the war which began in the year 1756, commonly called the seven years' war, was, strictly speaking, so far as relates to this country and to the Bourbon Governments of France and Spain, a war for colonial privileges, colonial claims, and colonial ascendancy. In the course of that war, British skill and British valour placed in the hands of this country Quebec and the Havannah. By the capture of these fortresses, Great Britain became mistress of the colonial destinies of the western world. What use we made of our successes in that quarter, I will not now stop to inquire. But if the proceedings of the Government of this country, after the peace of 1763, be closely examined, we shall find, that many of the causes which, ten years afterwards, led to the unfortunate rupture with our colonies, now the United States of America, may be traced to our unseasonable attempts to enforce, in their most rigid and exclusive application, our colonial and navigation system. Every complaint, every petition, every remonstrance, against the oppressive tendency, and vexatious consequences, of that system, on the part of the inhabitants of New England,—every temperate effort made by them to obtain some slight relaxation of the trammels that shackled their disposition to engage in commercial ex-

terprize—were only met, on the part of the British Government, by a constant succession of new laws, enforcing still more restrictive regulations, framed in a spirit of still more vexatious interference. One instance of the character of that legislation will be sufficient; and I give it, as a slight specimen of the commercial jealousy which prevailed in our councils, in reference both to the colonies and to Ireland. A ship from our American possessions, laden with their produce, was stranded on the coast of Ireland. It will naturally be supposed, that the cargo was landed, and the ship repaired, in that country. No such thing. The law compelled the owners to send another English ship from England, for the purpose of bringing away the cargo:—a cargo which, not improbably, might then be wanted in the Irish market, and which was, perhaps, destined to be ultimately consumed there, after having been trans-shipped in a port of that country, landed in an English port, and again re-shipped to Ireland.—This is a sample of the real grievances under which our American colonies laboured. Such a state of law could not fail to engender great dissatisfaction, and much heart-burning. It is generally believed, that the attempt to tax our American colonies, without their consent, was the sole cause of the separation of those colonies from the mother country. But, if the whole history of the period between the year 1763 and the year 1773 be attentively examined, it will, I think, be abundantly evident, that, however the attempt at taxation may have contributed somewhat to hasten the explosion, the train had been long laid, in the severe and exasperating efforts of this country, to enforce, with inopportune and increasing vigour, the strictest and most annoying regulations of our colonial and navigation code. Every petty adventure in which the colonists embarked, was viewed, by the merchants of this country, and the board of trade of that day, as an encroachment on the commercial monopoly of Great Britain. The professional subtlety of lawyers, and the practical ingenuity of custom-house officers, were constantly at work, in ministering to the jealous but mistaken views of our sea-ports. Blind to the consequences elsewhere, they persevered in their attempts to put down the spirit of commercial enterprize in the people of New England, until those attempts roused a very different spirit;—that spirit which ventured to look for political independence from the issue of a successful rebellion. The result is well known. The country found itself engaged in a civil war. That war, in its progress, involved us in the greatest difficulty and embarrassment. It was terminated by submitting to humiliations such as, I trust to God, the Crown of Great Britain will never again be exposed to.—America was not the only part of our dominions in which we were called to pay the penalty of humiliation. Ireland, towards which we had acted in the same spirit of commercial jealousy as towards our American colonies, took advantage of our difficulties, and refused any longer to hold her industry and trade subject to our system of exclusion. To the parliament and volunteers of Ireland, we had also to capitulate. If the capitulation was mortifying to the pride of England, fortunately it neither compromised our honour, nor involved any concession beyond what was strictly a debt of

justice to Ireland. The benefits of our commercial and navigation system were extended to her. She was permitted to trade direct to the colonies, and placed rather upon the footing of a partner than that of a dependent, in the concerns of the British empire.—If I have gone into this detail, I have done so, because it appeared to me necessary, as bearing, in a peculiar manner, upon the question now before the house. The immediate lesson which I draw from it is this—that it is a part of political wisdom, when danger is foreseen, not supinely to wait for its approach, but, as far as possible, to take timely measures for its prevention.—The peace with America gave the first great blow to the navigation system of this country. There had now arisen an independent state in the new world. Our colonies had fought for, and had taken, a station in the rank of nations. They had now interests in navigation to attend to, and a commerce of their own to protect. It therefore became imperative on this country, unless we were prepared to relinquish all trade with America, to conform to circumstances. It was impossible for us, in this new state of things, to enforce the system of our navigation laws, which, until then, we had so rigidly insisted upon. That part of the system which provided, that none of the productions of Asia, Africa, or America, should be imported into England, except in British vessels, could no longer be adhered to.—After the peace of 1783, and before the general congress of America had established that system of government, under which the people of the United States now live—a work which was not completed until the year 1787—each of the different States, then composing the union, was at liberty to act independently of the others, in matters relating to its trade with foreign countries. Accordingly, almost every state established a different rule of commercial intercourse with this country. The general character, however, of their legislation was conceived in a spirit of peculiar hostility (not unnatural, perhaps, so soon after the exasperation excited by civil discord) against trade with Great Britain. In some of those states, indeed, British merchants were prohibited from trading with them altogether; in others, heavier duties were specifically imposed upon British merchandize; and in all, a desire was manifested to give a decided preference to the goods of other countries. This state of things continued until the year 1787, when the general congress met, and one uniform system of commercial policy was laid down. By that system, a heavy blow was aimed at the navigation system of this country. It was resolved, that all foreign ships, trading to America, should pay half a dollar—which was afterwards raised to a dollar—per ton duty, beyond what was paid by national ships. And further, that goods imported in foreign vessels should pay a duty of ten per cent. over and above what was demandable on the same description of goods imported in American vessels. This system—in the adoption of which, the Americans had, in a considerable degree, followed the example of their English ancestors—was likely to become seriously prejudicial to the commerce and navigation of this country. The proper authorities, therefore, set about considering what was to be done in order to counteract it. The Board of Trade had recourse,

for advice, to the most eminent merchants and practical men; and various projects were started on the occasion. One plan proposed to give a bounty on all goods exported to America in British ships. Another, to impose a duty on all articles carried out of this country in American ships. A third, to retaliate upon the Americans, and, following their example, to lay a specific duty on American ships, and on goods imported in those ships. These and various other plans, having the same object in view, on being sifted and examined, were found to be open to insuperable objections. It was shewn that, without attaining their object, they would prove injurious to the commerce and manufactures of this country; and all of them were, in consequence, abandoned. After this inquiry, and a long struggle to counteract the navigation system of America, without in any degree relaxing our own, this country found it necessary to adopt the system of reciprocity, on which, since the year 1815, the commercial intercourse between the two countries has been placed; namely, equality of all charges upon the ships belonging to either country in the ports of the other, and a like equality of duty upon all articles the production of the one country, imported into the other, whether such importation be made in the ships of the one or the other. In the practical consequences of this arrangement, our adherence to another part of our Navigation Laws, instead of serving, appears to me to have shackled the shipping interest of this country. Our law still provides that goods, the produce of Asia, Africa, or America, shall not be imported in foreign ships, unless they be the ships of the country of which the goods are the produce. The Americans retaliate this restriction by applying it to all goods the produce of Europe. An American ship trading to this country has, in consequence, a great advantage over a British ship trading to America. The American vessel, on her voyage to England, is freighted with a cargo wholly produced in the United States. She has nothing else to bring here. For her return to America she may load in the ports of this country with a cargo, partly the produce or manufacture of Great Britain, and partly of any other country. The British ship is debarred from this advantage. Her cargo, when trading to the United States, must be exclusively of British origin. For instance, an American vessel, at the port of Liverpool, may take nine-tenths of her cargo, in articles the produce of Lancashire, and the remainder may be made up of brandies, wines, or the produce of any other part of the world, to be procured at Liverpool. But, if an English ship, proceeding to the United States, were to take a single cask of brandy, or a single pipe of wine, she would be liable to seizure and forfeiture. Is it not, therefore, fairly to be presumed, that a further relaxation of our system, to the extent of allowing the importation, from the United States, of goods, the produce of any part of the world, in American shipping, on condition of the like privilege being granted to British ships in the ports of the United States,—however departing from the policy of our ancestors,—would be rather an advantage than an injury to the shipping interest?—Shortly after the commercial legislation of the United States had assumed, in 1787, a regular shape, and an uniform character, the war of the French

Revolution broke out; a war which lasted nearly a quarter of a century. The course of this war was marked by so many strange and anomalous circumstances, both by land and upon the ocean;—so large a portion of the continent of Europe, including nearly all its trading and maritime communities, became subjected to the despotism of one great military power;—that despotism was exerted in so extraordinary a manner to crush maritime commerce, that it would be vain to enter upon the history of our navigation system, or that of other countries, during this long contest. It is, however, certain that the commerce of the United States of America, which were the only, at least almost the only, neutral power that could trade in safety, was greatly benefited by the war. It is equally true, that Great Britain, being well able to protect her commercial marine, in consequence of her vast naval superiority, did extend that commercial marine, in spite of all difficulties, whilst that of the other countries of Europe was greatly reduced. It is unnecessary for me, as the facts are so well known, to dwell further on the circumstances of that war. We may, therefore, as far as relates to the present question, pass over the period between 1792 and 1815. At the latter period, peace being restored, and with it, the independence of the States which had been incorporated with France, the commerce of the world began to revert to its ancient channels. The nations of Europe, whose flags had, for so long a series of years, disappeared from the ocean, were now naturally anxious that their own trade should be carried on in their own ships. This gave a check to the shipping of the United States, which was also felt by the shipping of this country: perhaps in a greater degree by our own shipping, in consequence of the restitution of several extensive and valuable colonies, which we had captured and held during the war. Besides this material circumstance, there were others, to which I will briefly advert, which had a natural and inevitable tendency to interfere with, and diminish, the employment for shipping in this country. The first to which I shall allude is the abolition of the slave trade. They who are old enough to remember,—and I am one of the number,—the early debates which took place on this subject, will recollect, that the arguments in opposition to the measure were grounded chiefly on the danger from which it threatened the shipping interests of the country. The necessity of kidnapping cargoes of slaves on the coast of Africa was, at that time, as coolly defended, on the score of encouragement to our marine, as the taking of cod-fish on the banks of Newfoundland could be at the present day. That traffic was, however, abolished in 1806; and, happy I am, that the interests of humanity, and the honour of the English name, were from that year, no longer sacrificed to the plea of the shipping interest: though I may, I think, fairly adduce the abolition of the slave trade as having taken away one source of employment.—After the general pacification of Europe, but before we dismantled our fleet, we insisted on the powers of Barbary desisting from the practices of maritime warfare, carried on by cruisers under their flags, in the Mediterranean. These corsairs were constantly taking prisoners, either for the sake of ransom, or for the purpose of carrying them into slavery. Whilst this system was in

olated, scarcely any trading vessels, those of Great Britain excepted, could navigate that sea in safety. In this state of things, it was highly honourable to this country to have used her naval power, the dread of which had constantly ensured respect for her own flag,—for the purpose of procuring an equal degree of security for the navigation of all Christian states. This was no positive duty which we were bound to perform. We were not called upon by any international engagement, nor by any moral obligation, as in the case of the slave trade. The act was one of spontaneous generosity. But, however high-minded in principle, it is not the less true that the result of our interference was injurious to the shipping interest of this country, in the Mediterranean. Since the bombardment of Algiers, the flag of every petty state, bordering on that sea, floats in equal security with our own. I am not accurately informed what was the quantity of British shipping employed in the carrying and coasting trade of those states before this change, but I have heard it stated, in this house, by one likely to be well informed,—the late Mr. Marryat,—that from eight to ten thousand British seamen, and from seven to eight hundred British vessels, were engaged in that commerce. Consequently, to that extent has the employment for British ships been diminished in the Mediterranean. But these were not the only circumstances, at the close of the late war, which had a tendency to reduce the amount of our shipping. With the termination of hostilities, there was necessarily a diminished demand for ships in the public service. The greatest proportion of those which had been taken up as hired transports was discharged. I have obtained a statement of their number and tonnage, as they stood at the termination of the war—and of the number and tonnage of those employed at the present period. The diminution is not less than 1226 vessels, amounting to 270,382 tons. In the next place, we had to sell out of the King's service a number of vessels, which were no longer wanted in the navy. I do not advert to ships of the line, or to frigates of a large class, which are always sold, subject to the condition, that they shall be broken up. Of this latter description of ships I take no notice; but confine my statement to vessels of smaller burthen, adapted to other purposes than those of war, and which are consequently not required so to be broken up. Of this class, there has been sold no less a number than 333, the amount of their tonnage being 93,530 tons. So that, if we add to the number of transports discharged the number of ships sold, we shall find that his Majesty's Government have set free, to compete with the commercial marine of the country, 1559 vessels, amounting in tonnage to 363,912 tons; a quantity nearly equal to one-fourth of the whole shipping of the country as it stood in the year 1793, at the commencement of the late war. But this is not all. If the difference of circumstances under which trade is carried on, in time of peace and in time of war, be taken into consideration, we shall find that, in the former period, a much smaller number of vessels is required for the same extent of transactions, than in the latter. In time of peace, the moment a ship has landed her cargo, she is at liberty to sail again, and is dispatched on another voyage as soon as possible. During the last

war, we were obliged, in almost all cases, to place our merchant ships under the protection of convoy; and, in spite of all the exertions of the admiralty, it was frequently difficult to provide convoys, as expeditiously as the interests of commerce would have required. Four or five hundred merchantmen were sometimes collected together at one point, before the required protection could be afforded them. And when, at length, these large bodies of shipping did proceed to sea, they were under the necessity of keeping together; so that the rate of sailing, during a whole voyage, was necessarily to be regulated by the progress of the slowest sailing vessel. In time of peace it is otherwise. Ships can then traverse the ocean singly, without fear of interruption; and in their passage from one port to another, as well as in loading and unloading, every exertion is used to ensure dispatch. An instance occurred lately, at Liverpool, of a large West Indiaman arriving from Barbadoes, landing her cargo, and sailing again for that island, in the course of one week. The multiplication and convenience of docks have also greatly contributed to obviate delay in the discharge and loading of vessels. Upon the whole, I shall not be overstating the proportion when I say that two-thirds of the number of vessels, necessary in time of war, are fully sufficient for all the purposes of the same extent of commerce, in time of peace.—There is yet another circumstance to which, before I quit this part of the subject, I must refer. I mean the alteration made in the year 1815, in the foreign corn trade of the country. During the war, this trade afforded regular employment to no inconsiderable quantity of shipping, but since the law has been altered, and the ports have been generally shut against the importation of foreign corn, that employment has ceased. In a desultory intercourse, like that which alone can exist under the present law, the opening of the ports being sudden, and, in most cases, uncertain, till the quarterly average is declared, it is almost impossible that the trade, when permitted, should not fall into the hands of the foreign ship-owner. The period for which the ports may continue open being limited to a few weeks, the persons who wish to take advantage of that opening, instead of fitting out ships in our ports, send their orders to the continent, with directions to forward the corn by any vessels that can be procured on the spot. Hence the almost exclusive employment of foreign shipping in this occasional trade.—I must now crave the indulgence of the house while I shew what was the situation of this country, with regard to its shipping previous to the last war. In 1792, one of the most prosperous years which the country has ever known,—the year immediately preceding the breaking out of that war, in which we were called upon to make such immense efforts to maintain our naval superiority—the number of registered ships in the several ports of the British empire was 16,079; the amount of their tonnage 1,540,145 tons. In the present year, that is to say, in the year ended the 31st of Dec. 1825, the number of registered ships was 24,174; and the amount of their tonnage 2,542,216 tons; shewing an increase of one-third in the number of ships, and of two-fifths in the tonnage, within that period. Having stated the number and tonnage of our registered vessels at the commencement of the late war, I will now shew

what they were at its close. In 1815, the number was 24,860, and the amount of their tonnage 2,681,726 tons. It appears, therefore, that there has been, since the conclusion of the war, a decrease in our shipping of 686 vessels, and 139,060 tons; but I have, I think, shewn satisfactorily that, upon the return of peace in 1815, our commercial marine was greatly in excess of what was requisite, in the then altered situation of the country. As connected with this part of our inquiry, it is material to ascertain the number of vessels that have been built in the British dominions, since the termination of the late war, and to compare it with the number built in former periods. It is with much satisfaction that I find myself enabled to assure the house that, taking the last thirty-seven years, the number of ships annually built in Great Britain, instead of decreasing, has increased. The documents which prove the correctness of this statement are already upon the table of the house, with the exception of those for the year 1812, which, in consequence of the calamitous fire at the Custom-House in that year could not be procured. From the returns which I hold in my hand, I find that the number of ships built, last year, in the several ports of the British dominions, exceeded the number built in any one year of the whole period to which I have referred. In the year 1814, when the war with France first terminated, the number of ships built was 818; the amount of their tonnage 95,976 tons. Last year the number of ships built was 1312; the amount of their tonnage 171,827 tons. So that in fact the tonnage of the ships built last year was little short of double the tonnage of those built in the year 1814, and exceeded considerably that of any year upon record. These details, however dry in themselves, appear to me to involve the elements of the whole question, and to afford the best criterion by which a judgment can be formed, how far the complaints which represent our shipping to have been in a state of rapid decline, are well founded. The only other comparison, growing out of the documents which I hold in my hand, is that of the number of ships which have entered inwards, and cleared outwards, to and from the ports of Great Britain, in the several years since the alterations which are objected to in our Navigation Laws. I have provided myself with a return exhibiting this comparison, from the year 1814 down to the last year; and I entreat the house to bear in mind that the complaint, in the petition on the table, is that in consequence of the alteration made in the Navigation Laws within the last three or four years, the employment of British shipping has decreased, and that of foreign vessels trading with this country has increased. I will confine the comparison to the returns of vessels, British and foreign, entering inwards; and for this reason—that it is not necessary for ships, leaving our ports in ballast, to clear out at all, and therefore the returns exhibiting the number of vessels cleared outwards must be very imperfect. I find that, in the year ended the 25th of Dec. 1824, the number of British vessels that entered inwards was 19,164, and the amount of their tonnage 2,364,249 tons. The number of foreign vessels that entered inwards, during the same year, was 5280, the amount of their tonnage being 694,880 tons. In the year ended the 25th of

Dec. 1825,—a year in which the modifications made in our Navigation Laws were in full operation,—the number of British vessels that entered inwards was 21,786; the amount of their tonnage 2,786,844 tons. The number of foreign vessels that entered inwards in that year had increased to 6561, and the amount of their tonnage to 892,601 tons. The year 1825 was, it is well known, a year of unexampled speculation in every branch of commerce, creating an unusual demand for shipping, not only in the ports of this country, but throughout Europe. And what, as regards British shipping, was the result? Why, that the positive increase of British vessels entered inwards, as compared with the year 1824, was 2622; and of tonnage 422,595 tons; while the increase of foreign vessels entered inwards, during the same year, was in number 1281; and in tonnage 197,721 tons. This at least is no unsatisfactory result. The increased employment of British shipping alone in that year exceeds the aggregate increase of employment to the shipping of all other nations of the world. But as the attention of the house has been specially referred, by the petitioners, to the state of the trade between this country and the northern parts of Europe, and more especially to the trade with Prussia, I must beg leave to enter rather more specifically into that part of their case. I am happy to be able to state, upon the authority of documents which will be laid on the table of the house that by a comparison between the British and Prussian shipping engaged in the trade between the two countries during the years 1824 and 1825, the increase of British was much greater than that of Prussian shipping in the latter year. The number of British ships trading to the ports of Prussia in the year 1824, was 470; in the year 1825, 942; being more than double the number of the preceding year. The number of Prussian ships which came to this country, in the year 1824, was 682; in 1825, the number was 887; being an increase of about one-fourth.—Such, sir, if any inference is to be deduced from the trade between Prussia and Great Britain for the last year, is the comparative growth of British and Prussian navigation. I am aware that the danger of losing our carrying trade, from the ports of the Baltic, has been the main source of the jealousy felt by the shipping interest, and of their complaints to this house. The comparison between British and Prussian shipping for the two or three last years, and especially that of the year 1825, has certainly not borne out their predictions, or justified their alarms. But it would be uncandid to deny, that we have not yet sufficient experience to warrant a positive conclusion that, prospectively, the shipping of the Prussian ports may not gain ground in the competition with our own. I am the more induced to make this remark, as, from the excessive excitement and over-trading of the last year, I am ready to acknowledge that, taken by itself, it cannot be considered as affording an estimate for the future: neither, on the other hand, perhaps, will it be fair, in 1827, to form such an estimate from the experience of the present year, which, it is as much to be feared, as a natural consequence of late excess, will be one of severe depression in the trade of this country.—Having adverted to the apprehensions which are entertained respecting our

trade with the ports of the Baltic, I have naturally been most anxious to sift to the bottom this important part of our inquiry. I know no mode so satisfactory of ascertaining what have been the fluctuations in the trade, either as respects our own share of it, at different periods, or the proportion which that share bears to the trade of other powers with the ports of the Baltic, as a reference to the annual returns of the vessels, of all nations, which have passed the Sound in a given number of years. Fortunately, the state paper office has furnished me with these returns. This account I hold in my hand, from the year 1783 to the year 1792, with the exception of the year 1789; the returns for which year have been either lost or mislaid. I also hold in my hand a similar account, from the year 1816 to the year 1825, both inclusive. The comparison of these two periods, each of ten years (both periods of peace), appears to me to afford a fair illustration of this branch of trade. I am happy to say that the result will be found highly satisfactory; for it will be seen that the number of British ships which passed the Sound in the year 1825, was not only positively greater than it was in any one of the twenty years to which I have referred, but that its proportion, with respect to the number of vessels from all other nations, was equally favourable to this country. It would be going into an unnecessary detail to give the numbers for every year of the twenty. I shall, therefore, confine myself to the five last years. The total number of ships which passed the Sound was:—

|                        | Ships of all<br>British ships. other nations. |      |
|------------------------|-----------------------------------------------|------|
| In the year 1821 . . . | 2819 . . .                                    | 6358 |
| Do. 1822 . . .         | 3097 . . .                                    | 5386 |
| Do. 1823 . . .         | 3016 . . .                                    | 6187 |
| Do. 1824 . . .         | 3540 . . .                                    | 6978 |
| Do. 1825 . . .         | 5156 . . .                                    | 7974 |

So that, looking at the proportion which Great Britain has been able to retain of the trade of the Baltic, it appears that, last year, when the total number of vessels which passed the Sound exceeded that of any former year, British shipping engrossed considerably more than one-third of the whole navigation of that sea, and had increased very nearly two-fifths, compared with the average of the four preceding years. The papers to which I have referred I propose to move for, so that the house will be able to judge from them of the correctness of my statement. In consequence of the restoration of peace, the demand for shipping, as I have already remarked, was much diminished, and the rates of freight were considerably lowered after the year 1815. This gave rise to great complaints on the part of the shipping interest. In the hope of finding some remedy for their difficulties, the house, in the year 1820, appointed a select committee to inquire into the state of our foreign commerce. My rt. hon. friend, the Master of the Mint, now absent, I am sorry to say, from indisposition, presided over the labours of that committee, and prosecuted the inquiry, in several succeeding sessions, with a degree of zeal, diligence and ability, for which the country is greatly indebted to my rt. hon. friend. One change recommended by that committee, in the navigation laws, was to the following effect:—that whereas certain goods, which I have already described as known in trade under the designation of "enumerated

articles," could only be imported in British ships, or in ships of the country in Europe of which they were the produce, and directly from that country, it was the opinion of the committee that the law ought to be so far relaxed, as to allow the importation of these articles in the ships of any country into which they had been previously imported. The recommendation of the committee was adopted by the legislature. That this relaxation has been beneficial to our commerce and navigation is now, I believe, placed beyond all doubt. It afforded a great facility to the execution of another project emanating from the same committee, and since also carried into effect;—that of establishing a general system of warehousing, so as to make this country a place of *entrepôt* for all foreign commodities. It was obviously impossible to give full scope to this system, unless we were prepared to allow greater latitude to the admission of foreign goods. The superior capital and credit of this country afford inducements to send those goods here, and their being deposited in British warehouses gives a facility to the British merchant and ship-owner to supply the demand for them in other parts of the world, through the medium of British adventure and British shipping, instead of their being sent directly to those parts in foreign shipping, from the countries of Europe in which such goods are produced. It was desirable, therefore, for the interest of our foreign trade, that we should no longer rigidly adhere to that part of the navigation act which prohibited the importation of the "enumerated articles," if brought from countries other than those of which they were the produce. Such a restraint, it is hardly necessary to say, could not fail frequently to prevent speculations of trade, in which the spirit of British enterprise would have otherwise engaged, or to throw those speculations into other channels. It interfered, likewise, to prevent the advantageous assortment of cargoes, and other commercial arrangements, as well in foreign ports as in the ports of this country; and, in this and many other ways, contributed, directly and indirectly, to diminish the employment for British shipping.—Another alteration in our navigation system has since been adopted, which certainly ought not to have been so long delayed. This alteration consists in putting the trade between Great Britain and Ireland upon the footing of a coasting trade. Every gentleman must, I think, see that from the time at least of the union of the two countries, it was desirable that their interests and commercial system should be identified as much as possible. From that period it was absurd to consider the commercial intercourse with Ireland as a part of our foreign trade, and to subject the shipping employed in it to the restrictive regulations and higher charges of that trade. But these were not the only deviations from the ancient rules of our navigation system. The revolutions which have occurred in the political state of the world, in our time, rendered other changes indispensable. There has grown up over the whole continent of America, a situation of affairs similar to that which the United States presented, after their separation from the mother country. This change, from a colonial to an independent existence, necessarily draws after it, in each particular case, the application of the new rule, which, as I have already stated, unavoidably grew out of the independence of

the United States. The first application of that rule occurred in respect to Brazil. From the moment when, in 1808, the house of Braganza transferred the seat of empire to Brazil, that country virtually ceased to be a colony. Great Britain had no choice but to apply the European principles to the commerce and navigation of Brazil, though out of Europe, and to admit Portuguese shipping,—and, since the separation of Portugal and Brazil, Brazilian shipping,—coming from that country into our ports, upon the same footing as the ships of any other independent nation. This principle has been extended, from time to time, as new states have risen up in America. When I heard the hon. member (Mr. Robertson) complain that, in our treaty of commerce and navigation with Colombia, and in that with Buenos Ayres, we had consented to place their navigation upon an equality with our own, I certainly listened to this charge with no small degree of surprise, being satisfied that what the hon. gent. censured so severely, was the very wisest principle that this country could adopt. Those states were anxious to encourage their commercial marine, by granting exclusive advantages to their own shipping, and imposing certain restrictions upon that of this country. This disposition was frequently manifested by the ministers of those states in the course of our discussions with them; and certainly there are not wanting some who are constantly endeavouring to excite in these new countries a jealousy of the naval power of Great Britain; instigating them to adopt a separate and novel code of maritime law for the new world, and to frame their navigation system upon principles of giving a preference to their own shipping, and to that of America generally, over the shipping of this country, and of Europe. Have we acquiesced in these views? Have we compromised any of the acknowledged principles of maritime law? No, sir—whilst we have explicitly refused to listen to any such compromise, we have disarmed all suspicion as to our commercial pretensions, by frankly declaring, that we sought no exclusive advantages for British ships or British trade, and that the principle of our intercourse with the new states, as with the old states of the world, would be that of a fair and equal reciprocity. This brings me to the *gravamen* of the charge made against his Majesty's Government; namely, the step taken by them, in furtherance of this principle, by the introduction of a law, enabling the Crown, with the advice of the Privy Council, to remit all discriminating duties on the goods and shipping of such countries, as may agree to impose no higher charges or duties upon British ships, and the goods imported therein, than upon their own ships, and the like goods imported in such ships. If the system of discriminating duties for the encouragement of shipping were a secret known to this country alone; if a similar system were not, or could not be, put in force in every other country, I should not be standing here to vindicate the measure to which I have just referred, and the present policy of his Majesty's Government. So long as, in fact, no independent trading community existed out of Europe, and so long as the old Governments of Europe looked upon these matters,—if they looked to them at all,—as little deserving their attention, and were content, either from ignorance or indifference, not to thwart our system,

it would have been wrong to disturb any part of it. But is this the present state of the world? Did not the United States of America, in the first instance, for the purpose of raising to themselves a great commercial marine, and of counteracting our navigation laws, adopt, in their utmost rigour, the rules of those laws, and carry even further than we had ever done in respect to foreign ships, this principle of discriminating duties against our shipping? Can we shut our eyes to the fact that other nations have followed, or are following, their example? Do we not see them, one after the other, taking a leaf out of our own book? Is not every Government in Europe, if possessed of sea-ports, now using its utmost endeavours to force a trade, and to raise up for itself a commercial marine? Have we not boasted of our navigation laws, till we have taught other nations to believe (however erroneous that belief), that they are almost the only requisite, or, at least, the *sine quâ non*, of commercial wealth and of maritime power? Did these vauntings excite no envy, no spirit of rivalry, no countervailing opposition in other countries? Did the success of the United States of America create no desire in those countries to follow her example?—It would be worse than idle, it would be dangerous, to dissemble to ourselves the great changes which have been wrought, since the establishment of American independence, in the views and sentiments of Europe, upon all matters connected with commerce and navigation. They now occupy a leading share in the attention of almost every Government. They are every where a subject of general inquiry and interest. Even in countries, of which the institutions are least favourable to the discussion of political topics, these questions are freely discussed, and by discussion, the influence of public opinion is made to bear upon the measures and policy of their Governments. In this altered state of the world, it became our duty seriously to inquire, whether a system of commercial hostility, of which the ultimate tendency is mutual prohibition,—whether a system of high discriminating duties upon foreign ships, with the moral certainty of seeing those duties fully retaliated upon our own shipping, in the ports of foreign countries,—was a contest in which England was likely to gain, and out of which, if persevered in, she was likely to come with dignity or advantage? I will lay aside, for the moment, every consideration of a higher nature, moral or political, which would naturally lead us to look with some repugnance to the engaging in such a contest. I will equally lay aside all consideration for the interest of our manufacturers, and for the general well-being of our population, who, as consumers, would obviously have to pay for this system of custom-house warfare, and reciprocal restriction; and I will view the question solely in reference to the shipping interest. In this comparatively narrow, but I admit, not unimportant, view of the question, I have no difficulty in stating my conviction,—a conviction at which I have arrived after much anxious consideration,—that, in the long run, this war of discriminating duties, if persevered in on both sides, must operate most to the injury of the country which, at the time of entering upon it, possesses the greatest commercial marine. How can it be otherwise? What are these discriminating duties, but a tax upon commerce and naviga-

tion? Will not the heaviest share of that tax fall, therefore, upon those who have the greatest amount of shipping and of trade? Before we embark in such a contest, we owe it to the character of the country, as well as to its interests, to satisfy ourselves,—first, that it is necessary for its welfare; and, secondly, that once committed to the trial with all the commercial powers of Europe, the country would have the firmness and fortitude necessary to go through with it. Do not let gentlemen too hastily decide this last point in the affirmative. Let them call to their recollection the famous orders in council;—let them, above all, bear in mind, that we have yet had but one trial of this discriminating warfare,—the trial with the United States of America,—and that we came out of that trial, after several years' perseverance, by conceding the very object, for the maintenance of which it had been carried on. Would it be politic or dignified to engage in a like struggle in Europe, with the risk of arriving at the same result? In commerce, in navigation, in naval power, and maritime pretensions, the United States are our most formidable rival; and we are now arraigned for not withholding from Prussia and Denmark, what parliament and the country, ten years ago, concurred in yielding to America!—Under what circumstances did England found her navigation system? When her commercial marine was comparatively insignificant, her wealth inconsiderable, before manufactures were established, and when she exported corn, wool, and other raw materials;—when, on the other hand, Holland and the Netherlands were rich, possessed of great manufactures, and of the largest portion of the carrying trade of Europe and the world. What has followed? The commercial marine of the latter countries has dwindled away, and that of Great Britain is now immense. But, in the progress of the change, England is become the great seat of manufactures and trading wealth, frequently importing, and never exporting, corn; drawing raw materials from, and sending out manufactured goods to, all parts of the world. This was our state, though in a far less degree than at present, when America became independent. She started by applying towards us the system, which we had applied towards Holland. She was then poor, with a very small commercial marine, without manufactures, having corn and raw materials to export;—and we know what her shipping now is. Let gentlemen reflect on these circumstances before they decide that it is necessarily wise to enter upon a similar contest with other poor and unmanufacturing countries. Let them seriously consider, whether a system of discriminating duties,—now that the exclusive *patent* by which we held that system is expired,—is not the expedient of such a country as I have described, rather than the resource of one which already possesses the largest commercial marine in the world. They will then see, that it may possibly be a wise policy to divert such countries from that system, rather than to goad them on, or even leave them a pretext for going into it. Let us for a moment, however, suppose that, at all hazards, we have embarked in this warfare of counter-acting duties. They who recommend this policy have no right to assume that, in the progress of the struggle, the discriminating duties imposed in the foreign country (Prussia, for ex-

ample) on British shipping, will not be, at least, equivalent to the like duties levied in England on Prussian shipping. The United States did not content themselves with equivalency,—they went more boldly to work;—so might any European power. If equivalent duties be established on both sides, how will they operate? It is clear that the shipping of each country will stand in the same relative situation to that of the other, as if no such duties had been imposed; the duties, therefore, in both countries will be a tax, and a very objectionable one, upon the interchange of their respective productions. But, as those productions are different, these duties will affect differently the industry of the contending parties. Our principal exports to the north of Europe are manufactured goods and colonial produce; our imports—timber, hemp, flax, pitch, tar, (occasionally corn,) and other raw materials. The former must be sold dearer in the foreign country, the latter in this country,—by all the amount of the tax. What is this in the foreign country, but a premium against our manufacturers, in favour of the rival manufactures of other states, or of the importing state itself;—and in this country, but a tax upon raw materials requisite for carrying on our own manufactures? A ship, for instance, is a manufactured article, and, to encourage our shipping, here is an additional tax upon the raw materials of that manufacture! Our cotton goods, our woollen stuffs, barely maintain a competition with those of other countries, and here is an additional tax on their importation into those countries, to turn the scale against us! Our West India planters complain of the low prices of their productions, and we provoke an additional tax, which tends to shut them altogether out of the foreign market! If the end of this warfare should be, as, pushed to the extreme, it might be, that each country should export its own productions in its own ships, and no country import the productions of another in the ships of that other, which would be the greatest loser, the country manufacturing, or the country producing the raw materials? I will not even glance at the effect of all this strife upon the consumers, that is, upon the bulk of the population; because I know that, in certain quarters, I shall be taxed with theory, if I stand up for the general interest of the community, against the pretensions of a particular class, when the interest of that class is supposed to be at stake. Indeed, I have no doubt I shall be told by some practical men, that all this is theory, to which they have a short answer. That answer is, 'We do not want any thing from the Baltic. We have plenty of timber, &c. in Canada, all of which would be brought home in British shipping; and, therefore, the powers of the Baltic must submit to our discriminating duties, without retaliation, or be content to lose our trade.' I really know not how to reason with such logicians. I believe the Baltic can do to the full as well without us, as we can do without the Baltic. We import quite as much timber from Canada as can be used, for the purposes for which that timber is fit. For other, and more important purposes, we want timber of better and more durable qualities. Looking to the shipping interests of this country, and to the interests of Canada, I am not one of those who think we have done too much for those interests, in the great preference, in point of duty,

which we have given to the Canada timber, and in the consequent sacrifices which we make to encourage the importation of that timber, inferior as it is; but I must say, at the same time, that the great annual increase of the importation from our North American possessions, under the present duty, shews that the proportion, which it bears to the Baltic duty, has not been settled to the disadvantage of the shipping employed in the Canada trade. Were it necessary, however, to make an option between a contest of discriminating duties with Prussia in the timber trade, or a further reduction of the duty on Canada timber, for the greater encouragement of our shipping, I certainly should prefer the latter measure, as the least injurious of the two to all the other interests of this country. For the reasons which I have now stated, his Majesty's government have thought it more prudent and more dignified to enter into amicable arrangements with other powers, founded on the basis of mutual interest, and entire reciprocity of advantages, rather than embark in a contest of commercial hostility and reciprocal exclusion:—a system, at best, of doubtful benefit to the shipping interest; involving the certainty of great injury to all the other important interests of the country, and which would, at last, place Parliament and the Government in the painful alternative, either of turning a deaf ear to the complaints of the many who would suffer from the contest,—or of terminating it, as other contests of a like nature have been terminated, by concession, bringing with it not only immediate humiliation, but other consequences, which do not end with the concession itself. But it is asserted, that we should not have been compelled to make our choice between these alternatives. Whilst I entreat the house to bear in mind the circumstances which I have already stated, in respect to the general feeling which prevails in the maritime countries of Europe and in America, I must now call their attention to the steps which had been actually taken by Prussia, (the first power, after the United States, with which we entered into a treaty upon this subject) before the negotiation of that treaty was entertained by his Majesty's Government. I hold, sir, in my hand a report made on the 6th of August, 1822, by the British consul at Dantzic, also reports of the vice-consuls at Königsberg and Memel, to the Secretary of State for Foreign Affairs. I will not trouble the house with reading the whole of these despatches, but I request their particular attention to the following extracts:—

*Extract of a Despatch from Mr. Consul Gibson, dated Dantzic, the 6th August, 1822.*

'My Lord.—I do myself the honour to transmit to your lordship, a translation of the Order of Cabinet (which I have only now been able to procure) respecting an increase of the government port-charges in the Prussian ports, on vessels belonging to countries between which and Prussia no reciprocity has been fixed by treaty, or which do not otherwise treat Prussian ships and their cargoes as advantageously as their own. Prussia has made arrangements with Holland, Denmark, and America, for establishing a reciprocity in this respect, and the present regulation has evidently for object to induce other countries, particularly Britain, to enter into a similar arrangement. At present,

Prussian, Dutch, Danish, and American ships pay, as public port charges here, about 46½ common groshes, or about 17½d. sterling, per last of 4000 lbs. (about 4140 lbs. English), or about 1½ tons British measurement; while British and other vessels pay about 77½ common groshes, or about 29½d. sterling per last, making 8½d. sterling per ton measurement more. The advance that is to take place will make, as it will be payable in gold at a losing valuation, viz.

|                                                                | Sterling, per<br>Ton measurement. |
|----------------------------------------------------------------|-----------------------------------|
| On ships coming in with a full cargo of goods, about - - - - - | 58d.                              |
| Do. with a quarter of a cargo or less - - -                    | 29d.                              |
| Do. going out with a full cargo - - - -                        | 29d.                              |
| Do. with a quarter of a cargo or less - - -                    | 14½d.                             |

Thus vessels arriving even in ballast, and taking a cargo back, will in future be burthened with about 37½d. sterling per ton measurement more government port-charges than Prussian ships; which, however, is not quite so great an advantage to the latter as British vessels have over Prussian vessels in Britain, by paying lower port charges, light money, &c. and less duty on the cargo, if of timber for instance, which gives the chief employment to Prussian ships. The Prussian government make this new port-charge regulation professedly from the interest created by the situation of their ship-owners, who are indeed all going to ruin.'

*Cabinet Order of the 20th June, 1822, for the Encouragement of Home Shipping.*

'In consideration of the unfavourable state of the shipping of this country for several years past, and in consequence of the representations made to me, founded on divers consultations, that the unfavourable state of things operates the more injuriously on the said trade, as the principles always observed here, of imposing moderate burthens on foreign ships frequenting Prussian ports, and of levying the same duties on goods imported or exported, whether in foreign or in native ships, are not adopted in several foreign ports frequented by Prussian ships; I have resolved, so long as these relations subsist—so detrimental to the maintenance of this important branch of domestic trade—to grant the said trade greater advantages than it has hitherto enjoyed; I, therefore, do ordain,

'First:—That the coasting trade from one Prussian port to another shall be considered, exclusively, a branch of domestic trade, and shall be carried on solely by Prussian vessels, under pain of ship and property being confiscated, upon any foreign ship-master being detected in it. Exceptions can only be allowed in very urgent cases, and only for the public good, by the provincial authorities.

'Secondly:—An increase of the hitherto existing harbour dues shall take place in all Prussian ports, on foreign ships with cargoes, in-coming or out-going, but the same shall not be applicable to the ships of those nations—

'a. With which Prussia has treaties, placing her ships and their cargoes on an equal footing with the native ships, or with those of the most favoured nations, in conformity with the stipulations therein made.

\* 5. Which from other causes treat Prussian ships with their cargoes, the same as native vessels with theirs.

\* With this restriction shall the increase take place, according to the following rates:

\* a. On in-coming ships... R. 2 per last of 4000 lbs.

\* 5. On out-going do. .... I do. do.

\* c. On ships that have only one-fourth of a cargo, or less, one-half of the above,

\* Say, in-coming ... 1

—out-going ... 0½

—Ships in ballast are not subject to the increased imposts.—The proceeds of this impost shall not be considered as an additional source of revenue to the state, but shall be applied for the benefit of the ship-owners, accordingly as you, the Minister of Commerce, shall propose to me.

\* *Thirdly*:—In order to present as far as is in the power of the state, a real source of profit to the ship-owners, the conveyance of such goods as may be for account of the Government shall be effected, in preference, by native ships, regarding which I refer to my particular order of this day.

\* The first and third of the foregoing enactments shall be put in force immediately; but the second point only in three months after publication of this Order, which is to be made through the Collection of Laws, and according to which the needful is to be decreed.

(Signed) \* FREDERICK WILHELM.

*Extract of a Despatch from Vice-Consul Tuke, dated Königsberg, 22d August, 1822.*

\* Sir,—I beg leave to draw the attention of your Excellency to several new laws and regulations of the Prussian government, which are highly detrimental to the British trade, and respecting which numerous complaints have been made to me by the merchants and ship-masters interested in the trade between this country and Great Britain.—By the last tariff, a duty of one guilder per hundred-weight is imposed on all flax, hemp, and tow, shipped in foreign vessels. This is probably intended as a measure of retaliation for the difference of import duty charged in Great Britain between goods arriving in British and foreign vessels. This law has obliged several British ships this summer to load flax at the low freight of thirty shillings per ton, instead of fifty shillings, which they would have got, had not the merchants been obliged to pay twenty florins per ton export duty, because the goods were shipped in a British vessel. As hemp and flax are, now that the corn trade no longer exists, the principal articles of export from hence, this duty bears exceedingly hard on British vessels.—According to a Cabinet Order, dated Berlin, 20th June, 1822, intended for the encouragement of Prussian shipping, the King has been pleased to direct a duty of three dollars per last to be charged on all foreign vessels arriving with cargoes after the expiration of three months. This tax is so important in its consequences as to demand immediate attention, for a moderate sized vessel will, by this Order, be compelled to pay three hundred dollars in addition to the existing heavy charges, which will

SESS. 1826.

entirely prevent our vessels from enjoying the carrying trade from home to this country.

*Extract of a Despatch from Vice-Consul Fowler, dated Memel, 21st August, 1822.*

\* This difference between British and Prussian shipping [*i. e.* the difference established by the decree of 20th of June] must drive the carrying trade in British bottoms from this port, to the great injury of the British shipping interest; for about three hundred British vessels, on an average, load here annually with timber for Great Britain, which, of course, cannot bear such heavy charges as cargoes consisting of grain, flax, hemp, tallow, &c. &c. and which are of so much more considerable value. The merchants here, who are principally British, have protested against this new regulation, and petitioned the Prussian government for the repeal thereof.

From what I have now read, the house will at once understand the nature of the measures adopted by the Prussian government, in the year 1822, and the motives which influenced them in that proceeding. What was the consequence of these measures? Why, that, in the next year, 1823, the Board of Trade, and other departments of the Government, were assailed with representations from all quarters connected with the shipping and trade of the country, against the heavy charges imposed upon British ships in the ports of Prussia. In such circumstances, what course did his Majesty's government take? We felt it to be our duty, in the first instance, to communicate with the Prussian minister in this country; and our minister at Berlin was, I believe, also directed to confer with the Prussian government on the subject. I myself had a conference with the Prussian minister at this court, and I well recollect the substance of his reply to me: 'You have,' he said, 'set us the example, by your port and light charges, and your discriminating duties on Prussian ships; and we have not gone beyond the limits of that example. Hitherto, we have confined the increase of our port and tonnage charges to ships only; but it is the intention of my government next year, [and of this he shewed me the written proof.] to imitate you still more closely, by imposing discriminating duties on the goods imported in your ships. Our object is a just protection to our own navigation; and so long as the measure of our protection does not exceed that which is afforded in your ports to British ships, we cannot see with what reason you can complain.' Against such a reply, what remonstrance could we, in fairness, make to the Prussian government? We might have addressed ourselves, it may be said by some, to the friendly feelings of that government; we might have pleaded long usage in support of our discriminating duties; we might have urged the advantages which Prussia derived from her trade with England. Appeals like these were not forgotten in the discussion, but they were of little avail against the fact stated by Mr. Consul Gibson, that 'the Prussian ship-owners were all going to ruin.' By others, it may be said, 'Your duty was to retaliate, by increasing your own port charges, and discriminating duties, on Prussian shipping.' I have already stated generally my reasons against the policy of this latter course. We

3 K

were not prepared to begin a system of commercial hostility, which, if followed up on both sides to its legitimate consequences, could only tend to reciprocal prohibition. In this state of things, more prudently, as I contend, we entered upon an amicable negotiation with the Prussian government, upon the principle of our treaty with the United States,—that of abolishing, on both sides, all discriminating duties on the ships and goods of the respective countries in the ports of the other.—Having concluded an arrangement with Prussia upon this basis, we soon found it necessary to do the same with some other of the Northern States. Similar conventions were accordingly entered into with Denmark and Sweden. Reciprocity is the foundation of all those conventions; but it is only fair to add, that they contain other stipulations for giving facility to trade, and from which the commerce of this country, I am confident, will, in the result, derive considerable advantage.—When his Majesty's Government had successively made the concession of these discriminating duties to the United States, to Prussia, to Denmark, and to Sweden, I should have been ashamed of the councils of this country if we had hesitated to enter into a similar agreement with the free Hanseatic towns of Hamburg, Bremen, and Lubeck. These little states, I admit, had imposed no discriminating duties upon our ships, though they had the power to do so. But would it have been worthy of the character of this great country, consistent with its justice, or honourable to its generosity, to continue to levy, upon the trade and shipping of these ports, duties which were no longer paid by the subjects of more powerful states; to have made their forbearance the plea for our exaction, or to have waited to do an act of justice until they had deprived us of that plea? In our treatment of these free towns, this country ought not altogether to forget, that, amidst the barbarous ignorance and habitual violence of the feudal ages, those little republics were the refuge of commerce, and the nurseries of civilization: they were the sanctuaries, in which the arts and pursuits most conducive to the enjoyments and improvement of mankind were respected, amidst the scenes of bloodshed, rapine, and insecurity, by which they were too often surrounded. With these recollections, I shall, perhaps, be excused if I express my regret, that several of the little trading communities on the Continent have ceased to be free and independent. In point of policy, it has always appeared to me that the incorporation of these communities with the military monarchies of the Continent, was not the most satisfactory part of the late settlement of Europe. This incorporation was, probably, more the inevitable consequence of the general derangement of the war than the legitimate result of the principles which prevailed at the restoration of peace. Were I disposed to illustrate the inconvenience of that incorporation, in reference to the present subject, I might, not inopportunistly, refer to Dantzic. If, instead of passing under the dominion of an absolute monarchy, that town (formerly, I believe, one of the Hanseatic League) had continued free like Hamburg, and had the government of Prussia then said,—‘You shall not trade with us, except on such and such conditions,’—our answer might have been, ‘The commodities which we want from

your country we can procure at Dantzic, where no such conditions are imposed on British ships.’—If we look at the present question, as connected with our maritime strength, I contend that there can be little or no danger from the arrangements which I have now described. The states to which those arrangements extend, from their situation, and from many other circumstances, which it is not necessary for me to mention, never can become formidable as maritime powers; they never can dispute with us the ascendancy on the ocean, nor have they an interest in assisting others to obtain that ascendancy. Their commercial interests, and regard to their own security, must alike incline them to our side. In time of peace, it is well known; the policy of this country excludes, as much as possible, from our commercial marine the natives of all foreign countries; but, in time of war, when our native seamen are required for the king's service, we are under the necessity of admitting volunteers from other countries to man our merchant-ships. The consequence is, that, from our multiplied intercourse with those secondary states, their seamen, in time of war, tempted by higher wages and other advantages, assist in manning our merchant ships, and thereby afford us great facilities for carrying on our extensive commerce. On the restoration of peace, these volunteers are, most of them, forced to seek employment again in the merchantmen of their own countries; and their return thither contributes to give increased activity to the commercial marine of those countries. If, therefore, by this system of extended reciprocity, a somewhat larger share of the carrying trade between Great Britain and these secondary states, devolve to their shipping, in time of peace, so far as this participation is obtained at the expense of any diminished employment for our own shipping, we may regret the diminution: at the same time, if the circumstances which lead to it be unavoidable, it is some consolation to know that the corresponding increase elsewhere is divided among those countries which cannot be dangerous, and are likely to be most useful to us, in time of war. The timber trade with Norway has, at all times, been carried on chiefly in the ships of that country; they are built for the purpose, in the cheapest manner, but so rudely constructed as to be unfit for the conveyance of almost any other article. In respect to the Prussian timber ships, they are also of a construction very inferior to the shipping of this country, built for the purpose of general trade. We are told by most of the petitioners, and figures are adduced to prove the statements, that they are sent to sea and navigated at less than one-half of the expense of British ships. If it be so, the restoration of the discriminating duty, to the repeal of which these petitioners attribute all their present difficulties, would be of little avail to protect them. That protection was 2s. 9d. upon a load of timber, being the difference between 57s. 9d., the duty in a foreign, and 55s., the duty in a British ship, exclusive of some difference on account of lower port charges, and light money paid by the British ship. Against this advantage, therefore, in our ports, was to be set off the alien duty of 3s. 1½d. a ton, imposed on British ships in the Prussian ports, whether with a cargo or in ballast. The balance, therefore, on our side would be next to nothing,—totally inadequate, upon the

showing of the petitioners, as protection; but just enough to excite irritation, and to afford a pretence for vexatious restrictions on British commerce, and the introduction of British manufactures into the Prussian dominions. It has also been stated by some of the petitioners, that ship-building in this country is rendered more expensive by taxes on the materials, from which other countries are exempt. I am not aware that, in the petition from the shipping interest in the port of London, praying for a continuance of the discriminating duties, the petitioners urge the direct taxation upon the materials employed in ship-building, as a ground of complaint. It has been alleged, that the Americans build their ships upon cheaper terms than we do. This I do not believe. Timber, I admit, is cheaper in the United States, but almost every other article employed in ship-building is as dear as, and several of them dearer than, in this country. Labour likewise is dearer, and the pay of the crew full as high as, if not higher than, in England. After all, there is nothing new in the complaints now made of the increased employment of the shipping of the Northern powers, in their trade with this country. Similar complaints were made after the American war. In 1786 the ship-owners represented that our laws gave too great an advantage to foreign ships, and especially to the foreign ships employed in the importation of timber from the Baltic. In consequence of this representation, the Board of Trade of that day entered upon an inquiry into the subject. Mr. Reeves, in his work on the law of shipping and navigation, states, in reference to this inquiry, that 'In the year 1786, it was observed, that the quantity of foreign ships employed in the importation of goods from Denmark, Norway, Sweden, and the East Country, was much greater in proportion to the British, than the foreign tonnage employed in other trades; and that it was increasing in general; and the British shipping employed in some of these trades was at the same time decreasing. A reference was made, in consequence, to the Board of Customs, to see whether it might not be proper to augment the duty, called the alien's duty, or petty custom, on such of the goods enumerated and described in the eighth and ninth sections of the act of navigation as were then subject to it, and were imported from the before-mentioned countries; and whether such increase would materially operate to increase the burthens on, and consequently the prices of, those articles, if such duty were increased gradually; that is, by making it double from the first of January 1787, and treble from the first of January 1788: and in case the Board of Customs should be of such opinion, then they were called upon to consider, whether some advantage might not be given to British-built ships employed in those trades, by lowering the duties on those articles when imported in such ships; or whether both these methods might not be pursued in such proportions as might best attain the end proposed, and not materially affect the revenue.' As it does not appear that recourse was had to these expedients, it is to be inferred that, upon further consideration, it was found it would not be safe to risk the experiment. The Northern powers had not then complained of our existing alien charges upon their shipping; they had taken no steps to countervail those charges in their ports; but did it follow that they would

continue passive, if a question then at rest had been disturbed, by increasing those charges in the manner suggested? In my opinion, to leave the question at rest as long as possible, was the wisest policy for this country. It was the policy pursued until the matter was taken up, not by us but by the United States of America, and in succession by other powers. In that state of things, and after the arrangements which we had entered into with those powers, acting upon the necessity of the case, I felt, in the course of the last session, that it would be better to make our laws upon this point square with our practice;—better, as one general rule,—first, to tender to all nations alike, and indiscriminately, equal facilities of commerce and navigation, and equal inducements to visit the ports of this country, with their merchandize, either for our own consumption, or in the way of transit (*entrepôt*) to other parts of the world:—secondly, to abolish all discriminating duties affecting differently the like productions of foreign countries, and, in lieu thereof, to establish one uniform tariff for the whole:—and, thirdly, to reduce that tariff to the lowest degree, consistent, in each particular article, with the two legitimate objects of all duties,—either the collection of the necessary public revenue, or the protection requisite for the maintenance of our own internal industry. These are the principles according to which our new book of rates has been formed, and the consolidation of our innumerable, and, in many instances, inconsistent and contradictory laws of customs been effected.—A few observations on our commercial policy, with regard to our colonies abroad, will bring me, I hope, to the conclusion of this important investigation. The former colonial system of this country was simply this, that our possessions abroad should receive all their supplies from hence in British shipping, and they were prohibited from trading directly with any other country. But, so early as the year 1783,—the year in which we recognized the independence of the United States of America,—it occurred to the Government at home, that it might be somewhat hard to require of the West-India colonies to draw all their supplies from the mother country. What, then, was the line adopted? Orders in Council, allowing those colonies to trade directly with the United States of America in British shipping, were passed, from time to time, as occasion required, and the ministers, as often, came down to parliament, for bills of indemnity, for having so far violated the plantation laws. In process of time, however, the Government of the United States, jealous of a trade in which British shipping alone was employed, said to this country—'If you want the productions of our country for the use of your colonies, and will not allow us to send them in our ships, we will entirely prohibit the exportation to your colonies, in British shipping, of those articles of which your colonies stand in need.' They did so. The British Government had then recourse to another expedient, in order to avert the threatened inconvenience, and at the same time to avoid any positive alteration of our navigation laws. A sort of open mart or fair was established, at some half-way place between the coast of America and the West-Indies, to which the ships of the United States came, and where, being met by our traders, the respective parties interchanged commodities, according to their mutual

wants. But the Government of the United States again interfered, and prohibited their ships from this trade. After a suspension of intercourse had continued for some time, parliament, in the year 1822, passed an act, by which American ships were allowed to trade, directly, between the United States and our colonies, in the West-Indies and North America. Now let me ask, was it politic, was it altogether consistent with impartiality, and our friendly relations with the north of Europe, to grant to the shipping of the United States, first, in the trade between them and this country, by the treaty of 1815; and, secondly, in the trade, by this act regularly legalized, between those states and our colonies, privileges, which we continued to deny to the shipping of Prussia, of Denmark, of Sweden, of Hamburg, and of other trading communities of Europe? Upon what principle of fairness, upon what principle of sound policy, were we to continue this preference exclusively to a power, towards which, God knows, I entertain no feeling of hostility—far from it;—but, when I am speaking of that nation in a British House of Commons, it is not improper to say, that, in matters of navigation and naval power, there exists, towards us, a spirit of rivalry in the United States;—a spirit of which I do not complain, but which should incline every Englishman to doubt the wisdom of any measure, tending to encourage the growth of the commercial marine of America, by giving to it privileges greater than are permitted to the shipping of other states—states less jealous of our maritime ascendancy in time of war, and, at all times, confining their views upon the ocean to the industrious employment of their seafaring people, without looking to the ulterior object of, one day, disputing with us the dominion of that ocean. Considering, therefore, the act of 1822, and the changes which had taken place in the colonial system of other powers, it appeared to me, that the time was arrived when, upon every sound principle, it would be right to extend, to the foreign shipping of Europe, the same privilege of trading with our colonies in the new world, which had been granted to the shipping of America; and also to give a greater facility, and extension, to the intercourse between foreign countries and our colonies generally;—strictly confining, however, to British shipping only all trade between this country and the colonies, and all inter-colonial trade between the different foreign possessions of the British empire. Whether we look to the interests of our commerce, which are also the interests of our navigation;—whether we look to the separate interests of the colonies, or to the general interests of the parent country;—or whether we consider the changes which have recently taken place, especially in the new world;—all these considerations appear to me to concur in support of the measures to which I have referred, and the enlarged views of policy, upon which they are founded. Shipping, like other branches of business in this country, is liable to fluctuation. There may be great excitement at one period, and great depression at another. Last year, for instance, the demand far exceeded the means of the British ship-owners to supply it. The price of freight for foreign adventures was, in consequence, so much raised as to become a very serious injury and interruption to

other branches of navigation, more especially to our coasting trade. Yet, such was the unbridled rage for speculation which then prevailed, that our tonnage could not keep pace with it, and foreign vessels were taken up in every port of Europe, not from a preference, but because British ships could not be procured. This is not the proper occasion to inquire into the origin of the almost universal mania, which appears to have seized upon merchants and manufacturers, not of this country only, but, more or less, upon those of other countries, during the last year. It is now too generally seen and admitted, even by those who were most infected by that mania, that their speculations were carried on without reference to the habitual scale of our consumption, or to the rapid accumulation of goods, or to any of those circumstances which, in their calmer moments, direct the operations of commercial men. When prices had risen, in the first instance, from natural causes perhaps, speculation soon forced a further and more rapid rise, and the only inference, for a time, among buyers, seems to have been, that it would continue progressive, and almost indefinite. Connecting this rage for speculation with the employment of shipping, the house will be surprised to hear in what a degree the quantity of bulky articles from foreign countries, and from our possessions in North America, in the last year, exceeded the importations of former years. In the year 1822, the total importation of timber from foreign countries was 140,715 loads;—in 1825, it amounted to not less than 301,548. Of flax, in 1822, 607,143 cwt.; in 1825, 1,042,936 cwt. Of tallow, in 1822, 805,238 cwt.; in 1825, 1,164,029 cwt. Of wool, in 1822, 19,048,879 lbs.; in 1825, 43,700,553 lbs. Of linseed, in 1822, 1,411,137 bushels; in 1825, 2,876,571 bushels. From British America—of timber, in 1822, 345,741 loads; in 1825, 467,565 loads. Ashes, in 1822, 135,983 cwt.; in 1825, 210,781 cwt. Number of masts from all parts of the world, under 12 inches in diameter, in 1822, 14,484; in 1825, 19,016;—above 12 inches in diameter, in 1822, 4577 loads; in 1825, 8698 loads.—The result of all this overtrading of last year, of which I have selected only a few instances, is the depression which now prevails, the interruption of commercial credit, the great diminution of employment for manufacturing labour in this country, and the general derangement of business in the countries with which our principal interchange of commodities is carried on. I deplore this state of things, not the less, certainly, because it is not confined to this country; and in alluding to the sufferings of others, I do so, not as a source of consolation to ourselves, but as evidence, that this derangement is to be traced to some cause of more extensive effect than the municipal regulations of this country. It would be matter of surprise if, amidst this almost universal stagnation of demand, the shipping interest, which had fully participated in the extraordinary activity of the preceding period, should not partake of the languor by which it is now succeeded. In looking dispassionately at this or any other of the leading interests of this country, we must not draw our conclusion from extreme cases either way. We must also recollect that shipping, in common with every other mode of employing capital and industry, when it seeks a foreign market,

able to be affected by a competition with other countries, and by acts of foreign states, over which we can have no control. As far as exclusion is within our reach—in the coasting trade—in the fisheries—in the trade between this country and our foreign possessions—we want a strict monopoly to the British shipowner. It is our duty to maintain and enforce that monopoly, not for his special advantage, but for the public interest. It is further our duty to give him every legitimate countenance and protection in the trade of this country with other maritime countries; but if any branch of that trade is interfered with, either by new regulations in those countries, or by the cession of territories, once colonies, into independent states, however we may regret the circumstances, as affecting our ancient navigation system, it may not be in our power to reverse those circumstances. In such a state of things, our policy must be, retaining the important principles of that system as much as possible, to adapt it to the change in our situation, and to the altered relation in which we stand to the parties with which we have to deal. The first effect of such inevitable changes, either in navigation or trade, is, usually, more or less, to derange the interests, upon which they immediately bear; but the temporary difficulty is generally overcome by the speedy opening of fresh channels of employment, and soon merged in the increased enterprise which attracts capital and shipping to some other quarter. This was the case after the separation of the British colonies in North America; and I hope for a similar issue on the present occasion. We are all agreed that our commercial marine is the foundation of our naval power, and that the maintenance of that power is the paramount duty of those who administer the affairs of this country. In an inquiry like this, therefore, the most important question for the consideration of the house is, not the detail of each separate branch of trade in which our commercial marine was employed any particular year, but its aggregate amount at this time, compared with the aggregate amount at some antecedent period.—Now, Sir, I have already stated what that amount was at the breaking out of the last war in 1793, and what it is at the present time. The comparison, taken by itself, certainly affords no ground for despondency or alarm. But, in making this comparison, in reference to our military arm, we are also to bear in mind, that in 1793, both the military and commercial marine of France and Spain were much more numerous than they are at present. The navy of France, once so powerful, has dwindled almost to nothing; her merchant ships have nearly disappeared from the ocean. The navy of Spain is less numerous and less formidable than it was at the breaking out of the revolution, and her commercial shipping, though reviving since the peace, is probably, at this moment, not more than one-half of its amount in 1792. On the other hand, whether we look to the number of ships of war, to the means of manning those ships, to the general spirit which pervades every branch of the service, or to any other element of naval power, what a contrast between our situation at the close of the last war of the American war! Can we forget the period when the combined fleet of the house of Bourbon was master of the British channel—

when a West India convoy was obliged to assemble at Leith, and go north about, in order to escape capture by an enemy's fleet, within sight of our principal sea-ports? Can we forget when Gibraltar, blockaded by the united naval forces of those same powers, was relieved, as it were, by stealth?—when it was considered matter of just praise to the highly distinguished officer who commanded the British fleet, on that trying occasion, that in performing this service, he was able to elude the vigilance of a superior enemy, and to return to England, without having risked a combat? These are among the recollections which belong to the American war. How different from those which connect themselves with the war by which it was succeeded! That our sway on every part of the ocean was undisputed by the naval power, not of France and Spain only, but of all Europe, before the close of the last war, is matter of notoriety. In fact, the British navy was then occupied in the blockade of every naval arsenal of its enemies; and this, for the last years of the war, formed its principal employment in Europe. When we began that war, in the course of which we achieved so many victories, our commercial marine was three-fifths of its present amount. Our seamen in the king's navy, 16,000, instead of 30,000, their present number. We had then no reserve of veteran seamen, receiving for former services an annual allowance from the state. We have now such a reserve, amounting to many thousands, all of whom are liable, upon an emergency, to be called upon by the Admiralty; and of whom a large proportion would, I have no doubt, be found as efficient as before their discharge. Our ships, likewise, are in a more complete state, and better prepared with all the means of speedy equipment than at any former period of peace. Never, I will venture to affirm, was there a time when the country might rest with greater confidence and satisfaction on the sufficiency of its naval resources than at the present. But we are told, and I am ready to admit it, that if the naval resources of France and Spain have declined, a new and formidable power has grown up in the United States of America. I have already stated, that the maritime means of that country had, from peculiar circumstances, been considerably benefited during the late war, which lasted so long, and spread so generally through Europe. But, if the commercial marine of the United States increased during that period, our own advanced in a greater amount. Since the restoration of a general peace, the shipping of both countries has rather decreased. The diminution in that of the United States has been stated at 168,000 tons, which I believe to be fully equal to any diminution that has occurred in this country. I am warranted, therefore, in concluding that, upon a comparison of our commercial marine with the commercial marine of other powers, we have no reason to apprehend any of the difficulties now which the petitioners predict, and that our naval means are fully adequate to any possible emergency which may compel us to call them into execution. If any hon. members entertain the opinion which exists in some quarters, that the distress under which the country now labours, is produced by the recent changes in our navigation system, and in our commercial policy, let them appoint a day for the discussion of the subject. This is the only favour I ask of them,

wants. But the Government of the United States again interfered, and prohibited their ships from this trade. After a suspension of intercourse had continued for some time, parliament, in the year 1822, passed an act, by which American ships were allowed to trade, directly, between the United States and our colonies, in the West-Indies and North America. Now let me ask, was it politic, was it altogether consistent with impartiality, and our friendly relations with the north of Europe, to grant to the shipping of the United States, first, in the trade between them and this country, by the treaty of 1815; and, secondly, in the trade, by this act regularly legalized, between those states and our colonies, privileges, which we continued to deny to the shipping of Prussia, of Denmark, of Sweden, of Hamburg, and of other trading communities of Europe? Upon what principle of fairness, upon what principle of sound policy, were we to continue this preference exclusively to a power, towards which, God knows, I entertain no feeling of hostility—far from it;—but, when I am speaking of that nation in a British House of Commons, it is not improper to say, that, in matters of navigation and naval power, there exists, towards us, a spirit of rivalry in the United States;—a spirit of which I do not complain, but which should incline every Englishman to doubt the wisdom of any measure, tending to encourage the growth of the commercial marine of America, by giving to it privileges greater than are permitted to the shipping of other states—states less jealous of our maritime ascendancy in time of war, and, at all times, confining their views upon the ocean to the industrious employment of their seafaring people, without looking to the ulterior object of, one day, disputing with us the dominion of that ocean. Considering, therefore, the act of 1822, and the changes which had taken place in the colonial system of other powers, it appeared to me, that the time was arrived when, upon every sound principle, it would be right to extend, to the foreign shipping of Europe, the same privilege of trading with our colonies in the new world, which had been granted to the shipping of America; and also to give a greater facility, and extension, to the intercourse between foreign countries and our colonies generally;—strictly confining, however, to British shipping only all trade between this country and the colonies, and all inter-colonial trade between the different foreign possessions of the British empire. Whether we look to the interests of our commerce, which are also the interests of our navigation;—whether we look to the separate interests of the colonies, or to the general interests of the parent country;—or whether we consider the changes which have recently taken place, especially in the new world;—all these considerations appear to me to concur in support of the measures to which I have referred, and the enlarged views of policy, upon which they are founded. Shipping, like other branches of business in this country, is liable to fluctuation. There may be great excitement at one period, and great depression at another. Last year, for instance, the demand far exceeded the means of the British ship-owners to supply it. The price of freight for foreign adventures was, in consequence, so much raised as to become a very serious injury and interruption to

other branches of navigation, more especially to our coasting trade. Yet, such was the unbridled rage for speculation which then prevailed, that our tonnage could not keep pace with it, and foreign vessels were taken up in every port of Europe, not from a preference, but because British ships could not be procured. This is not the proper occasion to inquire into the origin of the almost universal mania, which appears to have seized upon merchants and manufacturers, not of this country only, but, more or less, upon those of other countries, during the last year. It is now too generally seen and admitted, even by those who were most infected by that mania, that their speculations were carried on without reference to the habitual scale of our consumption, or to the rapid accumulation of goods, or to any of those circumstances which, in their calmer moments, direct the operations of commercial men. When prices had risen, in the first instance, from natural causes perhaps, speculation soon forced a further and more rapid rise, and the only inference, for a time, among buyers, seems to have been, that it would continue progressive, and almost indefinite. Connecting this rage for speculation with the employment of shipping, the house will be surprised to hear in what a degree the quantity of bulky articles from foreign countries, and from our possessions in North America, in the last year, exceeded the importations of former years. The diminution in that of the United States has been stated at 168,000 tons, which I believe to be fully equal to any diminution that has occurred in this country. I am warranted, therefore, in concluding that, upon a comparison of our commercial marine with the commercial marine of other powers, we have no reason to apprehend any of the difficulties now which the petitioners predict, and that our naval means are fully adequate to any possible emergency which may compel us to call them into execution. If any hon. members entertain the opinion which exists in some quarters, that the distress under which the country now labours, is produced by the recent changes in our navigation system, and in our commercial policy, let them appoint a day for the discussion of the subject. This is the only favour I ask of them,

and of those who heap abuse upon the measures in question, or who excite clamour out of doors against the individual upon whom has devolved the task, however imperfectly executed, of submitting those measures, on the part of Government, for the approbation and sanction of parliament \*."—Mr. Huskisson concluded by moving for the returns mentioned in his speech.

Mr. Baring rose, not so much with the intention of following the rt. hon. gent.'s remarks, as of thanking him for the able manner in which he had developed his views, and for the general system he proposed to adopt with respect to our shipping. But though he concurred with the rt. hon. gent. in his general views, he had closely watched the measures proposed, for no man could at the first anticipate how they would operate. In the detail of figures which the rt. hon. gent. had given, and which would be printed for the use of members, there appeared a greater decrease in the foreign, as compared with the British shipping, than many persons had been led to expect; but, looking to the stagnation which prevailed, it was not possible to view with confidence any of the accounts heretofore made public on this point. As to the shipping trade with the north of Europe, it was so much affected by our corn laws, that in considering it those laws met us at every turn. The navies of the north of Europe were manned by fewer hands, who were fed on cheaper food, and paid at a lower rate of wages than ours,—circumstances which must continue as long as our corn laws remained. He hoped, therefore, that these facts would not be lost sight of in the consideration of those laws in the next session, and that they would operate to their final repeal.—With respect to our North American colonies, he thought that if we wished to keep them, we must give them the full benefit of their connexion with us, by opening their trade as much as possible in every direction. We had no other means of retaining them in our possession, than by making it their interest to continue with us. As to the West India colonies, the case was different. We knew that we might irritate and tease them without danger. Some of the islands, however, particularly Jamaica and Trinidad, were great depôts for the trade of South America; and if we wished to become the successful rivals of the French and Americans in that trade, we must, for the sake of our own interests, extend the benefits of free trade to our West India colonies.

Mr. Robertson contended, that the foreign shipping trading to this country had increased threefold within the last four years. This increase had been occasioned by the measures pursued by the rt. hon. gent., and besides giving this superiority to foreign shipping, these measures tended to destroy our warehousing system, and rendered this country daily less and less the emporium of foreign trade. These same measures would have the effect also of putting into the hands of the North Americans, the whole of the trade with South America, which ought to belong to our West India colonies. He did not blame the abandoning a great part of our navigation laws; but then the shipping of this country had as

much right to protection as any other trade. Let them be put on the same footing as other trades, and they would not complain. If the navies of France and America increased, while ours declined or continued stationary, let the house consider the situation we should be in, in a few years, and how much, in case of emergency, we should have to bring up of what we were now losing. The President of the Board of Trade had much to answer for on this subject. We were daily making innovations on the system of our commercial regulations, which were unsettling and keeping unsettled the general mind of society. He did not see how it would be possible for us to go on paying the national debt, if ministers were resolved to persevere in the system they had adopted. He had been informed on authority on which he could most confidently rely, that the woollens manufactured on the Continent of Europe were now driving ours out of the market; and indeed foreigners were making rapid advances towards successfully rivalling us in the manufacture of cottons; although as yet he believed they had not quite equalled us. Looking at the present situation of the manufacturing interests, and considering the great weight of taxation with which they along with the other branches of the community were burdened, he should like to know how it would be possible for them ever to surmount their present difficulties, if foreign manufactures were admitted into the country? How could they possibly enter into a successful competition with the manufacturers of France, where labour was so much cheaper and taxation so much lighter, unless they had some adequate protection afforded them sufficient to counterpoise the advantages which the French in other respects enjoyed over them?

Sir M. W. Ridley said, that documents had been furnished to him, which placed this matter in a very different light to that in which it had been represented by the right hon. gent. From these documents, which contained an account of the entrance of shipping into the port of London, it appeared that there was no foreign country with which we had carried on trade, which had not doubled its amount of shipping trading to this country within the last few years. And with regard to the imports and exports, it appeared that imports from Sweden, Norway, and Russia, had been increased during the same period very considerably, whilst our exports to those countries had undergone a very great decrease. It was impossible that we could expect our shipping interests to be sufficiently protected whilst they had to contend with the difficulties and disadvantages which at present oppressed them. The expense of ship-building abroad was about 7l. or 8l. per ton, whereas here it was from 16l. to 17l. A vessel from most foreign ports could be fitted out at one-half the expense it could be fitted out in England; and the wages of seamen abroad were only 20s. or indeed frequently only 12s. 6d. per month, whereas here they were 3l. 10s.—indeed they had been 4l. 10s. When this difference in prices was taken into consideration, and when it was also considered what numerous and heavy taxes were imposed here on every article connected with ship-building, it would readily be concluded, that under existing circumstances it would be impossible for us to compete with foreigners. He had just left a merchant who had been

\* Reprinted from Mr. Huskisson's "Speech on the Navigation Laws."—London: Hatchard, 1826.

negotiating the transfer of bills to the amount of 33,000*l.*, in payment of produce which he had shipped from Hamburg to Newfoundland; the whole of this produce was foreign, and the settlers were foreign; in short there was nothing in the whole transaction which had any thing to do with this country.—He trusted these considerations would induce the right hon. gent. to concur in measures which might have the effect of relieving the shipping interests from the duties to which they were now subject.

Mr. *Ellice* said, that all that it appeared to him to be in the power of the right hon. gent. to do was, to reduce every tax which affected our shipping interests; and by this, and this alone, they might be enabled to compete with foreigners. It was not possible that the present system of taxation could exist together with the principles of free trade. It was absolutely requisite that a stop should be put to our present mode of proceeding, which had alternately placed the country in a state of fever and ague ever since the peace; and he was sorry to say that he saw no symptoms of improvement in any part of our trade.

Captain *Gordon*, in alluding to the increased quantity of foreign shipping which had been in our ports since the passing of the reciprocity acts, took occasion to observe that he was not at all surprised at it. Foreign ships could be bought and navigated at a much less expense than our own, in consequence of our ship-builders having to send abroad for most of their materials, and also in consequence of their having to pay a greater sum for wages and provisions. Merchants, who had goods to freight, would naturally send them by those vessels which asked the least price; and as the foreigner could afford to convey at a less price than the British ship-owner, it was no wonder that of late years a greater quantity of foreign shipping had arrived in our ports. He had never doubted that this would be the effect of the system of reciprocity. Though he had no knowledge of political economy, he was inclined to believe that the increased amount of exports and imports was a proof of increased prosperity; and yet he could not conceal from himself a suspicion that the cause of that increased prosperity might some how or other turn out to be prejudicial to the shipping interests of this country. It had hitherto been the policy of this country to afford different kinds of protection to its different interests. Whether that policy had been right or wrong, he would not at that moment pretend to decide, but this he could say, that under the system of protections, every interest of the country had risen to a degree of unparalleled prosperity.

Mr. *T. Wilson* admitted that when the freights were high last year, we were enabled to compete with the foreigners; but now they had fallen, we were unequal to that competition. So long as the British ship-owner was obliged to pay 3*l.* 10*s.* per month, and the foreigner only paid 20*s.*, for seamen's wages,—so long as the former paid 6*d.* for a pound of beef, whilst the latter only paid 2*d.*, this result could not be avoided. If we gave reciprocity to foreign shipping, we must, in duty to ourselves, put a countervailing duty on every thing that was imported or exported in them.

Mr. *Rumbold* said, that there were certain duties affecting our shipping, which, though they were of small account when considered

separately, became of some importance when considered collectively. He held in his hand a statement of the charges which had been paid by a small vessel of 71 tons, on her voyage from London to Petersburg. The fees for pilotage were 10*l.*, and the other charges, including tonnage, &c., were 44*l.* 18*s.* Now this appeared to him to be enormous. He had frequently pressed upon the house the necessity of making some reduction in pilotage; and he should think that the rt. hon. gent. could have no objection to making some reduction in the case of the smaller vessels, on which it fell most heavily, in consequence of their making, in a general way, more than one voyage in the season.

Mr. *Hume* thought, that if the rt. hon. gent. would leave out of his calculations the increase of our shipping which had taken place last year, in consequence of the speculations which were then so prevalent, he would not find that there was any just ground for exultation in the existing state of it. The whole of the difficulties of our shipping interest resolved themselves into the increase of our taxation. In 1792, the amount of our ships were 16,000; in the present year it was 24,000. Here was an increase of 50 per cent.; but what did the house think was the increase of our taxation in that time? It was 400 per cent. He thought that the rt. hon. gent. had no right to take the increase of our shipping in any one year, as it was an unfair criterion, and was certain to lead to erroneous results. He ought rather to have taken the average increase during a given number of years; and if he had done so, he would have found that the increase was not so great as he had stated, and that our shipping interest was now in a worse situation than it had ever been in before.—He advised the rt. hon. gent. not to continue the tax upon certain articles used in ship-building, as cordage, timber, &c., which, though they might not be of much consequence, as the rt. hon. gent. said, taken separately, amounted to at least 10 per cent. on the value of every vessel. Now a tax of 10 per cent. on the hull of a vessel, was enough to make the builders direct the trade to any other country. In looking at the great increase which, according to the right hon. gent. had taken place in the number of ships built during the last year, the house would observe that the amount of tonnage, built in the plantations, amounted to 52,000 or 53,000, whereas the usual average had not formerly exceeded 11,000 or 12,000. This could not create the slightest surprise to any thinking man; for individuals would prefer to build ships in any other country, rather than in that in which they had to pay an extra sum of 10 per cent. He was convinced that unless our ship-owners could get provisions much cheaper than they got them at present—unless they could reduce the rate of wages which they paid to their sailors, a measure which might easily be effected by abolishing impressment, which naturally tended to increase the rate of wages—unless they could have the duties on policies taken off, and the fees on pilotage lessened, their present sufferings must continue, and our shipping interest be entirely ruined.—In conclusion, he regretted the outcry which had been raised against the principles on which the right hon. gent. had been recently acting. Nothing could be more unjust than such an out-

cry. The evils under which the shipping interest now laboured were not to be attributed to the change of system, but to the weight of taxation under which it laboured, and which alone prevented it from flourishing.

Mr. C. Grant :—The hon. gent. (Mr. Hume) had told the house that his right hon. friend had deceived himself in the view which he had taken of the shipping interest. To that observation he would merely reply, that the printing of the papers would best decide whether his right hon. friend or the hon. member were right in the view they had taken of the subject. The great object which his right hon. friend wished to accomplish by his statement of that night, was to prove to the nation that the complaints made out of doors were utterly unfounded, and that the measures which he had introduced had not had any effect in diminishing our commercial marine, but on the contrary had considerably increased it. If at the same time that our commercial marine had increased, our foreign commerce had also improved, it was an accession to our wealth, and formed no cause of complaint against his hon. friend. He admitted that the two last years ought, upon a general view of the question, to have been left out of the calculation of his right hon. friend, but the reason for introducing them into the statement of that night was, that the earliest reciprocity act was passed about two years ago. Much had been said in the course of the evening of the expenses to which British shipping was liable. Undoubtedly it was subject to greater charges than foreign shipping. But that was no new discovery; it had been the subject of remark more than a century ago. He did not state that fact to justify the continuance of the present charges, but merely to show that the difference of expense in fitting out the British and the foreign ship did not make the difference in their employment. The question of the charges to which British shipping was liable had been taken into consideration by the committee upon foreign trade. They examined several witnesses on the subject, and the result of their deliberations was, that though the freight in British vessels was dearer, there were circumstances connected with them, as their better building, navigation, seamanship, &c. which made the merchant give a preference to them. As a collateral support of the assertions of that committee, he would tell the house that in the United States, the chairman of a committee on navigation had observed, that though American navigation was dearer than ours, they were enabled to support it, because they were enabled to make three voyages where we only made two.

The motion was then agreed to.

### *Exportation of Machinery.*

FRIDAY, MAY 5.—Mr. Hume said he had two petitions to present, one from the master machine makers, and the other from the operative machine makers of Manchester, praying for the removal of the laws restricting the exportation of machinery. The masters' petition, signed by a number of most respectable persons, stated, that many of the workmen were out of employment, and almost starving, while they had orders from abroad for machi-

nery, by which, if they had been permitted to avail themselves, they could afford full employment to the workmen (hear, hear). There were foreigners at Manchester, who expressly stated, that on account of the prohibition, they were sending British workmen to France, to produce the articles which, had it not been for the prohibition, would, in all probability, have been manufactured in this country. He had intended to introduce a bill, to alter these laws; but the rt. hon. gent. (Mr. Huskisson) had great apprehensions of the jealousies of the manufacturers on the subject; and he (Mr. Hume) was now sorry that he had yielded to the rt. hon. gent.'s opinion, and refrained from bringing in his bill. He regretted this the more from the late proceedings of the operatives at Blackburn, and other places, who were blindly destroying the property upon which their best hopes of employment depended, and were thereby adding to their own miseries, both in point of intenseness and duration. If they had seen the evidence now on the table of the house, they would have known that, by destroying machinery, they were only heaping destruction on their own heads. If he had brought in his bill, the discussion upon it would have considerably enlightened those misguided people respecting their own interests.

Mr. Grenfell entirely coincided in the opinions of the hon. member, and agreed that the repeal of this law prohibiting the exportation of machinery, would be the means of providing a fund of employment for many of those who were in a state of great misery. He had particular means of knowledge on this point; and he knew that many machine manufacturers would employ a very great number of persons, if ignorance and prejudice did not prevent the exportation of these machines. The machines would, in point of fact, be smuggled into foreign countries, and if foreigners could not smuggle the machines, they would smuggle the artisans; and, in point of fact, foreigners were endeavouring to attract the artisans to foreign countries. So long ago as the American war, the Government of this country supposed that, by a prohibition of the exportation of copper bolts and nails, we should deprive the French of those articles which were necessary in the building of ships. But what was the consequence? The French established a manufactory of their own at Rouen, in Normandy, where they procured the assistance of British artisans and workmen, and from that time to this day that establishment had been a rival of our own (hear, hear).

The petitions were then ordered to be printed.

THURSDAY, MAY 11.—Mr. Hume rose to move "for leave to bring in a bill to repeal so much of 6 Geo. IV. c. 107, as relates to the exportation of tools and utensils." He contended that the necessity of allowing the exportation of machinery had been fully substantiated by the evidence before the committee on that subject. It was proved, that if the exportation were permitted, this country would find a market for machinery throughout a large portion of the world. By adopting a contrary system, they compelled other states to manufacture machinery for themselves, instead of having recourse to Great Britain.—His present object was to give employment, as far as possible, to a numerous class of workmen—an ob-

ject, in his opinion, of great importance, when it was considered that one portion of our population was in a state approaching to starvation. The law prevented many persons from being employed in the formation of machines at the present moment, while the masters admitted that they could procure foreign orders to almost any amount, if they dared to take them. He had some time since called on the rt. hon. gent. (Mr. Huskisson) to bring in a bill to repeal the laws against exporting machinery; but at that time, the rt. hon. gent. was not aware of the situation to which the manufacturing classes were on the point of being reduced, neither was he (Mr. Hume); for, if he had, he certainly would have made every exertion to have the law repealed.

Mr. Huskisson said, that he feared there was a number of ingenious artisans out of employ; but, in setting on foot a measure of this kind or their relief, the house should first know how far it was likely to affect the interests of those by whom they were ordinarily employed. He would not oppose the motion for leave to bring in the bill; but, before it proceeded further, it would be necessary that the fact of such a measure having been introduced, should be known throughout the country, in order that they might be put in possession of the feelings of those who were most interested in its provisions. If, on that examination, it should appear that any of the great interests to which he had alluded were opposed to the measure, he should feel it to be his duty to withhold his assent.

Mr. Birch deprecated the introduction of any such measure at the present moment, because it must necessarily produce a most unpleasant feeling in the country. It would be much better to wait until the next session of parliament.—As to the committee, to whom the mover had alluded, the whole of the evidence given before it was *ex parte*.

Mr. Littleton said, whatever opinion might be entertained of the merits of this question, every one must see that the present moment was most unfavourable for agitating it. The inquiry which this subject had undergone was the most defective that could be imagined. There had been no petitions on the subject from the machine-makers of Lancashire, none from Glasgow, none from Birmingham, or from several other places in which this manufacture was carried on. The house had not heard the opinions of Bolton and Watt, and other eminent scientific men engaged in the trade; but from the information which had reached him on the subject, he was led to believe that the opinions of those gentlemen were not favourable to an unlimited exportation of machinery. A petition was last year presented from Nottingham, full of information on this subject, and to that petition he should wish to refer the hon. member. He would admit, that in time copies of our machines would find their way into foreign countries; but all those hitherto sent there were imperfect, and to repair them workmen were required from this country. It would take a long time to have such machines equal to our's, unless there was allowed a general export of machinery; and if that were once to take place, he believed it would be found that a great portion of our industry and capital would follow.

Mr. Phillips said, that if we had no means of

employing the manufacturers of machines at home, it would be but common justice to allow them to manufacture for foreign countries. The export of machinery would have the effect not only of giving employment to many of the manufacturers, but would also enable many persons in the trade, who had machines unemployed, to dispose of them to advantage to other countries. With respect to the question before the house, he thought that on the principle of free trade, which was carried into so many other branches of our commerce, the export of machinery would not have an injurious tendency; but under all the circumstances of the present time, he thought that it would be better to refer the whole subject to a committee next session.

Mr. Peel thought that a dispassionate consideration of the subject could not be expected at the present period. The hon. member had wished for the opinions of practical men on this subject; but he would ask whether it would be proper (supposing that time allowed) to withdraw practical men from other and more important business at this period? He thought he would best promote the object in view, by requesting him to postpone it for the present session.

Mr. Hume said, that he had brought forward the motion in consequence of the petitions which had been presented to the house from the manufacturers of machines, complaining of being out of employment, and praying for relief. He hoped that the principle which he advocated would at last be adopted, but as hon. members thought the discussion would only increase irritation in the minds of the manufacturers, he would, with the leave of the house, withdraw his motion (hear, hear). But he gave a general notice, that if he should have the honour of a seat in the next parliament, he would introduce the question early in the next session.

The motion was then withdrawn.

### *Law of Patents.*

WEDNESDAY, MARCH 22.—Lord Palmerston presented a petition from Charles Broderip, Esq., complaining that the laws relating to patents did not afford sufficient protection to the persons to whose ingenuity the public was indebted for many inventions of great importance and utility; and praying that the same principle which ensured to authors the copyrights of their works for more lengthened periods, might be applied to patents.

The Attorney-General allowed that it was the duty of the house, as far as was consistent with policy and sound reason, to afford every protection and facility of operation to those who devoted their time, their fortune, and their talents, to improvements which were likely to become useful to their country and mankind. He did not, however, agree that all the complaints of the petition, in the present instance, could be borne out by the facts, or that patentees laboured under any peculiar disadvantages, when compared with the possessors of copyrights. One ground of complaint, that relating to the provision against more than six persons being the holders of a patent, had arisen out of the provisions of the bubble act, and, since the house had thought fit to repeal that law, it seemed reasonable that the restriction should now be taken off. The second ground of com-

plaint—that patentees had not a sufficient protection or reward from the term of 14 years, to which the exclusive right extended; that they were not in so good a situation as the holders of copyrights; and that other countries, particularly France, had adopted a better and more equitable system with regard to patentees—seemed to him not supported by the facts. He had looked into the state of the law with regard to patents in France, and found that patents were granted for five, ten, and fifteen, but never longer than for fifteen years. Now as the patentee in this country held his exclusive right for fourteen years, it could not be said there was any great difference upon that point. It might happen, as it often did, that the intricate and expensive nature of the machinery required to bring the invention into practice would not allow the patentee to reap a fair reward from his labours in fourteen years. In some such instances the house had passed bills for extending the duration of the patent. In a great variety of instances, however, the period allowed by law was quite sufficient; but the difficulty might be obviated by leaving in the discretion of the Crown a power to extend the term, if circumstances should appear to require it. As to the next point, the expense of obtaining a patent, he allowed that it was matter of proper consideration how far all unnecessary expenses, connected with new inventions, should be so reduced as to form no impediment to the obtaining that reward of protection which they merited; but it was a mistake to suppose that the expense attendant upon taking out a patent was so much more in this country than in others. In France it was 1500 francs, or about 70*l.* English, and here it was about 100*l.* The petitioner complained that copyrights were in a better condition than patents. In copyrights, it should be recollected that the protection was granted to the individual work, and not to the ideas, inventions, or principles contained in it; but in patents there was a protection for eight years, during which the patentee was not called upon to give such a particular description of his invention as would enable other persons to avail themselves of it for the purpose of imitation. But it was totally different with respect to copyrights, where any man might pirate the whole or part of a work the very day after it issued from the press, and that too with very little difficulty or danger of detection; whereas, if he violated the substance of a patent in any particular, he would be immediately liable at law. The assertion, therefore, that patentees were not placed on as favourable grounds as authors, seemed to him totally unfounded.—He agreed that the subject was of great importance, and deserved the most earnest consideration of the house.

Mr. *Maberly* could not agree that the protection ought to be held inviolable in every instance to the extent which the patentees considered likely to remunerate them. He believed that, in many cases, patents had a most pernicious effect upon the trade and enterprise of the country, and that improvement had been cramped or wholly stayed by the consequences of exclusive privileges being granted for so long a period. If the cases were submitted to a committee, he was convinced he should be able to shew that the time of the duration of some patents was longer than necessary for any beneficial purpose.

The petition was then ordered to be printed.

### *Joint-Stock Companies.*

WEDNESDAY, FEB. 15.—Mr. *Hobhouse* said, that towards the close of the last session, the learned gent. (the Attorney-General) introduced a bill, which was subsequently passed, for the purpose of repealing the Bubble Act. At that time it was intimated, that a measure would be introduced by a learned lord (Chancellor) in the other house, which would strike at the root of fraudulent companies. He (Mr. *Hobhouse*) now wished to ask whether it was in the contemplation of ministers to introduce any such measure in the present session? There was a very uneasy sensation in the public mind on the subject of the fraudulent transactions of the last year in general, and fears were entertained that similar attempts might be made in future. He, therefore, was anxious to know whether any measure would be introduced, by which, if the public did not receive indemnity for the past, they might at least have security for the future.

The Attorney-General was not aware that any such measure as that alluded to by the hon. member was in contemplation, nor did he think it was at all necessary. As the law now stood, it was sufficient to reach any fraudulent attempts by any number of persons forming themselves into illegal companies. If the fact of any fraudulent attempts could be proved against individuals, the law, as it stood, was sufficient to reach and punish them, without the aid of any new enactment.

### *Mexican Mining Company.*

TUESDAY, FEB. 21.—Mr. *Hobhouse* rose to present a petition on a subject to which he had frequently adverted, and to which, notwithstanding all that had been said, he could not help attributing a great portion of the present distress—he meant the joint-stock companies. The loss occasioned by the great extent to which those ruinous speculations were carried, if the highest rate of premium and the lowest rate of discount were considered, would fall little short of 14,000,000*l.* Some, he believed by far the greater part of these speculations, were a total loss to the subscribers; and on those few which were carried into operation, he believed that very little profits had been shared. One great evil of those speculations was the injury they had done to the hitherto untarnished character of the English merchant. Some of the wildest of the schemes were ushered into the world with the names of the most respectable merchants and traders of London at their head; and he was assured by a gentleman well acquainted with these matters, that one cause of the present difficulty of obtaining credit in the city, was that so many were engaged in these schemes that persons knew not whom to trust. As this subject was likely to come before the house in a short time, the matter having now been taken up by the corporation of the city of London, from which he understood a petition would in a few days be presented, praying for inquiry into the late speculations, he would now briefly state the object of the petition before them. It was from Mr. *Bernard Ross*, and complained of the conduct of the directors of the Mexican Mining Company. The petitioner had purchased shares in that company, but on coming

to sign the deed of settlement, he found that it contained clauses which were extremely objectionable, and which he therefore refused to adopt by signing the deed. In consequence of this, the directors decreed that he was no longer a shareholder. The clause to which the petitioner objected was one by which the directors were to be indemnified against any legal proceedings. This he (Mr. Hobhouse) thought was a course not warranted by law, for the directors had acted illegally in the sale of shares: and it was well known that persons who were not original shareholders, but had become purchasers, had no remedy for a recovery of their money in a court of law. The petitioner stated, that each of the directors had appropriated to himself 200 shares, and that the whole number divided between directors, solicitors, and others connected with the company was 3800. So that the purchasers to that number (and it was said that most of these were sold) would be deprived of a remedy in a court of law, not being original shareholders. The premium at which the shares were sold was said to be 15*l.* per share, so that the whole sum realized by those shares would amount to 57,000*l.* This statement, it was but fair to say, was denied by the gentlemen against whom the petitioner complained, and who stated, that the whole of the allegations were greatly exaggerated. The whole amount of money received for shares by each director did not exceed from 1500*l.* to 1700*l.*; but even admitting this to be correct, the sale of these shares was not a *bona fide* transaction, and it was greatly to be regretted that respectable individuals should have lent themselves to such transactions. The prayer of the petition was, that a committee might be appointed to inquire into the formation of joint-stock companies generally, and into that of the Mexican Company in particular. He hoped that the house would institute some inquiry as to who were the authors of many of those ruinous schemes. He begged to call the attention of the house to the course which had been adopted in parliament after the blowing up of the South Sea bubble. A noble lord, then on the opposition side of the house, objected to any address in answer to the speech from the Throne going up, unless it contained some pledge on the part of the house that they would inquire, and punish those who were concerned in that scheme; and an amendment to that effect was moved and carried. Certainly there was this difference between the case of the South Sea bubble and the late speculations—that the former was directly encouraged by the ministers of that day. But though that was not the case with respect to the late joint-stock companies, still it was not less the duty of that house to inquire as to who were their authors. The petition was then ordered to lie on the table.

### *Welch Mining Company Bill.*

WEDNESDAY, MARCH 22.—Mr. P. Moore brought up the report on this bill. On the motion that the report be received,

Mr. Littleton rose for the purpose of objecting to the report of this bill, which, by giving to the officers of the company the power of suing and being sued, would invest them with all the privileges of a corporation. Now, as he

did not conceive that the house meant to give any sanction or approbation to the companies which had been applying in this manner for acts of Parliament, he thought the present a very fit opportunity to check such applications in future. He drew a very great distinction between companies formed to do what nothing but great companies could do—such as working the mines containing precious minerals in other countries, and various other undertakings, which required the hazard of immense capital, without the fear of great individual loss—and those companies which were created for undertakings of a mere ordinary description, and which were likely to prove ruinously injurious by competition with meritorious individuals, whose properties were invested in those branches of trade to which the companies proposed to apply their joint-stock capital and powers. Some of his constituents fearing such consequences from this company, and feeling they could prove it was not likely to be productive of any of the advantages, either to particular districts, or to the country at large, which it promised, had incurred a very serious expence last session in opposing the bill in the committee: and he, finding that the hon. member who was now endeavouring to carry it through the house, and who had chiefly interested himself in its success, was never, on any occasion, present at that committee, and that there was no probability of the bill being brought in that session, came down to the house and moved, “That the order for the committee be discharged,” and it was discharged accordingly. Seeing no better reasons for the bill this year, than he had been able to discover last year, he would now move “That the amendments be read this day six months.”

Mr. P. Moore hoped to be able so to convince the hon. member of the propriety and importance of the bill as to induce him to withdraw his opposition. The company had purchased mines at a cost of 100,000*l.*; they had expended 100,000*l.* more in machinery and preparations for working them; and they would, probably, lay out 2 or 300,000*l.* more in the progress of their operations; they had incurred debts, and they had debtors; and it was for the purpose of legalizing their actions, so as to protect the property they had invested already, as well as to secure the public in all their future contracts, that they now applied for leave to sue and to be sued. In the present state of the law, no man could recover any sum, however small, from the company, without filing a bill in Chancery, containing the names of all the directors, officers, and proprietors; and if any one of them should happen to die before a decision was pronounced, the whole of the proceedings must be commenced anew, with the same formalities. The bill, therefore, was not more a security to the proprietors than an accommodation to the public; and as there had not been a more respectable body of men associated together for half a century, he trusted the hon. member would withdraw his opposition.

Colonel Wood:—The only thing the Welch had to complain of was, that there was too much iron in Wales already (laughter, and hear, hear), and too much competition amongst the iron masters, without the addition of this company.

Colonel Davies said, that the two hon. members alleged no public grounds for their opposition; they did not say that it was likely to

prove delusive, but they only alleged that it would be opposed to the interests of the ironmasters with whom they were connected, in that part of the country where the bill would be carried into operation. He could not understand why, if such a company were to exist, the public was to be deprived of the power which it was now proposed to give them in all legal proceedings, since it was clear that if they had not that power they would be wholly without any adequate remedy.

Mr. S. Wortley said his objection to this bill was, that it gave the sanction of parliament to a company only for the purpose of enabling them to come into the market upon better terms than any other persons.

Mr. Colcraft opposed the bill because he conceived it to be a scheme to raise the value of the company's shares. He stood up to defend those persons who traded on their individual capital against the efforts of a combination.

Mr. Baring said, that it became the house to be more consistent in their legislation on these subjects. They ought to decide upon a general principle, and not with reference to the merits of particular companies.

The Chancellor of the Exchequer was reluctant to take a part in the discussion; but he thought that before the company came to that house to claim the advantage which would be conferred by the present bill, they ought in the first instance to have applied for a limited charter to the King in council, by whom the character of the company might be fully inquired into. It was impossible that the house could undertake to decide upon the fact stated in the preamble of the bill—namely, that the company would prove beneficial.

Lord A. Hamilton said, that joint-stock companies came to that house to obtain bills, in order to gain a character out of doors, and to enable them to sell their shares to advantage.

Mr. Huskisson said, that towards the close of last year, parliament made an alteration in the act of George I., the effect of which was to enable the Crown to grant limited charters to joint-stock companies. A great number of applications were, in consequence, made to the King in council for charters. Whilst those applications were under consideration, many of them were withdrawn, and he believed that the parties who had withdrawn them were now very glad that they had not been put to the expense of procuring a charter. One of the applications made to the Privy Council for a charter was by a company for working mines and minerals in Scotland, and the application was backed by the recommendation of the first people in Scotland. He was one of those who did not think it proper to advise the Crown to grant any privilege to a company which, by the general description of their object, might work any thing from a slate-quarry to a gold mine. The application of the Scotch company was therefore rejected; and he thought that the house would do well to be very jealous of entertaining any schemes which would interfere with the ordinary mode of carrying on commerce, manufactures, and mining. At all events, the company in question ought to apply in the first instance to the Privy Council, where their affairs could be more accurately examined than in that house.—He would take this opportunity of expressing a wish that some person more conversant with legal matters than himself—would consider the

present state of the law respecting partnerships in all its bearings. The defects of the present system, as exhibited by various cases which had lately occurred, were such as could hardly be conceived. If a partner was absent, the firm could not be sued till the plaintiff obtained an outlawry against the absentee. When the outlawry was obtained, another partner might abscond, which would render it necessary for the plaintiff to go through the same process again. Then, if there was the slightest error in the names of the persons composing the firm, the defendants would put in a plea of abatement. The unfortunate plaintiff was then placed in this situation—if the plea of abatement was allowed, there was an end of the action, and he could not get rid of the plea except by dropping the action and beginning *de novo*. If the plaintiff brought a new action, he might then be told that another person whom he had never heard of before was one of the firm, and he had no means of disproving the fact, because he could not examine the defendants as witnesses. These were some of the evils resulting from the present state of the law. Perhaps they might in some degree be remedied by compelling all partners to register their names, and by providing, that where the firm consisted of more than a certain number of persons, one partner might be sued for the whole.

The amendment was then carried, without a division. The bill was, therefore, lost.

### Liverpool and Manchester Rail-road Bill.

THURSDAY, APRIL 6.—General Gascoyne moved the third reading of this bill. Though he had been a member of that house for many years, he had rarely found it necessary to make any observation on a local measure of this nature; but as he saw an unusual number of those who objected to this bill, he felt it to be his duty to offer a few remarks in support of it. His constituents were decidedly in favour of the measure; as was evident from the number of petitions which had been presented, showing the benefit that would be derived from it. It was true, that last session a similar measure had been defeated; but even then the justice of its principle had been admitted, and since that time those who most strenuously objected to the formation of the road, had given up their opposition. The trade between Liverpool and Manchester had increased very much of late years; and therefore this new communication between the two places became necessary. It was said, that individuals who had property on the intended line of road would be injured. This, however, was an argument that would militate against every species of improvement. The population on the thirty-one miles which intervened between Liverpool and Manchester was nearer in amount to 1,000,000 than 800,000 persons; and, therefore, it was impossible that some inconvenience must not be suffered. This was a measure that did not originate in the spirit of speculation. Local circumstances, and the plain necessity for having an additional accommodation for the transit of goods between the two towns, had given rise to it. The plan would be extremely beneficial to Ireland; for he considered the adoption of every project which rendered the communication between the

two counties more rapid and easy, as a point gained for Ireland.

Mr. Peel seconded the motion. It was ascertained, that, from the year 1760, the commerce of Liverpool had doubled itself every twenty years, and the cotton trade every ten years. Now, if this were so, could any man seriously argue, that the present means of communication between the two places were sufficient? The fact was, that those who opposed the bill were chiefly the canal proprietors.

Mr. Stanley expressed himself decidedly hostile to the measure. The present means for the conveyance of goods were amply sufficient. This bill was originally brought forward with the most extravagant pretensions. First, it was said, that goods were to be conveyed at the rate of twelve miles an hour, and afterwards the rate of ten miles an hour was spoken of. Now, however, it appeared, that instead of doing the thirty miles in three hours, at the rate of ten miles an hour, the journey was to be performed in ten hours, at the rate of three miles an hour. The conveyance, too, was not to be effected by steam, but by what had been called the old exploded system of horse-labour. The Mersey and Irwell canal, the Bridgewater canal, and the Branch canal, would be more or less affected by this plan. Those who supported the measure argued that each horse would be able to proceed with a given load, at the rate of three miles an hour; but no allowance was made for stoppages. Now, it was a well-known fact, that on the Darlington rail-road, the stoppages consumed the fourth or fifth part of the time employed, and thirteen persons were engaged, in eleven miles, to clear the road. By the canal, the conveyance between Liverpool and Manchester occupied twelve hours. He knew that some gentlemen had stated that it occupied eighteen, and even twenty-four hours; but it was in evidence that it could be performed in twelve. From the time the goods were put on board the canal boat, until they arrived at the place of delivery, all stoppages included, would occupy twelve hours; while, if they were conveyed by the rail-road, the time required, without mentioning stoppages, was 10½ hours. Where, then, was the advantage in point of celerity?—He would next call the attention of the house to the rate of freight. It was proposed by this bill to charge 9s. 6d. per ton for the rail-road conveyance. The charge on the canal was 10s. 5½d. per ton, but in that was included a charge of 1s. 5½d. for warehouse, portage, and cartage; for not one article of which had the rail-road company provided. If this charge were, however, deducted from the rate of freight on the canal, it would then be 9s. per ton, while the rate on the rail-road would be 9s. 6d. The ordinary rate of tonnage on the canal was 3s. 4d.; for coals, 1s. 6d.; and manure was carried free. The tonnage on the rail-road would be—cotton, 7s. 9d.; timber and grain, 6s. 6d.; stones and bricks, 5s. 2d. These were the respective charges, instead of 3s. 4d. The tonnage on coal carried by the rail-road would be 3s. 10d., instead of 1s. 6d.; and manure, 3s. 10d., instead of being carried free. It had been stated before the committee by a coal-broker of Liverpool, that, in consequence of the insufficiency of the communication by the canal, he had been unable to perform a contract into which he had entered for 1000 tons of

coal. This individual had shown clearly enough that he had not performed his contract; but it was no less clearly shown that the fault did not rest with the canal. The house, he contended, were bound to interfere and prevent this mad and extravagant speculation from being carried into effect. Many had already suffered by it. When it was first projected, the shares were at 40 per cent. premium; but since the publication of the evidence, they had fallen to 1 per cent. discount. The opinion expressed by two engineers as to the expense which would be incurred in carrying this project into effect, was very different. Mr. Rennie, the son of a very distinguished individual, had stated, that the hill near Liverpool, the elevation of which was one in 49, would require 1-15th additional horse power; but Mr. Palmer said, that, instead of 1-15th, the additional horse power required would be as 57 to 10. The sum which would be required to purchase the land, and to carry the measure completely into effect, would be 500,000l., without making any charge for carrying the bill through parliament; which was a sum greatly beyond Mr. Rennie's estimate. In order to pay even moderately, it would be necessary that 313,000 tons of goods should be conveyed by the rail-road in the course of the year, or 857 tons a day; 430 tons must be moving simultaneously in one direction, and 430 in another, or else the shareholders would not receive 1s. interest. The hon. gent. contended, from a reference to the goods carried by the canal, that it was impossible such a quantity as he had mentioned would ever be conveyed by the rail-road. Gentlemen might say, "Oh, let us have the rail-road by all means, and the canal also. Let each take its chance for success." In answer to this, he would say, that if, should the experiment fail, they could undo all the mischief which must be perpetrated in making the trial, he would not object to it. But if they could not undo that mischief, then it was the duty of parliament to proceed cautiously. He concluded by moving "That the bill be read a third time that day six months."

Sir I. Coffin had been acquainted with the town of Liverpool for forty-four years, and he was convinced that it did not stand in need of this projected rail-road. He complained of the manner in which those who had the management of the concern had proceeded. In one instance, they had invaded the premises of a widow without her consent, and they would do much mischief to the property of gentlemen.

Mr. Huskisson:—His gallant friend (Sir I. Coffin) had told them that this measure went to invade private property. But this must always be the case whenever an improvement was contemplated, whether it was the formation of a highway or the excavation of a canal. His gallant friend had stated that he had known Liverpool for forty-four years. Now, he would ask his gallant friend whether, during that long period, the towns of Liverpool and Manchester had remained stationary? If they had, as was the fact, increased in size and importance, that circumstance formed a *prima facie* case in favour of this measure. The argument that this rail-road would charge more to the public than was charged by the canal, was one which he could not understand: if it did charge more, the only effect would be, that the public would not go by it. But the only ground

upon which he supported the bill was, that the rail-road would be likely to charge a great deal less than was charged by the canal. It was an especial condition that the profits upon the undertaking should be limited to 10 per cent.; would the canals limit their profit to this extent—taking, as they were now doing, more than 100? His main reason for assisting this project of the rail-road, was to break up the overgrown monopoly which was now enjoyed by the canals.

The house then divided, when the numbers were—For the bill, 88—Against it, 41—Majority, 47.—The bill was then read a third time, and passed.

### Mr. Brogden.

FRIDAY, FEB. 3.—The usual sessional committees, of grievances, privileges, &c., and the hours for regulating their attendance having been appointed,

Mr. Brogden, on his name being re-proposed, as chairman of the committees of the house, rose, and spoke to the following effect:—"I cannot consent to accept the situation to which I have been just nominated, without calling the attention of the house to charges the most unjustifiable, which have been preferred against me and another hon. member of this house (Mr. Bent). The most erroneous and cruel misrepresentations have been circulated throughout the newspapers, and no pains spared to implicate us in the misconduct of others. It is impossible to characterize the injustice which has been done me by misrepresentation, and no words can express what I feel and suffer under the infliction of that injustice. It is said that the consciousness of innocence should induce a person to waive any unpleasantness of feeling under an unjust charge. I confess I am unable to adopt that sentiment; for I own I have suffered much. From the charges which have been preferred against me in my capacity of director of a company (the Arigna Mining Company), I have been cleared, at a meeting of one hundred and fifty gentlemen, proprietors of the company, at the London Tavern. Amongst many hon. gents. present on that occasion, was a brother of the late Mr. Ricardo. At the investigation that took place on that occasion, Mr. Bent and myself were completely exempted from the charge of any implication in the guilty transactions which have taken place. A committee of inquiry into these transactions is now sitting, and, although the guilt has been committed so long back as July, it has not been, as yet, come at or detected. From that committee I have received a letter, which contains not only an absolute acquittal of myself and the other hon. member, but which thanks us for our continuance in the directorship, and admits that great benefits have accrued to the interests of the Company.—The money which I received, I received under the conscientious impression that it was a due profit arising from my shares, and believed that it must necessarily have come from that source. The case, however, will yet come before the public in the way of the fullest and most satisfactory inquiry—and although I have been injured myself, I will not say any thing that may prejudice or prejudice the cause of another party. My interests are not great. But whatever con-

fidence or share of the good opinion of the house my past conduct may deserve, I hope I shall not have forfeited on account of the unjust aspersions which have been lately levelled against me (hear, hear). I court inquiry the most public and the fullest. If it were permitted, I should be glad that a committee of this house were appointed to examine into my conduct. Although I have not condescended to notice these unjust aspersions when they were circulated in newspapers only, I cannot and ought not to abstain from noticing them here. The effect and result of the inquiry before any competent tribunal, I am satisfied will be an acquittal of my whole conduct in every upright, honourable, and intelligent mind" (hear, hear).

### KING AND ROYAL FAMILY.

#### Buckingham House;—Windsor Castle.

MONDAY, MARCH 13.—In the committee of supply on the motion that a sum of 38,000*l.* be granted for the expense of works and repairs upon buildings,

Mr. Hume wished to know from what source the expense of the alterations now going on at Buckingham-house was to be paid.

Mr. Herries said that the charges were to be defrayed, as the house was aware, from the surplus revenue of the woods and forests.

Mr. Hume wished to know what the probable amount of the whole expense would be?

Mr. Herries was not prepared immediately to state the amount, but the question had been discussed generally in the last session.

Mr. Hume said, that the surplus of the woods and forests was part of the public revenue—just as much as the customs or excise; and no part of the public revenue ought to be disposed of without an estimate laid before parliament. With reference to the bill of the last session, he certainly had understood that the house was to be called upon to vote the money required for these alterations from year to year. Would there be any objection to the furnishing an estimate of all the further expense which the country was likely to be put to on account of Buckingham-house and Windsor?

Sir C. Long said, that such an estimate could be given if the hon. member thought fit to move for it.

Mr. Ellice thought that the house and the country would be much better informed of what was going on, if the surplus revenue of the woods and forests was regularly brought to account, and the money for these works regularly voted.

Mr. Huskisson said that, according to the existing act of parliament, triennial accounts of expenditure must be rendered. As he took it, the whole matter had been fully explained in the discussions of last session. The expense of each year was not to go beyond the year's surplus on the revenue of the woods and forests.

On the vote of 70,000*l.* for repairs and works at Windsor Castle,

Mr. Hume again urged the necessity of furnishing parliament with proper estimates of the charges incurred, and the money wanted to complete the works.

The Chancellor of the Exchequer admitted that the expense had exceeded the estimate con-

Mr. Baring could assure the hon. gent. that he had totally mistaken his motives in moving for an increase of salary to the rt. hon. the President of the Board of Trade. He certainly had voted for that increase from a conviction that it was called for, and in giving his support to the present measure, his opinion as to its justice and expediency was unaltered (hear, hear). He would go even further, and state that there never was a vote more justly called for. With respect to the allusion which had been made to the company of which he had become a member, he begged leave to offer some explanation. The silk company was established last year with a view of benefiting Ireland, and with that view he had lent his name to the concern; but with respect to any profits which he might be supposed to derive from the speculation, he could assure the hon. gent. and the house that he had only contributed 200*l.* towards the concern, and that his expectations consequently could not have been very highly excited (hear, hear). He had never in his life spoken a word on the subject of the company to the rt. hon. gent. (Mr. Huskisson), and he could not but express his surprise that the hon. gent. (Mr. Robertson) should have thought fit to advance so unwarrantable a statement.

Mr. Peel said, that if the charges brought forward by the hon. member (Mr. Robertson) were confined within the walls of the house, he would not have thought it necessary to notice them, and, in the name of his rt. hon. friend, to repel them, as he now did (hear, hear). His rt. hon. friend had lent his name to the Silk company nominally, because he thought that by so doing he might forward the concern; but if the whole wealth of India could have been gained by lending himself to any company, his rt. hon. friend would spurn the offer (hear, hear). And when it was farther imputed that the prospect of gain had influenced an hon. gent. (Mr. Baring) whose name had been connected with his rt. hon. friend, the smile which marked the countenances of those who heard the imputation, was, perhaps, the best refutation which it could have met with. He (Mr. Peel) wondered that the hon. gent. who had uttered those charges, did not feel ashamed of the part which he acted. He was almost ashamed himself to notice the circumstance. He hoped that the house would agree in the present motion, and that there would be no want of unanimity in passing a vote which was founded in justice. He could not see why the offices should be connected, and he thought that their respective duties would be best performed by placing them in separate hands. The only question which the house was called on to decide was, whether 5000*l.* a year was adequate to remunerate the services of the President of the Board of Trade. He did not think it right to blend any other question with that simple proposition. The offices should be distinct, and an adequate salary ought to be attached to each. As to the situation of Navy Treasurer, the sum necessary for that office, and the measures to be adopted for its future regulation, could be discussed on another occasion. This much he would say, that considerable reductions were made in that department, and the general question involving the necessity of the office was still open to be discussed by the house.

Mr. Maberly entirely concurred in the view  
Sess. 1826.

taken of the question before the house by the rt. hon. gent. who had just sat down. He could not conceive why the situation of President of the Board of Trade should not be equally remunerated with the Secretary for the Foreign and Home Departments. The labours were at least equal to either of those appointments.

Mr. Calcraft repeated, that he would certainly oppose the present vote, unless he received some pledge that the Treasurership of the Navy would be modified, and the business done, as it might be, by the Paymaster.

Mr. Lockhart wished to know if the new arrangement would necessarily vacate the rt. hon. gent.'s seat in that house?

The Chancellor of the Exchequer replied, that the present resolution merely empowered the Crown to give a fixed salary to a certain office, and any regulation respecting the seat could be considered upon the bill which should follow the resolution, if carried. He defended the importance of the duties of the Treasurer of the Navy, and said they could not be conigned to the Paymaster, without elevating the latter into a higher scale of official importance than he at present filled.

Mr. T. Wilson considered that the present was not the time for taxing the country for an increase of official salary.

Mr. Hume moved as an amendment, that 5000*l.* a year be the salary of the President of the Board of Trade, but with this accompanying qualification,—that it be expedient to inquire whether any of the existing offices could be abolished to save and make up the above amount of salary. He could point out many offices from which the saving might be made.

Mr. R. Smith proposed to limit the amendment to the office of Treasurer of the Navy.

Mr. Ellice hoped his hon. friend would withdraw his amendment, or allow the inquiry to be limited as proposed. It would then be "that the sum of 5000*l.* a year be given as the salary of the President of the Board of Trade, but that inquiry should be made whether the office of Treasurer of the Navy could not be modified or abolished."

Mr. Hume would not withdraw his amendment until the house pronounced an opinion on the original motion.

The Chancellor of the Exchequer thought that the question before the committee had no connexion with that of any other office. However, he would not object to postponing the farther consideration of this subject till to-morrow.

After a few words from Mr. R. Smith, the Chairman reported progress, and obtained leave to sit again to-morrow.

FRIDAY, APRIL 7.—The Chancellor of the Exchequer moved that the house should resolve itself into a committee on the Civil List act (22 Geo. 3, cap. 82).

Mr. Hume thought, before the house resolved itself into a committee, the rt. hon. gent. ought to explain whether he intended to make any addition to the burdens of the people on account of the proposed augmentation of salary. The greatest spendthrift, when he was about to set up a new carriage, calculated whether he had money to pay for it (a laugh). If he was dishonest, he went on without making any provision.

The Chancellor of the Exchequer said, that he intended to give the explanation which the hon.

member required in the committee, where he thought it could be more conveniently made (cries of "committee").

Mr. Hume said, that if it was considered the most convenient course, he would not oppose the house going into the committee.

The house then resolved itself into a committee of the whole house, and

The *Chancellor of the Exchequer* said, that if he could persuade himself that the office of Treasurer of the Navy was a sinecure, he would readily consent to its abolition, and provide for the increased salary of the President of the Board of Trade out of the saving thus made. But it would be unreasonable to do so, unless it could be shown that the office was unnecessary, or was overpaid. As far as the present salary might be considered over payment for the duties of that office, disconnected from any other, he was disposed to reduce it. As to the duties of the office, he had held it, and he could assure the committee that it was very far from a sinecure, and it would be impossible to transfer its duties to the Bank, as some had preposterously supposed, without injury to the public service. The business of the Treasurer was not merely the acceptance of bills drawn upon him by the commissioners of the navy. It was also his duty to see that the money was paid to the parties who had a right to receive it. He had also to attend to seamen's wills, which was in itself no inconsiderable source of employment. Until within a few years back, the law was very defective as to seamen's wills, and frauds to a great extent had been committed on individuals and on the public, by the facility with which money was obtained under fictitious wills. By the regulations which had now been established, the Treasurer of the Navy was personally responsible for any sums of the public money thus paid to individuals to whom they were not legally due. If then the duties and responsibility of the Treasurer were thrown upon the Paymaster, who had only 1000*l.* a year, he did not think that those duties would be efficiently performed. He did not mean to assert that those duties were such as occasioned great bodily labour or mental anxiety, but still the responsibility was great. On his entering the office, he found several gentlemen in whom he was obliged to repose confidence, although he had not appointed them; but he found one fine morning that he had become legally liable for a sum of between 30,000*l.* and 40,000*l.* One gent. connected with the office went off to America with 25,000*l.* of the public money, and another soon after became a defaulter to the amount of 10,000*l.*; on the discovery of which that unfortunate person put a period to his existence. Formerly, the Treasurer was in the receipt of large sums from profits on the money which was allowed to be in his hands; but, subsequently, those profits were taken away, and a salary of 4000*l.* a year allowed instead. The committee of finance, in 1817, recommended that the office of Treasurer of the Navy should be assimilated in point of salary to that of the Paymaster-General of the Forces. Formerly, that office was divided between two persons, each of whom had a salary of 2000*l.* a year: afterwards, by the recommendation of the committee of finance, the second Paymastership was abolished, and a salary of 2000*l.* a year, with a residence and some small emoluments added, which made it worth about 2500*l.*

a year. The committee recommended a similar establishment for the Treasurer of the Navy, but at the same time it was understood, that if that office were held along with another of public and active employment to which no salary was attached, it should continue to yield the full salary. When he got it, the salary was only 3000*l.* a year, which was 1000*l.* less than any of his predecessors in the office had received. Now he would admit, that if the two offices—that of Treasurer of the Navy and that of President of the Board of Trade—were disconnected, there was no reason why the former should not be put upon the salary recommended by the committee of finance; but as the present residence attached to it might more advantageously for the dispatch of public business be applied to other uses, and as that, with coals and candles allowed, might be estimated at about 700*l.* a year, he would add 500*l.* a year to the 2000*l.*, thus bringing it on a level with the office of Paymaster-General of the Forces. The hon. member opposite (Mr. Hume) was anxious to know from what funds this additional expense to the country was to be derived, and he seemed disposed to save it out of the whole or part of salaries which appeared to him useless. Now he would tell the hon. member, that if he could lay his hand on any useless office, he was very well disposed to abolish it, without any reference to the present motion. The Government had shown its disposition to abolish useless offices in their recent regulations with respect to the boards of Customs and Excise in the united kingdom. In the same spirit of reduction, they had not filled up a vacancy which occurred in the Treasury board, and he had no doubt that his rt. hon. friend at the head of the commission of Revenue Inquiry, would be prepared at no distant period to propose an additional saving to the public, by the consolidation of the boards of Stamps, which were at present acting independently of each other in England and Ireland. He would conclude by repeating what he said last night—that there was no necessary connexion between the regulation of the office of Treasurer of the Navy and the vote before the committee. If the house should be of opinion that that office was not necessary, or that it was overpaid, they would have ample opportunity, in the course of the session, of declaring that opinion.

Mr. Tierney wished that the vote before the committee should pass unanimously, in order to express the sense which was entertained on all sides of the great ability with which the rt. hon. gent. (Mr. Huskisson) had discharged the important duties of his office (hear, hear). It was agreed on all hands that the sum of 5000*l.* a year was not an over-payment for discharging the offices of President of the Board of Trade and Treasurer of the Navy. He could by no means concur with those who thought that the office of Treasurer of the Navy should be abolished. It was an office of very old standing, of considerable public importance, and of great personal responsibility to the holder. He had held the office, and speaking from the recollection of twenty-three years back, he could assure the committee that it was by no means a sinecure. On the contrary, it was one which required no inconsiderable degree of care and attention, though perhaps the business to be done might be gone through by one hour's application every day. Since that time, he was aware that its duties had been considerably

increased by the attention required to the payment of money under seamen's wills. The committee might judge of the responsibility of the situation, when he informed them, that for five years after he left it, he did not get his *quietus* from it, so as to be released from all farther liability, though all his accounts were found quite correct. Looking to the nature of the duties of the office, one of the last things in his mind would be to think of its abolition, but it would be also one of the last things he could think of, to place at the disposal of Government two situations, one of 5000*l.* and another of 2000*l.* a year. Some time ago, when this and other offices were under the consideration of the committee of finance, it was clearly understood that there should be kept up some sinecures and offices with high salaries to which no great labour was attached, to be given to privy councillors holding high offices which were not well paid. Instead of making the two offices separate, he would suggest that 2000*l.* a year should be added to the salary of Treasurer of the Navy, when that office was held by the President of the Board of Trade. He thought the duties of the two could be efficiently performed by the right hon. gent. who at present held them. If, however, the right hon. gent. would declare (and he would take his word for that as he would for any thing else) that he was not able efficiently to discharge the duties of both offices together, let him state that, and then let some other course be taken. He did not concur with those who thought that they should first find out where the increased salary was to come from before it was voted, because it was but justice that no efficient public servant should be without full remuneration for his services.

Mr. *Huskisson* said, that in the peculiar situation in which he was placed, it could not be expected that he should offer any opinion, as to the amount of compensation which should be given to the holder of the offices which he had the honour to fill. After what had been said by his rt. hon. friend near him and his rt. hon. friend who had just sat down, it would be unnecessary for him to enter into any detail of the duties of the office of Treasurer of the Navy. He would, however, remark that those duties had been very considerably increased by the attention required to seamen's wills. Gentlemen who supposed that the office of treasurer was a mere banking concern, were very much mistaken. It was one of great responsibility and anxiety, and consistently with his other employments, he could not give to it that strict attention which was requisite for an adequate performance of its duties (hear, hear). He had a paymaster on whom he placed the greatest reliance, and he knew not what he could do if he were deprived of the assistance of that meritorious individual. In such a case he must resign his office rather than incur the risk of appointing a person unacquainted with its duties. He did not mean to say that he had neglected the duties of the situation, but he found it impossible, consistently with his other employments, to bestow sufficient time and attention to them. With respect to the situation of President of the Board of Trade, he had exerted himself to the utmost of his abilities, to render himself useful and to give satisfaction to the country at large (hear, hear).—In concluding his observations, the rt. hon. gent. left the question entirely to the house. The measure was not of his seeking; and in whatever manner the

committee should be inclined to dispose of it, he would be satisfied with their decision.

Mr. *Calcraft* observed, that the rt. hon. gent. opposite had a peculiar talent of magnifying the importance of their respective offices. One would be inclined to suppose from the extreme diffidence of those rt. hon. gent. in speaking of their own exertions, and the manner in which they spoke of the great labours attached to their situations, that they had been forced, against their inclinations, to accept of their present appointments (hear, hear, and laughter). He apprehended, however, that neither the Chancellor of the Exchequer nor the noble earl at the head of his Majesty's councils, were ever obliged to beat up for recruits, and to offer a bounty for the acceptance of a place. It was rather singular that the present was the first time the rt. hon. the President of the Board of Trade complained of his being obliged to execute the duties of two offices. So long as the salary of both appointments continued, that rt. hon. gent. preserved a laudable silence. He never complained of the severity of the duties until the present occasion, when the propriety of disuniting the offices was suggested. The hon. gent. had said much of the loss he should sustain if he were deprived of his present paymaster; a loss which he had described as irreparable: but was there nobody second or third in the department capable of supplying his place? He contended that one of the main motives which influenced Government in bringing forward the present question was to throw additional patronage into their hands, and secure another member to fill their own ranks (hear, hear). The Treasurer of the Navy might be exalted in consequence of this new measure, and he might be made a member of that house along with the rest of the ministers: but if the house was of his opinion, they would be cautious how they admitted another placeman within the walls of parliament. This was not the time to add to the pecuniary burthens of the public, for the sake of diminishing the official burthens of the servants of the public. It was idle to contend that the two offices could not be managed by the same individual. The Chancellor of the Exchequer, when President of the Board of Trade, held the treasurer-ship of the navy, and he never complained of being overburdened with business. That rt. hon. gent. took merit to himself for having abolished certain offices connected with the revenue, although, as he said, he might, if he pleased, have made out a good case for many of those situations. How did this admission look? Why, that although the rt. hon. gent. abolished the offices, because in his conscience, he did not think them necessary, yet he could, if he liked, have made out a case by which it would appear that they were still required (hear, hear). The rt. hon. gent. boasted that he had given up a lord of the treasury, in order to prove further his desire to reduce the national expenditure; but he had forgotten that the lord of the treasury had not been thrown overboard by the rest of the crew until they had been defeated on the question respecting the supernumerary lords of the Admiralty. Unless some pledge should be given that the situation of treasurer of the navy was not to be at the disposal of the Government, with a view to increase its patronage, he must vote against the original proposition. He felt, he owned, some little surprise at the different tone which the rt. hon. gent. (the Chancellor of the Exchequer)

assumed since last night. He had imagined that if ministers meant to persevere they could not have consented to the postponement, to which the opponents of ministers had only consented because they wished, from motives of delicacy, to avoid throwing any slur upon the vote of remuneration to the President of the Board of Trade, whose services had been so meritorious. But he now saw that there were other reasons which influenced the *rt. hon.* the Chancellor of the Exchequer in wishing to postpone the measure. No doubt the *rt. hon. gent.* did not wish to press his motion last night, because, among other reasons, the opposite side of the house was not so well attended as he could have wished. The real motive of the Chancellor of the Exchequer in bringing forward the present motion, on the main principle of which both sides of the house concurred, was, that under the plea of the high character and acknowledged merits of the *rt. hon.* the President of the Board of Trade, he might have a situation to dispose of to some of his supporters (hear, hear).

*Sir J. Coffin* said, that having held the situation of Treasurer of the Navy for some years, he might be supposed to know something of its duties. He did not by any means look upon the situation as a sinecure; and he could not credit the assertion that any *gent.* could adequately perform the duties of that office by devoting only an hour each day. He himself had given up many hours in the day to the performance of the duty which he had to transact, and yet he found that he had enough to do.

*Mr. Denison* :—The Chancellor of the Exchequer had stated, that while he had filled the office of President of the Board of Trade, he had been responsible for a sum of 35,000*l.*, which had been lost owing to the defalcations of two subordinate individuals. He begged to ask if that sum had ever been refunded by the *rt. hon. gent.*?

The Chancellor of the Exchequer said that the principal sum made away with amounted to something about 30,000*l.*, but Government having learned the route of the defaulter, were fortunate enough to catch him in America. They could not make him a prisoner in that country, but after some threats 15,000*l.* or 16,000*l.* were refunded, and his securities were obliged to pay largely; but, notwithstanding, the public lost by the transaction. About 6000*l.* was the sum which the other defaulter made away with, but nearly the entire amount was recovered from his securities. He (the Chancellor of the Exchequer), however, had fully satisfied the Lords of the Treasury, that he was not to blame, and that *right hon. board* acquitted him accordingly (hear, hear). And in order to put a stop to similar transactions, a bill was brought into parliament by which their recurrence was prevented. It would have been very hard if he had been called on to refund the money.

*Mr. Abercrombie* expressed his regret that this proposition had been brought forward, as he had the most sincere respect for the *rt. hon. gent.*, and a high sense of his services to the public; and it was distressing, that this salary should be proposed in a shape which compelled him and others to oppose it on public grounds. It was unfortunate, that the popularity which the President of the Board of Trade had so justly acquired in the discharge of his duties to the public should be exposed to so much

risk by a proposition like this. A great deal had been said about the incompatibility of the office of President of the Board of Trade with that of Treasurer of the Navy. He had no personal knowledge on the subject, but from all that he had heard about the matter, it appeared to him that there was no incompatibility between them, and that both offices might be held and adequately managed by one person. The denial of this was only one of those official fallacies which were often put forward and defended by ministers. The only argument on the ministerial side which made any impression on him, was the declaration of the *rt. hon.* President of the Board of Trade, that if he lost his present paymaster, he could no longer retain the treasurership of the navy. But then where could be the difficulty of finding another person in the office fully acquainted with its duties, in all their details? And as to the responsibility, the answer to the question put by the *hon. member* (*Mr. Denison*) put an end to all ground of dispute on that head. A loss had been suffered by the public in the office of Treasurer of the Navy, and the Chancellor of the Exchequer, who was the Treasurer of the Navy, was not called upon to make up the loss, because it had not happened through his fault. So that the responsibility amounted merely to this—that the Treasurer must make up any deficiency that might arise from his own dishonesty or gross negligence. The responsibility was, therefore, another mere official fallacy. The Treasurer had only to keep clear of any personal blame, and the responsibility was nothing. But they had the advantage of experience on the subject. Lord Melville had held the office of Treasurer of the Navy along with that of Secretary of State. To be sure, Lord Melville had the services of his *rt. hon.* friend as his under Secretary; but then the President of the Board of Trade had the assistance of the Vice-President. The object, in short, appeared to be to make a separate Treasurer of the Navy, in order to get another placeman's vote in parliament. Supposing that the performance of the duties of the two offices were incompatible, it would be the duty of the house, at any rate, to take care that the influence of the Crown, already too great, should not be increased by the admission of another Government officer into parliament. There was a Vice-Treasurer of Ireland, who had nothing to do in that country but to sign his name to some papers, and therefore that officer took care to attend parliament in this country, while this Vice-Treasurer had another Vice (a laugh) in Ireland. This office, therefore, served no other purpose than to increase the ministerial force in parliament. In this instance, at least, care ought to be taken that the influence of the Crown should not be increased in this manner. There was another office that might be united with that of President of the Board of Trade—he meant the office of Chancellor of the Duchy of Lancaster; and why should not the salary of that office be increased so as to afford ample remuneration to the President of the Board of Trade? He trusted ministers would consent that the further proceeding should be deferred, that the point might be reconsidered, and some other arrangement adopted, so that they might not appear to oppose the giving that ample remuneration to his *rt. hon.* friend which his services so well merited. It had been early said of him, when he first appeared in public life, that

he would some day render the state great service, and that prediction his *rt. hon. friend* had amply fulfilled (cries of "Move, move!").

*Sir John Newport*:—There was only one opinion as to the merit of the President of the Board of Trade, and it was distressing to force the house to oppose this resolution, which they could not support without a violation of their public duty.

*Mr. Canning*:—To vote for this salary would not compromise the right of any gentleman to call for an inquiry into the office of Treasurer of the Navy. He denied that this measure would increase the influence of the Crown. It might be right or wrong for the Treasurer of the Navy to sit in that house, but it was not matter of course that another office should be held by the same person. Lord Melville, it was true, held the office of President of the Board of Control with the Treasurership of the Navy. But Lord Harrowby, the *rt. hon. gent. opposite* (Mr. Tierney), he himself, and Mr. Sheridan, had each held the Treasurership of the Navy, without any other office. During all that time, it had never been made a question whether the Treasurer of the Navy ought not to be allowed to sit in the house. It was incorrect to talk of the office as a sinecure—it was not so in any one sense of the word. He did not dispute the assertion of the *rt. hon. gent. opposite*, that the duties did not take up more than an hour a-day of his time when he held it: but taking the fact as the *rt. hon. gent.* had asserted it, he must still consider this as a most inaccurate way of viewing it. Surely it would not be contended, that because a great banker only attended his establishment for an hour a-day to inspect accounts which were prepared for him by all the clerks, that his utility was to be classed with the attendance of one of the servants of the establishment. The increase in public business was almost overwhelming in every department. Concerning his own office, he could only say that he did not spare himself; but certain it was that no man who held it could call one hour of his time his own. He objected to the instance of the Vice-Treasurership of Ireland being assumed as an increase of the influence of the Crown. That office only replaced the Chancellorship of the Irish Exchequer, whose functions were abolished by parliament. As to the salary to the President of the Board of Trade, it was a question which stood on its own merits. It was nothing more than restoring the salary which had been taken away by Mr. Burke's bill, and that upon circumstances so entirely different, as to furnish a complete justification of the measure. The salary had been taken away because the office was then apparently useless. It was now proposed to restore it, because the office became one of the most effective in the state.

*Mr. Calcraft* then proposed that the chairman should report progress, and ask leave to sit again on Monday.

On the amendment being put, the numbers were,

For the amendment, 44—Against it, 83—Majority in favour of the original motion, 39.

On our return to the gallery,

*Mr. Hume* thought an inquiry ought now to be instituted whether the office of Treasurer of the Navy could not be dispensed with altogether, or so modified that another individual might be enabled to hold it, and the salary be saved to the country. He never heard so lame

an apology proposed by any set of public men for any public measure as had been made that evening for the present proposition. He moved an amendment—"That it is the opinion of this committee, that a salary of 5000*l.* should be attached to the office of President of the Board of Trade, but that it is expedient that an inquiry should be instituted, to ascertain if any, and what, alteration can be made in the office and salary of the Treasurer of the Navy."

*Mr. Maclerly* seconded the amendment.

The Chancellor of the Exchequer contended that it was neither proper nor parliamentary to discuss in a committee of supply, the question whether the Treasurer of the Navy ought to be permitted to have a seat in parliament.

*Mr. Baring* said that nothing gave him greater pain than to vote against the resolution for affording compensation to the *right hon. gent.* who at present filled the office of President of the Board of Trade; but the fact was, that the shape in which the present resolution was worded, rendered it quite impossible for him to afford his consent to it. He conceived this to be as decided and as bad a government job as any that had ever come under the notice of parliament; and he hoped that those members who were tenacious of the public purse, and also of the constitutional principle of opposing the entrance of placemen into that house, would give it every opposition in their power. The *rt. hon. gents.* had talked of the responsibility of the office of Treasurer of the Navy, but it appeared from a question which had been put to the *right hon. Secretary for Foreign Affairs*, that the responsibility of the office amounted almost to nothing. He did not know what was the nature of the duties incumbent on the individual who acted as Treasurer of the Navy. He believed that there were other members in the same situation with himself; and if that were so, it was a sufficient reason for instituting the inquiry which the *hon. member* (Mr. Hume) proposed. As ministers refused to institute that inquiry, all he could do was, to meet their resolution with the most determined opposition.

On a division, the numbers were—For the amendment, 35—Against it, 71—Majority, 36.

The original resolution was then put and carried.

MONDAY, APRIL 10.—*Mr. Brogden* appeared at the bar with the report upon the civil list act.

On the question "That this report be brought up,"

*Mr. Hobhouse* said, he would take that opportunity to enter his protest against this proceeding, and to express his astonishment, that his Majesty's ministers should have chosen this peculiar time for proposing an unnecessary addition to the number of placemen and pensioners whom they now saw in the House of Commons. Every *gent.* must recollect what had fallen from the Chancellor of the Exchequer in the speech which he delivered when introducing the Budget a few weeks ago. He declared how much he disliked the patronage which, as a minister of the Crown, was intrusted to his hands. But in the teeth of his profession, he came down to the house, and asked, as a matter of course, that they would split one placeman into two, and thus make a considerable addition to the already too powerful

patronage of the Crown (hear). He did not, on this, or on any other occasion, wish to attach a fanciful importance to any question. He did not suppose that one additional placeman would ruin the constitution, unless it had been very much deteriorated before; but he had a right to call on the Chancellor of the Exchequer to assign his reasons for dividing one place into two. He knew that some of the poorer bishops were allowed to hold other offices to make up for the deficiency of their annual revenue. Thus the Bishop of Bristol had been suffered to retain the Mastership of Trinity College, Cambridge, on account of the smallness of his income. But did any one ever hear of a proposal to remunerate that bishop, by granting him the full extent of his income for performing the duties of one office, while a second person was employed to do the duties of the other; thus employing two individuals to execute that which had previously been well done by one? The *onus* of proving the necessity of this proceeding rested with ministers. The right hon. gent. on the other side of the house were bound to show that the duties attached to the office of Treasurer of the Navy, and President of the Board of Trade, had not been heretofore efficiently performed by one person. Nothing of this kind had, however, been asserted. The rt. hon. gent. (Mr. Huskisson) did not state that he could not do the business of both situations. The rt. hon. gent. said, he would prefer attending solely to the duties which devolved on the President of the Board of Trade—that was, to perform the business of one office instead of two, with a better salary, which was natural enough. Here let it be observed, that he made no objection to the increase of that rt. hon. gent.'s salary (hear, hear). Very far from it. That was not the question; but whether they were to have two officers of the Crown in the House of Commons instead of one? His rt. hon. friend (Mr. Tierney) had told them, on Friday night, that when he filled the office of Treasurer of the Navy, in time of war, he performed the duties adequately, by devoting one hour each day to that object. That statement remained uncontradicted. The Chancellor of the Exchequer only said, that a considerable degree of anxious responsibility was attached to the situation, for which an officer of the Crown ought to be adequately remunerated (hear, hear). But, in point of fact, the responsibility alluded to by the rt. hon. gent. was none at all. Responsibility, according to the real signification of the word, must mean the liability of a man's fortune to make good the deficiencies occasioned by the running away of any of his underlings. But, if the individual who was at the head of an office was not called upon to make good the deficiency occasioned by the malpractices of his clerks, there was no responsibility. The business of the office ought to be so arranged, that the public could not be losers by the improper conduct of subaltern agents. The Chancellor of the Exchequer had stated, that some labour had been added to the office, in consequence of the arrangement relative to seamen's wills: but that part of the duty was now provided for by act of parliament, and the additional labour had been removed (hear). If he were mistaken in this or any other of his positions, that very circumstance afforded a reason for granting that inquiry into the nature and arrangements of the office which his hon.

friend (Mr. Hume) had required. His Majesty's ministers had not treated the rt. hon. gent. (Mr. Huskisson) fairly (hear). That rt. hon. gent. undoubtedly deserved much of his country. He had acquired popularity, and it was hard upon him that his well-earned popularity should be obliged to carry weight (hear, hear)—that ministers should endeavour to take advantage of it, in order to fasten upon it a measure altogether unjustifiable. From his unwillingness to shew the slightest disrespect to the President of the Board of Trade, he hardly knew how to shape a motion; but, as he was bound to resist this proceeding, he should take the course of protesting against the report. Out of doors but one opinion prevailed on the subject, where it was considered, as the hon. member (Mr. Baring) had termed it—a ministerial job. It had been urged, that formerly the two offices had existed separately, as if it were any reason for the vote, to say that it was fit to revive an exploded absurdity,—that experience was to be of no use; and that, because it had been found very convenient and proper to unite them, they were now to be disunited. It was a hard case upon the house—upon the king's ministers—aye, and upon the king's opposition, too (hear, and laughter), that they were to be dragged through the mire, because it was thought proper by certain individuals to pursue the course now recommended. To him it seemed a wanton attempt to increase the already swollen number of placemen with seats in parliament. Nothing could more plainly shew the distress of ministers upon this occasion, than the fact, that the President of the Board of Trade himself had been obliged to make a speech in favour of the motion.

Lord Glenorchy observed upon the obvious difference between the principles and the practice of the Chancellor of the Exchequer. Ministerial influence in that house was already more than sufficient, since many branches were filled by those who were placemen and pensioners of the Crown.

Mr. Canning:—On a question of so much personal feeling on this and the other side of the house, he was anxious, before hon. gent. came to a vote, to state, as briefly and as plainly as possible, his view of the question. He could not give a much better proof of his disposition to treat the matter with all fairness, than to assure the hon. gent. who spoke last but one, that he would not take advantage of the opportunity the amendment afforded of stating, that the hon. gent. meant to offer an obstruction to the whole plan, when, in fact, the opposition was only directed to one particular part of that plan. It could not be understood, after what had passed, that the amendment implied the slightest blame or disparagement of the president of the board of trade (hear, hear). The hon. member (Mr. Hobhouse) had asked why the present unfavourable time was taken for introducing such a proposition? The answer was plain: the question, in fact, originated with those whom the hon. gent. had designated his Majesty's Opposition (hear, and laughter). Government had not entertained the slightest intention of proposing the change until the suggestion came from the other side of the house in a former session. This suggestion had certainly been made under better auspices,—when the pecuniary affairs of the country had a more flourishing aspect; but the time was the misfortune, not the fault of ministers. The hint having

been given in the last year, ministers thought that they could not shrink from the adoption of it in the present. He could further inform the hon. gent., that ministers had received an intimation, from what they conceived good authority, that if Government did not stir in this business, some member of the Opposition would, so that, in point of time at least, those who brought forward the vote were completely exempted from blame. If he were compelled to purchase one of these offices, by the sacrifice of the other, he would certainly sacrifice the presidency of the board of trade, and retain that of the treasurership of the navy. This he would do with a view to the general advantage of the Government. It seemed to be contended that the two offices were so naturally united, that nothing but the most barbarous policy could ever separate them. But the office had been held as often alone as conjoined with another. It was true that Mr. Dundas held it while he was at the same time president of the board of control. In 1790, the presidency of the board of control became a salaried office, the salary being 2000*l.* in contemplation of the 4000*l.* which Mr. Dundas had as treasurer of the navy, on the principle that the emolument might be about equal to that of secretary of state. This salary of 4000*l.* had been established when the balances of public money were transferred from the treasurer of the navy to the Bank, after Mr. Burke's celebrated speech on economical reform, by which he also succeeded in abolishing the board of trade, and the salary of its president, amounting to 8 or 10,000*l.* a-year. Thus the matter stood till 1799, when Mr. Ryder succeeded to the office of treasurer of the navy, but not to the board of control. In 1801, Mr. Bathurst succeeded to the office of treasurer of the navy, and held it without any other office. In 1803, the *rt. hon. gent. opposite* (Mr. Tierney) held the treasurership without any other office. In 1804, he himself (Mr. Canning) succeeded to the treasurership, and held it without any other office. In 1806, Mr. Sheridan succeeded him, and held the office separately. In 1807, Mr. Rose succeeded Mr. Sheridan in this office, and held it along with the office of vice-president of the board of trade, and so the matter stood till 1812. In that year, Mr. Rose ceased to be vice-president of the board of trade, and held the office of treasurer of the navy alone for six years after, till the day of his death: so that it was a total mistake to suppose that this office was always held jointly with another office. It had been held quite as often alone. The office was certainly not a sinecure. What the *rt. hon. gent. opposite* (Mr. Tierney) had said on a former night, he (Mr. Canning) said now—that the treasurer of the navy, being an officer high in public trust, ought to hold his time and his talents at the disposal of Government, in order to spare those servants of Government who were generally over-laboured. This was not merely his opinion—he was stating only what had been said by a committee of that house in 1817, at the time Mr. Rose held the office alone, with a salary of 4000*l.* In the report of that committee, dated the 23d of June in that year, he found the following observations:—“They esteem the salary paid to the treasurer of the navy as much too large, and recommend a reduction on any future appointment to that office, so as to place it on a level in respect of emolument with the paymaster of

the forces, its present salary being the same as that which would have been lately received by the paymaster of the forces, if the office had been held by one individual. Your committee, however, think it but fair to observe, that in the oldest naval estimates extant, viz. from 1684 to 1695, while the salaries of the lords of the admiralty were, as at present, 1000*l.* per annum, the salary of the treasurer of the navy was no less than 3000*l.* per annum; and there is no doubt, that, besides his official duties, the treasurer of the navy has been frequently looked to as the person to whom important parliamentary and political business, connected with the naval department, and the general concerns of Government, should be confided. Whether these latter considerations will induce the house to continue the salary of 4000*l.*, or reduce it to 3000*l.*, or any other sum, it is not for your committee to inquire. They have not in any case considered themselves called upon to enter into political considerations of this nature, and have recommended the reduction hereinbefore proposed, on a mere view of the duties of the office itself, and on a principle of assimilation to the paymaster of the forces.” There were various committees, especially, in which the holder of such an office might be called upon to preside; and his *rt. hon. friend*, at this moment, was chairman of a most laborious committee. There was nothing which contributed so much to break down the physical strength of a noble lord (Castlereagh), whom he (Mr. Canning) was not worthy to have succeeded, as his laborious exertions in a select committee of that house. The *gents. opposite* had confessed, that Government had done some good things; but, on this supposed object of ministers to catch another vote, they had bestowed every vituperative epithet that could be applied to it. Now, he insisted that the present Government had shown no disposition to increase the patronage of the Crown, or to make offices for the sake of votes. The learned member (Mr. Abercrombie) had adverted to the office of vice-treasurer for Ireland, and some others; but the office of vice-treasurer for Ireland was no new office: it existed before, under another denomination. Then, with respect to the master of the mint, he was at the head of an important commission, with a salary attached to it. But when Mr. Wallace was made master of the mint, his salary as commissioner had been diminished, although it was a most popular commission. He claimed, therefore, fair credit for the assertion, that when the present Government wished to retain an office, it was because they honestly thought such an office ought to exist, and not with a view to increase their influence in parliament. What did it signify to them to gain a few single votes? They did not want such votes. Government must be supported by the confidence and trust reposed in it by the great body of the house and the country, and was not reduced to the necessity of canvassing for a few votes. If matters came to that pass that ministers must depend for their support on ten or twenty votes, it would be time for them to think of resigning their offices. The present Government had even been very lax on this point, and had not insisted upon many officers being in parliament who really ought to be there. He remembered when Mr. Pitt, who was himself equal in debate to any ten or twelve men of the present day, was supported

by the master of the rolls (Sir William Grant), and the master of the rolls sat in parliament until Sir Thomas Plumer was appointed to the office. There was another instance, in the case of one who held an office which bore some relation, with respect to the civil law, to the office of attorney-general, who had formerly usually sat in parliament, and had no seat there at present. In 1804, he remembered, when a very warm and long debate arose on a certain occasion, the whole brunt of it fell on the master of the rolls and the king's advocate. In what period was there such a number of the profession of the law among his Majesty's opposition as existed there at the present moment? What an advantage then would it have been to the ministers, to have had the master of the rolls and the king's advocate in the house on such occasions, for instance, as the recurrence of the chancery debates, and others of a similar nature, which lawyers alone could best understand? Then ministers had against them two eminent civilians (Sir J. Mackintosh and Dr. Lushington), and what an advantage would it have been to the ministers, even in that view, to have the assistance of the master of the rolls, the king's advocate, and the judge advocate, another officer who had generally a seat in that house? Never, till the time of the present Government, had these three officers been dispensed with in parliament. This was a proof, that in wishing to divide these two offices, ministers were not actuated by any motive of parliamentary influence; and they only wished to retain the offices, with the power of sitting in parliament; because it was their sincere conviction, that the course they were pursuing was beneficial to the country. Then, with respect to the diminution of the salary, and the exclusion of the treasurer of the navy from parliament, he objected to this latter proposition more than to any other that had been suggested. He objected to the principle of excluding from parliament officers in high situations under the Crown. It was of the greatest importance to the country, that the Crown should look to the houses of parliament for persons to fill high and responsible public situations. He knew no law that prevented the Crown from making any one who was not in parliament Prime Minister. But he had never heard it said, that it would be a good thing for the country that the Crown should choose for ministers persons not in parliament. Was not this a great security to the public for the efficiency of the officers of Government, that they should appear in parliament, and prove their capacity for their situations? There were certain offices whose possessors could not be excluded from parliament, without lowering the standard of the Government, and such an office was the treasurership of the navy. The consequence of excluding such officers from parliament would be to make the offices of state subjects for scramble among mere favourites. The gentlemen opposite, might, themselves, soon succeed to these offices, and he was, therefore, doing them a great favour in resisting their proposition (a laugh). If it were acted upon, they would have for the great offices of state persons of no higher qualifications for them than those of bankers' clerks. The parliamentary character ought never to be separated from high and honourable office, and never could be so separated, without great injustice to the public, and the loss of that high respectability which the Go-

vernment of this country generally maintained. So much, then, for the notion of excluding the treasurer of the navy from parliament; and now one word with respect to the salary. That salary was before 4000*l.* per annum, and at the present time it was 3000*l.* It was now proposed to reduce it to 2000*l.* He knew no principle upon which any one of these sums should be preferred to the others. But he found, in the report of the finance committee, a statement, that when this office was held alone, it should be put on the footing of that of paymaster of the forces. Here, then, was a rule; and, as the case mentioned by the committee was now likely to arise, that rule might be applied to this office. The salary of the paymaster of the forces was 2000*l.* with a house. It was now intended to give the treasurer of the navy a salary of 2500*l.*—the additional 500*l.* being in lieu of a house. He had stated the reasons, which to him appeared conclusive, why the treasurer of the navy ought not to be removed from his seat in parliament. It was unnecessary to argue the third point, relative to the continued unity of the offices of president of the board of trade and treasurer of the navy, as the propriety of that measure had not been attempted to be maintained by any body in the course of the debate (cheers).

Mr. Tierney:—"The question we have to discuss, is not whether the office of the treasurer of the navy should be abolished, as the *rt. hon. gent.* has argued it, and as any member entering the house during his speech must have supposed it to be. Nobody on my side of the house has dreamed of any such proposition, or hinted at it in any shape. I am glad to see so many members coming in at this moment. We shall, I trust, have a fair start now (a laugh). The true and only question before us is, whether the salary of the president of the board of trade shall be increased 2000*l.* more than he now receives; and I beg that we may not be talked out of it. Now, what, I ask, has that question to do with the influence of the Crown, or any of the other topics which the *rt. hon. gent.* has pressed into his service (this evening)? All that has been said is, that this measure will increase the power of the Crown by the creation of one office more than are actually existing. My hon. friend (Mr. Hobhouse) calls us his Majesty's opposition, and I think it is an excellent phrase (laughter). I ought to know something as to its correctness, for it has been my lot to be zealously opposed to his Majesty's Government—though latterly, since they have acted upon principles which seemed to me to entitle them to public approbation, I have to the utmost extent of my power supported them. My hon. friend could not have invented a better phrase to designate us than that which he has adopted, for we are certainly, to all intents, a branch of his Majesty's Government (laughter). Its proceedings for some time past have proved, that though the gentlemen opposite are in office, we are in power (cheers). The measures are ours, but all the emoluments are theirs (cheers, and laughter). It appears, by the *rt. hon. gent.*'s shewing, that this is our motion (hear, hear). He contends that we have no right to oppose it, because it was he who originally suggested it. It is in my opinion immaterial from what quarter the suggestion proceeded. I believe an hon. friend of mine (Mr. Baring) did say that he considered the salary inefficient to the labour required by the

duties of the office, and the great talents with which they were at this moment discharged. But this suggestion was thrown out last session, and no fault was found on our side of the house this session; because no notice had been taken of the suggestion. But it seems to have lain heavily on the rt. hon. gent. (Mr. Canning). He steps forward to relieve himself, and, as he assures us, to gratify us (a laugh); and he says, 'I will accede to your wishes; I will take the salary you suggest for one office, and I will keep the other office with the salary just as it is' (cheers). No wonder that we did not know our own child. Under his nursing, he had changed it for a lusty bantling, in the shape of a new treasurer of the navy (laughter); an office which I undertake to prove utterly useless, in a sense which I will hereafter explain. The rt. hon. gent. says, that we are not sufficiently on the alert with regard to our own interests; and he has declared that Government is in no want of such supporters as it may gain from this measure. I differ from him widely. I think that Government do want support. I never saw a session when they wanted it more (hear, hear). The rt. hon. gent. may not be aware of the full extent of his obligations to this side of the house; but I can assure him, that if, as he asserts, he would not consent to stay in office with a pitiful majority of twenty, he would, without our support, have been long ago driven from his present honours. If we take away our support, out he must go tomorrow (a laugh). The rt. hon. gent. has taken credit somewhat too largely for the reduction of the official seats in this house. True, we have lately had no master of the rolls here. But Sir Thomas Plumer, towards the close of his life, could not, if he would, have given his personal support to the measures of Government. His infirmities rendered him incapable of attending. If we have no master of the rolls now in this house, it is because he is in another place, where he is required to be bodily present for the aid and support of the Lord Chancellor (laughter and cheers). But the rt. hon. gent. complains that the opposition is made up of lawyers. It is true that we breed some lawyers on this side, but it is also true that we sometimes breed them for the other side of the house (laughter). Half their strength has come out of our nursery, not much improved certainly by transplanting (laughter). "You have two civilians," the rt. hon. gent. says; "there is an advantage!" But what has he, let me ask? He has one civilian (Dr. Phillimore),—and a judge (Sir J. Nicholl), and as one judge is at least worth two civilians, the balance is on the other side of the house. The learned civilian (Dr. Phillimore) was not seated at the Board of Control purely on account of his knowledge of Indian affairs. He no doubt considers the £500l. a year he receives as a general retaining fee for the support he is to render to the rt. hon. gent., who, on his part, seems to think that the moment a lawyer accepts office, he is bound to vote with his party through thick and thin. As to lawyers in general, there are surely enough on the other side of the house. They have the Attorney-General, and the Solicitor-General, and the Chief Justice of Chester—he, by the bye, is one they have borrowed of us (a laugh)—and they have a Welsh Judge, and perhaps they will have Mr. Kenrick next (laughter); while we have only those who maintain their station by the independent exercise of their talents. The real question

before us, however, is, whether the proposed salary of 5000l. shall be given to my right hon. friend the President of the Board of Trade, in consideration of the great ability with which he has filled that office? That is the footing on which I wish to see the question stand. I mean to consider the proposition as a compliment to the rt. hon. gent. (Mr. Huskisson), for I am not convinced that his office ought permanently to belong to the Cabinet. I am favourable to the proposition, because I am of opinion that Government will be strengthened by increasing the rank and importance of this officer. I therefore heartily hope he may have the augmentation desired. The rt. hon. Sec. (Mr. Canning) says that the suggestion originally came from our side. So let it be, if he pleases; but in what shape did it go from us? Why, undoubtedly, as a suggestion to add 2000l. to the salary of 3000l. already received by my rt. hon. friend (Mr. Huskisson) as Treasurer of the Navy. There is the less reason for giving a large separate salary to the President of the Board of Trade, as it is the necessary tendency of the labours of my rt. hon. friend to reduce the number and weight of the duties of that office in future. As to the incompatibility of the two offices which he now fills, will any hon. gent. in this house lay his hand on his heart and say, that he verily believes any inconvenience has resulted to the public service, or to the individuals holding those offices, during the last six years? I will by every means oppose this attempt to make the Presidency of the Board of Trade a substantive office. I regard it as a wanton waste of the public money; and I am equally opposed to the miserable project for reducing the salary of the Treasurer of the Navy from 3000l. to 2500l., in order that it may be given to somebody for his support in this house; and for aught that I know, too, to a lawyer (laughter and cheers).

The house then divided, when the numbers were—For the motion, 87—Against it, 76—Majority for ministers, 11.

Mr. Canning expressed his regret that the smallness of the majority would prevent him from persevering in the course, which, as a matter of principle, he had conscientiously supported; but which, as a matter of expediency, he now felt himself bound, under all the circumstances of the case, to abandon. The expression of opinion had, undoubtedly, been very strong, and his Majesty's Government would not further press the measure. As it seemed to be the wish of the house, they would consent to the union of the ancient office of the Treasurer of the Navy with that of the President of the Board of Trade (hear, hear).

Mr. Tierney rose, with heartfelt pleasure, to assure his Majesty's Government that they had, by this act, justly earned the approbation of his Majesty's Opposition (laughter).

The Chancellor of the Exchequer said, that his rt. hon. friend had intimated the course which Government intended on this occasion to pursue. It was his duty to carry that intention into effect, and it appeared to him consistent with right feeling, and with a due sense of what belonged to his situation, to move the proposition himself, without suffering any restraint from false shame (hear, hear). Many severe and groundless imputations had been cast upon Government in the course of the debate, but it was not necessary to do more at that time than to notice and repel them gene-

rally. He felt it his duty to move, "That the resolution be amended by inserting the sum of 2000l. as the salary of the President of the Board of Trade, instead of 5000l.

Sir M. W. Ridley seconded the amendment, which he had intended to move himself, if the rt. hon. gent. had not anticipated him.

Mr. Hume said, he wished to have his word too (a laugh). He would be happy to see Government oftener act as they were then doing. If the Opposition would attend more to their duty, he calculated upon a great deal more attention to the wants and interests of the people, and he hoped that much would yet be done for their benefit before parliament rose.

The resolution, as amended by the Chancellor of the Exchequer, was then agreed to, and a bill ordered to be brought in to carry the same into effect.

## ARMY AND NAVY.

### *Army Estimates.*

FRIDAY, MARCH 3.—On the motion of Lord Palmerston, that the house should resolve itself into a Committee of Supply,

Col. Davies proposed the appointment of a committee to take into consideration the whole of the military expenditure of the country. The hon. member then entered into a comparison between the expenditure and military establishments of the French and American governments, and those of Great Britain. He recommended that colonial corps should be raised, instead of sending troops from this country, which occasioned a heavy expense. If the colonial resources were properly managed, and the pensioners on them were got rid of, he thought that they might be fully available for defraying the costs of their governments. The hon. member considered that the mode in which the militia of this country was called out, created a serious expense, without any real benefit. After adverting to their mean appearance in the field, he suggested that a portion of them should be called out and embodied for a longer time. The hon. member concluded by moving, as an amendment, to omit the words after "that," and insert instead, "a select committee be appointed to examine into the whole military expenditure of the country."

Lord Palmerston observed, that the committee was the proper place for discussing these details. He should therefore reserve what he had to say on the subject until the Speaker left the chair.

The amendment was then put, and negatived without a division.

The Speaker having left the chair, the house resolved itself into a Committee of Supply.

Lord Palmerston began by remarking, that any person who had heard the hon. member (Col. Davies) would think that the estimates now proposed had been greatly increased, whereas the sum estimated was nearly the same as that voted last year. The difference in men amounted to about 300, occasioned by three companies raised in Newfoundland, and paid by that colony; and the sum was greater by 126,000l., of which 84,000l. was occasioned by the change in the currency of Ireland. The remainder was occasioned by certain items being charged for a whole twelve month, which in the last estimates were only calculated for

three-quarters of a year. The estimates of the first class, including the land forces, staff, &c., amounted to 104,000l. more than those of the last year. The increase in the land forces was 94,000l.; in the staff, 2620l.; part of which arose from the change of the currency in Ireland; the remainder was occasioned by the augmentation in the medical staff on the coast of Africa. The medical staff at home had been diminished by 941l. In the War-office there had also been a diminution of 941l. Very great progress had been made in the settlement of the arrear accounts, and it had been, and would continue to be, his (Lord Palmerston's) great endeavour to make every practicable reduction of expenditure in this office. Under the head of medical charges, there had been a diminution of 941l., effected by the conversion of the Royal Military Infirmary into an hospital. In the estimate for volunteer corps, there was an increase of 8966l., arising from its being supposed that the services of more yeomanry for permanent duty would be required this year than the last. The addition, therefore, would arise from the expenses of the corps whilst on permanent duty; for the number was diminished by 800 men, so that there would be a saving in contingent allowances. But the pay of 5s. per day each man, for himself and his horse, was insufficient for the expenses incurred by this class of persons whilst engaged in a temporary military service, and it was therefore proposed to increase the allowance 2s., which would make it 7s. per day. In the second class of expenditure there was no material variation. In the third class there was an increase of 23,791l. There was no material variation in respect to the Royal Military College. There was an increase of 5339l. in the estimate for the pay of general officers. As that for garrisons there was no material variation. In the full pay to reduced officers there was a diminution of 7500l.; in the half pay and reduced allowances to officers of foreign corps, 2414l. The charge on account of pensioners of Chelsea Hospital was increased 3300l., that for out-pensioners was increased 44,653l., in consequence of additional casualties. The Royal Military Asylum was much the same as the last year. The widows' pensions were increased 6670l.; the allowances on the compassionate list were increased 4190l. The superannuation allowances were diminished 1759l. The Exchequer-fees continued the same as last year. The estimate for the veteran corps was diminished 3959l. The numbers and expenditure of the two years, therefore, stood thus:—Number of men in 1825, 76,345—number of men in 1826, 76,372; making an increase of 227 men. Charges in 1825, 6,476,000l.—charges in 1826, 6,602,000l.; making an increase of 126,000l. The army had been increased last year, it was true; but the increase had been acquiesced in by the house, and likewise by the hon. member (Col. Davies) himself. The only criterion by which the house could judge of the amount of force required, were the present exigencies of the service, and not the necessities of any antecedent period. The colonial service required a large force in actual employ; and it was necessary to have also a disposable reserve. The hon. gent. had suggested that colonial regiments should be raised in order to dispense with the services of the regular army; but he (Lord Palmerston) conceived that if officers were commissioned

for general service, they would not like to be required to serve in perpetual banishment, at all events not without an increase of pay, in which case there would be no saving of expense. The force would likewise be locked up; would not be available for general service; and would consequently become infinitely inferior in point of efficiency (hear). Under the present system, regiments were constantly coming home, and by undergoing inspection, were kept up in a state of discipline: if kept constantly abroad, the troops would lose all their efficiency, and would not be fit even for the defence of the colonies in which they were stationed. With respect to the proposal of the hon. member to substitute militia for a part of the regular force, the house would be aware that, under the existing law of the country, it could not be carried into effect. The Crown, at present, had no power to keep the militia permanently embodied in time of peace, unless under circumstances of apparent danger from invasion or rebellion. And even setting aside that objection, what would be gained by such a proceeding? Certainly no diminution of expense. Militiamen must be fed and paid as well as regular troops; and we should be only exchanging a very admirable and complete description of force for a very imperfect one. Upon the colonial force he would not detain the house farther than to observe, that he denied distinctly that it was at all greater than it ought to be. The observations upon North America would be best answered by his hon. friend the Secretary for the Colonial Department (Mr. W. Horton). The objection respecting the garrison of Gibraltar was peculiarly unfortunate; inasmuch as an hon. and gallant member (Sir R. Wilson) had declared, only in the last session, that, having personally visited that place, he had seen and been satisfied with his own eyes, that the garrison was not at all greater than was required, and indeed scarcely, in his opinion, sufficient. He should not follow the hon. member through his review of the finance systems of France and America, because it was a proceeding which did not go very directly to the subject before the house; but there was one position taken in the course of it, the truth of which he felt himself bound to deny. The hon. member said that it was an additional reason why we ought to make every practicable reduction, because we were now about to return to a metallic currency, and to act upon principles of free trade. Now, as far as he understood our object in going back to a metallic currency, it was to avoid the recurrence of those distresses into which the departure from that system had from time to time unhappily plunged us; and our adoption of principles of free trade was not a course which would render the country poor, and unable to bear expense, but a course which had been resolved upon from a conviction of its superior profitableness and expediency. The noble lord sat down by moving, that a force not exceeding 87,240 men should be maintained, exclusive of our force in the East Indies, for the service of the present year.

Lord Milton was glad, at least, that he did not stand in the same predicament with his hon. friend (Col. Davies); having voted in a small minority of nine against the estimates of the last year. He did not mean to enter into any detail upon the grants before the house; because his objection was not an objection of detail—

he objected to them altogether, as founded upon an erroneous view of the interests of the country, and he was the more confirmed in that opinion by the latter part of the speech of the noble lord opposite, in which he had endeavoured to divert the attention of the house from looking back to the principles of policy by which in former times the country had been regulated; he saw clearly from that speech that the military spirit of the Government—or, more properly speaking, its disposition for keeping up a large military establishment—was far from being so subdued as for the safety and happiness of the country it ought to be. The latter part of the noble lord's speech showed clearly that, in the opinion of the higher authorities of this country, our security depended upon the maintenance of a large military force. He (Lord Milton) was yet quite unconvinced that there was the least necessity for any larger establishment than the country, in former years, had been in the habit of maintaining. If our colonies had increased in one part of the world since the period to which he alluded, in another part they had been diminished. Fifty years since, it would be recollected, the whole of the United States had been under our control. But he objected to the principle upon which the estimates before the house were framed. In the year 1822, the vote had been for 69,000 men. In the present year, and in the last year, it was for 87,000. What was the object of this increase of 18,000 men in three years, and in three years, too, of prosperity? The noble lord said that the estimate for this year was not greater than the estimate for the last. He did not inquire about that; he asked, why it was greater than that for 1822? He would tell the house why it was greater. It was because in 1822 the distress of the landed interest was such that the noble lord could not have counted upon his rows of county members without reducing every establishment to the lowest possible point; and as a measure of policy, let the noble lord take that course again, without the loss of an hour; for he might depend upon it that, whatever had been the distress of the landed interest in the year 1822, it would be at least as great before the end of the year 1827. There was one point which he would briefly notice—the increase of pay to the yeomanry. The pay of the yeomanry upon service, had been heretofore 5s. a day: it was now intended to increase it to 7s. An addition of nearly one half was an augmentation of great importance; and, besides, he much doubted the expediency of keeping that description of force at all. In many parts of England, he believed, it was kept up merely for the gratification of a few individuals; to his knowledge they were kept up in one county with that view: but the presence of this force was no longer necessary, and the reduction of it would save the country 130,000l. a year—not to speak of the money wasted upon it in Ireland, where it was not merely useless, but a serious mischief. The noble lord then adverted to the general disposition evinced by Government to rely for the safety of the country upon the strength of an armed force; he contended, that the weakness of the country would be found in the weakness of its Stock Exchange, and not of its military establishments. This weakness the whole of the late conduct of ministers had tended to aggravate rather than to remove. A negotiation

had been entered into with the Bank, upon which he placed no reliance; what the country wanted was, not money, but confidence; and the conduct of ministers had tended to any thing rather than the restoration of confidence.

Mr. Hume thought it very necessary, before the first portion of these estimates was voted, to consider how far the country was in a situation to pay them. In his opinion, the whole estimates of the country—army, navy, ordnance, and civil list—might be reduced by one-half, with prodigious advantage. The army estimates for this year were greater than for the last; while the nation was fairly entitled to look for a considerable reduction. We were in the 11th year of peace: with a very fair prospect that peace would continue; for the greatest advantage which the country had derived from the services of the *rt. hon. gent. opposite* (Mr. Canning) was, that he had struggled to keep her out of the influence of that military alliance with which she was unfortunately connected; and yet we were keeping up a military force which was more than unnecessary—it was monstrously and ruinously extravagant. Those who fed upon that establishment—as upon others—those who participated in the spoil of the system, did not perceive any inconvenience in it. Our large establishments became at once a cause and an effect; they served to maintain a number of persons, who, in turn, maintained them. From the year 1785 to 1793, our whole army had never exceeded 36,000 men. Now, our officers alone, of the army and navy, mustered 27,000. All this expense was paid by the middle and lower classes of the community. The amount of taxes paid by the higher orders was nothing in comparison of that paid by the lower. The poor paid for these enormous establishments, by which the rich and powerful benefited. Upon a moderate calculation, the higher classes received more from the public purse, through the medium of pensions and employments, than the amount of the taxes which they paid into it. Would the house go on, in the present state of the country, to uphold a system which was as destructive as it was unconstitutional? Having said thus much to apologize for what he meant to say (laughter), he should now call the attention of the house more immediately to some circumstances of detail. The noble lord (Palmerston) thought it unnecessary or objectionable, to go back to the state of our affairs in 1792: but the committee appointed to inquire into the whole revenue and expenditure of the country had been of a different opinion. It was time to look back, and to recur to the better principles of other days: for the country was pouring in its petitions for relief, and the house would find those petitions every day increasing. How could this relief be given? In no way, but by a reduction of our expense. The interest of the public debt could not be abated—that was a course which no man would advocate—but the expense of our establishments might be reduced 12,000,000*l.* a year, without the smallest ill consequence or inconvenience. The only difference would be, that the noble lord (Palmerston), and many others about him, would find their incomes reduced one-half. The extravagant expenditure of the present period, as compared with that of the time gone by, was most alarming. In 1792, the whole expense of the army, including the force in Ireland, was 2,330,000*l.*; the ordnance amounted to 44,000*l.* for which department they

would this year be called on to vote 1,300,000*l.* and the navy was under 2,000,000*l.* sterling. The whole expense for those establishments did not, at that period, amount to more than 4,700,000*l.* But they now cost four times that sum. Here was ample room for retrenchment. This simple statement showed how easy it was, by pursuing an economical course, to place the country in that prosperous and commanding situation which it was quite impossible the British empire could attain, if the legislature sanctioned so wild and thoughtless a career of expenditure. The finance committee had taken a view of the military force maintained by the country from 1785 to 1792. During the whole of that period of peace, the average number of troops employed never exceeded 32,000 men. In 1786, 1787, and 1788, the number was 30,000; in 1792, it was 33,000 and no more. The disembodied militia consisted of about 34,000 men. But now the noble lord called for, nominally, 76,000 troops, but in reality for 86,000; for he had omitted the 10,000 officers who were employed, and who must, of course, be paid by the public. Taking into account the royal artillery, the marines, and every other species of troops, the total number in 1792 was about 53,000 men. But now parliament was called on to vote 86,764 men, besides the royal artillery, engineers, and horse artillery, consisting of 8446 men, and 9000 marines, who were available for the land service, forming a total of 104,000 regular troops, which the people were called on to maintain in this the 11th year of peace. This immense force was demanded, too, at the very period when they were told by his Majesty, in his speech to both houses of parliament, that every disposition to remain in a state of peace and amity with this country was manifested by all the neighbouring nations (hear, hear). Could any thing be pointed out in the present situation of Great Britain that demanded the keeping on foot of 104,000 military men? Besides this regular force, there were in England 55,000 militia, and 22,000 in Ireland, making a body of 77,000 men, which cost the country upwards of 150,000*l.* per annum. There were also 74,000 yeomanry maintained at an expense of 153,000*l.* a year. These were exclusive of the colonial corps, which were stationed at Ceylon, the Cape, &c. amounting to between 4000 and 5000 men. Taking these different bodies together, they gave a grand total of 259,000 men in arms, or ready to be called into service on any emergency. If from this gross amount they deducted the militia and regulars which were provided for in 1792, they would find an increase in the present, as compared with the former period, of 173,000 men. Surely this was wholly inconsistent with the recommendation of the finance committee in 1817 (hear). Let gentlemen consider who were the members of that committee. Among them were the late Lord Castlereagh, Mr. Banks, Mr. Tierney, Mr. Vansittart, (the then Chancellor of the Exchequer), Lord Binning, Sir J. Newport, Mr. Huskisson, Mr. Peel, Mr. F. Lewis, Mr. D. Giddy, Mr. Gough, and Sir Thomas Acland (laughter). If the house were at this moment called on to choose a set of men to give their opinion on the grave and important subject of national finance, he did not think they could select a body of individuals on whom greater reliance could be placed than on those who constituted this committee. They sat for nearly two years, and

produced no less than eleven comprehensive reports. They investigated the state of the army, the navy, the ordnance, and various other departments. They made inquiries relative to sinecure offices, and recommended the abolition of several, and, indeed, they took into consideration the entire expenditure of the country. There were two or three of those gentlemen who were at present connected with his Majesty's Government, and he called on them to look at those reports (the work of their own hands), and to confess how far their present proceedings fell short of what they recommended the house to do in 1817 (hear, hear). The following passage was contained in their second report:—"Your committee, in making a reference to the year 1792, desire to call the notice of the house to the low establishments of the latter part of that year, which were deemed sufficient for all national purposes at that time, in the contemplation of a long continuance of peace; and although many circumstances are materially changed by events which have subsequently taken place, so as to prevent any exact parallel from being drawn between the two cases, especially in the amount of pecuniary charge, yet they submit that as near an approximation to that low scale of establishment and expense as may be found consistent with our more extended possessions, and with the augmented rates of various fixed disbursements, would be highly advantageous in relieving the burdens and in supporting the public credit of the country" (hear, hear). Now, he wished to know whether the price of stores, and of various articles connected with their military establishment, had not been very much reduced? It could not be denied, that the price had fallen greatly; and therefore it was clear, that if the scale of their military establishment was placed on its proper footing, a great saving might be effected for the country. What had taken place since 1817, to prevent such a reduction from being made? Those who were members of the house at that period, must recollect the speech of the noble lord (Castlereagh) which he (Mr. Hume) had afterwards read, and which held out the most flattering hopes of a reduction of the national expenditure. The noble lord then observed, that the reduced establishment at which they had arrived, was not near so low as that which might be expected in the course of a few years. The committee went farther than the noble lord, and declared their firm opinion, that by an arrangement with respect to the half-pay, the country would, in a very few years, be relieved from a very large portion of the expense incurred by the military establishment. But it appeared that the house and the country were completely deceived. The pensions and every portion of the fixed establishment, instead of being decreased, had gone on progressively increasing (hear). He did not blame the noble lord opposite (Lord Palmerston) on account of these estimates. He was only the organ employed to lay them before the house; and the censure ought to fall, not on him, but on his Majesty's ministers, who agreed that so immense a force should be kept up. By subjecting the country now to such enormous expenses, they would be placed in this situation—that should war arrive, they would be unable to make those great exertions which they had done on other occasions. It had been stated, with very great truth, that it was only by the force of her financial exertions,

that this country had been able to struggle through the war, and to overcome the manifold difficulties which were opposed to her. It was therefore the duty of the house to watch over those finances with extreme jealousy; for it must be obvious to all, that if the Government went on crippling the resources of the empire as they were doing at present, England must cease to have that commanding influence as a nation, which she had so long and so justly possessed. The committee of 1817 stated, in their second report, that it was only by adhering to a rigid system of retrenchment and economy during peace, that this country would be enabled successfully to encounter a period of warfare, should circumstances render it necessary that recourse should be had to hostilities; and therefore they recommended the utmost economy in all disbursements of the public money, as essentially necessary to the substantial benefit of the country. Indeed, every part of the different reports of the committee was directed to the same object. In every sentence they pressed on the house as powerfully as they could, the necessity of bringing down the military establishment as nearly as possible to the standard of 1792. The noble lord had drawn the attention of the house to the estimate of last year; and his gallant friend (Col. Davies) had very properly observed, that it was not fair in the noble lord to confine his view to the last year's estimate, instead of going back to that period when the house peremptorily called on ministers to cut down the expenses of the country. This was done in 1821, when distress bore heavy on the country, as it did at present; though it did not weigh quite so heavy at this moment on the landed proprietors as he thought it would do in the course of a few months (hear, hear). At that period the noble member for Yorkshire (Lord Milton) gave the landed proprietors a little good advice, but they would not take it (hear); and they pursued the most absurd course that any set of men ever adopted (hear). When attempts were made at that time to bring down those establishments to their proper scale, the country gentlemen refused to give their assistance in effecting that desirable object. They voted for the continuance of those extravagant establishments; and then, with the most extraordinary inconsistency, they turned round, and called for the reduction of those very establishments in favour of which they had previously raised their voices (hear). The estimate which the noble lord now presented amounted exactly to within 41,000*l.* of that which he submitted to the house in 1821. The estimate for this year was 6,602,133*l.*; for 1821, it was 6,643,000*l.* On the 27th of June, in that year, the house addressed his Majesty, requesting him to cause every possible saving to be made in the public expenditure, so far as such retrenchment could be effected without detriment to the public service in the different establishments. The expenditure in the military department was particularly adverted to. He proposed a motion which, though in substance the same, would have expressed the determination of the house more decidedly; and although the late noble lord had declared, at the commencement of the session, that the service of the country could not go on if a single man were reduced, in a few months after the address to which he had alluded was voted, a reduction was effected in every department. He believed the retrenchment in the army, navy,

and ordnance, in the next year, amounted to 1,500,000*l.* In 1821, 81,000 men were called for; but in the next year after that address, there was a reduction of no less than 20,000 men; and the reduced number was found amply sufficient for carrying on the service of the country. In 1822 the military estimate was 6,103,000*l.*, a reduction of half a million having been made on the estimate of the preceding year. The house would, therefore, see the good which had been effected by the address that had been agreed to in 1821. In 1824, the number of troops was raised to 73,000, and, unfortunately, in 1825, that number was augmented to 86,433. If the same causes which then existed were in existence at present, then there might be some ground for retaining this immense establishment. The reason assigned at the time for the increase was, the situation of Ireland, and the state into which some of the colonies had been thrown by the proceedings of that house. But as to the troops that were intended to protect those colonies, he believed not one-fifth of the number ever went abroad. So that, in fact, it was an increase of the number of troops meant to be kept in this country. He could see no necessity for keeping up any such force when the country possessed so numerous a militia as he had stated. At the present moment there were 32,670 regular troops in Great Britain; and in Ireland there were 21,900. Where was the occasion for such a force, when it was known that during the period of peace, from 1785 to 1792, the number of troops in Great Britain never exceeded 17,000? Why should they now keep up a regular force beyond the number which was deemed sufficient in 1792? Two or three years ago, the Chancellor of the Exchequer had said something which sounded as if he thought that a great additional military force was necessary as a counterpoise to the daily increasing numbers and influence of the people; but if ministers laboured to place the country in a happy, quiet, and comfortable situation, by taking off the burdens which pressed upon every necessary of life, the people would be perfectly contented, and there would be no necessity for keeping up troops to overawe them (hear, hear). The grinding system of taxation was, however, still continued; and hence they were called on to vote a great military force, which some persons deemed necessary to keep down the people. The expense which was attendant on the support of such an establishment added to the general distress; and that which was intended to suppress discontent, tended in reality to generate it. He had, he thought, said enough to shew ministers the necessity which existed for following the recommendation of the finance committee of 1817. It was their duty to reduce taxation, and this undoubtedly they could do, without impairing the strength of their establishments. Impressed with these sentiments, he should move—"That, in the opinion of this committee, it is expedient, under the present circumstances of the country, to make a large reduction in the amount and extent of the military establishment, and to approximate it as soon and as nearly as possible to the establishment of 1792, as recommended, in the report of the finance committee of 1817, in the following words"—[Here the hon. member introduced the passage from the report which he had read in the course of his speech.]

Lord Palmerston said, that the hon. member

would not obtain much even if his amendment were carried. The object of his resolution was to pledge the house to approximate the estimates as nearly as possible to the military establishment of 1792, consistently with the extended nature of our possessions, and the scale of force which circumstances appeared to call for. The whole question resolved itself into this—whether, in point of fact, that approximation had or had not been made. In considering this point, the fair criterion to judge by was not the mere point which had been so much relied on by the hon. member—namely, that the country was now, as in 1792, in a state of profound peace—they must, in coming to a decision, look to the present circumstances of the country; and he had contended (how successfully the house would judge) that, considering those circumstances, the existing military establishment was not too great. If that argument were of any weight, if his reasoning were just and sound, then it followed that ministers had acquiesced in the recommendation contained in the resolution of the hon. member. The hon. member had made the report of the committee of 1817 a very convenient instrument of debate. He used it on all occasions, as best suited his purpose; and he (Lord Palmerston) recollected when he had not treated that committee with the same respect and deference which he seemed inclined to observe on the present occasion. If the hon. member would take the trouble of looking at what that committee had estimated as the probable prospective expense of the military department, he would find that the amount now called for fell considerably short of that estimate. In the report, 8,500,000*l.* was set forth as the prospective expense (hear), including 300,000*l.* for the expense of the militia. The hon. gent. had repeatedly stated that if his recommendations had been attended to as they ought to have been, that Government would by this time have reduced the expenses of all the establishments full one half. If the house would look at the whole of these estimates, they would soon discover that about one half of the charges were ascribable to the efficient part of the establishment; the other half to the liquidation of half-pay, pensions, and other charges, which were of a nature not in any way liable to reduction, even by the plan of the hon. gent. If, therefore, his design of a reduction of one-half were seriously entertained, he would cut off the whole of the efficient part of the establishment. The house would see how proper and accurate a guide they had for these proceedings in the hon. gent. Of course he was aware of the advantageous position in which the hon. member stood in addressing the house on this occasion. He had at his ready service the general topic of declamation as to the expediency of reducing the taxation of the country—the dangers of a standing army—the prevalence of a military spirit in the Government, and the burden of large and unnecessary establishments. But he appealed to the house, if Government had not since the peace, by repeated reductions of taxation, shewn an earnest desire to relieve the country from its burdens, and to put the establishments of the country on a reasonable and effective footing. As to displaying too much of a military spirit—a charge which had been repeatedly urged against the Government—for himself, and for those with whom he acted, he disclaimed

it. He was sensible that there was nothing so ill-judged and inconvenient for the Government, as well as grievous to the country, as large and unnecessary military establishments kept up in time of peace. It was not only bad economy as it regarded the public treasure, but it answered no purpose of political strength and security; and in a military sense, for the maintenance of an effective service and sound discipline, it was notoriously defective. He was no advocate for large military establishments in times of profound peace. He stood there only to advise with the house upon that establishment which he considered as the best suited to the dignity of the country, and the necessities of the empire. He would just give one instance of the effects of too rapid a reduction of our forces. In 1821, the Government, in compliance with the wishes of parliament, effected a considerable reduction of the establishment. What was the consequence? There immediately occurred an urgent necessity for a great increase in the colonial service. Great embarrassments were experienced by the Government, and at last, after trying for three or four years, they found it necessary to come to parliament for an augmentation of forces. Last year he had stated in his place, that this augmentation was not wanted for any purpose at home—not for coercing the population—not for oppressing Ireland, but for colonial purposes. On that ground, and on no other, he now asked for this vote. He had explained before, that the additional force was required for reliefs on foreign stations in the first place; in the second place, to form a reserve at home, from which reinforcements might be sent to distant places, without stripping the country of its ordinary portion of defence. The hon. gent. had said that he would be content if it could be shewn that the augmentation was employed to the purposes of the colonies; but the complaint of the hon. gent. was, that the increase of force at home was large, while it was inconsiderable in the colonies. But Government had used no unfair pretence about the employment of these troops, in 1825. Each regiment before that time went abroad in a body. By the new organization, out of each regiment of ten companies, four were left at home to recruit, and six went on foreign stations. He had formerly explained the advantages of modelling the army in that manner. The effect of this new organization was, that scarcely any but non-effectives were left at home, as these reserve companies consisted chiefly of recruits, invalids, and men who had come home for the purpose of being discharged. The augmentation then granted by parliament had fully answered the purpose, and had been applied as the Government had undertaken to apply it. He did not suppose that any gentleman would assume it as the ground of his argument, that the colonial service ought to be a perfect banishment of officers and men—that they should be compelled to pass the whole of their lives in tropical climes, or other places equally unfavourable to their health. Yet such was the effect of the former method. In the East Indies, there were eight regiments, which had been stationed there for 19 years, without relief. There was one regiment at Ceylon, and another at the Mauritius, which had not been home for 21 years. Nor had the Government been able yet to provide for their return, notwithstanding all their efforts to re-

lieve them. If the number of forces were to be diminished, if the vote now asked were not granted, that relief would be impossible. The tendency of such a resolution on the part of the house would be, to consign officers and men to a hopeless banishment, which in other countries was only resorted to as a punishment for the most culpable delinquents. He could not conceive how the hon. gent. could include the marines as a body applicable to the service of internal defence. To the same purpose of argument the hon. gent. had applied the disembodied militia, as well as 22,000 Irish militia; and which existed only in his own imagination,—the latter being a force which was not even enrolled. By the same enlarged optics, he had discovered an effective force of 74,000 volunteers. There was nothing in the argument of the hon. gent. to induce the house to adopt his resolution. The hon. gent. talked of assimilating this period to that of 1792. The house would see how improperly the comparison was drawn, by considering that a great portion of the charge arose from transactions in the late war, which had no reference to the expense of the effective forces applicable to the public service. For instance, in 1792, the expense for half-pay and annuities for past service, widows' pensions, and other charges of a similar nature, was in sum total 434,000*l.* The same expense last year, including Chelsea, was 2,803,000*l.*; so that at least 2,400,000*l.* of the present expenses, which would not be reduced, arose from the transactions in the late war.

Mr. Robertson thought that ministers did not know what they were about. They were opening our markets to a competition with foreign nations, who lived at less expense and could work cheaper than our own labourers; and they were, at the same time, raising the standard of the currency. If they persevered, fewer commodities would be consumed, while the weight of the public burdens would be grievously augmented. Government ought, therefore, to do every thing possible in the reduction of the establishments.

Mr. Hume would have been satisfied with the application of the new forces to the relief of foreign garrisons, but his complaint still was, that they were chiefly kept at home. It did not appear that any had been sent out since 1821. If Government were sincere, the increase would only have been made in available corps. But how stood the fact? The Life Guards were 785 men in 1792; they were now 1305. The increase of the regiments of cavalry was from 3037 to 7014. Were these additional cavalry wanted for the garrisons abroad? The Guards had been increased from 3572 to 5726—but they were never sent to the garrisons abroad. Why not reduce these 8000 additional men, of the most expensive class in the service, the cavalry in particular, which cost 74*l.* per man—infantry only 31*l.* The marines had been augmented since the peace by 3000 men, with the express purpose of making them efficient as a garrison force, and ought, therefore, to be reckoned with the others. The noble lord accused him of mistake and delusion in considering the militia as a part of the effective force. But if they were really ineffective, why keep them up at an expense of 150,000*l.* a year? Let the noble lord only guarantee to the house, that the half-pay should not be filled up again with young officers. But that charge

had actually been increasing every year since 1816; the country being now in the eleventh year of a peace! He advised ministers now to withdraw these estimates, to revise and reduce them to a state of more conformity with the reasonable expectations of the country.

Lord Palmerston again asserted that the 13,000 additional men granted last year, had been applied to the relief of foreign garrisons. The hon. gent was clearly in an error as to the actual state of the militia and volunteers, having mistaken the staff, consisting of non-commissioned officers, for the whole amount of force which would be on emergency drawn out into service. At present there was not a single private enrolled. As to the half-pay, there was an absolute reduction. In 1820 it was 840,000l.; this year it would be 707,000l.

The house then divided, when there appeared, For the original motion, 144—Mr. Hume's amendment, 45—Majority, 99.

Mr. Hume then objected to an additional grant for the yeomanry and volunteer establishment. He did not see the least necessity for a country enjoying a profound peace to be burdened with a yeomanry establishment, and he should propose its being abolished altogether.

Lord Althorpe contended that this additional grant was perfectly uncalled for, and was only entailing on the country a useless expense; he therefore proposed as an amendment to substitute the sum of 147,000l., the estimate for last year, instead of 156,271l., the sum which was now proposed.

Mr. Peel said that, as he understood the hon. member (Mr. Hume), his proposition was, that the volunteer establishment should be abolished. He begged to remind the hon. gent. of the remarks of the finance committee, whose labours were so fortunate as to meet with the approval of the hon. gent. The opinion of that committee was favourable to the volunteer system, and in that opinion he most cordially concurred. They had maintained the tranquillity of the country, and had not been employed to keep down the people, as had been so frequently stated by the hon. member. If the force were kept up—and he (Mr. Peel) was satisfied of their utility—it must be kept up at the expense of the Government, not of the individuals composing it. It had been found that when sent out on permanent duty, 5s. a-day was not enough to keep a man and his horse; he had, therefore, after diligently inquiring into the sum necessary for this purpose, proposed 7s. for each individual. It was not reasonable to expect persons who gave their time and their services should also be subjected to a positive expense. The horse tax, from which these people were relieved, was a sort of remuneration for their expenses; but gentlemen would recollect that the horse tax, which formerly was 2l. 6s., had first been lessened to 1l. 3s., and then abolished. The principal inducement, therefore, for men to become yeomen had been done away; and he thought some equivalent should be given them for the advantages they had derived from being exempted from the horse tax. It had been proposed to him to exempt them from serving certain offices, such as that of high constable and overseer, but he had always objected to this, because it might happen that only a few persons could be found capable of filling these offices; and if the yeomanry were exempted, proper persons might be found. The increase of expense arose from

this cause, as he had never encouraged any increase in the number of yeomanry. He was an advocate for calling them out once a year on permanent duty, and he had last year proposed a periodical inspection of them by cavalry officers. Such an inspection was actually made, by which he acquired a complete account in detail of the state of every corps, and the accounts he had received were in general satisfactory. It was his principle to call out the military in aid of the civil power as little as possible. It was more to the credit of the Government to preserve tranquillity by means of the civil power, than to have recourse to the military; and he believed the silent power exerted by the mere existence of the yeomanry, dispensed with calling out the military, when it was probable cases would arise to make it necessary. He did not say it to the discredit of the people of this country; but there were times when disturbances might be expected. Even within a few days an occurrence of this kind had taken place; and where distress was at any time severe, more than ordinary exertions might be necessary for the preservation of public tranquillity, not only for the sake of property, but for the sake of individuals themselves. In such cases, he thought the yeomanry were the best species of force which could be called out to assist the civil power.

Sir Robert Heron considered that every grant of money that went to the support of volunteer cavalry, was so much thrown away. He would ask the house what were these troops fit for? In cases of internal disturbances, they by no means were found to be fit persons to quell riot and disorder, and for this obvious reason—that their local connexion made them parties in every disturbance, and they were therefore unfitted to interpose between conflicting parties. The disturbances at Manchester afforded a strong instance of this. It was otherwise with the regular army.

Lord J. Russell objected to the existence of a volunteer establishment, for he believed in most instances it could be proved that volunteer corps were kept up for political purposes, and to gratify the party feelings of those by whom they were established. He contended that, constituted as volunteer corps were, they produced any thing but concord in the country, and he would much rather see the civil authorities called out in case of necessity, than have resort to the interference of those men who, from local feelings and connexions, were more likely to act from passion than otherwise. He therefore objected to any additional allowance, and moved, as an amendment, that 25,000l. be adopted in place of the sum proposed by the original resolution. Before he sat down, however, he (Lord J. Russell) was forced to say that he thought it extremely discreditable to the house, at a period of such general distress, to see the public money thus voted away without expressing its strong disapprobation. He had heard none but weak reasons for keeping up a military force while the country was in the enjoyment of a profound peace.

Sir R. Ferguson seconded the amendment. If yeomanry were to be kept up in the country, let them pay for their horses as heretofore. Public money should not be so disposed of. His noble friend (Lord Althorpe), instead of moving an amendment recommending so large a sum, should have moved that no money at all should be voted for the support of a yeomanry

establishment. Something which he had said on another occasion, had, he was told, given offence. He had said that the English cavalry was the best in Europe, but had disgraced themselves by wearing hair upon their lips (hear, and laughter). It was perfectly ridiculous to see a farmer's son, newly enlisted, and just imported from the country, strutting about the town with immense mustachios (loud laughter).

Mr. Benett conceived that it was impossible for a yeoman to pay his expenses out of 5s. a day; he thought that 7s. was not too much for man and horse. He had himself witnessed the exertions of yeomanry to keep the peace in times of disturbance, and he bore willing testimony to the prompt and efficient manner in which they acted. In fact, there was nothing military about them: they were merely armed constables, and he had seen them on several occasions suppress very dangerous riots, without so much as presenting a pistol or drawing a sword.

Mr. Wynn defended the yeomanry force as a useful constitutional body; and even in the affair of Manchester, in which they had been so much censured, he thought their conduct in many points justifiable.

Lord Althorpe approved of the yeomanry system, because it brought the gentry and the farmer together; but he strongly objected to permanent duty.

Sir H. Vivian bore testimony to the merits of the yeomanry, and approved of their constant inspection by cavalry officers.

Mr. Brougham said, that after having voted such an immense standing army during a time of profound peace, there could be no real necessity for the expense of this auxiliary force.

Mr. Hobhouse said, that on the report on Monday he would propose a reduction of this estimate by some definite number, as he thought so large an expenditure in time of peace unjustifiable.

Sir F. Burdett wished to protect himself against being supposed to participate in the views of his hon. friends, who thought that the interference of a standing army with the civil power was preferable, in a constitutional point of view, to that of a yeomanry force. He could speak of that which was organized in the counties of Wilts and Berks, in which he chiefly resided, as being composed of a very respectable body of volunteers, who would, he believed, if called out in a time of invasion, or under any circumstances, do credit to their country (hear, hear). He objected, however, to the principle of permanent duty, inasmuch as it tended to destroy the real yeomanry force of a country, by assimilating them too much to a standing army. With respect to that unfortunate massacre at Manchester, he must say that it was not perpetrated by what he would call a yeomanry force, but by a body of armed partisans most improperly brought into action, against a defenceless and unarmed populace, against whom these armed persons were at the moment in a high state of excitement. Though he objected to the permanent duty, and wished as much as possible to diminish the expenditure of the country, there was no part of it he thought so little objectionable as this for the yeomanry.

Mr. Peel explained that the permanent duty was not imposed on the corps by authority, but

was made matter of arrangement at their own option.

Lord J. Russell said he would not divide the committee on his amendment, as some of his hon. friends entertained different opinions on the subject.

The two amendments were then put and negatived, and the original resolution carried.

MONDAY, MARCH 6.—On the motion in a committee of supply, for granting 13,135l. 11s. 10d. for the charges of the Royal Military College,

Mr. Hume asked whether all the young men educated at the establishment obtained commissions?

Lord Palmerston said that the number of students furnished with cadetships during the last two years was 113. Of these 46 were by purchase, and 67 by gift.

Mr. Hume objected to the appointment of new officers in the present distressed state of the country, whilst there were many meritorious officers on half-pay who would be glad to obtain employment. He also objected to the high salaries which the staff officers of the college received.

Lord Palmerston said, it was necessary that officers, to be of service to their country, should be well educated. It was also necessary that the instructors should be paid for their trouble. All the young men who had entered the service from the college had distinguished themselves—a proof that the expense of the establishment had not been thrown away.

Mr. Hume thought that persons who were desirous of filling any situation ought to qualify themselves for it. He objected to the sons of gentlemen being educated at the public expense. He wished to know how many days during the last year, the governor of the college, whose salary was 1500l. per annum, had attended at the institution.

Sir A. Hope said, that he was the governor of the college. He obtained leave of absence for two months, during the last year, upon urgent private business; but his attention was not withdrawn from the establishment. The situation was an arduous one; and, so far from being an object of desire, that he had resigned it for the situation which he formerly held, the salary of which was only 400l. He now only continued in the situation until Sir E. Paget, who was in future to fill it, should arrive in this country. The salary was not too much, considering the liberal conduct which the governor was compelled to display towards foreigners visiting the college, and to the society in the neighbourhood. He had held the situation for ten years, but had not grown sixpence richer in consequence; on the contrary, he was made a great deal poorer by holding it (hear, hear). The expense of the establishment had been reduced from 33,000 to 13,000l. and the number of pupils from 400 to 200. He (Sir A. Hope) begged that hon. gentlemen would consider what this establishment was: it afforded a general education upon almost all subjects—classics, languages, mathematics, drawing, fortification—in short, every manly accomplishment. If German was thought unnecessary, the establishment might be diminished to that extent; if classics were deemed superfluous, it admitted of further reduction. But the establishment had been maturely con-

sidered by Government, and was thought to be not too extensive. Independent of matters relating to the military profession, our officers should be possessed of every accomplishment (hear)—historical knowledge and classical knowledge. Rewards should excite emulation. On this principle depended the whole expense of the establishment. With this sum of 13,000*l.* a-year, were to be educated the staff officers of all our army. The establishment had 15 officers studying staff duties, whom it sent out, but not until they had practically made the survey of a line of country, and their work was minutely and accurately examined; of these from seven to nine were annually sent forth to fill their stations in society, and such as were not efficient, were not allowed to pass their examination. During preceding wars, we had to look abroad for persons duly qualified to fill the important office of the quarter-master-general's department; but in the last war, the college at Sandhurst supplied persons so well qualified for all the duties of that service, that we had no occasion to look abroad for assistance.

Colonel Davies remarked, that the expense of the American army was only 500,000*l.*, whilst that of ours was 6,000,000*l.* The hon. member complained of the large and expensive staff maintained to superintend the education of 216 young men.

Sir H. Hardinge said that if the hon. member (Colonel Davies) had looked into the papers which had been laid before Congress in regard to the American army, he would find that they had 268 cadets, who cost more than he was aware of. There was an estimate before Congress for horses, which we never thought of. There were always more cadets at West Point than at our college.

Mr Hume contended that if the hon. member who was governor of the college (Sir A Hope), was right in his argument, the principle should be applied to all persons under Government. (hear). We should have our ambassadors sent to school, and dancing masters as well as other teachers, provided for them (hear and a laugh). We had to pay 300,000*l.* to support our ambassadors, and lamentably did they figure when they had any thing to do (a laugh, and "hear," from Mr. C. W. Wynn). The right hon. gent. might know more of the matter than he (Mr. Hume), who knew nothing of them but what came before the public. He would ask the Chancellor of the Exchequer whether 24,000*l.* (the amount of the pay and subscriptions of the cadets and others) was not enough for the college? The Government had no right to teach at the public expense what these persons could learn at other seminaries. If they were to be taught every thing at the college, why not teach them their letters? Here were three French masters, two German masters, three masters of history and classics, and a drawing master: he contended that these nine masters should be dispensed with, or that the pupils should pay them themselves. Here were 6000*l.* for teachers, and 6160*l.* for the military staff, making upwards of 12,000*l.* for the education of 216 young men. The hon. and gallant officer (Sir H Hardinge) said that there were no horses here as in America; but was there not a riding establishment sufficient to teach the whole army? He (Mr. Hume) contended that the country could not afford to pay 1500*l.* to a governor, as well as 1095*l.* to a lieutenant-go-

vernor; and that the military pay of the students was sufficient to defray the whole expense of the establishment. The hon. member then proposed, as an amendment, to reduce the vote 3000*l.*, making the sum voted for the whole expense of the college 10,135*l.*

Sir R. Hussey Vivian observed, that the hon. gent. (Mr. Hume) seemed to think, that because a school was wanted for ambassadors, none was necessary for the army. He considered the estimate as not beyond the amount required.

Mr. Monck thought that much of the charge might be dispensed with. There was no more reason why these gentlemen should be educated at the public expense than others; and where were we to stop? If we were to have a metallic currency, and low prices, we ought to have low taxes.

General Gascoyne observed, that the hon. member (Mr. Hume) had recommended that persons educated at the college should pay the expense out of their own pocket, except officer's sons, who should be educated at the public expense. Now the case was exactly so: where the individuals were not officer's sons, they paid for their education.

Sir J. Yorke remarked, that if the charge of defraying the expenses of this college were taken from the public, it would become a mere private establishment; a result every man must deprecate who knew the general state of our public schools. Noblemen's and gentlemen's sons came away from those schools without learning any thing but extravagance and swindling (hear, and a laugh). If the hon. member took the charge of education from the public, he would increase the number of thick skulls and hard hearts amongst students.

Mr. Hume replied, that his object was not to allow the sons of officers to be educated at the public expense. He would take the gallant admiral as an instance; he was satisfied the gallant admiral would not grudge to pay 12*l.* per annum for his son's education. With respect to his animadversions upon schools, he wished the gallant admiral had stated what school he meant—whether Eton, Harrow, or what other (no, no). He (Mr. Hume) believed, that the college was a good school, but he thought that the public ought not to be forced to pay for the education of other persons (a laugh). It was a fact, the many paid for the education of the few; and he thought it hard that the people of England should be taxed to educate the children of the rich. He objected to the extravagant rate at which the military superintendents were paid, and it was from that part of the estimate he wished the 3000*l.* to be taken.

Lord Palmerston thought, that great misunderstanding prevailed upon the subject of this vote. Take all the seminaries of the country together, and it would not be found that such an education as was given at the military college could be obtained elsewhere at as cheap a rate. It had been objected that the cadets should pay the expense of their own education; and so they did in part. But there were some of distinguished officers who could not pay the whole expense of their education; and would the hon. member exclude them from rising to the height of their profession? So long as we had an army, the officers should be well educated. We had a naval academy—

Mr. Hume.—At half the expense (hear).

Lord Palmerston continued.—In other departments—the East Indian for example—provision was made for the education of officers.

Mr. Hume still contended that the charge was unexampled. At Woolwich, there were 200 pupils; and one lieutenant-governor, at 400*l.* a year, did the whole inspection. At Sandhurst, there were 195 pupils, and there was a lieutenant-governor at 1000*l.* a year, and a governor at 1500*l.* He protested against the weavers at Bolton or Glasgow being called upon to pay for the education of gentlemen's sons; and next year, if he were in the house, he would object to the vote altogether.

Sir H. Hardinge stated, that at Woolwich there were, independent of the business of the academy, several officers of rank on duty; and their presence rendered appointments unnecessary which it was absolutely requisite to make at Sandhurst.

The house then divided, when the numbers were—For the grant, 87—Against it, 22—Majority, 65.

On the house resuming, a grant of 35,498*l.* was proposed for garrisons at home and abroad.

Mr. Hume objected that, in a variety of cases, governors, and lieutenant-governors were kept up whose appointments were merely nominal. Some never resided at all; and in many places the garrisons were only kept up for the purpose of placing a certain number of sinecures at the disposal of Government.

Lord Palmerston said, that many of the posts were not sinecures; and that such as were, were rewards given to meritorious officers for services which they had performed.

Mr. Hume wished to know why Fort Augustus and Fort William—two places which the Military Commission had recommended for reduction—were not given up? and why there was an increase in the estimate for them for the present year? He understood that they were still maintained at the desire of the Duke of Wellington.

Lord Palmerston said, that if they had been demolished, of course the officers attached to them would have retained their pay during life; so that nothing would have been gained. The trifling increase in the estimate arose from some addition of pay given to non-commissioned officers. Really, the question came shortly to this—whether the Crown ought or ought not to have it in its power to reward long services?

Mr. Hume was afraid that the favoured officers, and those of influence, got more of this toward than the meritorious ones.

Lord John Russell said that he had changed his opinion since the last year upon this point, and could not vote with his hon. friend (Mr. Hume). He thought that the Crown ought to have the power of providing for officers; and that a place was better than a pension, because there was something of honour attached to it. Still he could not understand why Fort Augustus and Fort William had not been demolished. He believed they were known to be of no utility.

Sir H. Hardinge said, that the military commission had certainly thought this; but that since the Caledonian canal had been constructed, one of these forts stood at the very entrance of it. And if it were not for this fort, any privateer with a couple of guns might come up to the lock gates and blow them off, which would do very serious mischief. As for the other fort, it was used as a barrack, and a barrack was

wanted in that part of the country. Besides, he believed that the maintenance of these forts was part of the act of union with Scotland.

Mr. Hume believed that they had been both built considerably subsequent to the union with Scotland; and besides, the act of union was violated every day. As for the privateers, if there was any thing in that objection, it came to this—that, after paying 1,000,000*l.* of money to make a useless canal, we were to pay 1000*l.* a-year to defend it. The hon. member then proceeded to take a review of the remaining garrisons and stations. Canada was costing us a great deal of money; and the inhabitants, if they could be allowed to choose their own laws, would be happy to bear all their own expense. The garrisons in the West Indies were costly, and might, many of them, under proper management, be dispensed with. There was 1500*l.* a-year for Gibraltar, of which the country ought not to vote a shilling while the King put the surplus revenue of the place in his own pocket. For the Cape of Good Hope—if it were only under a proper governor, and relieved from Lord Charles Somerset, whom all the world detested—(murmurs)—why, he protested he had never heard any person speak of that officer in any other way—

Sir A. Hope said that there were accusations pending against Lord Charles Somerset; and, as a member of that house, he was compelled to request that the hon. member would not prejudice the case.

Mr. Hume:—Then how was it that the conduct of any public officer was to be taken notice of? The house had been led to suppose that Lord Charles Somerset would have been home by this time. Why was he not so?—Why, but because he did not choose to come to answer the charges against him. He said again—give the Cape a governor who satisfied the people, and the colony would pay all its own expenses. It was contrary to sense and reason to retain any man as governor of a place, who was disliked by every person in it.

The Chancellor of the Exchequer thought the hon. member misunderstood the grounds on which his hon. friend near him had risen to order. It was not because the hon. member was bringing charges, but because he was using unguarded expressions. The whole argument, however, of the hon. gentleman was foreign to the purpose, because not a halfpenny of the Governor of the Cape's salary was paid out of the present vote.

Mr. Hume said, that his argument was quite to the purpose. He said, that if the Cape had another governor, it might be made to pay all its own expenses. In saying that Lord C. Somerset was detested by every body, he meant every body at the Cape; and, as far his knowledge went, it was so (cries of order).

The Attorney-General.—A man under accusation!

Mr. Hume.—Under accusation! Why, that was just what he said—under serious accusations—for which he ought to be brought to justice (order, order).

Mr. W. Horton said, that the hon. member really seemed to have constituents in the colonies as well as in Aberdeen (laughter). His statement that the people at the Cape would be willing to pay their own expenses if Lord Charles Somerset was removed was quite incorrect: and when he talked of "bringing to justice"—was it right, or usual for a public offi-

cer to be spoken of in that way? So in Canada, he believed the hon. gent. would find it difficult to prove that the inhabitants would be happy to maintain themselves. If we were to have colonies, we must pay for them; and, if the hon. member thought that we ought not to have them, why did he not bring forward the question fairly? Lord Charles Somerset could not return to England until his successor arrived at the Cape; and the earliest means had been taken to send out a proper officer.

Col. *Davies* declared that there was too much of jobbing altogether in the colonial system. He believed that the Cape, under the Dutch, had paid its own expenses (cries of no).

Mr. *S. Rice* eulogized the character of the officer who had been sent out to relieve Lord Charles Somerset.

Mr. *Hume* said that the hon. member might as well have eulogized the character of *Pe-regrine Pickle* (laughter). What had that officer's character to do with the present question? In a time like this, every shilling that could be saved ought to be saved; but, looking to this estimate, the public would perceive that ministers appeared to have formed a very different opinion. The present vote, as it respected the colonies, was extremely unjust on this country. He should therefore move, that the resolution now before the house be reduced by the deduction of the sum of 5900*l.* being the charge for Canada, Gibraltar, and the Cape of Good Hope.

Mr. *Wilmot Horton* shortly defended the propriety of the vote. It was very true that the power of taxation, to meet the expense of the garrison, and every other expense, with respect to the Cape of Good Hope, rested with the Government. The question then, was, whether the colony was able to support the necessary expense. There was nothing analogous between the situation of the Cape of Good Hope and that of Jamaica. The hon. member had talked of introducing British laws, and even the British language, in the former place. But it was deceiving the house to say that such objects could be effected in so easy a manner. Every thing possible had been done for the amelioration of that colony.

Sir *R. Wilson* said, that when he was at the Cape of Good Hope, a Dutch officer, who had been Governor there, informed him, that he had been always able to levy sufficient in the colony for the maintenance of the garrison, &c., without calling for a shilling from the mother country. He (Sir *R. Wilson*) did not understand why that was no longer the case.

The committee then divided, when there appeared—For the Amendment, 21—Against it, 116—Majority, 95.

On the motion that 107,296*l.* be granted for half-pay and reduced allowances to officers of disbanded foreign corps, for pensions to wounded foreign officers, and for allowances to the widows and children of deceased foreign officers, for the year 1826,

Mr. *Hume* inquired whether those foreign officers were allowed to sell their half pay?

Lord *Palmerston* answered that they were, on the same principle as officers on the British half-pay were allowed to sell, with this difference—that the allowance to the foreign half-pay officers was not so great as that granted to the British half-pay officer. Very few of the foreign half-pay officers had availed themselves of this permission.

Mr. *Hume* said, this portion of the half-pay diminished very slowly. In 1817, the charge was 135,000*l.* and now it was 107,000*l.*; from this he inferred that as younger officers would buy the half-pay of older officers, the charge would be perpetual.

Lord *Palmerston* said, the hon. member had adopted a mistaken view of this matter. The half-pay was by no means a perpetual arrangement, as he seemed to suppose; nor were the individuals who remained on the list a whit more immortal than those who sold out. The advantage of the system was this, that those foreign half-pay officers formed a class of men who could not be employed, without a special act of parliament; but, by allowing them to sell out, instead of supporting a body of officers from whom we could derive no service, we procured the assistance of British officers, whose services were at once available. The arrangement was most advantageous to the country, and to the persons immediately concerned, by giving a scope to the preferment of meritorious officers. Since the peace, officers were growing grey in the service, who, in consequence of this arrangement, were enabled to get forward.

Mr. *Hume* denied that this arrangement was at all beneficial to the public. The half-pay officers formed a very large class at present; and instead of being promoted as vacancies occurred, other persons were selected. There were on half-pay, 7892 lieutenants, 3198 captains, 995 majors, 901 colonels, and 603 field marshals and generals. So far from giving facility to the employment of those individuals, they were really adding to the pension list of the country, without doing any benefit whatever. He did not mean to oppose this vote, although, in some respects, it was evidently objectionable. Here were foreigners placed on half-pay, although some of them, perhaps, had not served for a day. They were afterwards suffered to take advantage of their situation, and to sell out—a system which appeared to him to be most objectionable.

Lord *Palmerston* said, the hon. member was mistaken with respect to some of those individuals, whom he supposed to have been placed on half-pay. Some ensigns had been gazetted, but they were not placed on half-pay. No foreign officer under the rank of a captain was permitted to sell.

The resolution was then agreed to.

The next resolution was for 49,271*l.*: an account of the in-pensioners of Chelsea Hospital 34,323*l.* and of the Royal Hospital, near Kilmalham, Dublin, 14,947*l.*

Mr. *Hume* inquired whether there was any intention of dismantling Kilmalham Hospital? The expense of keeping it up was out of all proportion to the number of individuals supported on that establishment. He wished to see that branch of the Irish expenditure consolidated with the same branch in this country.

Sir *C. Long* said, he doubted whether it was practicable, with any benefit to the country, to adopt the proposition of the hon. member. The Government was obliged in some shape or other, to keep up an establishment similar to Kilmalham Hospital, and he did not think that any saving could be effected by the proposed alteration.

Mr. *Hume* said, the majority of the persons supported at Kilmalham Hospital would, tomorrow, receive, with pleasure, one half of the amount which was at present expended in keep-

ing up that large building. They would, by such a change, be enabled to live far more comfortably. When the comfort of the individuals and the saving of so much money were taken into consideration, he contended that the hospital ought to be given up.

Sir G. Murray said, most of the pensioners were natives of Ireland; and it was only proper that old soldiers should have a refuge and a resting place in their own country.

The motion was then agreed to.

The next resolution was for the sum of 1,285,566*l.* for the charge of the out-pensioners of Chelsea Hospital for the year 1826.

Mr. Hume said there was no man more anxious than he was to provide for those individuals who had served their country in the field; but he could not conceive why this expense should go on increasing. In 1821, the sum charged was 940,000*l.*; in 1822, 966,000*l.*; in 1823, 1,224,000*l.*; in 1824, 1,229,000*l.*; in 1825, 1,240,000*l.*; and now it was 1,285,000*l.* The increase since 1822 was 319,000*l.*; and he should like to know what reason could be assigned for it.

Lord Palmerston said this charge depended on contingencies, which must, of necessity, increase it sometimes, and decrease it at others. All that the proper authorities could do, or had to do, was to see that those who applied for the pension established their right to it. Of course it must be difficult for him to explain the particular casualties which had occasioned the necessity for this change. The large amount of the army in the late war might easily be supposed to furnish an increase under this head of expense, which would not be very speedily subjected to reduction. It was clear that many who had served with honour in the war, and had spent the vigour of their lives in the service of their country, must have since become chargeable on this fund. Many years after the war, therefore, it might as it did happen, that the casualties resulting from the former state of the army, would, under this head of charge, be greater than any amount arising from new cases. But he felt sure that the small pittances granted to the sufferings and infirmities of those brave men who had lost their health and strength in the service, would not be grudged them by the country. On the contrary, of all efforts of financial economy, the savings from that source would afford to the country at large the least possible pleasure.

Mr. Hume wished to know what must be the result if all the charges increased in this proportion. After the great reduction of the army in 1816, when the amount of the half-pay did not much exceed 400,000*l.*, the finance committee directed the house to look for a considerable decrease on this head of expense. Instead of which, it increased up to the year 1822, in the following amounts:—In 1817, it was 647,000*l.*; in 1818, 651,000*l.*; in 1819, 737,000*l.*; in 1820, 783,000*l.*; in 1821, 765,000*l.*; in 1822, 818,965*l.* So that after 10 years from the peace, this charge had increased upon the country upwards of 300,000*l.* To refuse the vote was out of his power. But he protested against the conclusion, that this was the result of a fair and proper calculation. He advised not only the house, but the Government to look to it, especially the Chancellor of the Exchequer, who might have difficulty in providing for all these charges.

Sir C. Long said, that the hon. member (Mr. Hume) had not taken notice of the fact that

in 1822, the out-pensioners of Kilmmainham had been incorporated with those of Chelsea. He admitted, however, he had looked for a diminution under this head; but instead of it he was surprised by an increase. He had also found the utmost difficulty in accounting for it. He knew that it could be accounted for in part by the reduction of veteran battalions, and in part also by the recalling of troops from the East and West Indies. But these two modes were not enough to account for a gradual and progressive increase. He had sent persons into various parts of England to detect fraud and imposition if they existed among the pensioners in England. No frauds or impositions were detected. He had sent parties into Ireland upon the same errand. As yet he had no satisfactory returns. He could not say where the fault lay. Certainly the Government was not blameable. They could not refuse the pensions. He, however, attributed the bulk of the evil to the service pensions. The act which gave that right was passed (he spoke it with due respect for all concerned) as a party measure. A great deal of alarm existed at the time, and the enthusiasm of Mr. Wyndham had acted but too sensibly on the house. Pensions for wounds could be open to no objection, nor could those for any serious detriment to or loss of health; but the chief amount here arose from the charge of service pensions. Certainly the house would never have assented to that act if it could have had the least idea of the consequences. He himself had opposed it at the time. The Government had done the best they could with it of late. Though bound to keep faith with the soldiers who enlisted under the authority of Mr. Wyndham's act, steps had been taken to prevent the evil in future. Service pensions now depended on 20 years' service, and had done so ever since 1822. But those who had enlisted before, under the sanction of the act of Mr. Wyndham, could claim pensions for short periods of service. The consequence was, that they were paying them to men of 30 years of age in full health, active, and fit for hard service. It was useless to object; the pensions could not be reduced. Government had done much to prevent the recurrence, but they must, to a certain extent, observe the law as it now existed.

Sir A. Hope had only one remark to urge in reply to the hon. member (Mr. Hume), as to his charge against the Government for an increase in the half-pay till 1821. The first reduction of the army was in 1816, when there were 1800 or 1900 officers reduced. In the year 1817 there was another small reduction, which, like that of the foregoing year, took place after the estimates for the season were before the house. In 1818 there were nearly 2000 officers reduced; a few hundreds were reduced in 1819; and in 1821, the year of which the hon. gent. particularly complained, there were 1000 officers reduced. So that there were no less than 2000 officers reduced after the year 1816, which would account for the increase of half-pay spoken of by the hon. gentleman.

Mr. Hume was still surprised, after what was contained in the report of the committee of finance, that there should be an increase up to 800,000*l.* on this head of expenditure.

Lord Palmerston said, the hon. gent. was mistaken in supposing that there was an increase in the present year. The half-pay in 1821 was 838,000*l.*; in 1822 it was 870,000*l.*; this year it was 770,000*l.* being 100,000*l.* less in comparison

of the year 1822 with 1826. He commended the plan of promotion adopted by the Commander-in-Chief; and he was convinced that the selection of the list of officers for the last augmentation would be most satisfactory to the house. The senior lieutenants and second senior lieutenants were all of 17 years' standing as lieutenants, with the exception of one officer, who was the only one left in his regiment after the battle of Waterloo. Of the majors who had been promoted, without purchase, from being captains, there were 22, who were all of 17 years' standing as regimental captains. Sixteen officers of 28 years' standing, as majors, had been promoted in the same liberal manner. It was impossible that any better mode could be taken as it regarded the charge of the half-pay. No improper application of the half-pay list could be made.

The resolution was then agreed to.

The next vote was for 25,543*l.* for the Royal Military Asylum.

Mr. *Hume* protested against the grant, and contended that they ought to leave the children to their parents. They might as well have an asylum for 50,000 children. If ministers were sincere in their professions to act on principle, they would certainly do away with this charge.

Resolution agreed to.

The next resolution was for 142,039*l.* for widows' pensions.

Mr. *Hume* wanted to know whether there was any rule for granting these pensions, which, like those of the officers, were in a continual course of increase.

Lord *Palmerston* answered that the pensions were granted by fixed rules, under warrants bearing the sign manual. The widows of half-pay officers were as eligible as those of officers dying in full pay; so that the casualties rather tended to an increase.

Mr. *Hume* asked if there was any restraint on the King for granting these pensions?

Lord *Palmerston* said, that the question had been agitated before in the house, but the general feeling was against any inquiry, as it was understood that no objection could be satisfactorily taken to these allowances.

The next resolution was for granting 190,798*l.* for the compassionate list, county warrants, and pensions for wounds.

Mr. *Hume* again complained of the increase.

Lord *Palmerston* regretted that there should be an increase; but as the allowances were for cases of real suffering, he should regret it much more if the means were found to be defective.

Mr. *Hume* put a question as to the retention of the office of Vice-Treasurer in Ireland, which he considered useless since the act for assimilating the currency of the two countries.

Lord *Palmerston* said that the office was just as much required as before the act.

Mr. *Hume* thought that it was now the most idle and useless office under the Crown.

The Chairman put the question for reporting to the house.

Mr. *H. Gurney* rose to take notice of some hardships which had occurred to a person of unquestionably good character, whose father had been connected with the army in 1797, and who was now called upon to answer, by the commissioners of accounts, in matters for which he had none of the papers necessary to his justification.

Lord *Palmerston* said, that no person had been called on by his office who was not liable

to pay, and Government could not always make up their accounts immediately.

On the motion for granting 23,683*l.* for the veteran service for Great Britain and Ireland,

Mr. *Hume* had seen veteran corps continually raised and disbanded without any reason. He desired to know if those corps were to be kept up or not? Their maintenance caused, in his opinion, a very useless expense. He had known 143 officers from half-pay put into veteran corps, and, after a service of six or eight months, they had retired from those corps enjoying their original half-pay, together with half-pay from the veteran service. He wished to ask the noble lord if this system was still to be continued?

Lord *Palmerston* replied, that all officers who had previously enjoyed half-pay in other regiments, were clearly entitled to the addition of half-pay from the veteran service, provided they were duly enrolled.

### *Ordnance Estimates.*

Sir *H. Hardinge*, in proposing the estimates for the ordnance department, informed the committee, that three or four departments had been consolidated for the purpose of being under the control of one responsible board, the members of which could have the best means of forming a correct opinion on the subjects laid before them. Another advantage was, that several expences which were before scattered in different estimates, were now brought under one head. Among the ordnance supplies was now to be found a naval vote. During the whole of the last century, it had been the custom to insert the naval vote among the navy estimates; but, as the particular subjects of this vote (the ammunition and arms) were supplied by the ordnance department, it was now thought better to introduce them among the expences of that department to which they more properly belonged. The sum required for this particular item, in this year, amounted to 98,133*l.* In the last year, the sum required was only 94,250*l.*, making an increase for this year of 3,883*l.* The whole sum required was 1,754,403*l.*, which only exceeded the vote for last year by the sum of 55,140*l.*; but as the estimate of this year was credited by an increased sum of 96451*l.*, the real increase in the sum required was only 45,493*l.* The sum now required was smaller than any other that had been required for the last thirty years, excepting only the year 1825. A sum of more than 22,000*l.* had been added to these expences by the necessary augmentation of a regiment of artillery; the augmentation having taken place, not in officers, not in the riding corps, but in the marching artillery, which was liable to colonial service. The number of companies had been increased. Each company consisted of seventy men, and we had formerly what was called a driving corps. In the year 1811, we had 400 drivers, who were now incorporated in the marching artillery gunners and drivers. This increase was not owing to any anticipation of an interruption to our foreign or domestic tranquillity, but was occasioned by the inadequacy of the present artillery corps for the demands of the colonial service. The artillery regiments, in fact, had been so reduced, as to be disproportioned to the other branches of the army, and to be rendered in-

adequate to perform the duties required from them. The increase was, therefore, only the result of the absolute necessity of the case, the artillery having actually been diminished below its proper standard. This, however, had been done at the recommendation of the house, which, after having been fully tried, was found to be attended with such inconveniences as to render it impossible to be continued. He had no doubt that the house would concur with him, when he stated that the present moment was the last the ministry would have chosen to require an increase in the military establishments of this country, unless they had been compelled to do so by absolute necessity (hear, hear). In consequence of the number of men required for the colonial service, and the number required to carry on the system of reliefs, the present number of companies had been found insufficient, no less than 500 men having been invalided this year. Perhaps one hon. member (Mr. Hume) might ask why the same system which had been carried on for the last three years, could not be continued during the present year? The answer was this, that the companies then sent out consisted principally of well-formed soldiers, who had been some time in the service, and who might therefore be considered to have been hardened to the duties they were required to perform. These men were now entitled to return, and those sent out to supply their places were mostly recruits, who would not be so well able to endure the change of climate, and the other consequences of the service. It had, therefore, been at first thought proper to ask that the number of men in a company should be increased from seventy to eighty; but, on account of the present difficulties of the country, that design was abandoned, although, undoubtedly, such an increase would be required next year. Originally, the proportion of artillery-men to soldiers of the line was as one to nine, but now that proportion did not exceed one to fifteen. The proportions of dismissals were these—four out of five artillerymen were dismissed, and the fifth was kept up; while, in the line, two out of three were dismissed, and the third was kept up. The proportion of artillerymen had been lowered since the peace beyond that of any other men in the service. The present measure was, therefore, one of absolute necessity; and he hoped it would not be received with the worse grace, because it happened to be made at a most unfortunate period. He wished to add, that the augmentation of the companies had taken place without any augmentation of officers. He would now refer to the item of cadets. The number of cadets at Woolwich was 146, in the year 1821; they now only amounted to 40; but in the estimate they were stated at 80, because it was supposed that the artillery corps could not be supplied with skilful officers, unless that number of students was kept up, and it was therefore necessary to provide the means of maintaining that number. The extraordinaries formed but a small item in the present estimates; and a sum of 16,919*l.* out of those to be voted for Ireland, was attributable partly to the expences of the Irish Survey, and partly to the difference occasioned by the payments being made in British instead of Irish currency, and also to some expences incurred in repairs. Perhaps he ought to take this opportunity of saying, that the Irish Survey was now in a state of great progress. It was going on as rapidly as such a

work could be carried forward. The soldiers of the Sappers and Miners were employed upon it, and by that means much labour and expence had been saved to the country. The Irish country gentlemen had called for the Survey, which they expected would be productive of the greatest benefit. Maps had been drawn, allowing six inches for a mile as the scale of measurement, in order to afford the fullest means of information on the subject. The barracks were the next items to which he wished to call the attention of the house. The sum required for the barracks in England was 165,087*l.*; in Ireland, it was 135,703*l.*; the expence in Ireland being 6,898*l.* less than last year. The increase in England was caused principally by the alterations which had lately taken place in the King's Mews, and which amounted to 25,000*l.* The barracks had been removed from the front to the rear of the King's Mews, in order to make way for the new buildings intended to form the front of that place. The subject of those alterations having been discussed in 1824 and in 1825, he should not now stay to enter into any explanation with regard to them. There had been a great diminution of our barrack accommodation in this country. The number of men formerly capable of being accommodated in barracks amounted to 170,000 in England, and to 80,000 in Ireland, making a total of 250,000 men. At present, barrack accommodation could only be afforded to 76,000 men in England, and to 42,000 in Ireland, and this reduction had taken place since the peace. In the military store branch, there was a diminution of 11,309*l.*; and he begged to observe, that the military and civil stores had been divided into two branches, in order to meet the suggestions of the hon. member (Mr. Hume). The last item to which he should now refer, was that for the repairs of military works and buildings, some of which were to be pulled down. These were the results of our military establishments abroad, where the buildings were under the direction of men of science, who, after having inspected our barracks and our hospitals, and having taken the opinions of skilful men on the spot, had come to the determination to demolish some of these places. Others had, perhaps, been originally built only for temporary purposes, and, if they were to be continued, must be strengthened and repaired; and surely, as every soldier was worth from 100*l.* to 120*l.*, it must even be a matter of pecuniary consideration to preserve his life and his health.—The hon. member concluded by moving the first item of the ordnance estimates, "That a sum of 52,349*l.* be granted to his Majesty, to defray the salaries of the master-general and the other officers of the ordnance."

Mr. Hume was extremely sorry to find that the estimates submitted to the house had so far exceeded every reasonable expectation. We had an increase in almost every item enumerated in those estimates, and the country had the additional satisfaction of hearing that a further increase was contemplated for the approaching year. He feared that the country would be destroyed by those unwise and unwholesome expences, and he conjured his Majesty's Government to pause ere they proceeded too far in their system of lavish, and, he was forced to say, wanton expenditure. He complained strongly that thirty-five companies of artillery were at the present time maintained, when ten ought to be deemed sufficient. He

protested against so large an expenditure of the public money for this branch of the military establishment in time of peace, and more particularly when he contrasted it with the amount kept up in the year 1792, and compared all the details of the expense of that day with the present, in this particular department. In contending against the persevering views of Government in this respect, he knew and felt the difficulties which he had to encounter; but he would still go on, hoping that, as drops of water were at length successful in making an impression upon the hardest bodies, his feeble efforts would at some time or other prevail beneficially for his country (hear, hear). He could not quit the consideration of this item, without complaining of the double item of expenditure entailed upon the public, by keeping up the two roofs of business for the ordnance service—in the Tower and in Pall-mall.

Sir *Henry Hardinge* defended the present scale upon which the ordnance establishment was framed; and said, that so far from its showing an increasing expense in the particular department alluded to, there was a reduction of 67,000*l.*, as compared with the estimates of 1820, and of 193,000*l.* as compared with those of 1821. He also pointed out that a system of economy was apparent in all the details.

Sir *Joseph Yorke* said, that with reference to the reduction in this branch of the public expenditure under Mr. Pitt's Government in 1792, he must say that the great pilot who weathered the storm never made a greater *yaw* (to use the nautical phrase) than he had done on that occasion (a laugh); for it afterwards exposed this country to the necessity of sending the Duke of York, with only a corporal's guard, to the Continent, to protect England from insult. If his hon. friend (Mr. Hume) was prepared with the statement of any specific act of extravagance, he should have his vote against it, as he had already given it to him in the cases of the postmasters-general and the number of lords of the admiralty. But he would rather at once cut away the dead-weight, of which he (Sir Joseph) formed himself a distinguished part (loud laughter), than diminish in these times one single effective man of the army or navy. He would stand by the active defenders of their country, and at all events not abandon its proper defence, as he feared had been done in 1792, which afterwards led to an improvident and ineffectual expenditure (hear).

Sir *Ronald Fergusson* could not disapprove of the maintenance of the artillery force, which ought, in his opinion, to be the last corps subjected to reduction; it was the most difficult and expensive to rear, and therefore the most difficult to be replaced when it was wanted (hear). There was no comparison between the present state of the artillery and that of 1792. Whatever they were at the former period, they were at present the most efficient corps in Europe. He at the same time bestowed the highest praise on his hon. friend (Mr. Hume) for the very able and assiduous efforts he had made during the last seven years, to simplify the accounts of the public expenditure, and render them intelligible to the most obtuse understandings (if such there were) in that house (hear).

Mr. *Hobhouse* resisted, on the part of the people of Westminster, the continued maintenance of a battalion of the Guards in the Mews at Charing-cross. He must protest

against this great infringement upon a favourite constitutional principle. He had already done so at an interview with which he was honoured by his Royal Highness the Commander-in-chief, to whom he had communicated the wishes and expectations of several of his constituents residing in the neighbourhood. Now that they had barracks in the parks, this eye-sore ought to be removed from Charing-cross, which was the centre of a populous and highly-respectable neighbourhood, composed of people engaged in the civil business of the metropolis. The Duke of York had, however, informed him, that the maintenance of the battalion on this spot had been decided upon, and he (Mr. Hobhouse) regretted that result, as well as the apathy with which the people submitted to the continuance of a standing army of 76,000 men.

Mr. *Peel* said, that in point of architectural taste, the hon. member for Westminster was wrong, in his objection to the proposed erection; and on constitutional grounds he was equally erroneous. The hon. member must be aware that in the petition of rights the complaint was, that soldiers were quartered on private individuals, instead of being put into barracks. The establishment of barracks in the city of Westminster was not a modern practice. From the year 1774 to 1776, there was a battalion and a half of the Guards stationed in the Savoy barracks. In 1776, those barracks were burnt, and after that the troops were stationed in Somerset-house. The principle of placing soldiers in barracks rather than in private quarters had been long known and acted upon. What was the fact at present? From want of accommodation in barracks, some of the troops necessary for the duty of the metropolis were quartered at Chalk-farm—a distance which it would not be denied was rather inconvenient for a man who had to appear on parade every day in the Bird-cage-walk (hear, hear). Others were quartered in Mary-le-bone, also a considerable distance from the parade. But what he objected to was, not so much the inconvenience of the distance, as the ill effect of exposing soldiers in private quarters to the danger of being mixed up with the worst members of society—a danger from which they would in a great degree be exempted in barracks (hear).

General *Townsend*, Colonel *Davies*, and Colonel *Johnson*, agreed as to the expediency of keeping soldiers in barracks.

Mr. *Hobhouse* said, his objection was to the principle of having soldiers too much separated from intercourse with the citizens,—a practice disapproved of by Blackstone, who had written in strong terms against it.

The remaining resolutions were then agreed to by the committee.

### *Motion to reduce the Estimates.*

TUESDAY, MARCH 7.—On the order of the day being read for bringing up the report of the Committee of Supply,

Mr. *Hobhouse* said, that it was his intention, in pursuance of the notice which he had given on a former evening, to propose a specific reduction of the number of troops which his Majesty's ministers had thought fit to call on the house to vote as necessary for the military service of the country. He hoped that gentlemen would listen to him while he stated his

reasons for considering the present as the most improper period that could be selected for proposing so large a military establishment as his Majesty's ministers now demanded from the house. The noble lord (Palmerston) had told them that it was easy for gentlemen to declaim on such topics as the danger of keeping up a standing army, and the necessity which existed for the reduction of taxation. It might be easy or not; but that circumstance depended entirely on the temper of the audience to whom the declamation was addressed. Now, if (as he believed it would be admitted was the case) the noble lord had the audience in his favour, it was much easier for him to indulge in observation on the opposite topics—to argue that such and such reductions were not possible—than for those to whom the noble lord had alluded, to work up, with any profit or effect, those trite and worn-out subjects, which had been so often expatiated on within the walls of parliament, and passed by with total disregard. The noble lord, in the speech which he delivered when he proposed the army estimates, gave the house no reason whatever for continuing the present military establishment in time of peace; and still less did he assign any ground for the increase which he had proposed; for, though it was comparatively small, still it was an increase; and in this period of public pressure it was the bounden duty of ministers, if they asked for a large standing army, (this being the eleventh year of peace), to come down with something like cogent arguments in support of such a proposition. An observation had been made by an hon. member on a former evening, that before ministers called on the house for those enormous supplies, the Chancellor of the Exchequer ought to have laid before the country something like a financial statement. Nothing of the kind had been done; and all they had heard, inside and outside of the doors of parliament, was, that there was a great difference in the state of the country in the present and in the last year,—that all the happy prospects of wealth and prosperity were unfortunately overclouded, and that distress prevailed in every quarter. Surely, when this was the case, parliament ought not to be required to tolerate an augmented scale of expenditure. He would call to the recollection of gentlemen the vote of the House of Commons in 1822; and, if nothing had since occurred in the foreign or domestic relations of the country to justify an increased military force, then he would call on those who held and ought to guard the purse of the nation, to reduce that augmentation which had unfortunately been made since the year 1822. Unless ministers could show that these establishments were necessary for the dignity of the Crown, the tranquillity of the country, or for securing to the nation that lofty position in which it ought to stand, they should be steadily refused by parliament. In 1825, the amount of taxation was 32,000,000*l.* And what was it in 1821? The amount of positive taxation was then very nearly 1,000,000*l.* less than in 1825; and yet, in 1821, the house deemed it necessary, under the sanction of his Majesty's ministers, and loudly called on by the agricultural interests, and by none more so than by the hon. member for Dorsetshire (Mr. Banks), to come to a unanimous vote, recommending in the strongest terms, that every possible reduction should be effected immediately. The noble lord (Castle-

SESS. 1826.

reagh), then at the head of his Majesty's Government, declared that the business of the country could not be carried on if the reduction of a single soldier took place. The hon. member (Mr. Hume) moved for a reduction of 10,000 men, and his proposition was negatived. However, very shortly afterwards, the noble lord (Palmerston) came down to the house, and stated that ministers had been able to reduce 12,000; and that the reduction would have been carried still farther, if it had not been for the disturbed state of Ireland. That country was now in a state of tranquillity—so were the colonies. Why, then, in a period of profound peace, should this immense force be continued? Above all, why should it be augmented? When an attempt was made to keep up the military establishment in 1815 and 1816, Lord Grenville, who was not then in his Majesty's councils, but who would not thwart unnecessarily the measures of Government, said, "It is useless to discuss minor matters, so long as you keep up this enormous military establishment, which cuts at the root of the British Constitution, and leaves no other rights worth talking about." The noble lord had told the house, that the situation of the colonies demanded the augmentation; and, notwithstanding the vote of 1821, and the reduction effected in 1822, the increase was granted, because the noble lord had declared that it was necessary with a view to the comfort of soldiers on foreign stations, for whom it was proper that ample relief should be provided. If, however, such relief were necessary for the colonies, it did not follow that so large a force should be kept up at home. The force supported here was the very worst that could be devised for giving relief to the colonies. Why were there so many household troops, and so large a number of cavalry regiments? They were not only useless, but it was unconstitutional to continue them. The present was a most opportune moment for those gentlemen who had joined in the resolution of 1821, to say, not only that there should be no farther augmentation of the military establishment, but that it should be brought back to what it was reduced to in 1822, when the number then voted was declared by ministers quite sufficient for the service of the country. There were now 32,670 soldiers in England, and no less than 15,000 on the recruiting service; while, in 1792, there were only 17,000 military in Great Britain. Ministers had no pretext whatever for this increase.—The hon. gent. concluded by moving—"That it appears to the house that the regular military force of the country in 1822, exclusive of the troops employed in India, amounted to 69,088 men; and, according to the estimate presented to the house, the same description of force in the present year amounts to 87,240 men; being an increase, over and above the number employed in 1822, of 18,152 men.—That it appears to this house, that no change has taken place either in the foreign relations or internal condition of the country, since 1822, to justify so large an increase of our standing army; and that, in order to return as early as possible to the military establishment of that period, it is expedient to reduce the regular troops for the service of the United Kingdom and the colonies, exclusive of India, to 77,000 men."

Colonel Johnson seconded the motion.

Lord Palmerston said, that although he could not agree in the proposition of the hon. gentle-

3 P

man, yet he was not disposed to object to the general principle which he had laid down—namely, that it was incumbent on the house to apportion, as scrupulously as possible, the amount of the military force to the actual wants of the country. Gentlemen, of course, had a right to make use of those anniversary occasions, for the purpose of making their observations, and of recording the opinions which he knew they entertained on these particular subjects; but though the general principle on which they proceeded was good, the results to which it led them were often erroneous. He (Lord Palmerston) most distinctly declared last year the grounds on which he called for an augmentation of 13,000 men (as the hon. member had correctly stated it to be); and, with very little exception, the house concurred in the force and justice of the reasons which he then assigned. At that time he explicitly denied that any part of that increase was rendered necessary by the internal state either of this country or of Ireland. The hon. gent. had asserted, that gentlemen had concurred in that augmentation, because the state of Ireland seemed to require it. It was not in his power to account for the feelings of others; but he could positively state, that he did not call for the increase, either then or now, on account of the situation of Ireland. The plain grounds were the state of the colonial service. But the hon. member said, "If a smaller force were sufficient in 1822, why have you demanded a larger force since?" The fact was, that in 1822 the Government, anxious, as they ought to be, to give in to the general feeling of the house and of the country, consented to a reduction, which, in their sober judgment, they felt when made would be greater than they could possibly adhere to, with a due regard to the proper performance of their duty to the country. Having tried this reduced system for two or three years, and finding that it did not succeed, they felt it necessary, as a public duty, to declare that the experiment had failed, and to ask for an augmentation (hear). He did not mean to go into a detail of all the garrisons that were to be supplied with troops. If it were necessary, he was ready to do so; and he was persuaded, that after such a statement, any person who was at all acquainted with the number and extent of our colonial possessions, would candidly acknowledge that the force called for was not greater than the necessity of the case required. Much had been said about the force employed in Canada and the West Indies; but if gentlemen would look to the troops employed in those possessions in 1792, they would find the present increase very trifling indeed, when they compared the extent of territory which we possessed formerly with that which we possess now. This was peculiarly the case with Canada, where population and cultivation had been greatly extended, so that it was necessary to protect a larger line of frontier. He would now state the distribution of the military force of this country, and gentlemen would then be enabled to judge whether it was or was not too great. The infantry of the line consisted of 83 regiments. Of these, 9 were in Great Britain, 23 in Ireland, and 51 on foreign stations. Besides the 9 regiments of the line in this country, there were depôts for the 51 regiments abroad, where recruits and invalids were received. Taking the 9 regiments at home at 740 men each, it gave a total of 6660 men. Supposing

224 men at each of the 51 depôts, the total was 11,424 rank and file. Add to these, six battalions of foot guards, 4400 men; and staff corps, 300 men; and the gross total would be 22,784 men. Of these, 11,424 were not on actual service; they were in depôt, and were ready to go abroad when called for. The object in keeping up this part of the establishment was, that the places of non-effective men might be immediately supplied; and by that means the regiments abroad be continued in a perfectly complete and efficient condition. In speaking, therefore, of the force at home, it would be proper to deduct this body of 11,424 men. There were 51 regiments abroad, of which 20 were in the West Indies. Now, supposing those regiments thus employed on foreign service to be absent only for ten years, (and he believed no person who was acquainted with foreign service would say that ten years was too short a period), then it became obvious that there must be sent out from this country annually, seven regiments to foreign stations, while seven others came home from foreign stations. And as one regiment did not quit a foreign station until it was regularly relieved by another, it followed that there were in the course of the year, 14 regiments neither employed abroad nor in this country, but occupied either with their passage out or home. Taking one station with another, he might say that the reliefs sent out were equal to five regiments, which ought to be deducted from the general establishment for the whole year. If, then, the five regiments thus constantly withdrawn for relief were deducted from nine, it would leave at home, independent of cavalry and of 4400 guards, a disposable force of only four regiments of the line. He would ask whether this could be considered a greater disposable force than the country ought to possess (hear)? If these strong grounds were not sufficient to show the house that the augmentation of last year was necessary, he was very much deceived. Indeed, he thought they would have justified the house in going even farther (cries of hear, and question).

The house then divided, when there appeared—For the Amendment, 34—Against it, 106—Majority, 72.

### *Mutiny Bill;—Punishment of Flogging in the Army.*

FRIDAY, MARCH 10.—Lord Palmerston rose for the purpose of proposing two clauses to this bill. The first was for the purpose of exempting persons who served in the capacity of consuls from being billeted upon by soldiers; the second would repeal a law by which, if a soldier destroyed game, his officer was fined 2l. for every head of game he might kill.

Mr. Hume stated, that persons in Edinburgh complained, that, although barracks were plentiful, soldiers were billeted on persons as if there were none. Such persons were obliged to find hay and straw for the soldier's horse, which would amount to 2s. 6d. per day, and they would only be allowed 10d.

Lord Palmerston said, that it often happened that where barracks were full, or there were no barracks, soldiers were obliged to be billeted. The clauses were then agreed to.

Mr. Hume then rose for the purpose of submitting a clause for the abolition of a practice which had long existed in the army of this country—

he meant the punishment of flogging. He was aware that on this occasion he should have to encounter the prejudices of many hon. members who were officers in the army, and who, from being in the habit of witnessing such punishments frequently, did not entertain the same feelings on the subject as might be supposed to actuate other men. However, he hoped that they would give the subject a calm consideration, and if it should be made appear that any other mode of punishment could be equally effectual, that they would consent to its abolition. The evil of flogging did not consist merely in the bodily torture inflicted on the individual who was thus punished; it had also the bad effect of rendering those who were obliged to witness such scenes more callous and indifferent than before. It had precisely this effect upon the persons punished—and he might appeal to the experience of those most acquainted with the army for the fact—that no man ever became a more diligent or a better soldier by the punishment of the whip. He was aware that a difference of opinion existed among many most respectable members of the military profession, on the subject of corporal punishment, and that many, he would admit, very humane individuals, thought that the duty of the army could not be carried on without it; but he was happy to add, that there were also many highly distinguished and experienced officers who were of a different opinion, and who thought that, considering the modern improvements in the system of military discipline, corporal punishment might be dispensed with, not only without injury, but with great advantage to the service. He might, if he were disposed to go into detail on this subject, give a great many instances in support of his resolution, but he would confine himself to the mention of a few facts. In the Wurtemberg army, under the government of the late king, a system of discipline of a most severe and cruel kind had been carried on; but on the accession of the present king, an end was put to that system, and he (Mr. Hume) was informed by an officer—an adjutant in one of the regiments—that the change was attended with the happiest effects. That gent. stated to him, that under the old system, the men became worse by flogging; but the moment the change had taken place, and the punishment of the lash was abolished, so far from there being an increase of crime, the soldiers seemed to emulate one another in avoiding every kind of punishment. He might perhaps be asked if flogging were abolished, what kind of punishment ought to be substituted? He did not know what was the practice of the French army in this respect, though he was informed that in several regiments in that service flogging was not practised; but in Wurtemberg there were two regiments to which men were draughted who had been punished twice or more in their own regiments. Another regiment was appointed to receive those who had been punished only once. This system, which made it disgraceful for a man to be punished even slightly, and therefore unfit to remain longer in the same regiment with his former associates in arms, was, he was informed, found quite effectual to keep up the discipline of the army in that country. Was it not, then, worth while that some attempt of the kind should be made with respect to our army, the general system of which, in other respects, and, he would admit,

in that of flogging also, had been considerably improved? Adverting to the alterations which, so creditably to himself, had been proposed in our criminal code by the right honourable secretary (Peel), and considering the intended amelioration of the system practised towards our colonial negroes, which had been mentioned by the hon. colonial sec. he would ask, if it were not monstrous that we should still keep Englishmen, in English regiments, in the constant fear of the lash, and hold that they could be kept to their duty only by that cruel species of punishment? Never did a better opportunity occur for giving the subject a fair trial than the present. We were now in a time of profound peace, and no danger could arise to the general discipline of our army from at least making the trial. He was not disposed to carry the experiment too far at first, and therefore, in the resolution which he would submit, he would limit the suppression of flogging to regiments in the United Kingdom. In the colonies, the present system might be continued until it was ascertained how far the suppression could be made effectual at home. He would also limit his resolution to a time of peace, so that if a war were to break out unexpectedly, resort might be had to the old system, if necessary. Thus no possible danger could arise from the trial. Humanity called upon us to make the trial, and there could, he thought, be little doubt that it would be successful. At all events, now was the time when it could be made with the least risk of danger. He would submit two resolutions on this subject. The first would go to the abolition of flogging; and by the second, another mode of punishment would be proposed for crimes to which flogging was now applied. The house was not without an example of flogging having been abolished without any dangerous effect upon military discipline. In America, the punishment of flogging had been abolished, and that, too, at a time when she was engaged in a war. This was effected without producing any bad effect in the discipline of their army. On the contrary, that discipline was kept up in a more effectual manner than before.

Mr. J. Smith said, that he did not think the present moment a proper one for the discussion of a question of such importance as that which the hon. member had introduced. The principle of the resolutions he fully concurred in to its full extent. But he thought that instead of being thus introduced at a late hour, the question should be made the subject of a specific motion, as it had been when formerly introduced by an hon. bart. (Sir F. Burdett), to whose humane exertions might be attributed the improvement which had already been made in our military discipline on this point. If a specific motion were made on the subject, the whole of the facts connected with it might be brought before the house in detail; and then he thought it would be made apparent, that throughout the whole of Europe there was a gradual abandonment of cruel bodily punishments; and he believed it would be seen that England was now almost the only civilized government under which this species of torture was inflicted—at least that we had not made the same progress as other nations in its abolition. He did not intend at that late hour to enter into any lengthened statements on this subject, to which he might be disposed if the subject were brought more fully before the

house. He would, however, mention one of many cases within his knowledge. He was acquainted with an officer who had for a considerable time the command of a troop of dragoons, and who during the whole period during which they were under his orders, never brought a man to corporal punishment. The only punishment inflicted on any of them, was confinement of a few days. This gentleman was one who had the command of his temper and passions—who watched his men narrowly, and thus became acquainted with their habits and dispositions; and so effective was his adaptation of even the slight punishment he had mentioned, that on an inspection by a general officer, that troop received great praise for its discipline and good conduct, while other troops, towards whom a more rigorous system had been applied, were censured for deficiency in both. But examples of this kind would be endless, and he would not adduce more. It was admitted by officers of all ranks, that the soldier who had been once brought to the halberd, was more likely to be brought to it a second time, than he who had never been subjected to that disgraceful punishment. This general principle was not applicable to the army only. In the history of the proceedings at the Old Bailey it would be found, that those who had been once subjected to corporal punishment by the whip, were the most frequently subjected to it a second time. If this practice was not found effectual for reform, which ought to be one object of every species of punishment less than capital, the legislature was bound to abolish it, and substitute some one more effectual. By public exhibition of severe corporal punishments, the feelings of the spectators became enlisted on the side of the sufferer, and in their compassion for the man they lost all recollection of his crime (hear, hear). The present period was peculiarly favourable for an alteration in our code of punishment, and particularly favourable for the abolition of military flogging. All the other nations of Europe were rapidly getting rid of their systems of bodily torture. He did not know the extent to which France had carried her improvements in military discipline on this point; but there was no question that her general code of corporal punishments had been most beneficially altered. Would she now tolerate such tortures as those inflicted on Ravillac and Damien? Whatever might be the result of the motion to-night,—and there was no doubt that it would be negative,—yet he hoped that if he lived 5 years longer, he should see an end put to this system altogether. The hon. member concluded by requesting his hon. friend to withdraw his motion for the present, and to allow it to stand as a specific motion for some future day.

Sir J. Brydges gave his entire concurrence to the resolutions of the hon. member (Mr. Hume); because he was convinced that the system of flogging in the army was improper, and ought to be abolished. It was improper, because honour was the essence of a soldier's profession, and when he was disgraced, by being subjected to such punishment, he considered his honour tarnished, and he was no longer capable of any heroic feeling.

Sir G. Murray did not deny the statement of the hon. member (Mr. J. Smith), that such feelings as he had described might be called forth from a mob witnessing a punishment; but it

was one thing to have those feelings, and another to legislate on them. It would be inconsistent with sound policy to legislate on such feelings alone; and, in looking to military punishments, it should be considered whether the discipline of the army could be kept up without them. He was no friend to severe punishment of any kind; but he thought that the power of inflicting corporal punishment was necessary to the discipline of an army. He knew of no instance of any army, ancient or modern, without similar punishments. They were in use amongst the Romans, and it would not be denied that their soldiers were kept in the highest state of discipline. If it were a fact, as the hon. member had stated, that the punishment of flogging was altogether abolished in America, what comparison was there between an army of 6000 men, scattered over the immense surface of that country, and the extensive army kept up in this? America did not want a standing army; and the state of discipline of her troops would be wholly inapplicable to this country. With respect to the army in France, it was well known that before the present dynasty returned to the throne of that country, a system of discipline of the most severe description was kept up at an expense of human life that would strike British feeling with horror, and the present system would scarcely be taken as a pattern. He had learned from a gentleman, well acquainted with the regulations of the Prussian and Saxon armies, that in the Prussian army the punishment of the cane was universal and arbitrary; but the constitution of that army was essentially different from that of the English military force; for there every man was obliged to serve. The army was composed of two classes—a soldier, on entering, belonged to the first, in which he was exempted from corporal punishment. But if he violated the military regulations, he was transferred to the second class, in which corporal punishment might be inflicted. The punishment of the cane was inflicted by non-commissioned officers, and in secret. Would the hon. member wish to see such a system of secret flogging adopted in our army? Another regulation was, that only forty stripes could be inflicted without the sentence of a court-martial. Would the hon. member desire to see an arbitrary system of this kind adopted in the British army? There were other species of punishment to which the Prussian soldiers were liable: as confinement of several sorts: first, sending a man to the guard-room, or for a short time to solitary confinement. The second was to solitary confinement, on bread and water, with a forfeiture of pay; and there was another species of confinement in which the prisoner was not permitted to lie down. Was the hon. member aware of these facts, when he stated that torture was abolished in foreign armies? Another species of punishment was, fastening the criminal to a tree, or a wall, with his face turned towards it, and keeping him in that posture for a considerable period without permitting him to lie down. This was an outline of the discipline in the Prussian service, which was described as the mildest on the continent. In the Saxon, the highest punishment was shooting; but in many cases, after death the body was delivered over to the common hangman, to be stretched upon the rack. There were, besides, several degrees of punishment by solitary confinement—sometimes with the addition of bread and water diet—sometimes with leg-irons of 32lb. weight: after the infliction

tion of this punishment a second time, the culprit was declared altogether unworthy to remain in the army. Under another description of punishment—a soldier was kept in solitary confinement, in chains, in a cell, without bed or bedding, and frequently in a position called crouching—the body bent forward, the hands and feet fastened together (was not that torture?) so that he could not lie down. The longest period during which this punishment might be inflicted at frequent intervals, was 8 months; in some cases it was limited to six. The military punishments of Hanover were fall as severe as the latter. These statements would serve to confute the assertions that other nations were less severe than we, in their military punishments, and that there had been an abandonment of torture in all nations except in England. As to the proposal that the system of flogging should be relinquished in this country, and retained in our colonies, such a regulation would be most highly unjust, and attended with the most pernicious consequences. It was, in his opinion, the liability which a soldier was under to be sent to any part of the globe, and to encounter every variety of clime and disease, which mainly contributed to raise our military service to the high eminence it had attained; he also considered the continual interchange of troops of great advantage to the service. The empire was not confined to the three kingdoms; there were limbs and members of it in every quarter of the globe, and surely it would be a very inconvenient and invidious distinction to have one system of discipline for our troops at home, and another for those stationed abroad. It had been said that this was a boon for the army; if it were so, he must, as far as he was connected with the army, beg leave to reject it. It was to our discipline that we owed all our military honour; it was not the arms or dress of our army, but its discipline which rendered it useful to its country, and feared by its neighbours: but if he had had no other reason for rejecting this boon, as it was termed, he must confess that when he considered the quarter whence it was offered, he should have felt but little disposed to accept it.

Sir R. Wilson thought the system of flogging ought to be altogether abolished. Every other power in Europe had given it up, and without any detriment to military discipline. The severity with which the discipline of the French army had been formerly maintained, had been very much exaggerated, and its present condition was highly commendable. In the late invasion of Spain, no irregularities had been committed which could in any way disparage the discipline of that army. The gallant general had drawn an analogy between the English and Roman armies, and seemed to think that both of them owed their courage to the system of flogging which prevailed in them; but where was there a more cruel people than the Romans? What atrocities were they in the habit of committing on their slaves? On one occasion, where a murder had been committed by a single slave, 650 slaves were consigned to instant execution, as an atonement. Was this the people to whom we should be anxious to compare ourselves? The gallant general had spoken of the cane being used by other powers as an instrument of punishment; but was there any resemblance between a cane and a cat o' nine tails? between striking a man with his clothes on, and flogging his naked back with an instrument cal-

culated to tear his skin and flesh from his bones? The gallant general had alluded to a punishment, which prevented the offender from reposing, but what kind of repose was one of our soldiers likely to enjoy after he had received eight or nine hundred lashes? If flogging were to be abolished in our army, it would soon be composed of a different class of persons. In consequence of the adherence to this system, our soldiers were at present frequently the outcasts of society, who resorted to this profession because they were neither fitted for, nor could get admitted into, any other. The chief objection to this system of punishment, was, that it degraded the moral character, and vilified the individual who had been subjected to it to the last day of his life. He should have wished at any rate that the experiment might have been tried. Possibly there might be some irregularities when individuals first began to feel their liberty, but he was convinced that after this experiment had been tried for twelve months, there would be no complaints from officers of any relaxation of discipline, or that they found any difficulty in controlling their men without having recourse to flogging.

Lord Palmerston did not wish to put the question on unfair grounds: he was ready to admit that whenever punishment was accompanied with ignominy, it must necessarily have the effect of hardening the offender; but he conceived the doing away with this punishment would have the effect of introducing other and greater evils. There was something in the constitution of an army which required some stronger and more speedy power to control it than was necessary for the regulation of a mere civil body. Indeed, the history of every age and every country showed this, and he would assert, without any fear of contradiction, that corporal punishment had prevailed in every army which had ever existed; and whether that punishment was administered with a cane or with a lash, did not seem to him to make much difference, at least with regard to the ignominy of it, which appeared to be the great objection which had been raised against it. He could assure the house that a disposition existed in the highest quarter to have recourse to corporal punishment as seldom as possible; and when, from the returns made to the Commander-in-chief, it appeared that corporal punishment had been frequently inflicted in a regiment, the conclusion which he universally drew from it was, that the officers were not doing their duty. The argument of his gallant friend had been totally misrepresented, when it was imputed to him that he had ascribed the courage of the Roman and English armies to the system of flogging which prevailed in them. When it was considered that our army was raised by voluntary enlistment, and not by conscription, it would be readily conceived that there must necessarily be no small difficulty in controlling a body of such different tempers and habits. He looked upon the proposition of the hon. member (Mr. Hume), for confining the system of flogging to the troops employed in our colonies, and abolishing it at home, as most highly objectionable, and he would conclude his observations by re-assuring the house that there existed a very strong disposition in the high quarter which had the direction of the army, to mitigate corporal punishment as far as it could possibly be mitigated, with a due regard to the maintenance of proper discipline in the army.

Sir R. Fergusson had always observed that the best discipline was preserved in those regiments where corporal punishment was least frequently inflicted. From this he inferred, that whilst regiments were employed on home service, their discipline could be maintained without having recourse to the whip or the cat-o'-nine-tails.

General Townshend having been in the performance of regimental duty for thirty years, might be permitted to say, that he brought at least the benefit of experience to this question. Corporal punishments had formerly been very prevalent in the regiment of Guards to which he had the honour to belong, but he was happy to say that of late the frequency of its infliction had much diminished. He was, however, of opinion that gentlemen were much mistaken who thought that the discipline of the army could be maintained without corporal punishment.

The house then divided, and the numbers were—

Ayes, 47—Noes, 99—Majority, 52.

### *Accounts of the Guards.*

TUESDAY, FEB. 7.—Mr. Hume said, that he was desirous of extending to the regiments of Guards, horse and foot, generally, his motion for a return relative to certain troops of the Oxford Blues. He found that, by an exemption from the law laid down by the acts, the 45th and 48th of the late King, there was not for the accounts of the several regiments of Guards an audit of the same character with that applied to the expenditure of the rest of the army. The commanders of the regiments handed their accounts to the King, and the King transmitted them to the Secretary at War; but there was no regular audit, and the subject was one of considerable importance. It appeared that the average cost to the country, of men and officers, in the Life-Guards, was 74l. per annum. In the Horse-Guards the charge was nearly equal. In the Dragoon-Guards the cost was about 56l. In the Foot-Guards, the average charge per man was 34l.; and in regiments of the line, only 31l. He thought that this difference of charge arose in some measure from the absence of the audit, and was desirous of hearing some explanation of it. At all events, the want of such a check left the system open to suspicion; and he could see no objection to placing the Guards upon the same footing with all the other troops in the service. He could not see how the difference between the number of officers on full pay in these corps and the troops of the line could be justified. During the war, he was aware the forces were so augmented that it was difficult, if not impossible, to come at a proper reduction at the peace without placing a great number of officers on half-pay. The proper economy for Government to pursue was, to fill vacancies from the supernumerary lists. He was sorry to say that not only that was not done, but while many officers of reduced troops had retired on their full pay, new ones were actually introduced to fill vacancies, thereby greatly swelling the expenditure of the establishment, and most unfairly passing over the supernumerary officers on the list of half-pay. In 1814, when two troops of the Oxford Blues were reduced, the men were discharged, the officers

kept on full pay. No reason could be given why such heavy expenses should be incurred for the officers, while the men were dismissed without ceremony. If the accounts which he was about to move for were produced, they would see what new promotions had taken place, and the house might, by applying to the noble sec. (Palmerston), obtain explanation on any particular cases. He had heard of the appointment of two new officers, who had come in without purchasing, while there were thousands of officers unemployed on the half-pay list. Gentlemen on the other side might think that 7s. or 10s. a day was not much for an officer and his family. But then it must be recollected that there were thousands of poor families among the operative classes who had not so much as 7s. a week to live on for the year round; so that no exertion of Government should be spared to effect every possible reduction. He then moved for return of the officers retired on full pay since the reduction of two troops of the Oxford Blues, in 1816; likewise of the vacancies which had occurred during the same time in the remaining troops; and of the number of new appointments and of the officers remaining at the time on full pay. Also for similar returns of the Life and Foot-Guards.

Lord Palmerston said, that there would be no objection made on his part to the production of the papers; and he assured the house of the readiness of his Majesty's Government to give every explanation within their power. As to the objections taken by the hon. gentleman to the difference between the establishments of the horse and infantry of the line, the question had been frequently and fully discussed in that house, and he would not now suffer himself to be drawn into it. Whether right or wrong abstractedly, Government had determined, and parliament had repeatedly concurred in the propriety of keeping the two kinds of force, the Guards and the regiments of the line, on a different footing. As to the accounts of the regiments of Foot and Horse-Guards, though they did not come before his office in the same shape, and with the same details, as did the accounts of the other forces, it was a mistake to suppose that they did not render any accounts, or that there was any possibility of the public money being wasted. There were sufficient and satisfactory guarantees for the conduct of these regiments, and it was absolutely impossible that any improper use could be made of the money so issued. The fact was, that they had advantages in point of pay and other allowances; but out of the money granted they had to pay the expense of recruiting, the purchase of horses, and other charges, to cover which in the regiments of the line there were specific issues by order of parliament. There were no officers on half-pay when the two troops of Blues were reduced. All those who held promotions were entitled to sell out on retiring. The only appointment of a new officer was subsequently to the battle of Waterloo. A Major fell in the action, and from the peculiar gallantry of this regiment on that eventful day, it was thought proper that the whole line of officers should be advanced. This made way for the appointment of one officer only; and when the house was told that he was the brother of the brave man who fell, and that he had behaved equally well in the field, they would not think the distinction was bestowed improperly (hear, hear). With regard to entirely new appointments in the Guards,

it would be found that they were pages of the King, whose privilege it had constantly been, after a certain term of service, to take the first vacant ensigncy in the Foot, or the first cornetcy in the Horse-Guards.

### *Half-pay and Pensions.*

THURSDAY, MAY 26.—Mr. Hume complained that the bargain respecting the "dead weight" was quite a delusion on the public; and that, instead of being a saving, it was a loss of a large sum. Instead of a decrease, there was an increase of the number of half-pay officers since the "dead weight" bargain had been made. In 1817, the finance committee stated, that the half-pay and pensions then amounted to 3,500,000*l.*; and it was added, that a reduction of from 5 to 7 per cent. might be expected every year on that amount. According to that statement, the decrease ought now to amount to about 50 per cent. on the whole sum, instead of which, it had been since then nearly doubled. A practice was begun, of allowing old officers on half-pay to sell, and their places were supplied by young ones; thus continuing the burden on the public. The number of promotions in the army since 1817 was, on the average, 500 each year, although there were 7000 officers on half-pay unemployed. A similar line of conduct was not pursued with respect to the marines, in which service there had been very few promotions since 1816. The navy, however, furnished another source of family patronage. Although the service was only capable of affording employment for 800 officers, there had last year been no fewer than 294 promotions.—The hon. member concluded with moving, that "an humble address be presented to his Majesty, praying that he would be pleased to employ in the army, as vacancies should occur, such officers as were on half-pay qualified to serve his Majesty, as well with intent to ease the nation in time from that burden as to reward those who had served during war."

Lord Palmerston said, that since 1822, both the number of officers on half-pay and the charge for their maintenance had decreased. In 1822, the number of officers on half-pay was 8317; in 1816, it was only 7666. The charge for this department was, in 1822, 728,000*l.*; and in 1826, it was only 715,000*l.* He must acknowledge that he did not feel the same anxiety to see the charge for the half-pay diminished by the death of persons holding commissions as was evinced by some persons (hear). The recent increase of promotions, and the permission to sell from half-pay, had been resorted to with a view of affording some recompense to those who had served in the war, and were growing old, in the rank of lieutenant and captain. He denied that there had been any abuse in the disposal of the patronage of the army, and contended that it was desirable that persons who were connected with the aristocracy of the country should be encouraged to purchase commissions in the army, in order to preserve it from acquiring the dangerous qualities of a standing force. He stated, at the same time, that no inferior officer was allowed to purchase over his superior officer, unless the superior officer declined, or was unable to purchase. He contended that due justice had in all cases been done to the claims of the half-pay officers, and concluded by giving his decided opposition

to the motion, because he conceived it calculated to disgust all the officers who were on full pay, and to annoy many of those who had retired upon half-pay.

The motion, after a few observations from Mr. Hume in reply, was put and negatived.

### *Petition of Mr. Bradley.*

THURSDAY, MAY 11.—Mr. Hume presented a petition from Thomas Bradley, Esq., late colonel in the 2d West India regiment, complaining of having been unjustly dismissed from the service of the army. The petition stated, that in the year 1819, the petitioner was the second in command at Honduras; and that, in consequence of Lieutenant-colonel Arthur, who was at that time the senior officer in command at that station, having been placed on half-pay, the command devolved on the petitioner; that Lieutenant-colonel Arthur, however, still persisted in retaining the command, notwithstanding the remonstrances of the petitioner; and at last caused him to be put under arrest, because he refused to attend an irregular and unmilitary meeting, which had been convened by Lieutenant-colonel Arthur, and kept him in close confinement for a period of nearly ten months; that whilst he was so confined, he forwarded to Sir Henry Torrens, as the colonel of the regiment, a full and candid account of the whole transaction; that owing, however, to certain misrepresentations proceeding from another quarter, the Commander-in-chief was induced to advise his Majesty to remove the petitioner from the army, with permission to dispose of a majority only; that the petitioner having in vain applied for a court-martial, was compelled to institute an action against Colonel Arthur for false imprisonment; but that, in consequence of a commission, and certain orders having been brought forward on the trial, which, till then, the petitioner had never heard of, and which, although sworn to at the trial by Sir H. Torrens and Sir H. Taylor, he was prepared to shew did not exist at the time when he claimed the command, he recovered damages only to the amount of 100*l.* He complained that Colonel Arthur's defence had been conducted at the expense of Government, and that since the verdict Government had conferred a lucrative appointment abroad upon him, and thereby wholly prevented the petitioner from enforcing against him the payment of the damages and costs in the action.—The hon. member said that he could not but consider it a great misfortune to the army, that the Commander-in-chief could all at once dismiss an officer from his profession, without any court-martial or investigation, no matter what had been the length of his services, or however meritorious his previous conduct.—He would now merely state the prayer of the petitioner, which was, that the house, as protectors of the rights of individuals, and the vigilant and zealous guardians over the controul of public departments, would take the premises into their serious consideration, in order that justice might be rendered to an innocent individual, whom even his oppressors admitted to be a meritorious officer, and that they would afford him such redress as to them should seem meet.

The Attorney-General was desirous of saying a few words on this subject. The petitioner had taken upon himself to state, that the commis-

sion granted by General Fuller to Colonel Arthur was a forgery; and to accuse two highly honourable individuals of perjury, with a view to the perversion of justice. Ought the house to receive a petition which contained matter of this nature? But what were the real facts of the case? In addition to the commission which Colonel Arthur had received from General Fuller, he had also been appointed superintendent, and an order had been issued from the competent authorities in this country, that the officer holding the situation of superintendent should also hold the command; and when Colonel Bradley insisted upon taking the command himself, Colonel Arthur proposed that they should wait the decision of the authorities at home. To this proposal Colonel Bradley wholly refused to listen, and insisted upon taking the command, observing that he would rather be put under arrest than have any thing to do with Colonel Arthur. The petition stated, that the petitioner was under close arrest for ten months; whereas, in point of fact, he was only two months under such arrest. It was suggested by the petitioner, that he was dismissed in consequence of the false representations of Colonel Arthur. Now it was expressly stated to him, in the communication which conveyed to him the notification of his dismissal, that he was dismissed in consequence of the impropriety and inconsistency of his conduct, as it appeared on the face of his own statement. As to the charge which the petitioner had insinuated against Sir Herbert Taylor and Sir Henry Torrens, these gentlemen had stated on the trial, as the fact was, that a general order had been issued that the civil superintendent at Honduras should have the command of the troops in the garrison. It was not meant that any general order had issued from the Horse Guards; but the epithet "general" was used, because the order was not intended to apply merely to one superintendent in particular, but to all who might hold that situation. It was not fit that an individual, after taking the opinion of a court of law on his case, and having it decided against him there, should come to that house for redress. If the petitioner had merely complained of the hardship of his case, he should not have opposed the bringing up and printing of the petition; but when he had gone on to impute forgery and perjury to most highly respectable individuals, he could not think of giving his sanction to having matter of this description circulated through the country.

Colonel Davies said, that although the petition did certainly contain matter which it would have been more prudent in the petitioner not to have introduced into it, he did not think that this ought to be allowed to prejudice the real merits of the case. No one who was at all acquainted with Sir Herbert Taylor or Sir Henry Torrens, could for one moment entertain an idea that they would descend to any dishonourable practice, or be any party to the perversion of justice. But what appeared to him to be the great hardship of the petitioner's case was this, that if Colonel Arthur was invested with the commission from General Fuller, he had improperly concealed it. Had he produced it at the time, Colonel Bradley must have conceded the point in dispute. The power of dismissal without court-martial, ought, if retained, to be most cautiously exercised; and it was unjust that Colonel Arthur should have been

relieved from payment of damages by a new appointment, and that his cause should have been conducted at the expence of Government.

Lord Palmerston said, that if the petition had been confined to the mere complaints of the petitioner, he should not oppose its reception; nor should he oppose its being read and printed, did it not contain charges the most unfounded against two men of as high honour as any in the country—namely, Sir H. Torrens and Sir H. Taylor. Colonel Bradley had appealed to a court of justice, for the purpose of shewing that his conduct was justified by law; in that appeal he failed: he appealed again, and was again unsuccessful: and he was therefore warranted in saying, that Colonel Bradley had no legal ground of complaint. With respect to his military conduct, the case was quite clear. Colonel Bradley had been guilty of gross insubordination, amounting almost to mutiny; and in consequence of his conduct, he was dismissed from the army—not on the representation of Colonel Arthur, but on the consideration and investigation of his own statements, as compared with those of Colonel Arthur. Colonel Bradley was quite mistaken in supposing that the debanding of Colonel Arthur's regiment produced any alteration in his military authority. As his regiment had never been in that colony, it was impossible he should ever have commanded by virtue of his regimental rank. He continued to command the garrison as civil superintendent, just the same as when he was on full pay. But it was said, that Colonel Mamey had exercised the military command after Colonel Arthur had been placed on half-pay. Now, this was disproved by the returns in the Commander-in-chief's office: so that Colonel Bradley was mistaken in all his facts. How was an officer to act in a distant colony? Colonel Arthur offered to transmit to the Horse Guards any communications which Colonel Bradley might think necessary. It was therefore clear, that Colonel Bradley having been guilty of this kind of insubordination, deserved to be dismissed from the service. But he could also state, that he had been treated with great indulgence; for, although he had been removed from the army, he was permitted to sell his majority, having only purchased his resignation and company; and when Colonel Bradley preferred those charges against Sir H. Torrens, it was fit to state, that it was on the personal recommendation of Sir H. Torrens that Col. B. was promoted to the rank of lieutenant-colonel. With respect to his (Lord Palmerston's) conduct in the transaction, he had felt it his duty to recommend that the case of Colonel Arthur should be conducted at the public expence. It would be hard indeed, if, when an officer had discharged the duty he owed his country, and was dragged into a court of justice, he should be subjected to all the expence and inconvenience; but at the same time he must add, that it was no part of his instructions to pay the damages attendant on the extension of the imprisonment of Colonel Bradley beyond its proper period. The ground upon which the court had directed a verdict in favour of Colonel Bradley was, that he should have been released on the first intimation of his being placed on half-pay. However, it was fair to state, that the intimation received by Colonel Arthur was not, that Colonel Bradley had been put on half-pay, but that it was in-

tended to do so. According to the usual course, the communication of the fact must have been made by Jamaica, so that necessarily an interval must have elapsed between communicating the intention and carrying it into execution.

Mr. Brougham:—With respect to the charges preferred by the petitioner against certain honourable persons, he would fain hope the house would pause before they adopted, as a principle, that no charge was to be printed amongst their votes which happened to reflect on high individuals (hear, hear). He must say here, that with respect to the charges preferred against these honourable persons, he knew nothing at all about them; but having read the petition, he must differ with his learned friend in supposing that there was any thing in it personally offensive to the person alluded to. All the petition did was to accuse some person of having forged a certain commission; Colonel Arthur not having produced that commission when he was repeatedly called upon to do so.

Mr. Peel said, that the charges in the petition were so wholly unreasonable, that the house could not, consistently with the principles of justice, permit them to go forth with any thing like the shadow of their authority. The petitioner persisted first in saying that there was no commission, and when its existence was afterwards proved, he said it had been forged. His imputations against Sir Henry Torrens and others who had given evidence on the trial, amounted to this,—that they had given untrue evidence. The improbability of this charge was in itself obvious; but the question now was, whether the house would choose to give currency to these charges against persons who had been unwillingly compelled to give evidence in a court of justice. For these reasons, he should not object to the reading the petition, but he should decidedly oppose its being printed.

Mr. Hume thought it highly expedient that the petition should be printed, in order that every member in the house might know the exact nature of the charges, before he moved for a committee. Since, however, the rt. hon. gent. complained chiefly of the charges, he had no objection to withdraw the petition for the purpose of expunging them; and to present it on a future occasion for the purpose of calling the attention of the house to the grievances of which the petitioner complained.

Mr. Brougham complained of the great hardship which persons laboured under who had to pursue in courts of justice complaints against officers for misconduct, when those officers were protected by the Government. They were not only opposed by all the talent and the pecuniary means which Government possessed; but when they succeeded in overcoming these difficulties, they were sometimes, as in the present instance, unable to recover the costs which the mode of defence had tended to augment very considerably.

The petition was then withdrawn; and after some alteration, was read on Friday, the 26th of May, when Mr. Hume and Lord Palmerston repeated the statements made by them as above.

### *Navy Estimates.*

FRIDAY, FEB. 17.—Sir G. Clerk moved that the order of the day be read for the house, resolving itself into a committee of supply, to Sess. 1826.

consider of the navy estimates.—It was read accordingly.

On the question that the Speaker do leave the chair,

Mr. Hume rose, and after reminding the house of the report of the finance committee of 1816, and the language of Lord Castlereagh, in both of which it was held out that the public expenditure of the country would not exceed 17,350,000*l.* complained that in every year subsequently to that period this expenditure had been very considerably increased; so that last year it was 3,000,000*l.* more than in 1818. This showed how much faith was to be placed in the flattering statements of ministers. If we wished for any relief from the immense load of taxation with which we were at present burdened, we must begin by reducing our expenditure. He was far from desiring to diminish the efficacy of the navy; but if we were to add to the expense of our navy as it was proposed to do, in the present year, we ought to make a correspondent reduction in the expenditure of the army; the house ought not to go into a committee until the Chancellor of the Exchequer had stated the amount of the resources of the country, and what taxes he meant to reduce, for it was not possible for the country to sustain the same load of taxation in a metallic currency as it could in a paper one. Ministers had told us in his Majesty's speech, that professions of friendship and amity had been received from all foreign courts: if this were the fact, especially when we took into consideration our insulated situation, there was no need for our keeping up such large military and naval establishments. This year it was proposed to add another thousand men to our military force, and if we went on at the same rate, it was quite impossible that our finances could recover, or that we could ever be prepared to carry on an effective war. All the naval establishments in the world, taken altogether, did not amount to one half of our own. What was the navy of the United States, from which we were constantly told we had so much to fear? The whole number of line-of-battle-ships in the American navy was only seven, whereas the number of our ships of war was 509. Surely, then, we ought to pause before we added to our expenditure in this department. He would not consent to vote a single man until the Chancellor of the Exchequer had made a full statement of the revenue and the expenditure. It should be recollected that on a former occasion, ministers, after stating to this house their inability to make any reduction, did, of their own accord, when they found the revenue insufficient, make a reduction of from ten to twelve thousand men. Our army might, without any danger to the country, be decreased to one-third of its present amount, and then we might better afford to keep up a respectable naval establishment. The hon. member concluded by moving an amendment to the following effect, viz.—that it is desirable before the house shall vote any part of the naval and military establishments for the year, the extent of those establishments and the estimates of them should be laid before the house, particularly as the estimates for the navy this year exceeded those for the last.

Colonel Davies having seconded the amendment,

The Chancellor of the Exchequer contended that it would be more expedient to go first into

the committee, and ascertain item by item why the estimates of the present year exceeded those of the last. This was the usual course, from which he had no intention of departing, although with a view to the public convenience he had always brought forward his financial statement as early as possible.

Mr. *Bright* observed, that the sum voted as a supply might not be such as the Chancellor of the Exchequer expected, and therefore it was necessary for the house to know how to apportion it to the different branches of the public service. The estimates ought then to be examined, with a view of making every possible reduction in them. He doubted much whether the revenue, under the new system of currency which was going to be introduced, could be raised to any thing like its old amount. Sure he was that the proposed alteration in the circulating medium would cause great heart-burning in the collection of the ordinary taxes of the country.

Mr. *C. Hutchinson* :—The going into a committee upon the estimates, without having an account of the financial state of the country, appeared to him to be as absurd as it would be for a gentleman to order a carriage and horses, without knowing what fortune he had to support it. Ministers acted as if they wished to pledge the house to support a certain amount of expenditure, without allowing it to judge of its means of meeting it.

Mr. *Canning* observed, that whatever might be the distress of the country, he could see no reason why hon. gentlemen should set themselves in array against the forms of parliament, and should insist that business should be transacted in a different mode from that in which it had been transacted for ages. He believed he was justified in saying, that never, on any account, at any period of our history, had there been any deviation from the course which Government had proposed that night to take; that never in the most turbulent times, had a vote been taken in objection to the Speaker's leaving the chair, when the purpose of it was to vote a supply in committee for the navy. But would it be right, it had been asked, for a man to keep a carriage without first examining into the amount of income he had to meet such an expenditure? The allusion, he conceived, to be ill chosen. The carriage might be considered as a sort of luxury; whereas what was now wanted was absolutely necessary to the defence of the country. If his servant were to tell him that he wanted locks for his doors in order to secure his property, he would order them to be got, without making a previous inquiry into the general state of his affairs. So he would advise the house to act upon this occasion. The grant of these estimates was necessary to the indisputable defence of the country. He admitted that the situation of the country was such as to require serious attention and deliberation; but he would never admit that it was in such a condition that its ordinary establishments could not be maintained, and that it was in such danger that the ordinary forms of parliament must be dispensed with. He therefore hoped that the hon. member (Mr. *Hume*) would waive his opposition.

Mr. *Hume* forbore to press his amendment to a division, and it was then negatived.

The house having then resolved itself into a committee of supply,

Sir *G. Clerk* expressed a hope that he should

be able to satisfy the hon. member (Mr. *Hume*) that the navy estimates of the present year were drawn up with every attention to economy which the safety and the honour of the country admitted. The hon. member upon this occasion, as upon many others, had referred to the opinion given by the committee of finance in 1817 as to the requisite magnitude of our naval force, and had contrasted the navy estimates of that year with the navy estimates of the present. But owing to the great extension of our commerce with the nations of South America, the calls on the admiralty for ships of war to afford it protection had very much increased; and even with the force now voted, the admiralty had not been able to meet the demands which had been made upon it from several quarters to send an adequate force into all those seas. The unsettled condition of that country, which had been felt by the United States, by France, and by every naval power which had any commerce at all, had rendered an augmentation necessary in the naval force of each of those states. For the same reason, a necessity for increasing our force in the Mediterranean had risen out of the war now raging between the Greeks and the Turks. If we had not had a considerable naval force in that sea, we should have suffered numerous insults from both the belligerents, of which ministers, had they taken place, would have heard pretty loudly in that house. The situation of the Spanish West India Islands, also, required the presence of a force to put down the piratical squadrons which had recently cruised in their neighbourhood; and though by the conjoint efforts of our own navy, and that of the United States, they had recently been driven into holes and corners, still they were not exterminated; if we diminished our force, they would soon recommence the depredations we had stopped. A large force was also stationed off the coast of Africa, to put down the traffic in slaves, and another for the same purpose, off the Cape of Good Hope. If the committee, therefore, would consider the various calls which were made upon the admiralty, it would see that a force of 29,000 men was not more than sufficient; indeed, that it scarcely was sufficient for the service. For the present year a force of 30,000 men was deemed absolutely necessary. A requisition had been presented to the admiralty from the East India Company, praying that an additional naval force might be sent into the Indian seas, on account of the hostilities between the Shan empire and the East India Company. A thousand men was the force required by them. As that force was sent into the Indian seas, not to protect British commerce, but to assist the East India Company, and to secure their territory, an arrangement was now in progress, by which the greater part of the expense of providing for it would be thrown upon the East India Company. They were to furnish the sum of 60,000*l.* for that purpose; but as some additional powers would be wanted, to enable them to complete that arrangement, the mode in which they were to pay it would be explained on the introduction of the bill. The amount of the estimates for the present year showed an excess above those of the last, of 180,000*l.* One cause of this increase was the additional force of 1000 men. Another cause was, that the expense of victualling the navy had increased, in consequence of the advanced price of all kinds of provisions, and

particularly of Irish pork and beef, of which the consumption was very considerable. An addition of 3s. a month in the victualling of each man had therefore become necessary, and thus, notwithstanding the victualling of the navy was conducted with the utmost economy, an increase had been caused of nearly 100,000*l.* on these two heads of expenditure. The expense of the civil establishments of the navy had not increased; on the contrary, in some respects it had considerably diminished. Indeed, he had no hesitation in saying, that had it not been for the additional force of 1000 men, and the increased price of provisions, the estimates for this year would have been much lower than for the last. Gentlemen would observe that a change had been made in the drawing up the estimates. Under the first head of expenditure the vote for wages, for victuals, for wear and tear, and for ordnance, had generally been included. Neither of the two latter items of expenditure were found under that head in the estimates of the present year; and he would shortly state why. The sum voted for wear and tear was supposed to be expended on the ships which were actually afloat, and was calculated at so much a-head. An objection had been made by the hon. member (Mr. Hume) to this mode of calculation. He had stated that it was absurd to calculate the wear and tear by so much a-head, instead of calculating it by the stores consumed. As soon as the objection was made, it was thought advisable to alter the plan and to bring it entirely under the head of stores. There was this year a diminution of 320,000*l.* under the head of wear and tear. Under the head of ordnance there was a considerable increase; but, in the two articles of wear and tear, and of ordnance put together, there was a saving of 30,000*l.* With regard to the head of ordnance of the navy, as it was a matter over which the Navy Board had no control, it had been omitted in these estimates, and would be moved for by the Clerk of the Ordnance (Mr. R. Ward) when he brought forward the ordnance estimates. He did not think it necessary to say any thing on the ordinary estimates of the navy, as they were the same as last year. Ministers had reduced them to the lowest possible scale; and a proof of it was, that with a force of 30,000 men our expenditure would not be greater than in 1821, when we had only a force of 23,000 men. There was one item which was inserted in these estimates for the first time for some years, and that was an item for the mending and repairing of ships at Bombay. After the year 1822, this item had disappeared from the list; but the quality of the Indian timber had been found so excellent, the labour so cheap, and the workmanship so completely equal to that of our dockyards at home, that it had been deemed expedient to continue the building of vessels at Bombay. In the extra-estimates would be found an account of the sums to be expended upon works of the yards. He had stated on a former occasion, respecting the works at Sheerness, that if Government were provided with funds to finish them in four instead of ten years, it would make about a saving of 14 per cent. to the public. The cost of erecting the proposed works had been calculated by the late Mr. Rennie at 921,000*l.*, but an offer had since been made to Government, to complete them in four years for 780,000*l.* The plan containing that offer appeared so beneficial to the

public, that Government had no hesitation in acceding to it; so that instead of calling on the committee for the vote originally mentioned for this head of expense, he should call upon it this year for a vote for 150,000*l.* There was an item of 50,000*l.* for completing the works of the break-water, on which it was found necessary to employ a greater number of men than had yet been employed there. Under these two heads there was an increase of 181,000*l.* in the estimates. This, added to the increase of nearly 100,000*l.* for which he had before accounted, made a total increase of 281,000*l.*; from this was to be deducted a sum of 94,000*l.* voted on account of the ordnance stores last year, and not yet expended; so that the real increase of expense to the country, after making allowance for the ordnance, &c. would leave the estimates of the year greater than those of the last by 187,000*l.* The whole of this increase arose from the necessity of employing 1000 additional men, from the increase in the price of provisions, and from the necessity of proceeding with their engagements at Sheerness more rapidly than was originally expected. That rapidity was rendered the more necessary by a great part of the works being at present under water, and therefore in a state very liable to be injured by violent winds or high tides. The hon. bart. concluded by moving the following resolution—“That it is the opinion of this committee, that 30,000 men be employed for the service of his Majesty's fleet for 13 lunar months, commencing the first day of January, 1826, including 9000 Royal Marines.”

Mr. Hume observed, that it was difficult for him to say whether 29,000 or 30,000 men were the exact number required for the sea-service. But he could not understand why the number should be increased. He was convinced that there must be something radically wrong in the estimates, from finding that at former periods of our history we had kept up a much larger navy at one-third of the expense. When he objected to the increase of our naval force three years ago, the rt. hon. Sec. for Foreign Affairs said that it was impossible to protect our commerce with the states of South America without a large disposable force, on account of the unsettled nature of their governments, and their war with the parent state. That consideration induced a considerable portion of the house to acquiesce in that increase. He was now surprised at hearing the same cause alleged for another increase, when these states were at peace with one another, their struggle with the parent state at an end, and three distinct treaties of peace made between us and them. But it was said that the presence of a large naval force was required in the Mediterranean. He did not think so; he had never yet heard of any English vessel having been either plundered or stopped by either Greeks or Turks, except when they were dealing in articles contraband of war. The revenue at home required protection, because they kept up a system of high duties, and so spent, in maintaining the preventive service, a sum larger than that which would have been lost to the revenue by establishing a system of low duties. The keeping up a naval squadron on the coast of Africa, which was the grave of our brave seamen, for the purpose of suppressing the slave-trade, appeared to him to be a measure that ought to be dispensed with: of every ne-

gro whom they intercepted, for they could not save them from slavery, the purchase was the life of an English sailor. On the whole, he thought that 30,000 men were not wanted for the service of the navy. If the estimates were increased in the item on account of the increased price of provisions, there were other items on which they might be diminished. The want of economy was an addition to the difficulties of the country. Let but a gun be fired in hostility against us, and Government would soon discover the situation to which they had reduced the country by the neglect of its finances. He proceeded to point out the great increase which had taken place in the half-pay and pension list since 1817, and to infer from that increase that there was great abuse in the management of it. An officer who had not parliamentary interest, found great difficulty in getting promotion; and an officer who had, was promoted up to a certain grade, and then placed on the half-pay list, to make room for others. It appeared by the estimates, that there were already 250 ships more than the finances of the country were enabled to man; and he therefore thought that it was a mere waste of money to promote so many officers. The consequence of that increase was also objectionable in another point of view: by adding to the dead weight. By the estimates which had been formed of that payment, it ought to have been reduced from 1,100,000*l.* to 550,000*l.*; but so far from this being the case, the sum paid to pensioners now was 300,000*l.* more than it had been at the end of the war. In the year 1822, in consequence of the very strong representations which had been made in that house, a reduction had taken place in the salaries of the civil offices of the establishments. In the present year, however, an increase appeared to have taken place, and the same salaries were 157,000*l.* A much more enormous increase appeared in the half-pay and superannuation list, which in 1817 was 85,000*l.*, and now amounted to 164,000*l.* This lavish expenditure would continue so long as the Admiralty should continue to have the power which they at present possessed, and which the house ought to take from them until the evils of which they complained were redressed. There had been, it seemed, no promotion among the marines, and the consequence was, that in that item a reduction had taken place. But why, he was obliged to ask, had there been no promotion? Was there any reason which entitled naval officers to any higher or exclusive consideration over the marines? He believed not, for he had always heard them spoken of in the highest terms; and although he was averse to all promotion, excepting where it had been merited, he was still more decidedly opposed to any thing like partiality in the application of that promotion. The charge for building and repairing ships, and supplying them with the necessary stores, was 1,395,000*l.*, and this he thought the most objectionable of all the items. He was prepared to assert, notwithstanding the contradiction and opposition which had been offered by the hon. Sec. for the Admiralty, backed by his documents, that there had been expended from the end of the war to the present time, 27,000,000*l.* under this head. This was enough for the support of two navies. There were now 509 ships on the establishment. The house was told that they were never in a better state than at present, and yet upwards of a million of money was re-

quired to prevent them from spoiling. If a war should break out, he would ask the Chancellor of the Exchequer, since it would take so large a sum as had been lately mentioned to put 130 ships in commission, where he would find the means to equip 500? The finances of the country could never bear any such expense. No more ships ought to be built; those which we had might be kept in proper repair, a due regard being had to the most economical mode of performing those repairs. He should be glad to see the attention of the Lords of the Admiralty turned to the recent discoveries which had been made respecting steam-vessels used as ships of war; and to consider that, in the event of this country being engaged in a future war, a great change must of necessity take place, by which many of our ships would be wholly useless. Upon this subject he could assure the house that some expenses which were still incurred, were, in the opinion of persons well qualified to judge, a downright waste. The expenses of improving and finishing the dock-yards at Sheerness, would amount to little less than 2,000,000*l.* The estimate for this year alone amounted to 150,000*l.* It had been admitted by the hon. bart. (Sir George Clerk) some years ago, that if the use of steam-boats in taking vessels up and down the river had been known, these works would not have been begun. But surely, now that the use and advantages of steam-boats were duly appreciated, the extensive dock-yards at Chatham might be appropriated for all the necessary purposes; and as there was no longer any difficulty in taking ships thither, it could not be prudent nor advisable to throw away this sum of 150,000*l.* at Sheerness. He therefore objected strenuously to this increase, which, in whatever way the account was stated, amounted to 150,000*l.* more than the estimate of last year. The aggregate amount appeared to be 6,133,000*l.*, which he thought a great deal too large to be expended at this time. In the year 1792, the character of the British navy had been so low, nor was it less respected abroad than at the present moment, and then one-fourth of its present number of ships had been found enough for all useful purposes. He took it to be a most unsatisfactory reason to say, that the protection of the revenue required this expense: if that were true, it would be better in every other as well as in a pecuniary point of view, to alter the law so as to prevent the necessity of any such extraordinary protection. He saw there was a charge for hired vessels, and this charge was connected with the post-office department. He thought these two establishments ought to be kept entirely separate, and that the house ought to see distinctly what was paid for the navy, and what for the post-office.

Sir George Clerk said, he did not complain of the statement which the hon. gent. had just made, nor of the manner in which it had been made; but he felt it necessary to say a few words in reply, for the purpose of showing the hon. gent. that he was mistaken in some points. The hon. gent. had laid great stress upon the amount of the half-pay and pensions, which, in the aggregate, had been increased instead of being diminished, as the hon. gent. had expected. If, however, he looked at this part of the list which related to the half-pay, he would find that it had experienced that gradual reduction which, from its nature, might reasonably

have been looked for. The increase had taken place in the civil departments, and for this there were two causes. The first was, that when in the year 1822 a reduction of one-fourth in the number of clerks and other officers had taken place, it became necessary to retain those whose services were most efficient. The result was, that the greater part of such as were dismissed were those persons who had become infirm and unable to turn to other employments, and who, on account of their long services, had greater claims upon the Government than those who were retained. The other deficiencies were occasioned by the falling off in the fund for paying the widows' pensions. During the war, the contributions which were made to this fund were so large, that the pensions were paid without the necessity of any application to parliament, and now the greater part was to be provided for by the public. The unclaimed prize-money which had formed a very important item in the receipts for Greenwich Hospital, and other sources of a similar description, were of necessity shut up, in consequence of the peace; these causes together produced a deficiency, and the increase of which the hon. gent. complained. With respect to the hon. gent.'s complaint respecting the promotion in the marines, he begged to remind him that there was a great difference between officers in the marines and those in the navy. Commissions were granted to officers in the marines who had no claims on the country. Officers in the navy, on the other hand, received their commissions as the recompense of long services. This circumstance would account for the list of lieutenants who had been promoted, many of whom had been engaged in most active and laborious services for ten or fifteen years of the war. The increase of the salaries had been produced also by another cause: the persons receiving them were divided into classes, with a progressive augmentation of their stipends, which must in the course of time produce this effect. The hon. gent. in alluding to the million which he supposed was paid for building and repairs, had fallen into an error similar to that which the hon. Sec. for the Admiralty had set him right in about some time ago. He (Sir George Clerk) was, however, happy to say, notwithstanding the hon. gent.'s misinformation on this subject, that at no period of the history of this country had the ships in ordinary been in a better state than they were at present, and that being repaired with seasoned timber, they had shewn no symptoms of the ravages of the dry rot. A great expense was necessarily incurred for the purpose of keeping the ships in repair; but it was an expense which was wholly unavoidable. The hon. gent. objected to the formation of the docks at Sheerness, and recommended rather that the dock-yards at Chatham should be used for the same purposes. The difficult navigation of the river was the strongest reason against this plan; and the great advantages which had already been derived from the facility which the establishments at Sheerness afforded, of examining ships thoroughly in dock, proved that they would, in fact, be the cause of a very material saving to the country.

The resolution was then put and agreed to.

The motion for a grant of 955,500*l.* for the wages of 30,000 men for 13 lunar months, was then put, and agreed to.

On the motion for a grant of 682,500*l.* for the victuals of the said men,

Mr. Hume asked why this estimate was higher than that of the last year, since every thing was now admitted to be considerably cheaper?

Sir George Clerk thought he had explained that a great increase had taken place in many of the articles of provision. In salt beef particularly, which was one of the chief articles, there was a difference of 16 per cent. from the prices of 1824; it being then 6*l.* 2*s.* 6*d.* a tierce, and now 7*l.* 6*s.* 9*d.*

The motion was then agreed to.

On the motion for a grant of 835,957*l.*, the charge for timber and all other materials for the building, repair, and fitting of all his Majesty's ships, &c.

Sir J. Coffin asked whether any inquiry had been made on the subject of the ships in the navy which were said to have the dry rot, particularly those mentioned by Mr. Burridge in his petition lately presented to parliament?

Sir T. B. Martin said, the ships of the British navy were the soundest in the whole world, and that those alluded to had not the dry rot.

Sir George Cockburn said, it was true, that in the course of the last war, in consequence of the exigencies of the times, ships had been run up in a great hurry, and little attention was paid to the sort of wood employed about them. The consequence was, that the dry rot attacked many of them. Now, however, all new ships had been built with well-seasoned timber, and all the work done under cover, and many of them, he was sure, were better now than they were on the day they were built; and every precaution had been taken to prevent the possibility of premature decay.

Sir G. Clerk then moved that the sum of 896,000*l.* be granted to his Majesty for defraying the expense of the half-pay of the unemployed officers of his Majesty's fleet for 1826.

Mr. Gordon complained that officers of the navy on half-pay were subjected to a species of tax which applied to no other officers in his Majesty's service. He alluded to their being compelled to pay certain fees on obtaining leave of absence to go abroad. He hoped the hon. persons at the head of the Admiralty would take the subject into consideration, and if they saw no good reason for the continuance of the practice, direct it to be discontinued.

Mr. Croker said, that the practice alluded to had been adopted in order to operate as a check upon officers going abroad. Naval officers were liable to be called into active service on a sudden, and it was not, therefore, desirable to encourage their leaving the country. The fee which was exacted was very small—ten shillings and sixpence, he believed, from a lieutenant; and larger sums from superior officers, in proportion to their rank. The fees were carried to the profit of the public.

The Chancellor of Exchequer stated, that for his part, he had no objection to give up the small sum of 150*l.* or 200*l.* a-year, which was derived from the fees (hear). At the same time he could give no opinion with respect to the principle on which the practice was founded.

Mr. Hume objected to the expenditure of any more money upon Sheerness dock-yard, and entered into a variety of details to shew the gradual increase of expenditure on these works; and observed that if he lived for the next ten years, he had no doubt a million more would be asked. It was literally melting gold. Such works should not be carried on without a proper inquiry. A committee unconnected with the Admiralty, would probably save the

country a million of money. He would now move, by way of amendment, that the estimate be reduced 150,000*l.*, and would move in a day or two for the appointment of a committee to inquire into the subject.

Mr. Calcraft would be glad to know, as it had been stated that the contractor had consented to reduce his contract-price 170,000*l.* or 180,000*l.*, how that could be possible if the contract had been originally a prudent one?

Sir George Clerk explained.—The work had been intended to proceed slowly; but the contractor had suggested that if the expensive coffer-dam could be taken down, and the timber disposed of, instead of standing for so long a time as was intended, he could reduce the amount of his contract.

The resolution was agreed to.

TUESDAY, FEB. 21.—Mr. Broden appeared at the bar with the report of the committee of supply relative to the navy estimates, which was ordered to be brought up.

On the question "that the first resolution be read a first time,"

Sir F. Ommamney complained of the difficulty which the widows of assistant-surgeons experienced in procuring pensions. He knew the widow of one of those useful individuals who had fallen a victim to his exertions in the service, and it was not until after a lapse of 15 years that she had a pension granted to her.

The resolution, granting 30,000 seamen for the sea-service for 13 calendar months, was then read a first time.

On the motion that it be read a second time,

Mr. Hume said that he must oppose the naval or any other establishment being formed on so large a scale as his Majesty's ministers seemed inclined to propose at the present moment. They had seen the ordnance estimates, they had had an opportunity of examining the whole scale on which it was intended that the military establishment should be kept up, and he was justified in saying that no such establishment was ever thought of at any former period of peace. He therefore wished to know whether there was any prospect of a return to what might fairly be denominated a peace establishment? At this awful moment, when distress and difficulty threatened the land in every direction—when no immediate relief appeared in view—when thousands and tens of thousands were in a state of destitution and want, it would well become his Majesty's ministers to reflect a little on what they were about to do (hear). In former times this country maintained a very different peace establishment, both with respect to the number of men and the magnitude of the expense. When the late war was terminated, that house appointed a committee to inquire into the state of the finances generally, and also into the management and expenditure of every particular department; and he regretted to say, that the recommendations contained in the reports agreed upon by that committee, and approved of by the ministers, had been, as it appeared to him, entirely neglected. They were now going on increasing the burdens of the country, without any reason whatsoever being assigned for their conduct; and he believed if 12,000,000*l.* instead of 6,000,000*l.* were demanded for the naval service, it would be at once voted, al-

though 2,000,000*l.* had been found sufficient at the end of former wars. In 1817, immediately after a long war, when Europe was in an unsettled state, and America was in such a situation with respect to this country that it was scarcely possible to guess how the scale would turn, only 19,000 seamen were called for. In the following year there was an addition of 1000. In 1818 and 1819 the same number, 20,000 was continued. In 1820 it was raised to 23,000. In 1823, there was a further increase to 25,000. In 1824, the number was 29,000. Last year it was continued at 29,000; and now, without any reason whatever being assigned, parliament was called on to vote 30,000 men, with all the accompanying expense. The hon. bart. (Sir F. Ommamney) had alluded to the situation of a great number of unfortunate widows, whom he had kindly taken under his protection (a laugh). Certain it was, that very many persons who had claims on the Government were plunged in deep distress and could procure no relief, whilst they saw young men of rank and family, who needed no adventitious assistance, amply provided for (hear). Such individuals were too often hoisted over the heads of men of talent and experience; and while the labours of the latter went unrequited, the former were quartered on the public purse. The navy and the army were filled with instances of this kind. It was, indeed, nothing more or less than a mode of pensioning individuals; and he regretted to say that there appeared to be a disposition in the aristocracy of the country to get their friends and relatives thus pensioned on the people (hear). While the great mass of the people had scarcely bread to eat, taxes were imposed on them without number, to keep up this useless expense (hear). Five officers were kept up, where one would be sufficient; and that, it appeared, was the mode in which the people were to be relieved from their taxes. From the estimate now before the house, they learned, that a sum of 6,297,000*l.*, including the receipts for old stores, was to be expended on the navy for the current year. This was more than the estimate for the last two or three years; and the system of wasteful expenditure which was now adopted could not be carried on, unless ministers made up their minds, ere long, to rob the public creditor. He was sorry he did not see a minister in his place, because he wished to impress on the minds of those who were at the head of affairs, the necessity of their giving these estimates a reconsideration. They ought to look to the situation of the country, and extend some substantial relief to the people. He was anxious, if he stood alone, to record his opinion as to what the house ought to do in this period of suffering; and what, he would add, if they had a reformed parliament, that house would do—namely, compel his Majesty's ministers to reduce those estimates and to revise the expenditure of all those departments which weighed heavily on the people, and of which they most justly complained. The hon. gent. concluded by moving—  
"That this house cannot take into consideration the report of the naval estimates, of this, the 11th year of peace, amounting to 6,153,000*l.*, without expressing their concurrence in the opinion which the committee of finance of 1818, expressed in their 8th report, in the following words: that ships, military stores, &c. were not only necessary to the glory of the country in the event of war, but that finances re-

recruited during peace are at least of equal importance; but that a strict regard to financial arrangements, by which wealth and industry were generally diffused through the nation, and by the operation of which the people were relieved as far as was practicable, from their burdens, was of equal importance: on these grounds, the house recommends to the ministers of the Crown the reconsideration of the naval estimates, in order that they may be reduced in consonance with the opinion of the finance committee, above recited, and the better to suit the present circumstances of the country."

Lord J. Russell seconded the amendment. The navy estimates were framed on a most inordinate scale, and he believed that the army estimates would be found still more extravagant. He would therefore divide the house on the amendment of his hon. friend.

Sir G. Cockburn was surprised that the hon. member (Mr. Hume) should have asserted, that no reason had been given for the increase in the navy estimates. He begged the hon. member to recollect that his hon. friend (Sir G. Clerk) in bringing those estimates forward, had stated that the increase this year was owing to the war in India, and to the necessity which existed for keeping up a naval force in various parts of the world. The general state of the commerce of the country was such, that ministers could not withhold this force, without creating general discontent amongst the merchants (hear). There was no part of the world in which the commerce of Great Britain was not going on at this moment; and armed ships had been sent abroad for the purpose of protecting that commerce. The Admiralty took care to see that those vessels were properly distributed. They were obliged to send ships up the Mediterranean, where the British were likely to be attacked by the belligerents on both sides. Again it was necessary to station vessels of war in the West Indies, and they were likewise called for on the coast of Africa. There was no part in the world in which a British naval force was not looked up to for protection. If that house were filled with merchants, he was convinced they would all rise with one accord, and bear testimony to the benefits they had derived from the system pursued by the Admiralty. The hon. member had stated, that the claim of no man was listened to at the Admiralty, unless he possessed family interest. He (Sir G. C.) denied the charge altogether (hear). He attended himself at the Admiralty in rotation; and he would say, that no person, from the highest to the lowest, ever asked to see him, whom he did not see, and whose business he did not hear (cheers). And he would tell the hon. member in the face of the house and of the country, that he paid less attention to a man who had family interest than to one who was without it (hear). He would say more. He would tell the hon. member,—and many officers could bear witness to the fact—that when men without interest, had stated their cases to him, he had done his utmost to bring them forward (hear). The charge, therefore, of the hon. member, was unjust and unfair. He could assert without fear of contradiction, that in proportion as the Admiralty brought forward persons of rank, they, with equal readiness, assisted others who had no recommendation whatever of that kind. Length of service, and a knowledge of the profession, were never overlooked, let the situation of the

individual be what it might. The services of the father were very frequently considered in the promotion of his sons; and it could not be denied that this was a fair and proper course of proceeding for the Admiralty to observe in their promotions.

Mr. Robertson complained, that on so important a vote there was not a minister of the crown in his place. The apology for keeping up a large naval force made by the hon. lord of the admiralty, was totally inadequate—namely, the war in India. The war in India no more required an increase of the navy, than would a war in the middle of Germany. It was totally impossible that a naval force could act in the Burmese war. Such a reason could only have been offered on the presumption of the utmost ignorance among the members of the house of the seat of war in India. True it was that in the mouths of rivers there were occasionally forts which were accessible by boats; but the weakest vessel that could swim, if she could only hold out the voyage and the landing of the troops, would be powerful enough for any maritime purposes of that war.

Mr. Croker had one short fact to state, in answer to the representation of the hon. gentleman. This very morning it had fallen to his lot, as secretary to the admiralty, to receive despatches from a commander in India, which stated that he was engaged in pursuing a party up a river at Rangoon, upwards of 1000 strong.

Sir C. Cole defended the admiralty from the charge of an unfair use of favour and affection in promotions. He could mention a proof of the contrary, within his own knowledge. He had taken two deserving youths by the hand, who had done themselves honour in the service; they were sons of an officer of distinguished merit, but they were for a time overlooked. He no sooner made their case known to the admiralty than their promotion was secured to them. From all that he had ever seen, this was but the usual character of their proceedings. As to the necessity of a naval force in India, he had been for a great many years on that station, and it rather astonished him that we could hold so vast a dominion with the aid of a naval force so small as was usually kept there. The house would recollect the limits taken in by that station—it was a full quarter of the earth's surface, reaching, in direct longitude, from the coast of Arabia to the Pacific Ocean.

Mr. Herries complained that this was an unfair application of that great but just and necessary power which the house had of disputing the estimates. This was at once to stop the progress of public business. The house was engaged on the report of a committee in which these estimates had been discussed over and over again, and had been carried without any attempt at a division, with the seemingly unanimous consent of the whole house in that committee. It would be a very different thing if the question had not been started before, or if the supplies proposed exceeded greatly those to which the house had been accustomed. But the establishment had been settled at its present amount after years of discussion, while every attempt had been making by the Government to bring it down to that scale which should accord with the wishes of parliament and the country, and the safety and well-being of the service.

Colonel Davies thought, on the contrary, that

this was a very fit opportunity for the exercise of that great economical check which lay in the voice of parliament. No good reason was given for keeping up so enormous an establishment, and he would vote for the amendment.

Captain Gordon complained of the uncandid expressions which, having been used, conveyed an impression to the house of the naval service having been rendered a mere mode of access to the receipt of a pension. He knew of several officers of acknowledged gallantry and merit, who, after serving 30 years or more, received a pension of about 180*l*. Surely these allowances ought not to be classed as mere burdensome pensions: they were rather a very limited reward for services highly valuable to the country.

Mr. Tremayne felt himself compelled, from a sense of the public distress, and the necessity of more economy in the finance, to support the amendment.

Mr. Hobhouse had no wish to embarrass the measures of Government: on the contrary, he had voted with them on every occasion during the session excepting last night, when they introduced a measure which tended to subvert their own principles. This was another occasion upon which he felt bound to oppose them; our establishments were too large. There was but one opinion out of doors, that such establishments could not be kept up for any continuance of time, especially if ministers were resolved to persevere in that measure, which he must deem on their parts an eminently wise one, of returning to a metallic currency. It was every man's settled conviction, that with the contraction of the circulation which that measure would cause, it would not be possible to keep up those establishments: unless, indeed, ministers had made up their minds to the more desperate and unjust alternative of breaking faith with the public creditor. With regard to the means of promotion at the admiralty, he had heard the gallant members opposite with surprise. One gallant officer, to disprove the charge of influence, told the house of taking two deserving youths by the hand down to the admiralty, and introducing them there with success. Why, this was the very case of his hon. friend (Mr. Hume). Their merits might have claimed and acquired for them promotion without the recommendation of the gallant officer. But then what was the use of his introduction and influence? Surely he ought to recollect how the public would view this transaction. They would not forget that the gallant officer was a member of parliament, and that by some good accidents, he always found himself at liberty, consistently with his conscience—how far it consisted with the sense and wishes of his constituents, he (Mr. Hobhouse) would not undertake to say—to vote with his Majesty's ministers. In short, it was clear that his recommendation was strong, because he was a member of parliament. Indeed, they all knew that there might be officers who had gallantly and strikingly fulfilled the functions of their profession, advanced without influence; but that influence was necessary, and the stream of influence bore chiefly towards parliament, none would deny.

On a division, the numbers were—For Mr. Hume's amendment, 15—For the original motion, 43—Majority, 28.

On the motion that the sum of 896,000*l*. be

granted to his Majesty for defraying the expense of the half-pay of the unemployed officers of his Majesty's fleet,

Sir Christopher Cole rose to express his regret at the hardships which half-pay officers of the navy were obliged to undergo, in consequence of their being obliged to employ themselves in other professions, owing to the very inadequate provision afforded to them by Government.

Mr. Hume, being the first person who had introduced to the house the subject of officers going into the church, could not let the present occasion pass without offering a few words. He was most anxious to learn what steps Government would take with respect to officers entering the church. His Majesty's ministers did not seem to know how to act on the subject, for an order in Council had passed taking off the half-pay of officers in holy orders, and a subsequent order restored it to them again. He (Mr. Hume) could not but consider it a hardship that in this latter order an exception had been made with respect to marine officers. It was certainly not fair to give half-pay to one class of officers, and to take it from another.

Mr. Croker:—The system which had always been adopted by the Admiralty was—that no person in the naval department should be allowed to enjoy half-pay, unless he consented to join the navy again, should his services be required. Not very long since it had been the practice in the army to suffer half-pay officers, who had gone into the church, to retain their half-pay; but when the principle came to be considered, the army saw the necessity of the measures adopted by the Admiralty, and came into those measures accordingly, and it was now an established rule in the army, that every person so situated should forthwith dispose of his commission.

### Marine Officers in Holy Orders.

WEDNESDAY, FEB. 22.—Mr. Calcraft, alluding to what was mentioned by Mr. Hume at the close of the discussion last night, that the half-pay of officers in the army who had taken holy orders had been taken away and subsequently restored, observed, that if that were the case, he did not see why an exception should be made of officers of marines, who had taken holy orders. He understood that this was now the case, and that by a recent order the half-pay of the few officers in that service who had taken holy orders had been discontinued. He hoped this subject would receive the attention of the admiralty.

Mr. K. Douglas said that it was a regulation of the service, that under any circumstances marine officers who entered into holy orders should not be continued on the half-pay list. The reason of it was, that the half-pay was given to marine officers, not alone as a recompense for past services, but also as a kind of retainer for future. Now, it must be obvious, that if such officers were to enter holy orders, they would put themselves in a condition in which their services could not be required.

Mr. Calcraft did not think this explanation satisfactory. He could not see why the distinction should be made between the officers of one branch of the public service and those of another.

FRIDAY, MARCH 3.—Mr. Calcraft presented a petition from James Shillibeer and John

Brown, representing that they had been subaltern officers in the marines, and had been placed on the permanent half-pay list in 1816, and complaining that by reason of a recent regulation of the admiralty, they had been struck off the half-pay list, on the ground that they had been admitted into holy orders. The hon. member said that the case of the petitioners appeared to him to be one of peculiar hardship, inasmuch as they had been deprived of their half-pay by an *ex post facto* regulation: for it was stated in the petition, that notwithstanding their having been sometime ago admitted into holy orders, they continued to receive their half-pay up to the 25th of September, 1825, when it was stopped, in consequence of a regulation which had been just before that time made by the admiralty. He was aware that a similar regulation had been made in the army, but there it was not permitted to have a retrospective effect, and it was this retrospective operation which furnished the chief ground of the petitioners' complaint.

Sir George Cockburn said that the regulation alluded to had not been recently adopted by the admiralty; that it had existed and been acted upon for some time; and that the reason why the petitioners had continued to receive their half-pay up to the 25th of September last, was, that until then it was not known at the admiralty that they had been admitted into holy orders.

Mr. Astell, Mr. Warre, and Sir C. Cole, also recommended the restoration of these officers to the half-pay list.

Sir C. Long said, that if the sense of the house was in favour of the restoration of these officers to the half-pay list, he should not be at all inclined to oppose it.

The petition was brought up and ordered to be printed.

### Preventive Service.

LORDS, TUESDAY, APRIL 11.—The Earl of Darnley rose, pursuant to the notice he had given, to call their lordships' attention to the late fatal event which had occurred on the coast of Kent—the death of an officer employed on the preventive service, in consequence of his being fired on by one of the men under his command. Although an instance of sudden and melancholy deprivation of life had just occurred, it was not merely on that account that he considered it his duty to call their lordships' attention to the system of the coast blockade, but because he entertained serious objections to the whole system of the preventive service. In the present case, some very extraordinary particulars had come out in the evidence before the coroner's jury. It appeared that the seaman who had killed his officer, supposing that smugglers were advancing upon him, hailed, and then fired his musket. Their lordships would find, that other instances of fatal accidents of this kind had occurred. He was informed that there was in Hastings' church-yard a monumental record of the death of a fisherman, who was killed by the coast blockade. The fisherman, approaching in his boat, was hailed, and no answer being heard, he was shot dead. It was some years since, a gallant officer (Captain McCulloch), supposing probably, like his namesake, who had written on absenteeism, that it was the same thing whether men ate their pro-

SESS. 1826.

visions on board or on shore, and that seamen could be as well trained on the land as on board ship, had proposed this mode of employing them during peace. But though seamen only had in the first instance been employed on this service, it appeared that a different practice now prevailed. Landsmen were selected from the crews of the ships employed on the blockading stations; nay, it often happened that these landsmen were raw Irishmen, totally unacquainted with the manners of the country in which they were employed, and ignorant even of the language of the people they were required to hail. He would just mention a circumstance in which he had been himself a party. On going from Sandgate in a boat, for the purpose of landing opposite to his own house, one of the men employed to prevent smuggling stopped him, and not only insisted on searching a small trunk which he carried with him, but also his person. The man was armed, and there was no alternative but to submit. He desired that he might be taken before the commanding officer, who, on hearing the complaint, behaved with the liberality of a gentleman, and proposed to have the man punished. To that proposition he was, however, by no means disposed to assent; the man had acted under a mistaken idea of his duty, and it was not the man but the system he blamed. If such things occurred to persons in his situation of life, their lordships might easily conceive the vexations and dangers to which poor fishermen and other individuals might be exposed. He would wish their lordships to consider what advantage could be expected from the continuation of this harassing system. Supposing the blockading plan perfect, he believed that smuggling would still be carried on with as much activity as ever. While high duties existed, the temptation to contraband trade would be too powerful for any measures of repression. If the adventurers could be driven entirely from one part of the coast, they would carry on their trade on another. At present, the line of blockade extended from Sheerness to Portsmouth; but, in spite of this notable system, smuggling had increased, and, he believed, was carried on to a greater extent than ever, even on the most strictly guarded part of the coast. He understood that the motion he intended to make would not be opposed by the noble lord (Melville), and he should therefore dwell no longer on the subject. The whole system should be brought under the revision of parliament. The noble earl concluded by moving that there be laid before the house an account of the number of officers and seamen on board his Majesty's ships *Ramilles* and *Hyperion*, distinguishing the landsmen; also an account of the annual expense of the preventive service.

Lord Melville did not rise to oppose the motion, but to notice some part of what had fallen from the noble lord. He must observe, that the noble lord was completely misinformed if he believed that any orders had been given to officers employed on the preventive service calculated to annoy or molest his Majesty's subjects when not offending against the law. There never was an order given which could justify any man in firing on persons engaged in peaceful avocations. Not only was there no such order, but the men employed on the service had been strictly enjoined never to resort to violence, until they were themselves at-

3 R

tacked. But nobody would say, that if persons lawfully employed with arms in their hands were attacked, they were not entitled to defend themselves. Upon the unfortunate night in question, notice had been received that there were bands of smugglers on the coast to the westward of the station where the accident occurred. A communication to this effect had been passed along the whole line, and it appeared that, in a moment of flurry and agitation, one of the men had acted in direct disobedience of his orders. He did not mean to contend that persons employed on such a service as the coast blockade might not act improperly; but it was absolutely necessary that armed men should be employed to put down large bodies of armed smugglers. Before the present system was established, troops were employed to watch the coast; and then persons in boats were liable, in the same manner as now, to be fired upon for not bringing to, or not answering when hailed. The employment either of troops or seamen was indispensable. The noble lord was likewise in error in supposing that smuggling was carried on to a greater extent now than formerly. In answer to the observation that the men employed in the preventive service were not seamen, he could assure the noble lord that there was by no means an undue proportion of landmen in the service. There was no article with regard to which he had so much objection to a reduction of duty as that of spirits, which acted as a poison on the lower classes; but there was no alternative between the lowering of the duty to a great extent and the employment of an armed force of some kind or other.

The Earl of Liverpool, from his residence on the Kentish coast, had opportunities of knowing some facts relative to the subject under consideration. With regard to the point immediately before the house, he would in the first place observe, that in the course of the twelve years which had elapsed since the present plan for the prevention of smuggling was adopted, the unfortunate accident to which their lordships' attention had been called was the only instance of the kind which had occurred; and this accident had taken place in consequence of the man's having acted in opposition to instructions expressly given. One accident could be no argument against a system. With regard to the effect of the system, he could answer, that in respect to revenue it was necessary. If their lordships wished to prevent smuggling, there were only three means to which they could have recourse. It was necessary to employ a naval force, or a military force, or to lower the duties. Now, as to a military force, he thought that the constitutional jealousy of noble lords with regard to it, would lead them to prefer the employment of seamen. With regard to lowering the duties, leaving the article of spirits subject to the observation made upon it by his noble friend, he would only say, that any great diminution of revenue must be made up by a mode perhaps not very agreeable to noble lords—by direct, instead of indirect taxes. The system of blockade which was established by a respectable officer already alluded to, had been effectual beyond the expectation of any of the persons who turned their attention to it at the time of its formation. The noble lord had observed that this system only served to divert smuggling from one part of the coast to another; but that remark was

not correct. The first great object was to drive smuggling away from the narrow part of the channel. If this only were accomplished, much would be gained, since ten cargoes were attempted to be smuggled in the narrow part of the channel for one in the broad. Under the officer who originally established the system, it had been carried on with the greatest mildness and propriety. Having been in the neighbourhood of that officer's station at the time of his management, he could assure their lordships that no individual was ever more beloved and respected for his general conduct. He had no objection to the production of the returns called for.

Motion agreed to.

## LAW.

### Courts at Westminster.

COMMONS, MONDAY, APRIL 17.—Mr. Abercrombie presented a petition from Mr. George Farquharson, a gentleman who, for twenty years, had been engaged in reporting the proceedings of the Court of Chancery. He complained that, in consequence of the recent changes made in that court, he was excluded, on Friday and Saturday last; whereby he was prevented from performing his usual duty of reporting for the *New Times*, and of reporting causes for suitors, as he was accustomed to do; and that, if such a course should be persevered in, he should lose a considerable sum of money. On applying at the door of the New Court for permission to enter, he was informed that an order had been made for the exclusion of reporters. He could not suppose that any such order had been made, for there was no reason why this court alone should be the only one in England from which reporters were excluded, or why the suitors of the court should be deprived of that which it was a great advantage to have,—namely, an accurate report of the proceedings of the court.

The Solicitor-General said, that certainly the New Court was not the very maximum of perfection, as regarded the accommodation of either the legal profession or the public; but he was satisfied that if any reporter had been excluded, such exclusion did not originate with the head of the court.

Mr. Scarlett said, that if the house was disposed to lend a willing ear to the case of the reporters, he hoped they would not be unsatisfactory of the accommodation of the public; and he must say, that a more contemptible attempt at a court of justice was never yet seen, than the new Court of Chancery. In fact, it was more like a shop or a place of shew for a popular exhibition, only that it was too small even for such a purpose. The accommodation for the bar was extremely slight, that for the public still worse. All the defects of the old court had been followed in the new, without any improvement. In the Court of Exchequer, it would hardly be believed with what assiduity every one of its defects had been copied; whatever inconvenience there was about the table, such as the seats at one side and the steps at the other; all the defects were copied with the most curious precision (a laugh). The large useless gallery behind the judges was also copied; the space, which might have been adequate, was frittered away, and the public money had been expended in the most frivolous man-

ner. He did not mean to speak disrespectfully of the architect who had the management of the work; but it was obvious that much space, which might have been better and more advantageously employed, had been thrown away on passages, galleries, and contemptible ornaments, which were disgraceful to courts of justice (hear, hear). The public had been put to an enormous expence.

The *Chancellor of the Exchequer* said, he could not remain silent after the strong language made use of by the learned gent. who had just sat down, reflecting on the professional character of the eminent architect who had projected these works. Five or six years ago, when the project was first commenced, it was considered indispensable that between all the courts there should be a direct communication. For all this accommodation there was a very confined space. It was impossible for Mr. Soane to consult all those gentlemen in the legal profession who had formed opinions on the subject of building; but he had frequent communications with the judges, and all their suggestions he carried into execution. With respect to the learned gent., he (the *Chancellor of the Exchequer*) had the honour to attend him all over the works, had directed Mr. Soane to call upon him, and had explained all the plans, and he had flattered himself that the learned gent. was quite satisfied that every arrangement and alteration suggested had been carried into execution, that was not incompatible with the wishes and opinions of the chiefs and other judges of the courts. The passages, so far from being objectionable, were indispensable as a means of communication. Mr. Soane's hands were tied up, so inadequate to the purpose was the space allotted; and he did not believe that any other man in England could, out of such a space, have afforded so much accommodation.

Sir *M. Ridley* expressed his disapprobation of the mode in which public works were carried on. When a public building was about to be erected, plans and models ought to be submitted from the various artists generally—the thing should be thrown open to the public; for, according to the existing state of things, it was impossible for any architect to be employed, unless he was connected in some manner with the Board of Works, as it was called.

Mr. *Ridley Colburne* said, that with respect to plans and models, none but young artists could present them, for the more experienced and distinguished were occupied so constantly, that they could not have leisure for such a course.

Mr. *Holme Sumner* said, that the orders Mr. Soane had received were peremptory; the space was not sufficient for the object, and that gentleman ought, therefore, to be exonerated from blame. Last year, a committee was appointed to examine into the means of improving the accommodation of the committee rooms of that house. He was sorry the suggestions of that committee had not been attended to. The committee stated that the rooms up stairs were quite inadequate to their purposes. They recommended the addition of twelve committee-rooms.

Mr. *Abercrombie* was glad to find that no order had been given for excluding reporters from the Court of Chancery. The presenting of Mr. Farquharson's petition would, at least, be the good effect of preventing the authority

of a judge from being abused by those who say they act under his directions (hear, hear). The petition was laid upon the table.

### *Mr. Kenrick.*

TUESDAY, FEB. 14.—Mr. *Denman* wished that the entry on the journals of last session relative to this case, should be read. It was his intention to move, that on this day the house should resolve itself into a committee, to investigate this subject farther; and then, in that committee, he would proceed to examine witnesses.

Mr. *Denison* said, he had just seen the individual alluded to; and as he did not know whether the charge would or would not be entertained this day, he was not prepared with counsel to meet it. He (Mr. *Denison*) begged leave, under these circumstances, to suggest, that the discussion should be adjourned until Thursday next.

Mr. *H. Gurney*:—It did appear to him that the House of Commons of England, which at this moment was engaged in the consideration of matters of the most pressing and portentous nature, ought not to have its attention divided by the introduction of this inquiry. Was it proper, at such a time, that, night after night, the Commons of Great Britain should be compelled to waste their time in hearing the story of a Surrey justice and the fleece of a ram (laughter)?

Mr. *W. Lamb* could not avoid expressing the very strong objection which he entertained against going into this inquiry at all. The case, so far as he could comprehend it, was, that the accused party had, without sufficient grounds, committed an individual for felony. Admitting that to be the fact—supposing, for argument's sake, the individual to have been actuated by vindictive motives—still, he contended, that this was not the place to institute a prosecution, or to seek for redress. Every case of injury, which the complaining party had the power of prosecuting in a court of law, would be brought before parliament, if this system were once tolerated. If it were difficult to proceed at law, then the proper course for the house would be, to render the law accessible to all, instead of entertaining subjects of this kind, and thus bringing under the jurisdiction of the house so many different questions as the purview of such a charge must give rise to. He did not think that this was the constitutional course; and of all things, he viewed with the greatest alarm a judicial sentence passed by a popular assembly. If that house proceeded to pronounce sentence of condemnation on individuals, they would, in the end, shake the whole system of constitution and law, and lay the foundation for violence and injustice. Of late years motions of this kind had been made, which, as they enlisted the feelings of men, were exceedingly dangerous. Last session a motion was submitted to the house relative to the case of Mr. Smith, of Demerara. The house was called on to vote a condemnatory address; and, in support of the case, documents were adduced as evidence, not one word of which would have been received as evidence in a court below. Any precedent of this kind he considered most dangerous; and therefore

he advised the house to proceed no farther in this business. It would be better to put up with it than to encounter the peril.

Mr. Brougham, with respect to the evidence adduced in the case of Mr. Smith, admitted there was one document which would not have been received in a court below in this country. But the document and other evidence on which that case was founded, had been received in Demerara (hear). He did not know of even one document which had been laid before the house, that had not previously been produced on the court-martial by whom that unfortunate gentleman was tried.

Mr. Peel felt, very strongly, the observations of his hon. friend (Mr. W. Lamb); and, had this been an original motion, perhaps he would have acceded to his hon. friend's view of the case. But as the inquiry had been already entertained, he thought there would be considerable difficulty in stopping where they were. Therefore, in his opinion, the inquiry ought to go on.

Lord J. Russell wished to state what his own impression was, with respect to the constitutional part of this subject. It was a part of the constitution, that judges should only be removable for partial or improper conduct; and it seemed to him quite clear, that when a serious stain was thrown on the character of a person in a judicial situation, it was the duty of that house to inquire whether the imputation was well-founded (hear)—and whether the individual was fit to exercise the high and very important functions attached to his situation. This was due to the constitution of the country and to the judges themselves, whose respectability alone could be supported by the general opinion which the country entertained of their uprightness and integrity (hear). Whether a court of law was or was not open to the complainant, was a matter of little importance in this case (hear). The redress granted in a court of law was redress to the individual for the injury he had suffered. But when the subject came before that house, it was not for compensation to the individual: the question then was, what step should be taken for the sake of the public, with respect to a judge who was charged with having violated the principles of justice in a transaction between man and man (hear)?

The entry in the Journals was then read. It set forth that a charge had been made by a member of the house against W. Kenrick, Esq. one of his Majesty's justices of the great sessions of Wales, for having committed to prison, on an accusation of felony, a labouring man, named John Franks, without sufficient proof of the same; that the said John Franks was acquitted by the jury, on the same evidence which formed the ground of his commitment; that during the period of his imprisonment, Mr. Kenrick applied to the said John Franks to plead guilty, promising, that if he would do so, he (Mr. Kenrick) would procure him a favourable sentence. And that the said Mr. Kenrick did afterwards write a libellous and calumnious letter, of and concerning the said John Franks.

Mr. Denman was astonished at the observations of the hon. gent. (Mr. W. Lamb); for he thought it was impossible for any man who had read the first page of the History of England, to doubt for a moment that it was the duty of parliament to inquire into the conduct of judges (hear). Were they to pause in exercising that power, when there was an abuse of the situa-

tion of judge, because his acts were amenable to the law of the land? The very fact that they were contrary to the law, was an aggravation of the offence. If any man really entertained doubts on this subject, he should like them to be expressed. He was anxious to be fully informed on this topic. He thought the house acted most properly in entertaining this inquiry last session; and he was sure that they would be guilty of an abandonment of a most sacred duty, if they did not proceed with it now. He then moved, "That the house do resolve itself into a committee of the whole house, to take the said charge into consideration on Friday next; and that Mr. Kenrick have notice that the house will resolve itself into the said committee, that he may appear by himself or counsel."—Agreed to.

FRIDAY, FEB. 17.—Mr. Denman moved the order of the day for the house resolving itself into a committee upon Mr. Kenrick's case.

On the question that the Speaker do leave the chair,

The Speaker intimated that there were two modes of going into a committee upon an inquiry of this nature. If they went into a committee of the whole house, comprehending the larger question, and without any restrictive instructions, their duty would not only be to inquire fully by evidence, but to come to resolutions of opinion upon facts which were afterwards to be presented to the house. If, on the other hand, the committee were only instructed to go into evidence, they would be restrained from pronouncing any opinion upon that evidence, and would simply have the duty of reporting it afterwards. The house ought now to determine which of these two courses they deemed it advisable to take, both for their own convenience and due observance of forms, and also to govern the line of defence of the party supposed to be implicated. If the committee went at large and unrestrictedly into the inquiry, then the party could be fully heard by counsel in that committee. If, on the contrary, they limited their labours to the receipt of evidence, then counsel could not be heard (except for the cross-examination of witnesses) till after the house resumed, and took further cognizance of the proceedings.

Mr. Denman said, that it was his wish, in justice to all parties, that the committee should enter into the fullest inquiry, with a view to adopting some resolution, and that both Mr. Kenrick and his counsel should be present, and be allowed every opportunity to watch over the proceedings, and be heard in their defence. This was the course he should move for in the committee.

After some discussion this course was ultimately pursued.

Mr. Wm. Lamb, after repeating the observations he had made on the 14th, moved "that the house do not proceed further in the case of Mr. Kenrick."

Colonel Wood, in seconding this amendment, entirely concurred in the reasons upon which it was founded. He was quite at a loss as to what upon what public conduct, either as a magistrate or a judge, the inquiry was to be sustained. They ought to be careful how they set such a dangerous precedent over a man's private life.

Mr. Peel:—Were the case entirely a new one, and now brought forward for the first time,

he should feel much disposed to concur in opinion with his hon. friend (Mr. Lamb), that the proceeding was inexpedient. But he could not come to that conclusion now. They had already permitted the charge to lie on their table; they had so far committed themselves to inquiry, and the learned gent. had consented to postpone that inquiry at his suggestion from the last session. In candour, therefore, he could not now interpose an obstacle. He did not, however, see that this was exactly a private or domestic transaction, with which it was clearly beyond their province to interfere. No doubt the learned gent. meant to impute malice to Mr. Kenrick in Franks's case, and in the discharge of public duty (hear).

Mr. Scarlett pretty much agreed with his hon. friend (Mr. Lamb) in his character of the charge, and also in his estimate of the difficulties that surrounded it. The ordinary tribunals of the country afforded sufficient remedies: but if the house declared Mr. Kenrick not guilty, and Franks afterwards appealed to a jury, who took the exactly opposite view of the matter, see then the situation in which the house would place itself in the public estimation (hear).

Mr. Sturges Bourne concurred in the observations of the learned gent. (Mr. Scarlett). With respect to the malicious prosecution, it was remarkable that another magistrate took the same informations, and a grand jury found the bill. The libel did not appear to have been promulgated in his character of magistrate or judge. The former charge (Canfor's) concerned his conduct as a magistrate, and was entirely different from the present. This was solely an inquiry into the moral character and actions of the individual, and as such a most dangerous precedent (hear).

Mr. Denman said, that he must be permitted to express some degree of surprise at the course now taken by some hon. members, after the charge had so long remained on the journals of the house. If these gentlemen condescended for a moment to consider what were the facts connected with the charge, they must at once see that the scope of his motion was as distinct as possible from any reference to a mere private or domestic act. Mr. Kenrick had thought proper to apply for a criminal information against a newspaper for some comments upon his magisterial conduct, and he put in several affidavits, in one of which was this gross libel upon Franks. Was this private proceeding, or were the materials of accusation taken from an opponent? No, they were publicly and voluntarily furnished in a Court of Justice by Mr. Kenrick himself. They were, in consequence, repeated through the thousands of newspapers throughout the country. To say of a proceeding founded upon such conduct, that it was an inquisition into a man's private and domestic life, was very much like a perversion of fact. He was also surprised at what had fallen from his learned friend (Mr. Scarlett), who had warned them against proceeding, because it was possible they might decide one way, and a jury afterwards another. If that argument were valid, there would be an end altogether to parliamentary control; for this might happen in almost every case in which their jurisdiction over the judges might be exercised. What mitigation was there in this case? Here was a man who first prosecuted his neighbour as a felon, and then, failing in the attempt, afterwards endeavoured

to run him down by a libel, stating falsehoods to his prejudice. Ought such a person to be permitted to continue in the administration of justice? If they were prepared to admit this, and make such conduct a stepping stone to promotion, or a protection for guilt, let them avow that determination in the face of the public, and dispose of his motion as they pleased. So long, however, as he had a seat in the house, he was determined to do his duty. The argument of some hon. members would go this length—that all propriety, all moderation, all decorum might be banished from the bench, without requiring the interference of that house. Would this indifference on the part of the house render the office of judge more respectable in the estimation of the public? By the act of settlement it was the duty of the house to examine the conduct of judges if notoriously improper, even on matters which affected their private character.

Mr. Scarlett would admit that the private conduct and actions of judges might in some cases become the subject of parliamentary inquiry, but these were extreme cases. If a judge was guilty of a libel, the law would reach him as well as any other person; and where that remedy might be had, he did not think, except in extreme cases, the house should interfere in matters affecting private conduct.

Mr. S. Wortley admitted that the house might be called upon to interfere in certain cases, but the present was not one of them. According to the statement of the learned gent. (Mr. Denman), the first two parts of his charge were not offences of Mr. Kenrick, nor offences at all. It was another magistrate by whom the man was committed. And as to inducing a man to plead guilty, it was a thing done every day. What was more common than the asking a man accused of forgery to plead guilty to the minor offence? He objected to this motion, because he thought it would establish a bad precedent. He should be sorry to see the House of Commons made judges of libel. The house took that office with respect to its own privileges, though he did not think that even in such a case they were at all times the best judges. God forbid, however, that they should ever become the judges of the question of libel in other cases (hear, hear), for he considered that they would be the worst possible judges of such a matter. From the very nature of the case, they must be the most prejudiced (hear, hear). He would therefore advise the learned gent. to let the question of libel be decided by a jury of twelve men, and then, fortified with their verdict, if he should obtain it, let him come to that house with a motion as to the conduct of Mr. Kenrick.

Mr. Abercrombie said, the doctrine held by the hon. members who opposed this motion would have the effect of shutting out the exercise of one of the most valuable of their privileges. Was it denied that the judges, who had to decide on questions affecting the lives and property of the King's subjects, ought to be men of pure and unblemished character; and if this was important to the due administration of justice, was it too much to ask that inquiry should be made when charges affecting the character of a judge in a very serious matter, though not in his judicial capacity, were brought before the house? This case was only the following up of that part which they had before them last

session. Taking the two cases together (should the present charge be made out), the question would be, was the conduct of this gentleman, on the whole, such as that no minister would recommend his appointment as a judge; and if not, ought he to be continued in that situation? He did not mean to say it followed that because he could not now be recommended to the office he ought therefore not to be continued in it; but the question, as was properly remarked by the right hon. gent. (Mr. Peel), was one of degree; and it would be for the house, considering all the circumstances of both cases, to say whether they were such as should induce them to send up any address to the Crown on the subject of this gentleman's removal from office. As to the case itself, he would not go into it, but he thought it was almost impossible that any man could read the charges, and not say there was a case for serious investigation. He regretted, however, to find that it was viewed so lightly by some hon. members, or that they should feel disposed to throw so important a duty from their own shoulders.

Mr. Canning said, that judicial discussions were, of all others, those on which each hon. member was most likely to have his own separate opinion. Without, however, offering any on that now before them, he would briefly state the reasons why he should give his vote for the motion of the learned gent. (Mr. Denman). If this were the first time that the present subject had been introduced to the notice of the house, he might perhaps concur with those who thought that it was not of a nature which the house was called upon to entertain; but he could not forget, in the preceding session, when the learned gent. proposed to bring it forward, he (Mr. Canning) was one of those who concurred with his right hon. friend (Mr. Peel) in requesting the learned gent. to postpone it.

Mr. Denison said, that he had just received a communication from Mr. Kenrick, stating that he was quite ready to meet any investigation into his conduct.

Mr. C. W. Wynn observed, that if the hon. member (Mr. Lamb) pressed his amendment to a division, he should vote for it. He could not concur with those hon. members who thought that this charge was a necessary sequel of the charge of last session. They were quite distinct, and he thought it would be injustice to Mr. Kenrick for hon. members to allow their opinion on this case to be influenced by what took place on that occasion. The ground on which the case of last session went was, that if it could be proved that this gentleman had acted improperly in his character as a justice of the peace, that ought to be a reason why he should be considered unfit to fill the higher office of a judge. The transaction in the present case did not affect him in his public capacity, but had reference to him solely as a private individual, for which he was liable, if he were in fault, to be called to account before the ordinary tribunals of the country. Would it not be a much better course for the house to confine itself to cases where guilt had been proved by the ordinary tribunals? He did not mean to say that there were not cases in which the house would be called upon to interfere, before any inquiry by the courts of law; but these were extreme cases, and it was most desirable that the principle applying to them should not be extended. He could not at all concur in the observation

of the learned member (Mr. Abercrombie), that if the character of an individual were such as that no minister would recommend him as a judge, that therefore (he being already a judge) he should not be allowed to continue to fill that situation. A judge held his situation *quandiu se bene gesserit*; but the reasons for which he might be removed were in general founded upon his conduct as a judge. He did not say that cases might not arise out of his private conduct which would justify his removal; but the charge before the house, was not, in his opinion, one of that description. Taking it for granted for a moment that the whole of the charge now preferred was clearly made out, he did not think it would justify the house in agreeing to an address for Mr. Kenrick's removal. He did not think that the postponement of the matter by general consent last session, implied a sanction of the propriety of its introduction in the present. Even after the charge was laid on the table, and the attendance of witnesses ordered, he thought the house were not precluded from reviewing their decision, and if reasons were shewn, from coming to a resolution to proceed no farther in the affair.

The house having divided, there appeared, For the original motion, 81—For the amendment, 42—Majority, 39.

The house then went into a committee (Mr. Gordon in the chair).

Counsel being called in, Mr. Gurney and Mr. Bolland appeared for Mr. Kenrick.

Henry Peters, Esq. was called in, and examined by Mr. Denman.—The substance of this gentleman's evidence (in answer to Mr. Denman's questions) was, that he is a magistrate of the county of Surrey, residing within about two miles of Mr. Kenrick, in that county. Some years ago (he thought about seven or eight) a daughter of John Franks was charged before him with stealing some property belonging to Mr. Kenrick. He did not remember having seen the girl, but he understood that she was about fourteen or fifteen years old at that time. When the charge was preferred, witness granted a search-warrant. There was no evidence whatever before him to implicate Franks or his wife in the charge against their daughter, or to show that they were abettors of the theft imputed to her. Witness had some sheep stolen from him at two different periods. Two years had elapsed between the first theft and the second. On the first occasion thirty-eight sheep were stolen. Some suspicion attached to Franks in consequence of a letter or paper which was known to be his having been found at the place from whence the sheep were stolen. In consequence, witness sent his bailiff to search Franks' house; but the finding of the letter was the only ground of suspicion against him. Soon afterwards the man who really did steal them was tried and convicted. Witness had no ground whatever for believing that Franks had any part in stealing the sheep. Witness received a letter in 1824 from Mr. Kenrick. It was, he believed, in August he had the letter, but it was not dated. (The letter was here produced). It was brought to witness by Mr. Kenrick's servant. Witness here read the letter, which was to this effect:—"My dear sir, I arrived here last night, and found a fair copy of the draught of an affidavit, which I had hastily thrown together a few days before I set out for the circuit. After I was made ac-

quainted with the attack made upon me in the *Morning Chronicle*, my solicitor recommended that I should apply to different parties, whom I had named to him, for affidavits as to the facts which I mentioned. I shall therefore feel obliged to you to peruse numbers 3, 4, 5, and 6, of the accompanying sheets, and also to make an affidavit yourself in confirmation of those parts which have come within your knowledge. I have some doubts as to those parts which relate to the two sheep; but you can send me the affidavit, and it may be used, if the facts are as there mentioned. I shall call on you to-morrow on the subject: pray return the affidavit." Witness added, that a part of the letter was cut or torn off in this place, and he could not make out any more of it.

Examination continued.—Witness did not see Mr. Kenrick in consequence of this letter; but he wrote an answer to it. Of that answer he did not keep a copy; but he had no doubt that Mr. Kenrick had the letter. The affidavit was returned with witness's answer, that he could not make any affidavit; for that he did not recollect any ground of suspicion against Franks, except that of the paper which he had mentioned.

After a cross-examination, in which nothing new was elicited, the witness was told he might withdraw, and Edward Arnold was called in, examined by Mr. Denman, and stated, that a person of the name of Bignell had been convicted of stealing the first portion of his master's sheep which were stolen—that he had lived in Franks's neighbourhood ever since the year 1811, and had never heard of any other charge having been brought against him.

John Franks was then called in, and examined by Mr. Denman, and stated that he remembered his daughter being taken before a magistrate on a charge of stealing some articles belonging to Mr. Kenrick; that loose articles were found in his house, in a small box in his bed-room; his daughter, who was a child of about ten years old, slept in the same room. The charge was dismissed. He himself (the witness) had been imprisoned for two months on a charge of stealing wool belonging to Mr. Kenrick. He never authorized his wife to interfere with Mr. Kenrick; never expressed gratitude to Mr. Kenrick for his conduct on that prosecution.

Mr. Gurney declined asking this witness any questions, and he was ordered to withdraw.

Mr. Denman said, that he should, upon the documents and evidence which had been laid before the committee, move that the charge had been fully proved, and that he himself was ready immediately to proceed to discuss the question; but he was afraid, from the inattention with which hon. gents. had treated the documents on this subject which had been laid before them last session, that he could scarcely hope at present to put the house so fully in possession of the subject as to enable them to form a correct opinion on the question.

Mr. Canning observed, that he believed the general understanding was, that evidence was to be received to-night, and the question discussed another day.

The counsel for Mr. Kenrick were here called in, and asked what course they intended to pursue?

Mr. Gurney said, he should wish, in the first place, to lay before the house one or two documents, viz. the depositions which had been

made before the magistrate against Franks, tending to charge him with stealing Mr. Kenrick's wood, and a letter written by Mr. Kenrick to the clerk of the peace for the county of Surrey.

Charles Lawson, Esq., the clerk of the peace for the county of Surrey, was here called in, and produced the depositions of two individuals taken before George Burgess, Esq., a magistrate of the same county, and which depositions were here put in and read. The substance of them was, that a piece of timber, which had been taken from a saw-pit belonging to Mr. Kenrick, had been found in Franks's garden.

In reply to questions put to him by Mr. Gurney, the witness stated, that whilst the prosecution against Franks was pending, he received a letter from Mr. Kenrick, which he produced, and which was then put in and read, and was to the following effect:—"Dear sir, I wish you would give me that advice which, from your long practical experience as clerk of the peace, you are so well enabled to do, on the following matter:—John Franks was committed to prison about three months ago on a charge of stealing a piece of timber belonging to me. I understand that this man has a large family, and is a member of a benefit society, by the rules of which he would be excluded if he should be convicted of felony, and the facts against him are so short and clear that his conviction would be certain; therefore, although I cannot say much for his character, still as his long imprisonment may perhaps have been a sufficient punishment for his offence, and may have had the effect of reforming him, I do not wish to proceed against him any further. Do you think the court would permit the prosecution to be discontinued, and the recognizances to be vacated?" The witness said he forwarded this letter to Lord Mitleton, who sent an answer to it to Mr. Kenrick.

Mr. Gurney stated, that he had brought forward the whole of his evidence; and, if the committee would permit him, he would now proceed to make a few observations upon it.

Mr. Denman thought it would be much better that the evidence should be printed before his friend, Mr. Gurney, addressed the committee, in order that hon. gents. might have an opportunity of considering it.

Dr. Phillimore agreed with Mr. Denman in thinking this would be the most convenient mode of proceeding.

Counsel were then ordered to withdraw.

The house resumed, and the chairman reported progress.

MONDAY, FEB. 20.—Mr. Denison said he had received a petition from Mr. Kenrick, with a request that it might be presented to the house. He (Mr. Denison) would, therefore, if the house should receive it, move that it might be printed, in order that it might be in the hands of members before the discussion on Mr. Kenrick's case.

The petition was brought up and read. It stated in substance that in 1816, a person named James Rose, came to Mr. Kenrick and informed him that two sheep, belonging to Mr. Peters, had been killed, and that a knife and a paper respecting the collection of taxes, both stained with blood, were found near the place, and were known to belong to John Franks. Mr. Kenrick told Rose to acquaint Mr. Peters with those circumstances. Rose did so; but

Mr. Peters declined to take any step in the matter. Under a conviction of the accuracy of what Rose had told him, Mr. Kenrick some time after, when he found it necessary to take proceedings on the subject of an attack made upon him in the *Morning Chronicle*, wrote to Mr. Peters, enclosing a draught of an affidavit made on the subject of Rose's statement, requesting that he would make an affidavit confirming it. To this Mr. Peters replied, that he had no recollection of the circumstance. Annexed was a copy of Mr. Peters's letter, and the petition concluded by praying that the house might take the whole case into their consideration, and do justice without delay.

The *Speaker* wished to know in what character this document was presented. It did not appear to him that it was a petition. The house was always disposed to allow great latitude as to what should be considered a petition. But the question here was, should this be considered as a petition, or as a statement in defence by this gentleman? If it were simply and exclusively a defence, the house would recollect that the party had already obtained leave to attend by his counsel, agents, and witnesses, and it might be a question how far this could now be received.

Mr. *Abercrombie* thought that this was one of the most extraordinary and irregular proceedings which could come before the house. The house had, in committee, gone into an inquiry on this subject, and permission was given to Mr. Kenrick to attend by his counsel and agents. He had had an opportunity of making, by his counsel, any statement he pleased, and of cross-examining the witnesses; but, after that, he now came with a request that the house would record a statement of the facts of the case in his view of them. But there was another ground on which he should object to this petition being received. It would be thought to be unjust to the respectable gentleman, Mr. Peters, whom they had examined, and whom Mr. Kenrick had an opportunity of cross-examining by his counsel to any extent he pleased, to allow this document, which went indirectly to attack him, to be circulated amongst members before the discussion of to-morrow evening.

Mr. *C. W. Wynn* said, it would be irregular to receive the paper in its present form, having a copy of a document annexed to it.

The *Speaker* said, that if the substance of the document were stated in the petition, the house would have power to call for the original.

Mr. *Denison* expressed his readiness to withdraw the petition, if it were the pleasure of the house.

Mr. *Peel* hoped, that in a case like the present, the house would feel disposed to wave any objection to points of form, provided the document were one which in its present shape was essential to the defence of the individual before them. But as there was another mode of coming at the document, he thought, under the double objection made to the petition, it would do the party no injury to have it withdrawn.—The petition was withdrawn.

TUESDAY, FEB. 21.—On the motion of Mr. *Denman*, the order of the day was read for taking Mr. Kenrick's case into consideration. The question for calling counsel was put and carried; and Mr. Gurney and Mr. Bolland were called in.

Mr. Gurney then addressed the house in defence of Mr. Kenrick. He commented upon the evidence which had been adduced against that gentleman, and contended that it wholly failed to support the charge which had been brought. The only thing which could, upon the most severe construction of the case, be urged against Mr. Kenrick, was, perhaps, that he had committed John Franks without a sufficient investigation of his guilt; but this was not a charge which involved any thing like criminality. The learned counsel went on to complain of the injury which Mr. Kenrick had sustained from the animadversions which had appeared, from time to time, in the shape of paragraphs in a morning paper. The learned counsel concluded by saying that he relied upon the good sense of the house—upon its justice—for the vindication of Mr. Kenrick's character (hear, hear).

Counsel then, by order of the house, withdrew.

Mr. *Denman* said that the period had at length arrived when it was permitted to him to expose in detail the grounds and principles upon which he had founded the present proceeding. It became the more necessary to do so, because, in the course of the preliminary debate, it was impossible to conceive a greater misconception than appeared to exist on this subject. In all that he had done, he was founded on the best and most important principles of the constitution. It was the duty of Parliament to watch over the conduct of the judges of the land, and when they were of opinion that any of them conducted themselves in such a way as to show that they were no longer fit to continue in the administration of justice, to address the Crown to remove them from their situations. In former times the commissions of judges were held during the pleasure of the Crown. Between the reign of James I. and the Revolution, the former tenure alone prevailed. Judges then were not removable on account of ill-behaviour, but only at the pleasure of the Crown. The consequences of this practice were most unfortunate for the due administration of justice; for it not unfrequently happened, that when judges performed their duty to the public in a way that deserved commendation, they incurred the displeasure of the Crown, and were removed from office. After the revolution, this practice was put an end to. It was enacted by the act of settlement, that the judges should continue in office *quamdiu se bene gesserint*. But they were still removable by the Crown upon an address for that object being carried up from both houses of parliament. In the act of the 1st of his late Majesty, the object of which was to render the judges still more independent of the crown, by continuing them in office in the event of the demise of the crown, a clause was also introduced, which made it lawful for his Majesty to remove any judge upon an address for that purpose being carried up from both houses of parliament. But it was impossible that the house could carry up an address to the throne for the removal of a judge, without instituting a previous inquiry to ascertain whether the individual had conducted himself in such a way as to bring disgrace on his office, and render him unfit to continue in the exercise of its functions. He had stated the tenure by which the twelve Judges of England held their offices; and that by which the eight

Judges of Wales held their's was precisely the same. The latter held their offices under the 34th of Henry VIII. which gave them the same power of holding all manner of pleas of the crown as the Chief Justice of the Court of King's Bench or any of the judges of that Court; and the same power of trying all actions, real, personal, and mixed, as the Chief Justice of the Court of Common Pleas, or any of the judges of that court then possessed. The Welch judges also exercised in Wales the same equitable jurisdiction as the Lord Chancellor exercised in England. The origin of this power he had not been able to ascertain precisely, but it was, he believed, founded upon custom. The great powers vested in the Welch judges furnished a reason for looking at their conduct with some degree of jealousy; and the mode of their appointment was not such as to render this the less necessary. Mr. Kenrick came before the house as a Judge of Great Session of Wales, and a magistrate of the county of Surrey. He also called himself Recorder of the town of Dover; but he believed that Mr. Kenrick had not yet received, in consequence of recent circumstances, the king's sanction to the appointment. He quite agreed, that this was altogether a question of degree. It would be for the house to consider, whether Mr. Kenrick's conduct had been such as to bring disgrace upon the administration of justice, and to render him unfit to continue longer in the exercise of his high office. In his opinion the conduct of Mr. Kenrick had been of that description; and he would endeavour to establish that position to the house, by stating and commenting on the facts of the case. It had been stated, that the newspapers had contained animadversions on the conduct of Mr. Kenrick, and his learned friend had been pleased to call those animadversions atrocious libels. The animadversions were published in August 1824, and between that period and Michaelmas following, Mr. Kenrick had to consider of the propriety of applying to the Court of King's Bench for a criminal information against the editor of the paper in which they appeared. It was a singular fact, that an English judge should have applied for a criminal information against the publisher of what had been styled atrocious libels, and that the court should have refused to accede to the application (hear, hear). Perhaps he might here mention a fact, almost as extraordinary, that the same judge had prosecuted his poor and unfortunate neighbour at the sessions for stealing a scrap of wood not worth twelve-pence, and that the court instantly dismissed the prosecution, and would not allow the prosecutor his expenses. Before any person applying for a criminal information could obtain it, he must deny distinctly upon oath the truth of the imputations contained in the libel or libels. The imputation which was contained in the articles published in the *Morning Chronicle*—(here he begged it to be understood, that he by no means approved of all that had appeared in that paper on the subject)—could not be mistaken: it was this—"You have prosecuted your neighbour because you wanted his land." This imputation Mr. Kenrick had not denied. He said that he did not tamper with Franks's wife for the purpose of dispossessing him of his freehold. Did he say that he did not prosecute him for that purpose? There was no such denial. Did he say that he did not send him to gaol for that purpose? There was no such de-

Sess. 1826.

nial. Indeed, in his letter to Mr. Collet, Mr. Kenrick admitted the truth of the imputation. In that letter he said, "About four or five years ago I offered him in exchange another house, &c., which he declined, and from that time to the time of his coming out of gaol I had never, directly or indirectly, treated with him, or made any offer, or in any manner endeavoured to purchase his cottage. I had bought another which answered my purpose, and was indifferent about either of them, otherwise than to get rid of a bad neighbour." What were the means to which Mr. Kenrick resorted, in order to get rid of this "bad neighbour?" He prosecuted him for stealing a dirty plank, of no value whatever, which Franks admitted to have found on his premises, but could not account for its being there, unless it had been placed there by some of his children. It was astonishing that any magistrate could have committed Franks upon such a charge. He did not mean to say that Mr. Kenrick exercised any undue influence upon Mr. Burgess, the magistrate; but when he went before him, accompanied by his two servants, to swear to the fact, his character of a judge must, he thought, have had some effect upon the decision of that gentleman, and induced him to agree to a committal, which, under other circumstances, he never would have consented to. In order to account for Franks being committed upon such slight evidence, Mr. Kenrick had undertaken to prove that he was a man of bad character, and therefore peculiarly liable to suspicion. It was only yesterday that Mr. Kenrick presented a petition to the house, in which he introduced an imputation about a bloody knife, as if the unfortunate Franks had been guilty of sheep-stealing. He had not ventured to swear any thing of the sort in his affidavit. In Mr. Kenrick's letter to Collett, in the *Stamford News*, he had resorted to one of the most cruel proceedings which it was possible to imagine. He had alluded to an offence committed by Franks's daughter when a little girl, ten years ago. The girl was now in service, but because her father happened to have incurred the displeasure of a Welch judge, the history of her past life was to be dragged before the public. The passage to which he alluded was as follows:—"I had, or rather my wife had, sent one of his daughters to school, and she was employed at needle-work, which occasioned her to have access to the house; various articles were missing—lace, stockings, clothes, silver-handled scissors, &c., were missing, belonging principally to the housekeeper; and much jealousy and suspicion was occasioned amongst my servants, till they all agreed on suspecting Franks's daughter, when they acquainted me with the circumstance, and I directed application to a neighbouring justice for a search-warrant, in the execution of which all the articles were found in a box in the bed-room of Franks and his wife under their clothes." The clothes were found in a doll's box. The only circumstance stated by Mr. Kenrick was, that they were found among Franks's clothes. They were slips of silk, a bit of lace, and other trifles, and were found beside the girl's bed. Now it was said, that this was before the late act for prosecuting abettors had passed. This was said to show that Franks would have been prosecuted as an abettor, if the act had passed (hear, hear). The next charge was—"I know Franks killed and stole two fat sheep belong-

ing to the same magistrate (Mr. Peters), though he would not prosecute." What! Mr. Peters the owner of the sheep, and yet would not prosecute. This was strange indeed, that the magistrate should wish to have a sheep-stealer near his premises. But was not the statement of Mr. Peters perfectly satisfactory? "I did lose 33 sheep, but the only ground for suspecting Franks was a paper found by the side of the fold, which evidently belonged to Franks;" which paper, being taken to Lord Rothes, he refused to grant a warrant against Franks, observing that any person going up the field, and taking his handkerchief from his pocket, might drop a paper out, which might be carried there by the wind. Mr. Peters actually found the real criminal afterwards, who was tried and convicted. Now came the fourth charge—"I have no doubt that Franks has been daily and nightly in the habit of committing thefts for the last ten years;" but not the slightest proof was brought forward in support of this assertion, and therefore he had, he conceived, an undoubted right to say, that the assertion was unfounded (hear, hear). This had been repeatedly asserted in the *Morning Chronicle*, and that journal justly set forth, in contradiction to the statement, the very excellent character given to Franks by the parties called upon his trial. Mr. Kenrick felt this, but in the criminal information for which he moved against that journal, and the affidavits of the three or four neighbours, whom he brought forward, not one word was said about Franks being a man of bad character. If the statement of Franks's having been a man of bad character was true; if Mr. Kenrick was right in stating that he (Franks) had for years been in the habit of committing nightly depredations upon the neighbourhood, why did not that fact appear upon the face of these affidavits? After the evidence which had been given at their bar—after the admissions made upon all hands, he asked any hon. member to put his hand to his heart and say whether there was not before him sufficient ground for the course of proceeding which he had felt it his duty to adopt? But it was said, and it was, he understood, true, that Mr. Kenrick had applied to Mr. Lawson, the Clerk of the Peace, to withdraw the proceedings against Franks, upon the score of his former good character, although he had, on a former occasion, stated that his character was a bad one. From what had transpired, it was clear that that gentleman (Mr. Kenrick) had involved himself in some such dilemma. In Mr. Kenrick's affidavit, he said that he had written to Mr. Lawson, the Clerk of the Peace, a letter, of which he kept no copy, stating, to the best of his recollection, how the said John Franks was circumstanced, and praying that the proceedings against him might be withdrawn, upon the ground of his previous good character (hear, hear). If the previous character of Mr. Franks was so good, why was he committed to prison upon such light and inconclusive grounds? Even if the charge of taking a slab of timber of such trifling value were true, why should a man of such character be committed to prison? And if his character of being a nightly depredator was true, why was he to be protected by the interference either of Mr. Kenrick or the Clerk of the Peace? Was it consistent with the duty of a magistrate—was it consistent with the character and dignity of a Welch judge, either to oppress an individual in the one case, or screen a guilty one in the other (hear)? Nay, more,

was it consistent with the character of such an individual, to keep back the witnesses necessary to support and prove a charge of felony? Why should this magistrate try to screen this nightly thief from the operation of the law, "if it could be done without his forfeiting his recognizances?" Was it not clear that Mr. Kenrick was, throughout, actuated by a wish to get rid of a person whom he considered a troublesome and inconvenient neighbour, and get possession by some means of his freehold? He would put it in this way—Mr. Kenrick having this object in view, thought he would best accomplish it, first by getting Franks into prison, and then letting him know that he would best relieve himself by pleading guilty to a charge of which he knew himself innocent. By this means his little freehold would become forfeited to the Crown, and being close in Mr. Kenrick's neighbourhood, every man knew how possible it was for a person so desiring, to get possession of it. He maintained that there was abundant proof of such an intention on the part of Mr. Kenrick. In his letter to the goaler of the prison in which Franks was confined, he said, "Sir, I shall be obliged to you to inform me in what manner John Franks, committed by Mr. Burgess, for stealing a plank, my property, has conducted himself, since he has been in your custody. The facts of the case are so short, and so clear against him, that I cannot suppose he can entertain any hope of acquittal. I have no animosity against him, and if I find he has conducted himself with propriety since he has been in your custody, and is ready to acknowledge his guilt, and is sensible and sorry for his misconduct, I shall be ready to do all in my power to induce the court to be as lenient to him as it can be when convicted, or he shall plead guilty" (hear). He (Mr. Denman) was amused when he first received this pompous promise of an effort to mitigate the sentence of the court upon an admission of guilt. It was in substance saying, that if Franks would only confess his culpability, he might escape, perhaps, some seven or fourteen years' transportation. This attempt to extort a confession of guilt was, in his view, without a parallel. In another place, when the unfortunate prisoner mentioned what was likely to be the conduct of the benefit-society to which he belonged, in the event of his conviction, Mr. Kenrick said he would use his efforts to procure the most lenient sentence, upon an avowal of guilt: the offer was refused with the indignant feeling of an innocent man. If all which he had stated was true, and they had undeniable evidence of the facts, was it not a public scandal to continue Mr. Kenrick any longer in the high and important office of an administrator of justice (hear, hear)? He had been told, that he being himself a lawyer, and in a certain degree in the administration of justice, ought not to bring forward a motion like this. But whoever maintained such a principle, must be prepared to follow it up with a proposal to exclude all lawyers from that house (hear, hear). Lawyers, in his opinion, were, from their profession and from their habits of thinking and inquiring, the most proper to agitate inquiries like the present (hear, hear). The house had heard of the criminal information moved for in the Court of King's Bench by Mr. Kenrick against the *Morning Chronicle*, and the grounds upon which that motion had been refused; and, gracious God! was it right after that to continue Mr. Kenrick

in the magistracy and in the administration of justice (hear, hear)?—The hon. member concluded by moving, "That it is the opinion of this house, that the charge preferred against W. Kenrick, Esq., one of his Majesty's Justices of the Peace, and also a Justice of the Great Sessions in Wales, has been fully established in evidence, except inasmuch as it is imputed to him that he offered to withdraw the proceedings against the said John Franks, upon the ground of his previous good character."

The motion having been seconded,

The *Attorney-General* confessed, that, after all that he had heard, he felt bound to come to a conclusion very different to that at which his learned friend had arrived. He felt that his learned friend had no right to bring into that house one grave and specific charge, and then turn round and call upon them to convict the accused party upon another (hear, hear). His learned friend stated, that he did not wish to proceed upon his first charge against Mr. Kenrick, but that there was another and a graver offence of which that gentleman had been guilty. The original charge was, that Mr. Kenrick had preferred a charge of felony against Franks, and, without sufficient evidence, had him committed and brought to trial. But no proof of malice was given; and the theft, however trifling, having been proved to have been committed by some part of Franks's family, it was a case which was fit to be sent to a jury. No proceedings, either civil or criminal, could be instituted for prosecuting an individual without sufficient proofs, unless malice or other improper motives could be shown. And were they, without any such evidence before them, to proceed thus harshly against a gentleman filling such important situations as Mr. Kenrick did? There was nothing in the evidence against Mr. Kenrick which might not be held equally good against Mr. Burgess, the committing magistrate in this case, a gentleman against whom not even the slightest suspicion had been or could be fairly entertained. It was admitted on all hands that the property had been taken by some of Franks's family, and the conduct of the different branches of that family was of a nature to excite the strongest suspicions. When the bailiff or servant of Mr. Kenrick first proceeded to Franks's, he measured the slab of timber and returned to his master. On his going there a second time, the wife of Franks asked him, in a bullying tone, what business he had there? and added, before a word respecting Mr. Kenrick had been spoken, "That the timber did not belong to Mr. Kenrick." The son of Franks, too, a lad of about 14, blustered and said, that the piece of timber had been the property of his father for years. To this, the servant of Mr. Kenrick answered by cutting a piece of the slab, and pointing out that, from its green state, it could not have been more than a month cut (hear, hear). It was not asserted now, that the father stole the timber, but the conduct of his family was of a nature to cause a suspicion that it had been taken by some of his family, with his privity (hear, hear). Now, with respect to the cottage, what was the evidence upon that subject? Why, Mr. Kenrick stated, that at one time he had offered to purchase the cottage; but that afterwards, on Franks's refusal to sell it, he had abandoned the intention six years since. Yet, although such was the fact, it was

now stated that he had instituted this proceeding against Franks for the purpose of obtaining possession of this cottage. So much, then, for the first part, which, he thought, had been negatived by Mr. Kenrick's testimony—to impeach which, not even an attempt had been made. This brought him to the consideration of the second part of the charge: that which imputed to Mr. Kenrick that he had published a libel on the character and conduct of Franks. Now, that it was a libel, was yet to be proved; and he had always understood that the burden of proof lay upon the prosecutor. A man was not bound to clear himself from a charge not made out against him by the public prosecutor (hear, hear). Even though that charge had been made out, he apprehended there was no great crime in writing a letter to a private connexion, in explanation of a circumstance respecting which he had requested information. Mr. Collett had written a letter to Mr. Kenrick, and this alleged libel was the letter written in answer to that of Mr. Collett. Before he adverted to the terms of this letter, he wished to call the attention of the house to part of the evidence relating to the question whether it had been published by Mr. Kenrick. The fact was, that it had been published by Drakard, under the direction of Mr. Collett; but Drakard did not state that he had been authorised by Mr. Kenrick to publish the letter. The attorney for the *Morning Chronicle* had called on Mr. Kenrick, and had asked him whether that letter was his—not whether it had been published by his authority or with his knowledge, but whether it was his—and Mr. Kenrick refused, as he was at liberty to do, to answer the question. Mr. Collett, on being applied to, said he would not give up the original, and he himself would take the consequence. In his opinion, there was no evidence whatever of authority for publication. Mr. Collett's letter to Mr. Drakard, was—

"DEAR SIR—Upon reading your statement of the transaction between Mr. Kenrick and a poor man at Betchworth, I wrote to him for the particulars, as I did not conceive it possible, from my intimate knowledge of him, that it could be any thing near true; the inclosed is his answer. You will see what dependence can hereafter be placed on the *Whig Chronicle*, from which your statement is copied, and will, I am sure, be glad of the opportunity of repairing the injury you have done, by inserting his letter in your paper. I am, truly yours,

"RUSSELL COLLETT.

"Mr. Drakard, Stamford."

"DEAR SIR—The account in Drakard, is the reverse of truth. I do not think it became me to enter into controversy with the editors of any Newspaper, or to notice their scandal. I heard of the paragraph in the *Chronicle* only two days before I left home, and drew out a sketch of the affidavit I proposed to make, as the foundation for a criminal information, or instruction, for an action against the Editor, and those of other papers who should publish any copy, and left it with my solicitor in town.

"I am, dear Sir, yours truly,

"W. KENRICK."

When there was no evidence that that letter had been published by the authority of Mr. Kenrick, was it for this house to take notice of it, written, as it had been, under such peculiar circumstances? Did his learned friend mean

to say that Mr. Kenrick was bound to give evidence to shew that he had no concern in the publication? But after all, suppose he had, was it not too much to say, that when he was goaded as he had been, day by day, he was to be strictly called to account, because, in a moment of irritation, he had gone beyond the letter of what was capable of proof? What were the charges in this letter? One related to a petty theft committed by the daughter, in which the father was stated to have been an abettor; and which could hardly have been concealed from the knowledge of her parents. With respect to the sheep, the charge must be admitted on the testimony of Mr. Peters to have been unfounded. But though that charge was not true, it did not follow that Mr. Kenrick might not honestly have believed it at the moment. He said this in justice to Mr. Kenrick, or he should rather say, as declaring to the house his own impression on the subject. One point of evidence he had omitted, which regarded the conduct of Mr. Kenrick after Franks had been committed to prison. It was suggested in the *Morning Chronicle* that Mr. Kenrick, after five or six weeks had elapsed, found himself in an awkward situation, and was desirous to get out of it. Now, the evidence on that point shewed that a few days before the sessions commenced, Franks's wife applied to Beale, to intercede with his master on behalf of her husband, and, on his representations, Mr. Kenrick said he would write to the gaoler to know how Franks had conducted himself; for that if he had manifested any signs of contrition, he (Mr. Kenrick) would take care the sentence should be lenient. Franks's wife said, that the leniency of the sentence would be utterly unavailing, for that Franks was a subscriber to a benefit-fund, and that, if he was convicted, he would, by that conviction, forfeit all title to relief from it. Mr. Kenrick then said, he would interfere to prevent the prosecution being pressed. Under similar circumstances, what gentleman was there in this house that would not do the same? Franks had already suffered punishment, which Mr. Kenrick deemed sufficient to have reformed him, and Mr. Kenrick, therefore, to prevent his conviction taking place, wrote a letter to the clerk of the peace. His learned friend had said, that Mr. Kenrick ought to have persevered strictly in the prosecution. From that opinion he differed. The two witnesses were bound to appear, but there was no such obligation on Mr. Kenrick, and he was therefore fully at liberty to say, that the witness who was under his control, and whose testimony was most material, should not attend the trial, and that he would not employ counsel against the prisoner. When the case was called on, as there was no counsel to press for a conviction, nor any witness to give testimony, Franks was discharged. Was this too to be imputed to Mr. Kenrick, as proceeding from a corrupt and hostile motive towards Franks? The statement that Mr. Kenrick was desirous Franks should plead guilty, could not be reconciled with the fact that he would not pursue the prosecution, and that he kept back a witness who could swear to that most important circumstance, of the slab having been in Franks's possession. This was the last charge against Mr. Kenrick, and this, he thought, was answered as fully as the others. Before he sat down, he would allude to the prejudice which had gone abroad against Mr.

Kenrick, upon what had been done in the Court of King's Bench. It was generally supposed that the Judges of that Court had investigated the matter, and had given their judgments against Mr. Kenrick on the merits of the case. Such was not the fact. One counsel only, and that counsel employed for the defendant, had been heard, when the Court decided the question on a ground foreign to the merits of the question. Their ground of decision was, that upon the circumstances under which the alleged libel on Mr. Kenrick had been published, that gentleman had his remedy by indictment for libel, to which they would leave him. As to the costs, when the Court were asked to grant them, their lordships said, that if the defendant insisted on having his costs, they must hear the other side, and the question of costs, therefore, was not pressed upon them. The present charges had not been made out, and he should, therefore, give his decided negative to the motion.

Mr. Denman, in reply, said his opinion was not in the least altered: he attributed the feeling manifested in the house to annoyance at the length of the proceeding, and therefore he should not press the matter farther. He had done what he thought necessary, and he should rest satisfied with that discharge of his duty.

The motion was accordingly put, and negatived without a division.

### *Licensing System.*

FRIDAY, MARCH 17.—Mr. Estcourt moved for leave to bring in a bill for the better regulation of the licensing of alehouses. He observed that his object was to make two or three alterations in the act of 3 Geo. IV. c. 77, now about to expire. The first of them had reference to the general licensing day. That day generally took place in September, but was often adjourned upon insufficient notice, which occasioned much disappointment. Now he intended that the magistrates should hold the licensing day, as they did at present, in September, but that they should only adjourn it upon ample notice to all the magistrates. He should also propose that the present practice with respect to signing licenses, should be changed. He understood that if there were 30 magistrates present, two only signed the license. He would suggest, that instead of this the names of all the magistrates present should be inserted in the body of the license, and that the majority of them should sign it.

Mr. Hume seconded the motion, and recommended to the hon. member to follow the example of the rt. hon. Secretary (Peel), and at the same time to consolidate, by his proposed bill, all the existing acts relative to the licensing system. He should be glad also to see introduced into the bill a clause which would ensure a license to every respectable person who could obtain a certificate from the minister of the parish and a certain proportion of the inhabitants.

Leave was given to bring in the bill.

THURSDAY, APRIL 13.—Mr. Hume rose to present a petition from Thomas Edwards, a Doctor of Laws, and a Magistrate for the county of Surrey, on the subject of the present licensing system—a subject which must be viewed by all as one of very great importance. The petitioner had selected the present period, because

an honourable member (Mr. Estcourt) had introduced a bill respecting the licensing system; and he hoped that the suggestions contained in his petition would not be disregarded. It was manifestly necessary that well-regulated houses should be established for the benefit of the public, and a proper power should be given to keep them in a quiet and orderly state. But an attentive perusal of the whole of the evidence taken before the committee on this subject showed that the existing system, so far from having the effect of encouraging the establishment of well-regulated houses for the public good, had, on the contrary, been a cloak for the establishment of houses of the worst description. They all knew, that when a license was granted, it raised the value of a house from 500*l.* to 1000*l.* The profits on money thus laid out were very great; and were raised by charging the public exorbitant prices for beer, spirits, &c. It was a very lamentable thing to find a magistrate speaking, as the petitioner did, of the conduct pursued by his brother magistrates in granting licenses. He stated that, on licensing-day, he had often witnessed a system of jobbing, altogether disreputable to persons holding the situation of magistrates. There were 20 public-houses in some streets, while in others there was not one, because no person had taken the precaution to prepare the magistrates to grant a license. He (Mr. Hume) could not see why any license should be required for a public-house more than for a house in which tea and coffee were retailed. The person who wished to obtain a license for the sale of tea and coffee produced his money, and the license was granted as a matter of course; and if the same practice were adopted with respect to persons who sold beer and spirits, it would be attended with very great convenience. If any abuses were discovered, the law now in existence was sufficiently powerful to put them down. The petitioner was anxious, and so was he, to do away with the necessity of applying to magistrates for licenses, as was now the case, and thus to put an end to the jobbing system which at present prevailed.

FRIDAY, APRIL 21.—Mr. *Hobhouse* presented a petition from the licensed victuallers of the parish of St. James, Westminster, complaining of the hardships to which they were exposed, in consequence of the regulations that had been adopted under the existing law for the regulation of alcohouses. By that law a power was given to punish individuals for keeping their houses open during what was called unseasonable hours. Now, as it was left to the magistrates to say what should and what should not be considered unseasonable hours, and as in the event of a house being kept open a minute after the prescribed time, and any person seen going into or out of it, a common informer had the power to bring the owner of that house before a magistrate, and have him punished, although no improper conduct was proved against him, he thought under such circumstances, that the licensed victuallers had very just grounds of complaint. The hour fixed for closing the public-houses in St. James's parish was half-past 11 o'clock. He, however, held it to be wholly impossible that the public-houses could be cleared at that hour. If tradesmen who did not leave their business till late in the evening, wished afterwards to take refreshment, and to converse with each other in their respective

neighbourhoods, how could the rooms in which they met be cleared at half-past 11 o'clock? The petitioners had no objection to clear their tap-rooms at that hour; but what they complained of was that they were called on to clear their parlours and coffee-rooms, where respectable parties were assembled, at half-past 11, at farthest. This, too, was demanded of them, while oyster-shops, saloons, and taverns, were suffered to remain open at all hours. If this system were not altered, it would cause the utter destruction of the most respectable part of this trade.

Mr. *Estcourt* said, that the words now in the bill, and which related to the subject of the petition, were not final; and when gentlemen complained of the hardships suffered by the licensed victuallers, they ought to recollect that something must necessarily be done, for the purpose of preserving quiet and tranquillity in the neighbourhood where public-houses were established. He had, in his bill, introduced the expression, "unseasonable hours," as the most comprehensive—but a reservation was made in favour of travellers. The present bill, he knew, was imperfect. He therefore thought it would be better to let the measure drop for the present, and to bring in a bill for continuing the existing law for another year. Public attention had been drawn to the subject, and much information connected with it had reached him, from which, a measure might thus be produced, which it would be highly advantageous to pass into a law; but he thought that, in the present situation of the house, an efficient measure could not be framed this session; and therefore moved that the bill might be read a second time that day three months.

Agreed to.

FRIDAY, MAY 12.—On the motion of Mr. *Estcourt*, the report of a bill to continue the act 3 Geo. IV. c. 77, was brought up.

Mr. *Hume* moved that a clause be added to the bill, ordering that "an adjournment day be held within 15 clear days after the regular annual licensing day for the purpose of granting licenses, but that no license be granted on that day except to houses previously licensed." The hon. member contended that such a clause was necessary to prevent many cases of extreme hardship to which publicans were now exposed by the want of a regular adjournment day.

The clause was brought up and read a first time. On the question that it be read a second time,

Mr. *Estcourt* opposed it, and observed, that if it were adopted, it would open the door to many jobs and tricks of which the hon. member was not aware. He thought the bill, as it now stood, provided sufficiently for the interest of the parties who took out licenses. He was the less inclined to agree to the addition of new clauses, as the whole subject would come under consideration next session, and this bill was only to continue the licensing acts in force till the general measure was brought in.

Mr. *Maberly* expressed his surprise, that any opposition should be offered to a clause, so reasonable and fair as that proposed by his hon. friend. As the practice now was, if a license were not granted on the general licensing day, the party refused had no appeal and no remedy during the whole year, for no ad-

jourment day was held. The consequence would be, in most instances, the entire ruin of the party whose license was not renewed, for it was well known that many persons embarked the whole of their property, the savings of their industry for years, in the purchase of public-houses. To such parties the non-renewal of their licenses would be complete ruin. He was therefore anxious that where a sufficient opportunity of examining into the whole of the cases on the general licensing day did not occur, the parties should be allowed to bring them on on the adjournment day. He appealed then to the house in favour of a clause by which so many cases of hardship might be prevented.

The house then divided, when the numbers were—For the clause, 28—Against it, 40—Majority, 12.

### *Thames Watermen.*

TUESDAY, APRIL 18.—Alderman Wood presented a petition from the watermen plying on the river Thames. They complained that individuals were allowed to let out boats on the Sunday for hire, while they were prevented on that day from pursuing their avocation, unless they received a regular license from a magistrate. They therefore prayed, either that some restriction should be placed on the hiring of boats, or that the regulation which prevented them from plying on the Sunday should be removed.

Sir J. Coffin bore testimony to the merits of this very useful body of men. On one occasion 500 of them had entered the naval service, and he believed not one of that number had ever deserted. They made the bravest seamen that ever entered a man-of-war.

Mr. C. Calvert said, he resided on the banks of the river, and he could see no reason whatever for preventing those men from plying on the Sunday. Accidents innumerable happened on the river Thames in consequence of the practice of letting out boats, which were not attended by those experienced men, but were left to the guidance of persons who did not know how to manage them.

The petition was then laid on the table.

THURSDAY, APRIL 27.—Mr. Alderman Wood moved for leave to bring in a bill for regulating the watermen on the river Thames from Gravesend to Windsor: but stated afterwards (Thursday, May 4), that he could not press his bill forward to a second reading, as he was given to understand that it came under the denomination of a private bill; in consequence of which, the lateness of the session would preclude him from adopting those preliminary forms which that class of bills required.

### *Sheriff of Durham.*

THURSDAY, APRIL 6.—Mr. Peel moved for leave to bring in a bill to continue the sheriff and all the other officers connected with the custody of the peace in the county of Durham, whose appointments were now determinable by the decease of the bishop *in esse*, in their situations for a certain time after. The office of sheriff was at present in the nature of an appointment for life by the bishop who filled the see. He did not see why Dur-

ham should not be assimilated to the other counties in this respect, nor why the very respectable gentlemen of that county should not be called upon in turn to assist the country by an annual service of that office. Perhaps the best plan would be, to give the judges power to nominate three gentlemen of the county annually for the bishop to exercise his right of selection. That, however, would be an after consideration. At present he would content himself with moving for leave to bring in a bill for remedying the inconveniences to the administration of justice in the county of Durham, arising from the present vacancy of the see, and to prevent the like in future.

Mr. Hume approved of the efforts of the rt. hon. gent. to assimilate the practice and the institutions of the northern counties to those which prevailed in other parts of England.—He took this opportunity of saying, that the revenue of the bishopric of Durham was a great deal too large (laughter). It was a great reflection on our church establishment, that one or two should be so rich, and so many others be kept too poor. The present was a good opportunity to fix the salary of this enormous bishopric at a more moderate rate (laughter). The thing would be done at some time not very remote. What he wished was, that the rt. hon. gent. might have the credit of doing it (laughter). Enough might be well spared from this see to furnish the means of due encouragement for many men of ability and learning, who would afterwards be ornaments to the church.

The bill was then brought in, and read a first and second time, passed through a committee, was subsequently read a third time, and passed.

### *Debtor and Creditor Arrangement Bill.*

THURSDAY, FEB. 16.—Mr. Bright moved the second reading of a bill for altering the law as regarded arrangements between debtor and creditor. As the law now stood, a deed signed by a debtor making over his property to trustees for the benefit of his creditors, constituted an act of bankruptcy. This was a great grievance; and the intent of the new bill was to take the act out of the limits of bankruptcy. According to the existing law, too, such a deed of trust must be signed by every creditor, or it was invalid; his (Mr. Bright's) bill made it valid when signed by seven-eighths. He was convinced that the bill would be felt as a great boon in the commercial world, as enabling parties in many cases to avoid the expense attendant upon commissions of bankruptcy.

The bill was then read a second time, and committed for Monday next.

MONDAY, FEB. 27.—Sir C. Cole presented a petition from a majority of the creditors of the Swansea Bank, in favour of the bill before the house for promoting a better arrangement between debtor and creditor. The hon. member read several extracts from the petition, which went to point out the serious inconveniences which occurred, as the law now stood, in vesting the property of merchants, bankers, and others engaged in trade, who might be involved in difficulties. It often happened, that when the majority of the creditors were disposed to invest the property in the hands of trustees for the benefit of the whole, one obstinate creditor,

by holding out and taking out a commission of bankruptcy, involved the property in legal proceedings to such an extent, that that property which would, under a different system, pay a large dividend, was wholly absorbed in law expenses, and thus lost to the creditors. The petitioners, therefore, prayed that the bill which allowed the majority of the creditors to enter into arrangements for the security of the property, might be binding on all; and that, after such arrangement had been entered into, no creditor should be allowed to sue out a commission of bankruptcy. They gave an instance of the evil of which they complained, in the case of the Swansea bank.

The petition was brought up.

Mr. Alderman Wood bore testimony to the general utility of the bill.

Mr. Lockhart thought, to render the measure productive of the intended good, it should be carried much farther than was proposed. The mere prevention of an investment of the property of a trader from being considered an act of bankruptcy, would not be sufficient, for it often happened that acts of bankruptcy were committed before such investment was made. Now, it would be necessary that the bill should extend to prevent those previous acts of bankruptcy from affecting the trust deed for the benefit of the creditors. The bill which had already passed, making the issuing of commissions of bankrupt null and void (where deeds of trust investing the property had been executed), unless such commissions were issued within six months, was not carried far enough; and unless some improvement on this point were made in the present bill, it would be inoperative.

The petition was read, and laid on the table.

FRIDAY, APRIL 28.—Mr. Bright presented a petition from the inhabitants of Coggeshall, in favour of the debtor and creditor bill.

Mr. Sykes agreed that this bill would be a most important improvement in the existing laws respecting debtor and creditor. He thought that the clause in the bill which went to enable partners, if they thought proper, to arrange their affairs without being obliged to undergo the expensive process of bankruptcy, would have the best effect. He could see no reason why the bill should not have a retrospective operation. There were many cases of parties who wished to settle their affairs, to which the application of this clause would be an object.

### *Expenses of Commissioners of Bankrupt in the Country.*

WEDNESDAY, MARCH 15.—Sir Robert Wilson rose to submit a motion to the house respecting an abuse which prevailed in the practice under commissions of bankruptcy in the country. He had been informed, that when the commissioners met, they were in the habit of partaking of refreshments of various kinds, the expenses of which were afterwards charged to the creditors under the commission. Under the act recently passed respecting bankrupts, this practice was decidedly illegal. The returns under the motion which he was about to make would show the extent to which the practice prevailed, and there could be no question that a remedy would

be easily found when the house was once in possession of the facts. He apprehended there would be no difficulty in carrying it into execution. The secretary of bankrupts must be acquainted with the names of the commissioners and solicitors under all the commissions of bankruptcy which were issued. It would, therefore, only be necessary to order him to write to the solicitors, and to require them to extract from their bills of costs all the sums which had been paid on account of tavern expenses. He therefore moved that there be laid before the house a return of all the tavern expenses incurred by commissioners of bankrupts, under all commissions executed in the country during the last three years.

The Solicitor-General thought it would be extremely difficult to procure the returns required by the gallant general. Besides, commissioners so conducting themselves were by law disqualified to act; and this motion would call on them to give evidence against themselves.

Mr. Abercrombie said, there could be no doubt that the practice alluded to existed. The learned gent. read some items from a bill of costs, the whole amount of which was 2000l., under a commission of bankrupt, where several large sums had been paid for tavern expenses. It was true that the commissioners who partook of these expenses were disqualified from acting, but then it was also true that the bills were taxed by the same commissioners. He saw no difficulty in obtaining the returns.

Mr. Banks, jun. said, that the act as it stood provided a remedy for any abuses which might exist. If the commissioners partook of these entertainments, they were guilty of perjury. He apprehended the difficulty of obtaining the return was insuperable.

Mr. Hume said, that his experience convinced him that a clause in an act of parliament was no remedy against abuse. By returns laid on the table two years ago, it appeared that 224,000l. had been spent by the commissioners of the land-tax in London and Middlesex, in the very teeth of five acts of parliament. In two or three wards of the city, a sum of 180l. was charged for trips to Blackheath, and a bull in the winter.

Mr. Croker thought it would be impossible to procure the returns. It would be much better to state some individual case by way of beginning, and then proceed upon it.

The Speaker said, the house would misunderstand its power if it should be diverted from requiring the returns which had been moved for under an idea that they could not enforce them. Upon the return made by the secretary of bankrupts, the order would be served by the proper officer, and parties refusing to obey would be in the same situation as others who should presume to neglect the commands of the house.

Mr. S. Bourne recommended that the motion should be confined to one year. There could be no question that the alleged abuse was a gross one, and he should be the last person to interfere to prevent a remedy, or to suffer the parties offending to go unpunished. The great difficulty appeared to him to be, that these parties were called upon to furnish evidence against themselves, on which they were afterwards to be prosecuted.

Mr. C. Wynn objected to the form of the motion. He thought the case was already suffi-

ciently provided for by the law as it stood. If a true return should be made to the motion, it would render the party liable to a prosecution, the evidence on which he would himself have furnished. He put it to the gallant general whether this could be advisable.

Mr. Peel suggested that it would be advisable to shorten the time still further; for, in consequence of the difficulty of making returns to orders of the house, clerks in public offices were really hardly able to execute the ordinary business of their departments (hear).

Sir R. Wilson then said, that he would not carry the motion farther back than May, 1825.

The motion, thus amended, was agreed to.

### County Courts' Bill.

MONDAY, FEB. 20.—Mr. Wyell presented a petition from the city of York, praying for an alteration in the laws respecting the recovery of small debts. The hon. member said he was anxious to impress upon the house the necessity of taking those laws into consideration, and expressed a hope that the noble lord (Althorpe) who had so successfully carried a bill on the subject through the house last year, would persevere in the measure this session, though the bill had been lost in another place. The evil of the present state of the laws was severely felt throughout the country.

Mr. Hobhouse bore testimony to the inconvenience felt from the want of such a measure as the petitioners prayed for.

Lord Althorpe said it was not his intention again to introduce any measure on this subject. After what had passed in the other house respecting the measure last year, he thought it would be hopeless for him or for any individual to attempt to carry the bill through; therefore he would not try again. He had come to this determination on the subject, not from any difference in his opinion now as to the necessity of the measure from what he formerly held, but because, after the bill had passed that house twice, he might almost say unanimously, and had each time been rejected in the other house, he thought it would be only waste of time for any individual, not having the support of Government on the subject, to bring in the bill again.

The petition was ordered to be printed.

THURSDAY, MARCH 16.—Lord Althorpe asked the rt. hon. Sec., (Peel) whether his Majesty's ministers would think it their duty to bring the County Courts' bill forward in the present session?

Mr. Peel said, that if the noble lord had thought fit to introduce the bill again in the present session, he would most cordially have supported it as he had done before. He should be unwilling, after the pains which the noble lord had taken upon the subject, to interfere with it, or, at this eleventh hour, to take to himself any of the credit which alone belonged to the noble lord. If, however, the noble lord wished to give the measure up, and thought that it was more likely to succeed in the hands of ministers than in his own, he (Mr. Peel) was prepared to take charge of it. He must, however, in that case, be permitted to conduct it in such a manner as he should think most conducive to the public interests. He should not be able to bring it forward in the course of this session, for he had directed the commissioners

of the Insolvent Debtors' Court, by whom the provisions of the proposed bill were to be carried into execution, to make inquiries into several particulars, on which it seemed very desirable that the house should have information. They related chiefly to certain peculiar jurisdictions, to which it was not intended by the noble lord that this bill should apply. The local jurisdiction of Bury St. Edmund's, for example, included a great part of the county of Suffolk. In Yorkshire, and in Lincolnshire, there were similar jurisdictions, and to all of them the principle of the noble lord's bill ought to be extended as well as to the objects which it was expressly intended to embrace. The counties palatine, which differed in many respects from the jurisdictions he had just mentioned, must also be made the subjects of inquiry, and the information required could not be procured in time to bring forward the measure in the course of this session. If the noble lord chose to pursue his own measure, he (Mr. Peel) should recommend him to adopt the alterations made in the other house of parliament, which, although they extended, did not in any other way affect the principles of his bill. If the noble lord chose to relinquish the measure to him, he should feel it necessary to adopt the spirit of those alterations. He thought that the remuneration to be made to the officers, affected by the measure, ought not to be an obstruction in the way of measures tending to the public benefit; and he should therefore make it a point in this respect to conciliate the other house of parliament, in order to ensure the success of his measure.

Lord Althorpe said he should very willingly leave the measure to be conducted by the rt. hon. gent. in such way as he might think fit.

### Contempts in Chancery.

TUESDAY, MARCH 7.—Mr. Hume moved for a return of the number of persons confined in the Fleet and other prisons for contempt of the Court of Chancery. He had moved in 1820 for a similar return, including the number of persons who, being in confinement for such contempts, had died during the eight preceding years. It appeared by the return which was made in consequence of that motion, that twenty persons had died during the period mentioned—some after a confinement of ten months, others after being in prison thirty-two years (hear, hear). Among the persons confined under the orders of the Court of Chancery, many were in such a state of poverty that they were unable to procure copies of the bills, for not answering which they had incurred this charge of contempt. The expense of procuring copies of these bills was enormous; they were to be paid for at the rate of 10d. per folio, and when the voluminous nature of Chancery proceedings was considered, it would be clear that many of the persons called upon to put in answers were wholly unable to do so. Those bills were filed without any regard to truth. The plaintiffs were at liberty to tell any lies they pleased, and unless the individual against whom they were filed had money in the first place to obtain copies, and in the next to fee lawyers, he had no chance of avoiding the imprisonment to which this Court doomed him. Among other cases, it appeared by the return which he held, that Wil-

liam Dawson was committed to the Fleet prison on the 12th of January 1818, and his wife Elizabeth Dawson, on the 1st of May, 1819. From that time to the present they remained there for an alleged contempt of court, and, as they stated, were wholly unacquainted with the plaintiff, and with the reasons of the bill filed against them. There were many others who had been confined under the vague allegation of having incurred a contempt of court, and whose only offence was their ignorance of the forms of the court, and their poverty, which disabled them from adopting the expensive measures necessary for putting in an answer. By the return made on the 11th of July last, it appeared that there were 31 persons then in confinement. He begged the attention of the right hon. gent. (Mr. Peel) to this statement, because he thought that among the useful reforms which the right hon. gent. had introduced into the system of administering the law of the land, none could be more properly or more beneficially introduced than some alteration of the proceedings in the Court of Chancery. He (Mr. Hume) had taken the trouble to send a person to the Fleet prison, with the list in his hand, to inquire of the warden what had become of the persons whose names had been returned in it. The warden, for some reason which the hon. member could not understand, had refused to satisfy that inquiry; perhaps he was alarmed at the long array of names, and thought very properly that some use was to be made of the information which he might afford. As he was, therefore, unable to state any more than what the return contained, he should confine himself to that. It seemed that Hannah Barber had been committed on the 30th of January, 1789, under a writ of rebellion. By a copy of the writ under which the commitment was made, it appeared, that in a suit by the creditors of one Thomas Green against Hannah Barber and others, the defendant was committed for contempt in not obeying an order of the court, for payment of 406l. into the Bank of England. She remained in the Fleet until her death, which happened since the return, and after an imprisonment of between thirty and forty years. He understood that by a clause in the insolvent debtors' act, a person might be discharged from custody for contempt, when the cause of imprisonment was only the non-payment of money, but that the court had no power to release from the costs. Was it not disgraceful that, in a country like this, the criminal law was more mild in its effects than the civil? For if a man were sentenced under the former to transportation or imprisonment, he knew the limit of his punishment; but having once fallen under the sentence of the Court of Chancery, there was no knowing how long his imprisonment might continue. Such a system was better adapted to the arbitrary jurisprudence of Constantinople or Algiers than to this free and enlightened country. Another instance in the return was that of George Pigot, who had been sent to prison under a rule of court, ordering an attachment for want of answer to an amended bill. This man had been in prison for more than twenty years, during which time he had no means of obtaining a copy of the amended bill, nor of procuring a person to draw an answer to it. Anne Bretner was committed under a writ of *habeas corpus* from the Exchequer, for not appearing to a bill, and she was also dead. He now put it to the rt. hon. gent. whether this was

SESS. 1826.

right or not—whether some inquiry ought not to take place before persons were doomed to such imprisonments, as to the nature of their alleged contempts, and whether an end ought not to be put to so persecuting and oppressive a system. He understood that there were two instances in which the Lord Chancellor, learning that the parties were unable through poverty to put in answers, had sent for them, and paid out of his own pocket the necessary expenses which their detention had occasioned (hear, hear). If his lordship felt so keenly the hardship of such cases, it was extraordinary that he had not brought forward some regulation to prevent such abuses for the future. Another case he would state was that of Jane Mapson, who had been committed in 1813 for want of an answer, and who, although she had put in that answer ten years ago, was still detained for costs. Two other persons were in custody, the one for having seen a young lady, a ward of the court, after being prohibited to do so, and the other for cutting crops on an estate in disobedience to an injunction of the court. He would not conclude without expressing his wish that not only the kind of imprisonment which was the subject of his present complaint, were done away with, but also imprisonment for debt altogether; for he was convinced, that the facility with which credit was given was most injurious to society, and if the creditor had not such immediate means of arresting his debtor, much of the disposition to give indiscriminate credit would be checked, and the ultimate loss to the fair trader would be less.—The hon. member concluded by moving for “a return of the names of all the persons now in custody of the warden of the Fleet, and other prisons in England and Wales, committed by order of the Courts of Chancery and Exchequer, since the 11th of July, 1820, together with copies of the commitment of each; also a return of the number who had died in prison, and periods of their respective deaths, and how many were still remaining in custody.”

The Attorney-General understood the return now moved for by the hon. gent. was a continuation of that formerly made, and to this he could of course have no objection. Every body was aware of the importance of the subject which the hon. gent. had touched on, but put as it was, in this incidental way, he should not feel himself justified if he took up the time of the house by any detailed answer at present. The house would soon be in possession of the report of the commission appointed to inquire into the practice of the Court of Chancery, and it would probably then become his (the Attorney-General's) duty to propose certain bills to carry into effect the alterations in the present practice which that report might suggest. He could assure the house that every attention would be paid to the subject which the hon. member (Mr. Hume) had alluded to. Some remedy might be and ought to be applied, if any thing like oppression or unfairness could be shewn to exist under the present system; but it was impossible to meet all the views of the hon. gent. on this subject without going the length of abolishing the Court of Chancery altogether. In a bill, for example, filed for the purpose of obtaining discoveries of the utmost importance to the justice of a case depending either in the Court of Chancery or in some other court, if the defendant obstinately refused to make the discovery sought of him, what was

to be done? There was no mode consistent with the law of England by which he could be compelled to do what justice required, excepting by imprisonment. But the moment he put in his answer he was released from confinement. Where was the hardship in this? If there were a hardship, and if it was thought that such a power ought no longer to exist, the Court of Chancery must be abolished, because there was no other mode of enforcing its decrees. The hon. member had stated that the ignorance of parties exposed them to offend unintentionally against the law—but he had been misinformed upon this point. No party was called upon to put in an answer until he had been warned by subpoena, and notices of the time at which he was to do so. It was only when he disregarded these notices, and refused to obey the order of the court, that he was imprisoned. If a party chose to remain in prison rather than do that which the interests of justice demanded of him, was the house to assume that his imprisonment was oppressive? He (the Attorney-General) by no means meant to say, that if a person was unable to pay a sum of money which the Court of Chancery had ordered him to pay for costs, he ought to be kept in prison for life in consequence of that inability. He would read the clause of the Insolvent Debtors' act alluded to, and the house would see how far they could trust to the accuracy of the hon. gent. (hear, hear).—[The Attorney-General then read the clause, which, after providing for the release of prisoners confined for contempt in not paying money ordered by the Court of Chancery, goes on to provide the same relief for persons detained in prison for non-payment of costs.]—This might be taken as a specimen of the hon. gent.'s accuracy (cheers). The act of which he had spoken was passed in 1812, and contained the very remedy of which the hon. gent. had so strenuously proposed the adoption. It was not necessary for him (the Attorney-General) to go further. It was obvious that the only means the Court of Chancery had of enforcing obedience to its decrees, was by the imprisonment of the refractory parties; and if they obtained their liberation on complying with the order of the court, no evil could be said to exist. If the cause of detention was merely the non-payment of money, which the prisoner was unable to pay, he was entitled to the benefit of the laws which had been made for the relief of insolvent debtors.—He pledged himself to give the subject all the attention in his power, and to support every practicable method of reform, as far as was consistent with his opinion of a court, which, with all its alleged hardships and inconveniences, he considered an admirable branch of the jurisprudence of the country, and absolutely necessary for the preservation of their legal system; for if they gave up the Court of Chancery, he had no hesitation in saying they must at the same time abandon the whole of the common law, which could not be tolerated as a system unless it were not only modified, but corrected, by the proceedings in a court of equity (hear, hear). In one word, he would say, that the general principles of the courts of equity in this country were so sound, just, and admirable, in every respect, that they might defy the utmost ingenuity of man to give them any improvement (hear, hear).

Mr. Lockhart agreed with the learned gent. that the commitment for contempt could not be

dispensed with, and that the power of summary punishment was absolutely necessary to compel discoveries, or force the production of deeds which were requisite to the interests of suitors. He did not, he was sorry to say, however, agree at all in the propriety of the act of parliament, which enabled persons, when they had spent the money of the orphan, or the infant, or the minor, to clear themselves from all the effects of their obstinacy or iniquity by the operation of the Insolvent Debtors' act. He thought that such a clause took a very great liberty with the property of the suitors of that court, and tended rather to promote injustice than justice in its proceedings.

Mr. Hume occasioned some laughter by observing that the Attorney-General had been prompted by the Chancellor of the Exchequer and the Secretary of State, as to the clauses contained in the Insolvent Debtors' act, so that there was very little ground for the tone of superiority he had assumed in pointing out his (Mr. Hume's) ignorance of those clauses.

TUESDAY, APRIL 18.—Mr. Hume presented a petition from William Richardson, labourer, a prisoner in York Castle for a contempt of the Court of Chancery. The petition set out various facts connected with the petitioner's case, and among others, that a dispute had arisen between him and another party, on the subject of a life interest in 700*l.* which had led to the filing of a bill in Chancery. To this bill, as the petitioner did not understand the nature of the proceeding and the absurd language introduced into it, he had failed to put in an answer, and the consequence had been his commitment for contempt of the Court of Chancery. It was required that he should pay 300*l.*, and about 30*l.* in addition for costs; but this sum he was unable to raise upon his life-interest. The hon. member expressed his strong regret that the present session was likely to pass over without any remedy for this disgrace and pest of the nation—the Court of Chancery—although the commissioners of inquiry into its abuses had been appointed not less than two years ago. It was the greatest curse upon the country to have such a Court of Chancery, and such a Chancellor (hear, hear). The curse ought not to light upon the King's innocent and injured subjects, but upon those who allowed such an infiction to continue. The case of the petitioner showed how a poor man might be oppressed, and without remedy.

The petition was brought up and read. On the question that it lie upon the table,

Mr. Lockhart observed, that the observations of the hon. member were entirely uncalled for by the facts disclosed. The Lord Chancellor did not possess, and never had possessed, any power to make great alterations in the constitution of his court. Some persons were confined from ignorance, and some from imbecility; and he thought the law had gone too far already, in allowing the privilege of the Insolvent Debtors' act to persons imprisoned for non-payment of costs.

Mr. Peel very warmly protested against the extremely unfair use the hon. gent. (Mr. Hume) had made of his privilege in attacking a distinguished and learned individual, without giving the slightest notice that it was his intention so to avail himself of the opportunity afforded by the presenting of a petition (hear, hear).

The Solicitor-General appealed to the house

whether such language as the hon. gent. had employed, ought to be endured in support of a petition which only stated one side of a case (hear, hear)? He avowed himself a latitudinarian, as far as the right of petitioning was concerned; but the House of Commons itself would become a curse, if such a course as the hon. member had taken were allowed with impunity. He called upon the hon. member to make out something like a case for his own justification. If he did not, he (the Solicitor-General), instead of deeming the Lord Chancellor a curse upon the country, should consider the word far more applicable to the party making such an unjust and unprovoked accusation (hear, hear).

Mr. Grenfell agreed in the justice of part of what had just been said: when the hon. member (Mr. Hume) had asserted that the Lord Chancellor was a curse to the country, he had used language altogether unbecoming (hear, hear). If, however, his hon. friend had confined himself to the declaration, that the Court of Chancery was a curse to the country, he (Mr. Grenfell), in his conscience, should have agreed with him, and so would ninety-nine out of every hundred of the King's subjects (much cheering). He would state in one sentence, why he held the Court of Chancery to be a curse—because it enabled the rich man to oppress and ruin the poor one (hear). He would take this opportunity of stating the great disappointment he had experienced on reading the voluminous report of more than seven hundred pages, to find that it contained nothing to correct that greatest of all abuses, which went by the name of Fishing Bills. These bills gave any man the power of making the most atrocious charges against an innocent party, without the possibility of redress. Although the falsehoods should be proved in the clearest manner, there was no punishment. The only result was, the suit was dismissed with costs. It was not, perhaps, just to ascribe all the blame of this to the judge; but he was justified, as he believed, in saying that the Court of Chancery was at present, in system and practice, a curse to the country.

Mr. H. Sumner said, that he had never heard such outrageous and indecent language applied to any public functionary; and the house would not do its duty unless it showed its sense of this outrageous and indecent language, and abuse of the privileges of the house. Unless some explanation should be given of the words, he himself would make some proposition to the house on the subject. He agreed that very ruinous delays took place in the Court of Chancery; but these were not owing to the Chancellor, who, instead of being a curse to the country, was, by his knowledge and ability in the administration of justice, one of the greatest blessings that any country ever possessed.

Mr. Hume said, that it appeared the language he had used respecting the system of the Court of Chancery (Mr. H. Sumner—"Not of the system, but of the individual") had been considered as indecorous and improper (hear). Now, on the contrary, he thought it perfectly correct; and begged that the hon. member, or the house, would, if they thought otherwise, order his words to be taken down, for he was ready to abide by them (hear). The Solicitor-General regretted that he (Mr. Hume) had not paused to ascertain the truth of the petitioner's

case. He had done so—he had referred to the respectable solicitor at Hull who drew up the case, and who had satisfactorily convinced him, that there was nothing exaggerated about it, but that, on the contrary, it was a simple statement of the truth. If the Lord Chancellor was in any measure the cause of these evils, ought milder terms to be employed towards him than towards the system which he had tolerated, for the quarter of a century during which he had presided in that court? It was in that way that he had put his argument, and how could he have done otherwise? He of course could not suppose that the Lord Chancellor was a man who had so little humanity, as to be the willing inflictor of so much wrong; but why, with all the power which the noble lord could wield, had these abuses been so long suffered to exist? He did not mean that the whole of this blame should lie on the Lord Chancellor's head; he assuredly desired that a portion of it should attach to that house, and more particularly to his Majesty's ministers, who had so long permitted these abuses to be practised unrestrained. He would again repeat that such a system was a curse to the country which was burdened with it; and if it were suffered to exist through the supineness or remissness of the head of the court, who had the power of applying a remedy, then he was at a loss to see how the same epithet did not apply to him as to his system (hear).

Mr. H. Sumner said, that if the hon. member still insisted, that not only was the system of the Court of Chancery a curse to the country, but that the Lord Chancellor himself was equally so, and would now repeat his expressions, he would certainly call to have his words taken down.

Mr. Ellice said, that if the hon. member was desirous of having it repeated, that the administration of justice in the Court of Chancery as at present constituted, and the manner of its performance by the Lord Chancellor who administered its affairs according to this system, had become a curse to the country, he for one would himself indulge him with the repetition of that animadversion. (Mr. H. Sumner—"Those are not the words.") It did not become members of that house, when describing the abominable and most vexatious proceedings of such a system, to soften down and qualify the epithets which it loudly called for (hear).

On the motion that the petition be printed—

The Solicitor-General rose to point out, that nothing had been done in this case, according to the petitioner's own statement, but what was done every day by any hon. member of that house, who had to foreclose a mortgage and proceed with an ejectment; and yet this process was to be made the frame-work of a bitter attack upon the Lord Chancellor, as if he alone had inflicted an unusual injury upon an individual in administering a particular process of law. The fact was, it was not the court which had ruined this man, but the lessor, who had directed his attorney to proceed. Why, then, did not the hon. member, instead of impugning the Lord Chancellor, attack the attorney, or his client?

Mr. Baring said, he was certainly obliged to his hon. friend for having brought forward this petitioner's case, and drawn the attention of the house to the enormous abuses which prevailed in the system of the Court of Chancery. At the same time, he certainly regretted the

introduction of any harsh epithets as applied to the head of that court, from their natural tendency to indispose the majority of the house from seriously considering the nature of the case itself, which undoubtedly seemed to call for dispassionate consideration (hear.) As to the noble lord at the head of the Court of Chancery, if any grave cause of blame attached to him for the existence of those abuses, it must be that he had sat so long in his distinguished station without calling for the application of a remedy to prevent the recurrence of abuses which he could not but have seen in frequent operation (hear.) He (Mr. Baring) had himself been applied to on one occasion, by a cottager who lived in his neighbourhood, who had been wronged in the sale of his cottage. He went to a respectable attorney, and begged he would do what was right; the attorney, after inquiring into the particulars of the case, fully admitted the justice of the complaint, and that redress could be obtained by filing a bill in Chancery; he added, however, that before he could take three steps in the cause, the cottage and gardens would be lost with the expenses of the suit (hear, hear). The existence of such facts was a disgrace to the administration of justice. People of small property could not venture upon this mode of redress. To file an answer to a bill in Chancery, would, he was informed, cost the party about 20*l.*; and if the man, who was perhaps wantonly dragged by a litigious person into such a predicament, was unable to afford this expenditure, he must be in what was called contempt. After all, when it was notorious that equity could not be safely sought for property which did not amount to more than 500*l.* or 600*l.*, he hoped that the attention of the house would be seriously called to remedy such evils.

Mr. Canning complained, that for the purpose of this petition, the discussion which had taken place was quite irregular and uncalled for. The preamble of grievances in the petition set forth that the evil lay in the Court of Chancery, but one half of the subsequent matter applied equally to process issuing from any of the courts of common law. The petitioner had refused obedience to a process which had been duly taken out against him, but of the effect of which he pretended ignorance; and for so doing he had entailed upon himself the further proceeding of which he had complained. All this would have happened in any other court as well as the Court of Chancery: what, then, was the result of the complaint? Why, nothing but this,—that legal proceedings were attended with expense, and that the rich man must always in litigation, have an advantage over the poor. But this must, from the nature of things, continue, not only in this but in every other country which had laws to administer; and a grievance it was so far for the poor man,—one, too, carrying with it the painful conviction, that it was impossible for the wisdom of man to devise any perfect remedy. The attack on the Court of Chancery, and the judge who presided there, was as unfounded as it was unfair; and if any man thought he could remedy abuses by pursuing such a line of conduct, he was grossly mistaken. Now let it be supposed that the petition which had occasioned the present discussion had proceeded from the other party in the suit, let it be supposed that this person was as poor a man as the complainant

was represented to be, and that he filed a bill as the petitioner had done, would they not have been justified in vituperating the Chancellor and his court, for not applying a remedy for wrongs of which they professed to take cognizance? Such a complaint as the present would be just as applicable against the courts of law: why single out the Court of Chancery and the Lord Chancellor? Why not also deal out censure against the Court of King's Bench, and the respected individual who presided in that court? Notwithstanding the disclaimer of being actuated by personal feeling against the venerable head of the Court of Chancery, he was convinced that the sole object was the removal of that exalted individual from the high office which he held. Hon. gent. were mistaken, however, in the course they pursued to accomplish that object; for the unjust aspersions by which the learned lord was so often assailed, would serve only to rivet him still firmer to the high office which he filled.

Mr. J. Williams commenced by disclaiming the slightest feelings of personal disrespect against the learned lord who presided in Chancery, in whom was blended a great mixture of courtesy and dignity. He (Mr. Williams) was most willing to admit that the learned lord could not be surpassed in those qualities, and to use the words of the learned lord himself, in alluding on another occasion to a no less gifted individual, "he wished him well wherever he was" (hear, hear, and laughter). But while speaking on the subject which had chiefly given rise to the present discussion—he meant the unlucky monosyllable which had spread so much alarm on the opposite side of the house, and had even caused the hair of his learned friend (the Solicitor-General) to "stand on end,"—he begged leave for himself to adopt that monosyllable, and to repeat it if requisite. That the Court of Chancery was a curse on the country, could not be denied. When he heard hon. members express themselves as they had done that evening, he could not avoid feeling surprise at the change in the language of the house. According to the hon. member (Mr. H. Sumner) it was not the Lord Chancellor but that house which was to blame for the defects of the Court of Chancery, but if so, where was the hon. member's vote on the motion for inquiry in 1823; where was it on the various motions of the hon. member for Durham (Mr. M. A. Taylor)? Did he not on those occasions screen it from investigation by swelling the majorities that decreed it? At length the Secretary of State stepped forward with a plan to obviate all objection. But it was natural to expect that a sufficient time would be demanded; and accordingly a convenient pause (a laugh) was granted, in order to give the commission the fullest opportunity of investigating the entire system. We will have, said the right hon. gent. (Mr. Peel) no interruption to our proceedings—we will dispatch the business, and will only ask two years for the purposes in which we are engaged (hear, and laughter). Give me, said the right hon. gent. a commission—a commission of our own choosing, at the head of which the learned lord shall sit in judgment upon himself, and originate 180,000 propositions (hear, hear, and a laugh): whether there were 180 or

180,000 propositions he (Mr. Williams) really forgot. Such was the committee, which, after infinite labour, was at last appointed, and the rt. hon. gent. (Mr. Peel) now came forward with a report, which, from the number of pages it occupied, and the quantity of matter it contained, no one would have patience to read (hear). He (Mr. Williams) could not but consider it a little extraordinary, that although nearly three years had been allowed for remedying the abuses of the Court of Chancery, it was still suffered to remain a nuisance to the country; or, to adopt the short and expressive monosyllable which the patients of that court had themselves adopted, that it should continue "a curse." He was aware that the term was not the most courteous, and that it might perhaps offend the learned lord to whom the term might seem to apply. But the friends of the learned lord, and the country in general, need not be alarmed. There was no cause to dread the effects which would be produced by the attack, for the learned lord against whom it was aimed, was determined to brave his enemies to the last, and had long since made up his mind to quit office and life at the same time (hear, hear, and laughter). Panegyric or abuse would neither defer nor hasten the consummation of that event. He should only observe, in concluding, that the Court of Chancery, in consequence of its expenses and delays, was in the predicament of precluding persons of moderate fortune from suing for their right, which was a great and crying evil, and one which was directly opposed to the first principles of justice (cheers).

Mr. Peel observed, from what had fallen from the learned gent. it was quite plain that no report, however framed, would have given him satisfaction. Indeed, so prejudiced was the learned gent. that he could not distinguish between 180 and 180,000 propositions (hear, hear). The learned gent. complained that the report was voluminous. Did he forget that this was his own suggestion? When the commission was appointed, did not the learned gent. say, "I hope you will give a full and ample report" (hear, hear)? Nothing at that time would satisfy him but a full report. His suggestion was adopted; but when the report was brought forward he cried, "It is too voluminous, we can never get through it." Such was the spirit of justice displayed by the learned gent. (hear, hear). The report was voluminous because every person who had a complaint to prefer, every solicitor who might offer an objection against the practice of Chancery, was invited to state his grievance or propose his remedy (hear, hear).—With respect to the present petition, he could only say that he thought the house should wait to hear from the attorney employed on the other side, who might give a new version to the present story. It was unjust to attend to an *ex-parte* statement, and he for one was free to confess that he did not believe the case which the petition detailed. The terms of law and the progress of the suit were correctly described. The hon. gent. (Mr. Hume) admitted that a solicitor drew up this petition. And it could scarcely be credited that a professional man would have described legal proceedings in the language contained in the petition. If the petition should be ordered to be printed, he (Mr. Peel) hoped that an opportunity would be afforded to the party on the other side to state their case; and

he believed that from that statement the complexion of the affair would be materially altered.

Mr. Brougham:—The report contained 800 or 900 folios, but it omitted many material points; and notwithstanding its bulk, it was very meagre with respect to that sort of information which the house had a right to expect (hear). In the evidence given and received, many questions had been proposed which had not been properly followed up, and consequently imperfect information had been afforded. One gentleman asked this question—"Could three men do the business of Chancery?" The answer was, "No, nor three angels." Another asked, if a man were to devote his best exertions for six hours in each day, could he get through the business? Answer, "One man would be totally incapable of doing the business." Could it be credited that this answer, which clearly suggested another question, was not followed up, and that nobody even thought of asking, did any one man ever yet try to get through the business in six hours each day? Did any individual put his shoulders to the wheel, and try to overcome the labour? No. The judges of the court tried the experiment, and found its accomplishment impracticable. There were other instances which might be advanced; but those which he had stated would serve to show the nature of the long-expected report (hear, hear).

After a few words in reply from Mr. Hume, the petition was received, and ordered to be printed.

FRIDAY, APRIL 21.—Mr. Sykes presented a petition against the abuses of the Court of Chancery. Though he did not concur in the energetic language of the hon. member (Mr. Hume), he did not differ from him greatly in sentiment, and if he would not say that the court and the administration of it were a curse, from all he knew or had heard, and from something which he had felt, it was, in his opinion, any thing but a blessing. He feared, indeed, that its practice altogether was little better than a public nuisance. The petition was from a solicitor of 25 years' practice, whose respectability he vouched to the house. The petitioner had acted for the committee of a lunatic for several years. His costs in carrying on suits in equity for the estate were taxed, and allowed in 1814 by the Master. He complained that the question of these costs was re-opened in 1826. Successive committee-men had died in the meantime, and the petitioner was left without the assistance of those papers and documents which were necessary to justify his accounts. He consented, however, to have his bill re-taxed, and the result was, that Master Trower deducted only 3s. 6d. from the whole bill. Having neglected his business in the country, and being again baffled by the contrivances of his opponents, he returned home in despair—a perfectly ruined man.

The Solicitor-General had made inquiries respecting this petition, in consequence of the hon. gent.'s intention to bring it forward, and the result of those inquiries tended to convince him that the petitioner had no ground of complaint. He could not but deprecate the part which some hon. gents. had taken with regard to the Chancery question, in bringing forward cases of this description, for the purpose of charging the Court of Chancery with

sanctioning improper proceedings. It was most unfair to advance such charges, in order to make a run on that court, and to impute blame to the venerable and exalted individual by whom it was governed (hear, hear). An hon. member (Mr. Hume) had thought proper, in no very measured terms, to commence the attack, and the hon. member (Mr. Sykes), in presenting this petition, seemed to follow it up. The case was briefly this:—The petitioner, an attorney at Hull, had been employed to sue out a lunacy. He appeared for both parties to the suit, and one of those individuals became a bankrupt. From the part which he had acted in the business, a petition was presented to the Lord Chancellor, stating improper conduct; his lordship thought that a solicitor was not warranted to act for both parties in a suit; he gave it as his opinion, that although the solicitor in this instance had obtained the taxation of his bills in the master's office, yet that his conduct had been such as not to warrant such taxation; and he declared that, acting on a principle of justice, and with a view to public policy, he thought it right to revoke the taxing of those bills. This, then, was one of those cases which he supposed hon. gents. on the opposite side meant to bring forward in order to prove their assertion that the Court of Chancery was a curse to the country (hear, hear). But he hoped that this petition would not be given as a proof of the abuses in Chancery. Had the Lord Chancellor adopted any other line of proceeding than that which he had pursued, he would have been guilty of a gross dereliction of duty, and he would have betrayed the high trust with which he was invested (hear, hear).

Mr. Hume said, that since the learned gent. had done him the honour to allude personally to him with reference to the part which he had taken in a former debate, he begged leave to repeat his opinion of the Court of Chancery, and to state that an institution like that Court was disgraceful to the country by which it had been too long protected. Under the appearance of administering justice, that Court was destructive of every principle of justice. It was a Court of Equity only in name; in point of fact it was a court of injustice—a court of iniquity. The learned gent. had evaded that part of the petitioner's complaint which spoke of twelve years' delay with the term "a few years." Good God! how many of those few years did the learned gent. intend to give to his own life (a laugh)? The Court of Chancery was a nuisance to the country, and a committee of the House of Commons should long since have been empowered to uproot it from the country. But his Majesty's Government had evaded inquiry, they had screened the proceedings of Chancery, and it was not the fault of those whose wish it was to drag those abuses into light, that an opportunity was not allowed them to do so. Let any hon. member look to the report now on the table, and refer to the amount of capital in the possession of the Court of Chancery. They would find a little nest egg of thirty-nine millions of the property of the King's subjects within the claws of Chancery (hear, hear, and a laugh). In the year 1750 there were only two millions and a half of property lodged in the Court of Chancery. The fearful increase had been added during the long reign of the present Lord Chancellor. If that vast sum of

thirty-nine millions, instead of being hoarded up under the lock of Chancery, were distributed to the heart-broken suitors of that Court, it would be but an act of tardy justice to them. Under such a mass of evils—such a system of injustice and abuse—was it too much to say that the Court of Chancery was a curse to the country?

Mr. Sykes could not see that the learned gent. had made out any statement to shake the credit of the case contained in the present petition. He said that the costs had been improperly taxed; but they had been taxed in the master's office. The other ground of objection advanced against the petition was, that the petitioner had been a solicitor for opposite parties. He (Mr. Sykes) denied that such had been the case. The petitioner had certainly acted for two parties in the suit, but they were not opposite parties. With respect to time, the learned gent. seemed to think that 12 years were but a brief lapse. It might be so certainly in the Lord Chancellor's court, where time moved with such a tardy pace that the lapse almost of centuries was little thought of (hear, hear, and laughter), but 12 years to the unfortunate suitors of that court were surely quite enough to try their patience.

The petition was then read, and ordered to be printed.

#### *Attorney-General's Bill.*

THURSDAY, MAY 18.—The Attorney-General rose to move for leave to bring in a bill, founded on the report of the commissioners appointed to inquire into the practice of the Court of Chancery. The house, he said, must be aware that on the present occasion it would be necessary for him, after the various allusions that had been made to the subject of his motion, and the frequent debates respecting it, to enter upon a consideration of the manner in which the commissioners appointed to inquire into the practice of the Court of Chancery had performed their duty—to ascertain what were the particular points to which they had directed their attention, and what was the general nature of the measures which they had recommended for the adoption of parliament. The house would also feel, that in performing this task it would be necessary for him to enter into details which might appear dry and uninteresting, but when hon. members recollected that those details were connected with the reform of one of our highest judicial establishments, involving in its practice a great portion of the property, and of the best interests of the country, he was persuaded they would bear with him, on account of the importance of the subject (hear, hear). The composition of the commission had been made the subject of many observations both in and out of the house. It had been said, that nothing good could be expected from a commission so constituted. If to conduct an inquiry into the practice of an establishment of such a nature as the Court of Chancery, it were objectionable to appoint persons deeply conversant with the subject—of great experience and of acknowledged talent—then he admitted that such an objection would apply with full force against the present commissioners, for it would be impossible to find in the country an equal number of persons possessing such knowledge of the subject, such

experience, or such talent. But it had been said, "admitting the qualifications of these individuals, yet their interests and prejudices are such that it is impossible they can carry in the inquiry in such a way as to lead to any important result." He appealed to the individuals present, members of that commission, from some of whom, though his friends, he was in the habit of differing on political questions, whether it was possible for any inquiry to have been conducted with a greater spirit of fairness and liberality, than the inquiry which this commission had conducted. Although not a member of the commission, he had not been an attentive observer of the inquiry, and he could state, without fear of contradiction, that upon every suggestion of abuse of any description, an immediate investigation took place; and if it appeared that any alteration or reform was expedient, it was immediately recommended. Not only, however, had exceptions been taken to the composition of the commission, but some defractory observations had latterly been made with respect to the tone, temper, and spirit, in which the inquiry had been conducted. It was said that the report which the commissioners had presented to the King, and which, in pursuance of his Majesty's commands, had been laid on the table of the house, was overwhelmed by the mass of evidence (hear, hear). Insinuations had been thrown out that the commissioners desired to cloud that which it was their object to elucidate and render as perspicuous as possible. It was impossible that the commissioners could have pursued any other course than to annex to their report the whole of the evidence upon which it was founded. If they had not done so, he was satisfied that the day after the report had been submitted to the house, some member would have moved that the evidence should be produced and printed. If the commissioners had pursued another course—if they had selected that part of the evidence which they considered most important, as containing the essence of the information which they had obtained—they would have been charged with making garbled extracts, and another motion would have been made for the production of the whole evidence. The commissioners, therefore, had no alternative but to lay the whole body of the evidence on the table of the house, thus putting the house in possession of all the information which they themselves possessed. One of his learned friends (Mr. Brougham) could not, he was sure, object to the publication of the evidence, because in a former session, when the subject was under consideration, he expressed a hope that the commissioners would not rest satisfied with merely laying the report on the table of the house, but would also set forth every particle of the evidence which might come before them. The house, perhaps, would wish to be informed as to the manner in which the evidence had been taken before the commission. For the purpose of obtaining information as to the important subject to which their attention was directed, the commissioners, in the first instance, requested the attendance of those persons whom they thought best calculated from the experience they possessed to give them information. They did not, however, exclude any evidence. The evidence of any person who thought he possessed information was received if tendered; and

in order that there might be no misrepresentation, copies of the evidence were regularly transmitted to each witness for revision. He had felt it his duty thus shortly to state the manner in which the commission had proceeded; and he repeated with confidence, in the presence of several of the commissioners, that the inquiry, from its commencement to its end, had been conducted with a spirit of liberality and candour—with an anxious desire to detect abuses if any existed—and with an anxious wish to apply a particular remedy to any abuse which might be detected, as when unnecessary delay or expence accompanied the proceedings in the Court of Chancery. It was material, for the purpose of considering the manner in which the inquiry had been conducted, to look at the objects to which the attention of the commissioners was directed, as well as to the suggestions which had been thrown out with respect to more extensive reforms than the commissioners had thought proper to recommend. He had heard it said out of the house, and insinuated within it, that the jurisdiction of the Court of Chancery ought to be abolished. He had heard it insinuated—may more, boldly stated—that this jurisdiction was not founded on common law, was supported by no statutory enactments, was prejudicial, and ought therefore to be got rid of. If this were true, then the labours of the commissioners had been misdirected. Instead of inquiring into the details of the course of proceeding in the Court, the house ought at once to have declared against the system. He would here beg leave to recal to the recollection of the house, how necessary the jurisdiction of the Court of Chancery was in the present state of property in this country, and how impossible it was to get rid of it. He would take the liberty of pointing out some of the principal objects of this jurisdiction. Every person who knew any thing of law, must be aware that almost all the real property in the country was vested in trustees for a variety of purposes, and a great deal of the personal property was in the same situation. Was it not necessary that a jurisdiction should exist somewhere for the purpose of enforcing the fulfilment of those trusts? Was it not necessary that power should exist in the Court of Chancery, or somewhere else, to compel the performance of duties in which so much of the property, and so many of the essential interests of the country were involved? But there was no jurisdiction over these trusts in the common law. The jurisdiction of the Court of Chancery, with respect to injunctions of every description, was highly necessary. In the case of the infringement of a copyright, for instance, the common law provided no adequate remedy. The plaintiff might obtain damages in a court of law after a year's delay, but in the meantime the injury would go on. There was no means of checking it, except by the intervention of the Court of Chancery. In another class of cases touching the specific performance of contracts, the common law had no jurisdiction. A court of common law could merely give damages for the breaking of the contract; but they could not compel its specific performance. Every body must feel that such a limited jurisdiction was inadequate. The defendant might abscond, or he might go to prison, and not be in a situation to pay the damages. A jurisdiction must therefore exist

for the purpose of compelling the specific performance of contracts according to their letter and spirit. In another class of cases of great importance in a commercial country—namely, cases of accounts between parties,—the common law courts possessed no adequate jurisdiction. He was not now talking of the manner in which the jurisdiction of the Court of Chancery was exercised; his object was merely to show that it was necessary that some such jurisdiction should exist somewhere. Another class of cases in which the jurisdiction of the Court of Chancery was eminently useful, was that of fraudulent transactions. The case of a fraudulent contract could not come into a law court unless one of the parties carried it there in an attempt to enforce the contract. The law court could not, like the Court of Chancery, compel the contract to be delivered up for the purpose of being cancelled. After he had alluded to these cases (to say nothing of those of infants and married women, with respect to whom, no provision was made by common law), it must, he thought, be apparent that the jurisdiction of the Court of Chancery could not be dispensed with in this country. The question then was, where was the jurisdiction to be vested? This was not at all a complicated question. The jurisdiction being admitted to be essential, it was clear that it must either be exercised by a separate tribunal, or engrafted on the common law. There were some persons who contended that a separate jurisdiction was inexpedient, and said that if the jurisdiction were united with that of a court of law the system would work better. He totally differed from the persons who entertained that opinion. If the plan they recommended were adopted, it must, in the first instance, double the number of the law courts, and upon combining two systems so dissimilar in their nature, the courts of law must appoint one day for law, and another for equity. The two tribunals would still be essentially distinct, without possessing any of the advantages derived from their present separation. Besides, the administration of justice at common law required great study and learning, and, as every body acquainted with the subject knew, the administration of justice in equity, depending as it did, as well as that of common law, on positive cases, required the same study and extent of reading, he would ask whether, if the administration of justice and of equity were united, the same extent of information would be brought to bear upon the decisions in either case as was at present displayed whilst they were separate? Was there no rule to serve for a guide in this respect? It would be said, the practice of the Court of Exchequer. The Court of Exchequer had a jurisdiction in law, and likewise a jurisdiction in equity. But it was well known that a suitor who wished to try a question at law, preferred the King's Bench to the Court of Exchequer, as he did the Court of Chancery to the latter court, if he was desirous of settling a point of equity. The inconvenience resulting from the union of the two jurisdictions in the Court of Exchequer had been found so great, that a learned gentleman, accustomed to vote on the other side of the house, some years back brought in a bill, which was passed, to separate the two jurisdictions—not entirely, but substantially. In consequence of that bill, the equity jurisdiction of the Court of Exchequer was now discharged

by the Chief Baron exclusively, in one court, whilst the legal jurisdiction was administered in another by the rest of the Judges. Having thus endeavoured to satisfy the house that the equitable jurisdiction must continue, and must be administered by a separate tribunal, the next question was, could any essential change be effected in the machinery by which the jurisdiction was administered? In the first place, the complainant filed his bill, which was answered by the defendant upon oath. In this mode of proceeding the jurisdiction was most powerful for the object which it was intended to effect. To what point then should the attention of the commissioners have been directed? How were they to proceed, in order to reform the abuses which were supposed to exist in the practice of the Court of Chancery? It was impossible that the commissioners should suppose that the equitable jurisdiction should not continue to be administered in a separate court, and that the causes should not come on in the form of a bill and answer. Having laid that down as a principle, it was necessary that they should confine their attention solely to those points of form which created unnecessary delay and expence. In order the better to effect their object, the commissioners determined to follow a Chancery suit through all its various details, from its commencement to its end; intending, if they saw any thing exorbitant, to retrench it, and to get rid, as far as possible, of all unnecessary expence and delay. This course the commissioners had adopted and pursued with a degree of industry and intelligence which had, perhaps, never been surpassed in any similar inquiry. The first subject to which the commissioners directed their attention was the subpoena. It was objected that the form of the subpoena was such that an unlettered man could not make himself acquainted with its object. This was an important objection, and accordingly the commissioners altered the form of the subpoena, so as to make it quite evident to the party upon whom it was served what it was the court required him to do. The commissioners found that the time which a defendant could, under the present system, take before he entered his appearance in the suit was much too long, and they therefore recommended that less should be allowed. The next step in the cause was to compel the defendant to put in an answer to the plaintiff's bill. If the defendant failed to do this within a certain time after having received a subpoena, he was taken by the sheriff on an attachment. If the sheriff returned *cepi corpus*, a *habeas corpus* must be resorted to, in order to bring the defendant to the bar of the court. Should he then refuse to put in an answer, another *habeas* was applied for; and should he continue in the same resolution, an *alias habeas*, a *pluries habeas*, and an *alias pluries habeas* must successively be had recourse to, before the bill could be taken *pro confesso*. It was evident that much of this machinery was unnecessary, and the commissioners therefore thought it proper to inquire how far the time which a defendant was allowed for putting in an answer could be shortened. If the sheriff should return *non est inventus* on the attachment, another species of process was resorted to. In that case recourse was had to an attachment with proclamation, commission of rebellion, and commission of sequestration. All these pro-

cesses might have been necessary when the jurisdiction of the court was in its infancy; but now that the jurisdiction was fully established, it could not be requisite to incumber the suitor with the delay and expense occasioned by these various steps to effect the same object. It was important that sufficient time should be allowed to a defendant for putting in his answer, but it was likewise important that the time allowed should not be too much. The commissioners, after having considered the subject with great care and attention, recommended that a defendant should, after appearance, be allowed eight weeks to answer in a town cause, and ten weeks in a country cause, and that if he did not answer within that time, the bill should be taken *pro confesso*. Suppose, however, that the defendant put in his answer. It might be evasive. It was essentially necessary that the plaintiff should have the power of compelling a clear and specific answer to the questions which he proposed. If, therefore, the answer should be evasive and insufficient, the plaintiff had a right to except to it. This was an extremely important point, and he begged the attention of the house to it. Mark the consequences of an exception to an answer under the present system. The plaintiff having put in his exceptions to the insufficiency of the answer, the defendant contended that the answer was sufficient, and the question was then referred to the master, who decided against the sufficiency, and in favour of the exceptions. The defendant appealed from the master's decision to the Vice-Chancellor. The cause was set down for hearing; and perhaps three or four weeks, perhaps three or four terms, might elapse before it was decided. The Vice-Chancellor decided against the answer, and confirmed the master's report. The defendant then said that he was not satisfied with the opinion of the Vice-Chancellor, and he appealed to the Lord Chancellor. The cause was set down for hearing, and after another delay was decided, and the report of the master again confirmed. Was this final and conclusive? By no means. The defendant might appeal to the House of Lords. The cause was again set down for hearing, and a year, or a year and a half might elapse before it was decided, and then the result would be the confirmation of all the previous decisions. The defendant then had as much time allowed for putting in a further answer as he would have had if he had taken no exceptions to the master's report. The further answer might be insufficient, and the same round of decisions and appeals might be gone through again. He did not mean to say that the course of proceeding which he had described was always pursued, but it was certain that a defendant had it in his power to, and not unfrequently did, avail himself of all those means of delay. A third answer was put in, and this, like the other two, was for the purpose either of gaining time or of causing vexation, insufficient. The same round of decisions and appeals would again take place. This course of proceeding was not new. It existed in the time of Lord Bacon, of Lord Nottingham, of Lord Somers, of Lord Hardwicke, and of Lord Camden. The subject had engaged the attention of the commissioners, and they recommended that the decision of the masters should be final, and that a period should be prescribed within which a second and a third answer should be put in, and if the

SESS. 1826.

third were not satisfactory, the defendant should be committed to custody. He was aware that great diversity of opinion existed as to whether the decision of the master, upon exceptions, should be final, and it was fit that the point should be maturely considered; but if he obtained leave to bring in the bill, an opportunity would occur in a future stage for debating all such particulars. The commissioners had bestowed the most anxious attention on the subject, and their opinion was, that the decision of the master should be final, unless he himself chose to refer the question to a higher authority. It sometimes happened, that after an answer was put in, the cause was substantially at an end. The plaintiff found the answer to be completely decisive as to the merits of the case, and was satisfied that he could not proceed further. After the cause was thus substantially at an end, and the plaintiff was unable to proceed another step, and did not intend to do so, the bill could not be dismissed for three-quarters of a year. This was not all. The plaintiff might then, by taking advantage of a mere form, prevent the bill from being dismissed for three-quarters of a year longer. This was a practice which called for remedy (hear, hear). The commissioners had in consequence recommended, that if a plaintiff did not undertake to speed the cause within the first term after the answer was put in, the bill should be dismissed. The house would of course consider the wide difference between suits in equity and suits in courts of law. In the courts of law they tried one or two simple issues; in the courts of equity several issues were tried, extremely complicated, wherein the parties were all differently interested, and drew in different directions. The duration of a suit in a court of law, and the duration of a suit in equity, were not, therefore, capable of being compared. But, almost in the last stage of a suit, when delay after delay had taken place, and when the party was on the eve of being dismissed, all he had to say was, "I am advised to amend;" and, on the payment of nominal costs, the case had to begin *de novo*, and all the former procedure was renewed. This could be repeated; he had the same power in every stage; he had only to say "I wish to amend." The commissioners had therefore said, "You shall not amend after a particular stage, and not more than once." This power of amending was most essential to the party, because he was often placed in a different situation on account of the answer which was put in; but it was a power which should not be abused, and therefore the commissioners recommended that the party should not be permitted to amend more than once, unless a proper case was made out to the satisfaction of the court. Another and a most important check suggested by the commissioners was the payment of costs. He hoped the house would not understand him, when he pointed out these delays which might take place, if parties were willing to abuse the opportunities afforded them,—to affirm that it was common for this power to be abused. There had, however, been instances of gross abuse; and if there had been but one instance, it was the duty of the house to interfere. But as he had already shown that the jurisdiction of the Court of Chancery must exist, the commissioners could not do more than they had actually effected. His learned friend (Mr. Abercrombie), than whom there was

no person more competent to form a judgment upon this subject, must approve of this part of the report; for his learned friend had observed upon a former occasion, that a great deal might be done in abridging the causes between the commencement and the issue, and that there ought to be a special direction to the commissioners to attend to this point. The commissioners had pursued the course here suggested; and he (the Attorney-General) confidently appealed to the learned gentleman for his support on this part of the question. He would now return to the proceedings of the court. After the answer had been put in, the parties might go to a hearing upon bill and answer; the plaintiff, however, might amend. Evidence was then gone into before an examiner, and the case and evidence then came before the judge; but as questions often arose not exactly fit for discussion in an open court—such as matters of debt, and points requiring close investigation,—the judge directed these points to be heard before the master, who investigated the subject privately, and made his report to the judge. After this, the cause was set down for final hearing. He had pursued the case up to the issue; there was bill, answer, and evidence. By the present course the evidence was taken before the examiners by interrogatories, not *vivâ voce*, as in a court of law; and it formed a very important subject of consideration for the commissioners, whether this practice should be continued or not. He (the Attorney-General) confessed that his prejudices, as a common-lawyer, were strongly in favour of *vivâ voce* evidence; and he could not understand, at one time, why a different course should be pursued in the Court of Chancery from that adopted in a court of law. After reading the evidence taken before the commissioners, and after mature consideration, however, he confessed himself a convert to the practice of the Court of Chancery. He was convinced that no advantage would be gained by a change in the mode of taking evidence in that court, but, on the contrary, great injury. He would refer to one most important consideration,—namely, that the evidence could not by possibility be heard by the judge who heard the cause, unless the court were entirely remodelled, and unless two or three additional judges were appointed; and if the judge who ultimately decided the cause, decided it on evidence taken *vivâ voce* by another, all the advantages attending *vivâ voce* evidence would be completely lost. If no advantages were gained, what was lost? The expense was increased, and the suit was prolonged; for questions would arise respecting the admissibility of evidence, and delay would certainly ensue. He (the Attorney-General) had seen evidence taken before the Commissioners of Bankrupts, and the length to which it extended, and the inexplicable confusion which it exhibited, were such that he could not have made up his mind to decide on such evidence. Besides, these examinations would go on without end. A party would be able constantly to supply any deficiency he might perceive in his proof: hence the examinations would be protracted, and there would be strong inducements to the commission of perjury. Plausible, therefore, as the alteration seemed, it would be productive of no real advantage; but, on the contrary, it would be attended with the disadvantages he had described. He re-

membered that one of the witnesses, a gentleman of great experience now retired from the bar (Mr. Bell), when he was asked whether any instance had occurred to him in which the ultimate justice of any case had been defeated by the present mode of examining witnesses in the Court of Chancery, replied, "I do not recollect that in any case I have gone out of court with dissatisfaction as to the decision of the fact, where the judge, in the first instance, has thought proper to decide. Whenever it was a case where one could entertain a serious doubt, the judges have always sent it to an issue." He referred to this opinion with confidence, for there was no individual who had possessed more extensive experience in that court. This question had been discussed in another country, and the same view of it had been taken. About four or five years since, a convention was summoned at New York to consider of some alterations of the judicial system. It was there stated, that the law of the state was the English common law, modified by new statutes; that their Court of Chancery was constituted precisely on the same principles as our's. It was proposed to abolish the Court of Chancery—not to abolish its jurisdiction, but to unite the equity court to the courts of law. The proposition was discussed with great talent, particularly by one member; and, after a full consideration, it was deemed more wise and expedient to continue the present system. It was also discussed whether the examination of the witnesses should be *vivâ voce*, and an individual of great weight and respectability in that state had expressed an opinion which he would quote, because it coincided with the opinion delivered by Mr. Bell. [The learned gent. then read the opinion, and remarked the extraordinary concurrence of opinion between experienced persons in two different countries]. He believed that there were several persons who had entered upon the inquiry with the same prejudices upon this point as himself, and who, in the progress of the inquiry, had arrived at the same conclusion as he had. He now brought the cause down to the time of hearing; but he should postpone what he had to say on this head, till he came to consider that part of the case which related to the master's report. Every body must be aware that great delays existed in the master's office. But the house and the country were not to imagine from what he had stated that the inquiries could be dispatched with great expedition. The subjects which came before the master required great time for investigation; such as intricate accounts, disputed titles, and pedigrees, which consumed a large portion of time. All the commissioners could do was to take the circumstances under consideration. Under the present system the master was passive; the solicitors managed the case; and there was every inducement for delay on the part of the solicitors. When, therefore, the cause was known, the remedy was easy. If the master was passive, all that could be done was to arm him with authority, and enable him to act. It was also proposed, in such a case, to take the agency from the party in delay, and let the other be the actor. Let the masters be invested with these powers—let them attend to their duty well and faithfully, and delay in the master's office would no longer be a subject of complaint. He had now brought the case down to the final hearing, from the commencement

The commissioners had travelled the same route before him; and he thought he could say with confidence that not a single circumstance had escaped their attention. He now came to the consideration of a most important point—of what use was expedition in the progress of a cause, unless there was an expeditious decision? This point had not escaped the commissioners. It was necessary to apply a remedy, and an adequate one, to the evil as it existed. Before, however, he inquired into the extent of the evil, he would mention the remedy they had prescribed. With respect to appeals,—according to the present practice, on the hearing of an appeal from the Vice-Chancellor before the Lord Chancellor, new matter was introduced; although, from the very nature of an appeal, it ought to be decided on the old facts; instead of which, a cloud of new affidavits was introduced before the Lord Chancellor, who, in fact, decided on a new cause. Nothing was more unjust to the character of an inferior judge than this proceeding. It was an anomaly in the nature of appeals for new matter to be introduced into an appeal from a subordinate to a higher tribunal. The very nature of an appeal called into question the judgment of the inferior, which ought to be reviewed by the superior on an examination of the same facts. But it happened, from the circumstance of the Lord Chancellor and the Vice-Chancellor being considered as belonging to the same court, that this extraordinary anomaly had crept in, whereby a party could resort to indirect means of remedying a defective cause. The learned member (Mr. Abercrombie) had pointed out this as an evil requiring amendment. The commissioners had recommended that there should be no appeal allowed, except on a consideration of the same facts. The effect of this regulation would be to diminish the number of appeals; for it was owing to the admission of new facts that appeals had so much increased. There was another measure of considerable consequence recommended by the commissioners, and which he (the Attorney-General) regretted he should be the instrument to bring forward. The measure to which he referred was the limitation of the number of counsel to speak in a cause. He regretted that it should fall to his lot to propose a regulation which appeared calculated to prevent the junior members of the profession from distinguishing themselves. But he knew so much of the character of the profession, that he could undertake to say, that there was no body of men that possessed more probity and public spirit, nor more readiness to sacrifice their own interest to the good of their country, than that to which he had the honour to belong. After a long experience of their character, he was convinced that if they were satisfied the measure was necessary, they would submit to it with cheerfulness. The time which would be thus saved was evident. In page 96 of the report, Mr. Hamilton was asked, "How many counsel, to the best of your knowledge, were heard on each side?" He replied, "I think I counted seven on one, and five or six on the other; and there were as many in a case arising under Howard and Gibbs's bankruptcy." In another part of the evidence it was said, "There were seven or eight counsel in that cause; each of them spoke at great length" (a laugh). The Lord Chancellor made it a rule to read all the affidavits in a cause; and in the case of "Se-

nior against Smith," there were eight counsel and ninety-six affidavits. The proposed alteration would, in his opinion, be of great advantage to counsel. Whilst the number of counsel was unlimited, each was apt to leave the conduct of the case, in some degree, to the persons with whom he was associated (hear, hear); but if only two were allowed, each must and would exert himself. If the commissioners, however, had made a regulation prejudicial to the junior members of the bar, they had recommended another which was advantageous to them. He did not mean that it was intended as a compensation by the commissioners, but it was calculated to operate as such. Formerly, it was the practice in the Court of King's Bench for the senior counsel to proceed with his motions, and then the next; and it often happened that a junior counsel had no opportunity to move during the whole term. This very practice existed at the present day in the Court of Chancery; although, in the time of Lord Mansfield, this practice was altered in the Court of King's Bench. It was intended that the same alteration should now be made in Chancery. The commissioners had also proposed, that no person should be allowed to prosecute an appeal, except on a certificate of counsel, pledging himself that the application was fit and proper to be made to the Lord Chancellor. He was aware that an idea prevailed, that the signature of counsel in cases of this description would be mere matter of form; but no opinion could be farther from the fact. A learned member (Mr. Brougham) had observed, and with great truth, on a former occasion, that nothing could be a greater mistake than to suppose that counsel were disposed to recommend the bringing actions; and, upon that point, he (the Attorney-General) fully concurred with the learned member; but the signature of an appeal, it would have to be recollected, was a far nicer proceeding than even the recommendation of an action. If a counsel recommended an action and failed in it, he committed himself certainly, but the fact was known only to his client; but if he signed a certificate of appeal without sufficient cause, the failure would be known universally,—to his client, to the judge, to the bar, to the public. The necessary regard which every man had for his own reputation would become a sure protection, under such an arrangement, against the prosecution of appeals in any cases where substantial grounds did not exist for finding fault with the original decision. So much, then, for the course recommended with a view to diminishing the number of unprofitable appeals; to that course he anticipated very little objection; but he now came to a part of the subject upon which greater difference of opinion might exist,—the management of proceedings in cases of bankruptcy. The measure which was recommended by the commissioners had two objects,—the first, to lessen the number of bankruptcy cases brought before the Lord Chancellor; and the second, to facilitate the decision of such cases as should still continue to be brought before him. As the practice now stood, every question of fact connected with proceedings in bankruptcy came before the Lord Chancellor upon affidavit; and every hon. member, who was familiar with legal transactions, knew how difficult—he might almost say impossible—it was, upon affidavit, to decide upon any disputed question satisfactorily. Parties could

not be compelled to make affidavits: there was no power of cross-examination; and it required much time to balance and weigh conflicting testimony given in this way, particularly where either party was desirous of concealing the truth. For the serious operation of all these drawbacks, he appealed without fear to the learned member (Mr. Scarlett), or any other of the legal members who were in the house. Now what was proposed was, that, in the first instance, a certain number of commissioners should be elected, who should be the first judges applied to in all cases of bankruptcy. These commissioners were to form a court, which should decide, not upon affidavit, but by witnesses examined *vis à voce* before it upon all disputed facts, in cases of bankruptcy; and after their decision, each party was to have a right to appeal to the Lord Chancellor. The effect of this would be, that a great number of cases which now came before the Lord Chancellor would be disposed of by the commissioners, and those which went into the upper court upon appeal would be decided there, not by the present lengthy and inconvenient system of hearing upon affidavits, but upon the notes of evidence taken by the commissioners, before whom the cause had originally been investigated. In addition to the measures already detailed, it was intended to relieve the Lord Chancellor from his jurisdiction in cases of *habeas corpus*. With respect to what were called the arrears of the Court of Chancery, it was scarcely conceivable what a mass of misrepresentation had gone forth. The house would be surprised, after all that it had heard as to the arrears of the Court of Chancery, to learn, from the best authority, what the real state of the case was. With respect to the Vice-Chancellor's Court, in which all causes were first heard upon petitions, the arrear of business was very small indeed. The late Master of the Rolls, it would be remembered, had laboured for a long time under severe illness; in consequence of which a slight arrear had been occasioned in the Vice-Chancellor's Court; but, previous to that event, there had been no arrear of business before his Honour at all, and the causes set down in Easter Term had been regularly disposed of in the Trinity Term following. In consequence, however, of the illness, first of the late Master of the Rolls, and then of the present Vice-Chancellor, at the close of the year 1824, an arrear of about seven terms had been created. In eighteen months which had elapsed since, that arrear of seven terms had been reduced to four: this was an extent of delay not greater than was experienced in the Court of King's Bench; and he (the Attorney-General) had no doubt that, in twelve months more—without any assistance from the new measures—that arrear would be worked off altogether. Substantially, therefore, there was no occasion to provide for any arrear of business in the Court of the Vice-Chancellor. The portion of the Lord Chancellor's business which the house would now have to look to, lay in the rehearings and appeals; and some gentlemen had declared that it would take forty years to work up the arrear of the Lord Chancellor's Court as to those two departments. The fact was, that in the month of January last, the total amount of causes in arrear had been 109. How little that arrear of business had been increased within the last few years, might be gathered

from the fact, that, by the return ordered in the year 1822, the arrear of causes then stood at 105. Every gentleman acquainted with the mode of transacting business in the Lord Chancellor's Court, must be aware how very quickly that arrear would be got through, if his lordship had only the power of directing his undivided attention to it. He (the Attorney-General) had in his possession an account of the whole business which had been done in the Lord Chancellor's Court during the last three years; and he regretted that it was not formally upon the table of the house, that his members might see the laborious life which that noble and learned personage actually led. The fact was, that not a day elapsed in which the Lord Chancellor was not called upon to hear something or other in the shape of a motion, which it was of the highest importance to the parties concerned to have immediately disposed of. In a great variety of cases, where a hearing was not obtained instantly, the whole object of the proceeding was lost. In a case of an appeal from a decree, the hearing must be instantaneous, or the decree would be carried into effect; and the appeal perhaps embraced the whole merits of the cause. If it were said that the Lord Chancellor lent himself too readily to applications of this nature, the answer was, that he trusted—what else could he do—to the representations of counsel. The Lord Chancellor could have no intuitive knowledge of the merits of a case; he could only appeal to those who were acquainted with them. He could only say to a barrister—“If you assure me, as a gentleman, that if I do not take this case out of its common course, the greatest mischief will accrue to the parties—I will hear it.” In questions of injunction—of lunacy—in a great variety of other proceedings—day after day, the same thing constantly occurred to interfere with the regular business on the paper; and yet, with all this, the house would observe there was no increase of arrear. The arrear was almost the same now as in the year 1822; there was no arrear of bankruptcy cases or motions; the only arrear was in the re-hearings and appeals. The question then was—how should this arrear be got rid of? It was easily answered. The Vice-Chancellor's court needed no alteration at all; and all that was to be done was wanted only for the court of the Lord Chancellor. In that court, then, every thing which went to save time would tend to reduce the arrear (which was not increasing); but it was hoped that the measures recommended by the commission—which diminished the number of counsel allowed to be heard—limited the quantity of business to be done in the court, and simplified that which was actually transacted—it was hoped that, subject to the operation of these measures, the existing arrear of 109 causes would not entirely disappear. Having pointed out, as briefly as he might, the modes by which it was proposed both to diminish and facilitate the details of business in the Court of Chancery, he (the Attorney-General) had little more to add beyond a hope that the house would feel that the commission had done its duty. The commissioners had done all which, in their opinion, it was wise or expedient, in the first instance, to do. Let their present plan be carried into execution; and when the working of that alteration was seen, if farther remedies were needed, those farther remedies might be applied.

In what he had stated to the house, he had abstained entirely from every personal or party allusion. He had done so, because he thought that the object now was to amend, or make perfect, a great and important system; and, in fact, so completely did he feel the system, and the system alone, to be the subject in question, that he had not even once alluded (except incidentally) to the noble individual who had presided for so many years, and with such distinguished zeal, and learning, and ability, over it. In truth, to the praises which, from time to time—even by his bitterest political opponents—had been bestowed upon the talents and industry of that noble lord, he (the Attorney-General) could hope to add nothing. He had heard from the learned member (Mr. Abercrombie) such an eulogium upon the noble lord's acquirements—upon his uncommon memory—on his profound and intimate knowledge of the law of his country—and his extreme anxiety to do justice to suitors—as made it needless that any thing should be added to it. To go further, and to quote the opinion of one who, as his means of judging had been great, so his political hostility to the noble lord had been most marked—he might almost say most active—the late Sir Samuel Romilly had said of the Lord Chancellor, that no man he (Sir S. Romilly) had ever known, or read of, had possessed more talent to qualify him for his place. That he had never met a judge so anxious to do justice to the suitors in his court; that if he had a fault it was an over-nicety and anxiety upon that head. To testimony like this, it became impossible to add any thing. The noble lord to whose conduct it was given, had been 50 years in the service of the public. From the first moment when he had attracted the public eye, he had been marked out for the situation which he now held; and not one act had there been in his whole life which had not confirmed the opinion originally entertained of him. It was but due to the Lord Chancellor to say, that, as a member of the commission, his conduct had been most active, candid, and liberal. No man could have been more ready to point out difficulties, or to rectify any abuses, or check any needless expenses in the constitution of his court, than he had been. Farther, in the way of commendation, it would be offensive for him (the Attorney-General) to go; and he had already, he feared, too long occupied the attention of the house; he should, therefore, finally sit down by moving “for leave to bring in a bill to carry into effect the measures recommended by the late commission upon the practice of the Court of Chancery.”

Mr. John Williams did not propose to follow the learned gent. through the whole details of his speech; in which, however, it might be as well to observe, the learned gent. had omitted to give any explanation as to the object or purpose of his bill. For the panegyric which the learned gent. had pronounced upon the commission, he at least deserved the warmest thanks from all concerned in it; and he (Mr. Williams) would certainly so far imitate the tone which had been taken as to keep the discussion as free as possible from party or political allusions. The report would do good, no doubt, as far as it went. The only question was, whether it went far enough; and upon that point he was compelled to say he thought not. Notwithstanding all the demonstration of the learned Attorney-General, the fact that there

were grievous complaints, and had been for years—complaints both loud and deep—against the Court of Chancery, remained unaltered; and the fault of the report before the house—though, no doubt, it would do good, if it were only by exciting observation and inquiry—was, that it failed to apply itself to the main and important features of the grievance. What was to be effected by this bill which might not have been done 25 years ago by the simple interposition of the authority of the noble lord at the head of the court himself? He spoke now upon the best authority—the best evidence. Almost every thing which the commission proposed to do, the Lord Chancellor might have done by his own authority years ago. Mr. Bell, who had made a large fortune in the Court of Chancery, and was not likely hastily to quarrel with the conduct of it, said, in page 392 of the report, “Much should be left to the discretion of the judges, who, I think, are competent, without legislative assistance, to make most of these reforms which have been alluded to, and are best able to do it, as they may vary and alter their rules as experience demonstrates the necessity.” And yet, whatever was the necessity, it was certain that nothing had been done. Again, in the evidence of Master Stratford was the following passage:—“It is a matter of great regret, looking to the circumstance that the more material ordinances heretofore made for the regulation of the several offices of the Court of Chancery were made by the Lord High Chancellor for the time being [or persons holding the great seal, from the time of Lord Bacon downwards, not forgetting even the time of the Protectorate, and much less the times of Lord Clarendon and Lord Nottingham]; and looking also, not only to the learning, but to the experience and wisdom of the present Lord High Chancellor, that he has not followed the example of his great predecessors, and of himself determined what alterations in the practice of the several offices of the court may now be usefully made and ordained accordingly.” Still, notwithstanding the manifest, and now avowed, inconveniences of the existing system, no alterations or improvements had ever been made. With reference to the report itself, it did not appear that it had by any means been generally assented to by the commission; and it was not so much as signed by Lord Redesdale. As to the remedies which were recommended by the commissioners’ report, it was much doubted by the members of the profession whether, if carried into effect, they would produce any benefit. It had been stated by the Attorney-General, that the commission had afforded every facility to inquiry; that they threw their arms wide open to complaint; and that the whole profession were invited to furnish their suggestions, and to offer such hints for the improvement of the Chancery system, and the remedying of its abuses, as their experience might suggest. But neither the solicitors, nor the metropolitan law societies, were applied to or consulted, although the evidence of the former body of men in particular would have been found most useful. Indeed, he had been informed that no person, who had not been especially summoned, had been brought before the commissioners. He had not heard of a single volunteer. He therefore contended—and he thought he had a right to contend—that although the evidence brought forward before the commissioners was not, perhaps, deficient in autho-

rity, it was too limited in extent (hear, hear). Solicitors were not duly represented in that commission. Judges were well represented, and learned gents. with stuff gowns, and with silk gowns, and the masters and officers of the court, were all duly represented, but not a single solicitor had a voice in the commission. The reason implied, if not assigned for this exclusion, might be found in the 23d page of the report, where it was said that the delays in Chancery were to be mainly attributed to the solicitors. He (Mr. Williams) did not believe one word of that charge. Every man who knew any thing of the conducting of a Chancery suit, must be aware that large advances of money were frequently made by the solicitors at the commencement of a suit, in order to meet preliminary expenses and to fee counsel, who in many instances were nine or ten in number. In a case last term, the counsel for the plaintiff said, that if all the defendants were allowed to put in answers he should be obliged to pay 300l. for office-copies, in order to see what had been sworn against him, so that in this instance 300l. might have been advanced by the solicitor upon the outset of the suit. He mentioned this, in order to shew that large advances were constantly made by solicitors; and with this fact on record, with what consistency could that body of men be charged with creating delays in Chancery? Was it not their object that the suit should be as speedily determined as possible? and for this convincing reason—that the sooner it was decided the sooner would they be reimbursed their heavy advances? With what show of truth or consistency could it be maintained, then, that solicitors were the cause of delays in Chancery, when their dearest interest lay the other way? He believed that if solicitors had been on the Chancery commission, that they would have laid the blame of delay on a higher quarter. With respect to the subject of injunctions, the report had stated nothing satisfactory on that head. When a plaintiff at common law had obtained judgment and a writ of execution by a process which certainly could not be esteemed too short, he was often stopped by an injunction, and subjected to the vexatious delays of the Court of Chancery. Having tried and succeeded in his cause in a court of common law, he had to go over the whole ground again in a court ignorant of the merits of the previous proceedings, and acting on different rules of justice. Upon that point the report did not touch. On the subject of contempts, also, the report was silent. It had been his duty, as well as that of other hon. members of that house, to present petitions from persons labouring under poverty, and who did not wilfully incur contempt. If a party had contumaciously refused to abide by an order of the court, it would, undoubtedly, be proper that the party so refusing should be imprisoned; but it was the abuse of that rule to visit it on poor and unoffending persons. He remembered that his hon. friend (Mr. Hume) had some weeks since presented a petition from a man of the name of Richardson, who stated, that it was not his fault that he was held in contempt and imprisoned for the same. In the discussion to which that petition had given rise, it had been stated, that a child was also a prisoner with its father; and he remembered very well that the rt. hon. Secretary (Canning) expressed his surprise at that assertion, and said that it was quite impossible

that any such circumstance could have happened, and he (Mr. Williams) thought at the time that the statement was overcharged. He had, therefore, taken the trouble of writing to the Governor of York castle, the prison in which Richardson was confined. A reply had been forwarded to him verifying the truth of the statement in every particular, and stating distinctly that the child was committed a prisoner for an implied contempt of the Court of Chancery. The terms of the commitment ran thus—"Herewith by virtue of a writ I command you, in the name of his Majesty, to take charge of the bodies of James Richardson and his boy, and that you receive them into your safe keeping, there to answer to his said Majesty, for contempt to the High Court of Chancery." This was the system that was without reproach—the immaculate, unerring Court of Chancery (cheers). There was another subject which the commission had touched upon with a degree of gentleness that was truly edifying—he meant the subject of conveyancing. It was stated in the report, that much delay arose in consequence of the prolixity of conveyancing. Now it was obvious from this, that the whole system of conveyancing, as connected with the practice of Chancery, should have undergone a close investigation, in order to come at once to the root of the evil. The commissioners, indeed, had recommended with great fortitude that proper persons should consider the subject; but, according to analogy, it was probable these persons would be the five or six conveyancers who monopolized the practice; who were as well qualified to do justice in that respect as those others who had been sitting in judgment on themselves. He would now come to the most important points which the commission had overlooked in their report. Had the commissioners taken pains to examine into the abuses which arose during the progress of a suit? Did they not know, in cases of appeals, that five or six years had elapsed from the time of setting down for a hearing until the hearing actually took place? In the case of "The Attorney-General against Brooke," six years elapsed from the setting down to the hearing; and in the case of "The Attorney-General against Brown and De Tastet," it was nine years from the setting down to the hearing. In cases of motions, some of them had occupied two or three years before they were disposed of. Mr. Basil Montagu, the commissioner of bankrupts, had given three instances of prolonged cases of bankruptcy. One of those had been touched upon by the report. It appeared that they severally occupied nine, eight, and seven years, up to the year 1824, and in 1825 two cases out of the three still stood upon the paper (hear, hear). Had the commissioners heard of the quantity of causes that remained for judgment when they commenced their labours? The house and the country both demanded that something should be done to expedite the business of a suit towards its termination. The period from the hearing of a case until judgment should be pronounced upon it was a stage, with respect to which the country was totally in the dark. That, he considered, was one of the most crying grievances of the Chancery system. It was the longest and most expensive period, not to speak of the increased anxiety and torture which every moment of delay gave to the unfortunate suitors. The expense at that time was enormous. He himself

knew of a case, in which 1000*l.* had been expended upon attendances to obtain judgment; and the judgment was often rendered ineffectual from the incorrectness with which the minute of it was taken by the register. By a reference to page 453 of the report, where the case of "Fitzgerald v. Balfour" was quoted, an instance would be found of the incorrect manner in which a minute had been taken, and of the mischief consequent thereon. It was the case of a bill filed for the specific performance of an agreement entered into in the East Indies, respecting a debt from the Nabob of the Carnatic. "On the 30th of July, 1817, a motion was made before the Lord Chancellor that the defendant might be directed to pay into court the amount of the debt in question, with interest thereon at twelve per cent. (the Indian rate of interest); and an order of some kind or another having (as it was supposed) been made by his lordship, minutes of such supposed orders were drawn up by the register according to the notice, and delivered out to me; but the defendant's solicitor having alleged that no order was made, or at least no order to the effect stated in the register's minutes, and which question the register (not having, as it afterwards appeared by his book, taken any minutes of his lordship's judgment) was unable to decide, a further application to the court became necessary; and on the 10th of December, 1817, such application was made, when the Lord Chancellor promised to look into the papers (which he took home with him for that purpose), and give his judgment at some future time thereon. No judgment, however, was afterwards given, although repeated applications were made by counsel for that purpose. On the 22d of May, 1820, I took the liberty of addressing a letter to his lordship on the subject, in answer to which, he promised to give judgment on the Saturday following. No judgment was, however, given, and in the month of November, 1820, I determined to set the cause down for hearing before the Vice-Chancellor, who decided that the defendant was bound to pay the principal debt, and 12 per cent. interest thereon up to that day; but upon the defendant objecting to have interest decreed against him at the rate of 12 per cent., the matter was referred back to the Lord Chancellor, who decided that he had already made an order in the case." So that it appeared that the matter slept for four years.—In the following page of his evidence, the learned member referred to the case of *Erskine v. Garthshore*, as another illustration of the evils of the present system of the Court of Chancery. In that case, a person named *Husbands* was a claimant against the estate of Mr. *Garthshore*, who had been declared a lunatic. Before any report could be obtained from the Master, *Husbands* died. His executors revived the claim on the 4th of June 1810; the Master reported that a sum exceeding 20,000*l.* was due. Exceptions were filed, but on further inquiry the Master confirmed his former report. In November 1816, the case was heard at length before the Lord Chancellor, and he promised to give judgment in a few days, but had never done so up to the present moment. In 1824 the claimant's widow died, leaving two orphan children, who, after being for some time maintained by the Solicitor in the country, were finally sent to the workhouse, and who, if still alive, were yet supported by charity. On the 22d of May, 1820, the hon.

member (Mr. Leake), as solicitor on the other side, called the Lord Chancellor's attention to the case, and intreated that judgment might be given. His lordship returned a note, in which he stated, that the papers in that cause had been long ago taken from his table, and that as soon as he recovered them he would dispose of it. Notwithstanding this promise, the cause still remained for judgment; and as Mr. Campbell, the Master, had since been made Accountant-General, the consequence would be, that if his report should be disallowed, the proceedings must commence *de novo*, and the expense already incurred of 1500*l.* would be entirely cast away. He (Mr. W.) knew that he should be met by being told that these were individual cases of extreme hardship, and that they formed no just ground of blame against the general system of the Court of Chancery. The complaints, forsooth, originated in fancy, and had no foundation in reality. Within the happy regions of that court there was neither distress nor disappointment (hear, hear). He would continue to answer these assertions by facts. A case of a singular nature had lately reached his knowledge. The suit was commenced in 1814. Before the Vice-Chancellor a demand was established by the plaintiff, Mr. Welling, against the estate of the defendant, who was represented by a woman named *Kinnersley*, who was formerly in partnership with him. An appeal was made from the Vice-Chancellor, and from 1819 to the close of 1824, the cause stood sometimes at the top and sometimes at the bottom of the Lord Chancellor's paper, where it still remained without having been heard at all (hear, hear). In July 1825, one of the parties who had furnished him (Mr. Williams) with the information, wrote to the Lord Chancellor, requesting his lordship to give judgment. The answer he received from the Lord Chancellor was, that he would that month state his opinion on the case, and hand down to the register the minutes of a decree. In the November following, Mr. Welling, the plaintiff, who was a partner in the Ludlow Bank, and to whom 32,000*l.*, the sum at issue, was at that time of great importance, went personally into the Court of Chancery, and addressed the Lord Chancellor, complaining of the delays and disappointments he had suffered, and begging that his suit might be speedily terminated, for which nothing was requisite but his lordship's decision. He stated that he was upwards of 70 years of age, and that at his time of life, having 17 children and 27 grand-children, he was desirous of being able to close his affairs. The Lord Chancellor, after some reflection, remarked, that he had given judgment in that case six months before. The register was applied to, but it appeared that the minutes of the decree had not been written, and they were not written yet (hear). The mischief, unfortunately, did not end there. Mr. Welling was, as he (Mr. Williams) had stated, a partner in a country bank. In March last, a run took place upon the bank; the 32,000*l.* in Chancery might have saved it from ruin, but it fell for want of support, and the old man became a bankrupt (hear, hear). Another case he would relate, on the authority of an affidavit made by the solicitor, Mr. Weightman (we believe). It was that of *Simkins* and others v. *Fowler*. In this case exceptions were filed. The parties waited four years for the decision of another cause which, it was supposed, being alike in principle, would necessarily decide

their's. But they had found themselves mistaken. No decision had yet taken place in them. The suit had been pending thirteen years in Chancery, from the time of an appeal from the Rolls. It began in 1812. In 1824 the defendant became bankrupt, and died in the poorhouse of Kensington, in which place the affidavit described him as having previously been a respectable inhabitant. He (Mr. Williams) would state the facts of one case more. He would not mention the names of the parties, or the solicitor, unless he was requested. The statement he should make would be founded on a faithful transcript of the brief. In Michaelmas term, 1822, the plaintiff filed the bill. In the January following, two of the defendants put in a demurrer; the third defendant neither demurred, pleaded, nor answered. In Easter term, 1813, the demurrer was heard before Sir T. Plumer, then Vice-Chancellor, and by him allowed. That judgment was dated 19th May, 1813. In Trinity term, the defendants appealed to the Lord Chancellor, having made the usual deposit of five pounds. In Michaelmas term, 1818, the appeal was heard before the Lord Chancellor, but no judgment was given. His lordship wished to see the copy of a deed of trust. The instrument was obtained from the country, and left with the Lord Chancellor, but no judgment had been pronounced up to December, 1824. The cause had stood six years for judgment; and this delay, besides producing much anxiety and disappointment, necessarily entailed great expense with the clerks in court, and in effect amounted to a denial of justice. Considering the risk of deaths, as it seemed impossible to expect that the cause could have become ripe for hearing without much further procrastination, the parties despaired of living to see the suit finished, though it was not by any means intricate in its nature. They, therefore, felt themselves obliged to compromise it (hear, hear). What effect had these delays in increasing the expenses of this court? Let the house refer again to the evidence of the member for Malmesbury (Mr. Lenke). He stated, that as solicitor, his bill for costs alone amounted, in one case, to 1000*l.*; in another to 1000*l.*; in a third, to 1500*l.*; in a fourth, including the common law costs, to 12,000*l.* (hear, hear). This part of the inquiry was not gone into by the commissioners, though it was obviously essential to the due consideration of the general question. It was incumbent on somebody, he (Mr. Williams) maintained, to originate some measure to carry off this great and crying evil of everlasting and ruinous delay. His learned friend (the Attorney-General) might promise them that a time would come, and perhaps ere long, too, when all complaints would cease; but he (Mr. Williams) cautioned them against founding any such expectations on the bill which his learned friend intended to introduce, or on the report by which it had been preceded. He would trouble the house with a short passage bearing on this subject, from "Jortin's Ecclesiastical History." That writer explained how King Theodoric, whom he praised as a prince brave in war and wise in peace, expedited the administration of justice in his dominions in Italy, over which he reigned many years. A woman complained to him that she had been three years at law with a senator, and could obtain no decision of her suit. The King sent immediately for the judges, and told them that

if the cause were not speedily decided, they should be put to death (cheers and laughter). Whether the principle of executing some judges as a warning to the rest, was one which could be exercised for the benefit of the whole bench, he would not say; neither would he express any opinion on the propriety of preventing delay in Equity suits by following the example of Theodoric—an example which, he would venture to declare, would not be received very agreeably if it should be recommended to his present Majesty, as one which could be imitated in the Court of Chancery—at least it would not be agreeably received with regard to the noble, learned, and very excellent lord who now presided in that court. He (Mr. Williams) was the last man who should recommend such a course to be pursued with regard to that noble lord, whom he would rather hand over to the commissioners (of whom he was one) to direct the future course of his judicial conduct;—to those commissioners—who would not hurt a hair of that noble lord's head—who would not strip from him one plume with which he was now decorated—who would not abridge the smallest part of his legal patrimony—who would not interfere with any of the now never-ending cases litigated in that court, nor with the patronage of the new beginnings. He was of opinion that there were many points on which the commissioners ought to have received evidence, and have stated it in their report. In the absence of evidence, he thought no correct judgment could be formed, and therefore, whatever credit he might give to the intentions of his learned friend (the Attorney-General) he must say, that in the present instance the house was required to legislate in a manner to which he objected; and he called on it to hesitate before it consented to legislate partially, and in the dark.

The Solicitor-General said, that he should make his stand simply on the ground that he, with the rest of the commissioners, had fully performed their duty. They had been accused by the learned member of not having received the evidence of solicitors, from whom much valuable information might have been acquired. The accusation was directly the reverse of the fact; for not only had the commissioners received the evidence of solicitors, but they had actually given an invitation to solicitors to come in and deliver their testimony on all the points on which they thought they could afford any information to the commissioners. It had been stated as another ground of accusation, that solicitors should have been constituted members of the commission. He differed from that opinion; and he was prepared to assert, that in no instance had a commission been so constituted. The commission in Lord Hardwicke's time was not so formed, nor, in fact, was there any instance of a commission to inquire into the practice of a court of record in which the powers of that commission had been delegated to persons who practised in it as attorneys or solicitors. The commissioners had been accused of not hearing any evidence on the subject of the delays in the court, and when the learned member made the accusation, he looked to the hon. member (Mr. Lenke), as if expecting his support in that statement. Now it was a singular circumstance that that hon. member was one who had given evidence on that very point, and had spoken with reference to some delay which he supposed had taken place in a judgment delivered in the Court of

Equity, but with regard to which he was undoubtedly mistaken. For himself, he was prepared broadly to assert, that no information had been kept back, and on all the cases to which the attention of the commissioners had been called, he was ready to give any explanation that might be deemed necessary; but it was impossible to answer all those complaints which were now started for the first time, and of the existence of which he had not been aware until they were produced in the house by the learned member (Mr. Williams). With respect to the case of *Erskine v. Garthshore*, he should think it necessary to make but one observation. There was certainly a very strong intimation of his lordship's opinion in that case; and after that intimation had been given, his impression was, that the parties had agreed to arrange the case, and he had always considered that it had been terminated in that manner. To the case of "*Brown v. De Tastet*," he thought he could give a satisfactory answer. In consequence of the exertion of that rapidity of decision, that judicial haste, which some imagined to be deserving of panegyric, it became necessary to carry that case into a Court of Appeal. The delay in that case was a delay not of the judge, but of the individuals concerned in the case—a delay which the counsel and the parties had determined on as the best means of obtaining a complete and final judgment in the case. He was convinced that if the five or six other cases which had been mentioned as instances of delay could be examined in the same manner, the result would be the same; and he felt assured that every petition which had been presented to that house, complaining of the delays in Chancery, had, on examination, turned out to be a mass of utter falsehood, of gross and scandalous calumny. One petition which had been presented by the hon. member for Hull (Mr. Sykes), and in which the hon. member (Mr. Hume) had taken so warm a part, as to justify him in being described as the colleague of the member for Hull, complained of the Lord Chancellor having ordered a re-taxation in a case in which a bill had been submitted to taxation 12 years before. In that case, one of the parties concerned had taken an illegal and fraudulent bond, and had sued out and levied execution on that bond, and had taxed his bill. All these proceedings, it afterwards appeared, had taken place under the administration of a committee, who was directed, in every thing, by the influence of the party for whose benefit they were adopted. When a new committee, who was not under the influence of that person, was appointed, an examination was instituted, and some legal fraud having been discovered, a petition was presented to the Lord Chancellor, praying that he would order the bill to be re-taxed. His lordship granted the prayer of the petition—and no less than a sum of 100l. had been struck off on one part of the taxation. He believed that the sum struck off on the other part only amounted to 3s. 6d., but that was caused by the fact, that such a confusion was created by the parties at the second part of the re-taxation, that it was found impossible to proceed with it. He thought that the complaint of the hardship of allowing a re-taxation, after such a lapse of time, was fully answered by these facts. He was glad to find that the language in which these charges were made against the Court of Chancery had lost the asperities by which it was formerly distinguished: and the learned

8255. 1826.

member (Mr. Williams), instead of indulging in those asperities, had enlivened the house with pleasantries from the writings of Cicero and the acts of Theodoric. These pleasantries, however, though delightful in themselves, formed no answer to the facts which he had just stated to the house. He did not mean to say that there were not any cases whatever in which the Lord Chancellor might not have come to a judgment a little sooner than he had done. He was certain that that noble lord was a man of too much conscience, feeling, and integrity, to assert any such thing; but he was also sure, that this trifling delay was nothing but the result of an over-anxiety fully to weigh the merits of a cause before he decided upon it. The number of instances in which this delay was said to have taken place had lately been much diminished, and he was convinced that the resolutions to which the commissioners had arrived, would do practically as much as could be effected in abridging the time and expense of suits in the Court of Chancery. The alterations recommended by these resolutions were admitted to be beneficial, in order, as it seemed, to ground an attack on the Chancellor, respecting whom, it was asked, why he had not himself exerted the power he possessed to make these alterations in the practice of a court in which he was supreme judge? The answer to that question was easy. The practice of the Court of Equity, as it now stood, had been framed by Cromwell's commissioners, and had afterwards been adopted by Clarendon, since whose time it had been acted upon up to the present day. When, therefore, he was asked why the present Lord Chancellor had not effected these alterations, his reply was itself a question, for he asked, in return, why had not the Chancellors, King, and Thurlow, and Camden, effected these alterations? If Lord Eldon was wrong, he at least had the merit of being so in good company. There was a community of error with him, and some of the noblest and highest names that ever graced the office he occupied. Besides this, there was another answer to that question. It was stated, that Lord Redesdale objected to the principle of these resolutions. Now that noble lord was undoubtedly a man of the highest authority in all chancery matters, and under all the circumstances, therefore, it would have been too much to expect that Lord Eldon should take upon himself the responsibility of making these changes. If he had done so, and any error had afterwards been discovered, any inconvenience, or any new expense had grown out of the altered practice, all the blame would have been charged on the Lord Chancellor, for not having previously come down to parliament to obtain the sanction of their authority for the alterations. Lord Thurlow, who was a man of undoubted nerve, had never been brave enough to take upon himself the responsibility of making any great alteration in the practice of his court. Lord Rosslyn had only attempted to make one, and none had been made by any of his successors, although Lord Chancellors King and Camden were both reformers, and would not have hesitated to make any alterations which they thought they would be justified in effecting. Still, however, none had been made, except here and there a stray order of no importance. He was, therefore, justified in saying, that the present Lord Chancellor was not to be attacked for not having done what every one of his predecessors,

3 X

from the time of Lord Clarendon to the present moment, had abstained from doing. The page of judicial history proved what he had asserted, that no considerable change had ever been made in judicial proceedings but by the authority of the legislature. He alluded, as an evidence of this, to the statute of Anne. There could be no doubt that the judges of that day possessed the power to have directed that all the pleadings in their Courts should be in English, but they had not done so, because they would not take such a responsibility on themselves. The details of the improvements recommended by the Resolutions had certainly not been stated at length to the house. The Attorney-General had not told them how many days and how many weeks there might be saved by the new practice; and it would be sufficient to say, that the general saving amounted, in cases not litigated, at least to three Terms, or nearly to one year; while in some litigated cases it extended to one year and a half. He observed that the learned gent. (Mr. Williams) had not pointed out one of the 180 Resolutions, which he considered to be defective. He believed the cause of this to be, that that learned gent. was convinced that they met with the general approbation of the profession. He was aware that they were considered as beneficial by many most respectable solicitors, and their opinion was confirmed by that of Mr. Bell.—An hon. member (Mr. J. Smith) had said, that it was desirable to avoid the circuit of accounts in the Master's office, or, in other words, that common matters of account should go to a private accountant, that where legal questions were not mixed up with them, they should be referred to the *forum domesticum* of a private arbitrator. He (the Solicitor-General) had been struck with the remark, and one of the Resolutions which now appeared in the Report of the Commissioners was, that the Master should be at liberty to refer to a private arbitrator, all matters of account, which he was of opinion could be properly adjusted in that manner. The Resolution, however, did not stop there, for, to prevent all delay, it provided further, that the Master should, in such cases, be at liberty to act for the benefit of infants, married women, and lunatics, and to consent, on their behalf, to the reference to a private arbitrator. He was not one who would sacrifice justice for mere popular applause; but this was one alteration, as to the merits of which he thought there could be but one opinion. He believed also that much benefit would be obtained by the altered mode of obliging a defendant to meet a bill of discovery, not by plea, but by answer. It was of importance that persons should have the power of appealing to the Vice-Chancellor, or Master of the Rolls, but not that they should have the power of appealing to both. This alteration would have the effect of doing away with double appeals. There was another point to which he wished to direct the attention of the house. In consequence of there being no means of forcing attorneys to bring their decrees in to the Master, great inconvenience was sustained; and the new regulation provided, that within six weeks the Master should have the power of compelling solicitors to bring in their decrees. It had been considered by some expedient that the division of bankruptcy cases should be detached from the Court of Chancery. But this was a branch of the business of the

Chancellor, which he should never wish to see deputed to others. In fact, the evil was, that persons who applied to the Commissioners of Bankrupt, never seemed to consider that such application was to be decisive; but the proposed improvement of the bill was to select Commissioners, who would conduct the business with regularity—before whom the case would be stated completely, and who would pronounce judgment. So that when the hon. member (Mr. Williams) complained that nothing had been recommended to relieve the Lord Chancellor, if he considered that in the last year there had been 500 bankrupt petitions presented, and suppose that one-half or even one-quarter of them should be struck off, would the learned member then say that nothing had been done to relieve the Lord Chancellor, or diminish the business of the court? It was universally considered that there must be an appeal somewhere. The House of Lords would be an inconvenient tribunal for such a purpose, and it was, therefore, proposed to transfer the power to Commissioners, and to reserve the appeal to the Chancellor. On this subject there seemed to be a great difference of opinion. This seemed to him the best course. The imprisonment of the infant which had been complained of was owing to the friends of the party not taking the proper steps to prevent it, and the same thing might have happened at common law. He should only remark, in conclusion, that with respect to the details of this measure, he had, in conjunction with his learned friend, the Attorney-General, given them all his attention with a view to arrange every topic that it seemed expedient to introduce.

Mr. M. A. Taylor would admit that that report did possess some merit, but it had fallen far short of the object which it ought to have effected, and it had left very much undone which it ought to have performed. That the commissioners had diligently investigated and examined into the subject he would not deny. But he wished the house to look to the evidence of Mr. Shadwell, a most able Chancery barrister. When this gentleman was asked by the commissioners whether he considered the judges of the court competent to get through the business of it, his reply was, that he was persuaded three angels could not do it. Yet the commissioners had entirely passed this matter over. They ought to have recommended the separation of the bankruptcy business from the great seal. The Court of Chancery ought also to be a court entirely independent of political power or principles. The judge of it ought not to be distracted by political business, but should be able to sit *de die in diem* for the dispatch of business. He meant nothing personal against the Chancellor—he had not the slightest wish to give him any offence, but he had a right to deliver, and he should not be performing his duty if he did not fearlessly deliver his sentiments on this subject. He and his friends had been working hard for twenty years endeavouring to convince the Government and the country that the system of this court was not as perfect as it might be, and to procure some reform in it; and he might presume to say that he ought to know something about the court, as he had practised fourteen years in it; but all their efforts had proved fruitless—no attention was paid to their representations; now indeed a new light had broken in upon the Government, and they had found out that the system was bad—

but still it was said that most of the evils complained of were fancied abuses. When, however, men were ruined and undone, and when the fortunes of orphans were locked up in the court for years, he thought the sufferers would not readily be persuaded that their grievances existed only in their fancies. There was no need to enter into any detail of cases of this kind; they were already in print, and all who wished might read them. The report stated there had been no delay: people, however, did not understand how suits could be going on for years without there being culpable delay somewhere. It also stated that a suit might beneficially last for half a century; but surely the commissioners must have taken the House of Commons to have been idiots, or else they could never have thought of making such an assertion. What then, he would ask, had been gained by this report—the commissioners had not suggested any thing in it on that particular point to which their attention ought to have been peculiarly turned by the direction of his Majesty,—viz., whether the Court, as at present constituted, was competent to perform all the duties which were attached to it? The Solicitor-General had said that he would have been a bold man who should have taken upon himself to alter this system without the sanction of the legislature, and had contended that Lord Eldon had, in this respect, only acted as former Chancellors had done: but he would mention one instance in which a considerable improvement had been made by Lord Eldon, *ex mera motu*, and which he (Mr. M. A. Taylor) had repeatedly recommended without effect. This was the appointment of a deputy speaker, who might sit in the House of Lords from day to day, for the determination of appeals. He could not see why a deputy speaker was not as necessary in 1811, when he proposed that he should be appointed, as in 1822, when the appointment was actually made. Whatever might be the talents or industry of an individual, it was not possible for him—it could not be expected of him—that he should be able to do every thing. The Solicitor-General had contended, that there was no arrear of business in the Court of Chancery; but he believed there was a very great arrear, and of that sort of business in which any arrear was most to be deplored—he meant of causes remaining for judgment. There was also a very considerable delay in making out the minutes of the decrees, and indeed the register's office was in a state of the greatest confusion.

Mr. Peel said the object of his learned friend (the Attorney-General) was merely to get the bill printed, in order that a full opportunity of considering its principles might be afforded before next session. This was not the precise time for discussing those principles. He could not, however, avoid saying, that the learned gent. who had just sat down had not dealt fairly with that report. He had said that the report had dealt very lightly on the subject of delay, and had represented that a Chancery suit might be beneficially carried on for fifty years. Now the report had only said that there was a great popular misunderstanding on the subject of delay, and had shown, that in cases of trusts and in matters relating to infants, it might often happen of necessity that a cause must remain in that court for a great many years; and indeed, when it was recollected that property might be tied up for a life in bo-

ing, and one-and-twenty years afterwards, during all which time the administration of it might unavoidably be under the direction of a Court of Equity, it would be readily seen that it might very possibly happen, without any delay, mismanagement, or prejudice, that a cause might remain in that court for half a century. Neither had the question as to the separation of the bankruptcy cases from the great seal been quite fairly stated by the hon. member (Mr. M. A. Taylor). Certainly Mr. Shadwell had advised such separation; but then he was the only witness, (and many other witnesses of the greatest experience and ability had been examined) who had recommended this, and Mr. Shadwell himself had proposed that the bankruptcy business should be committed to four or five judges to be appointed for this purpose. The commissioners said, that the knowledge required to decide in cases of bankruptcy, comprised a complete knowledge of the practice in equity; that the business in bankruptcy was not sufficient to occupy the entire time of one judge; that it was of a nature which required the existence of a court of appeal; and that the course which they recommended for adoption, appeared in many points of view less open to objection than the entire transfer of bankruptcy from the Court of Chancery. The hon. member also complained that the commissioners had not gone far enough in the recommendation which they offered to the house, whilst others of his hon. friends, and especially some near him, complained very loudly that the commissioners had gone too far. What did he infer from these conflicting opinions?—That the commissioners had steered sufficiently between the two extremes, and had submitted such propositions to the house as they deemed wise and necessary, even though they knew that such propositions must lead to very extensive innovations and reforms. He was likewise surprised at the different views which the hon. member (Mr. Williams) had taken of this report, on the present and on a former night. He had formerly complained that it contained 180,000 different propositions—he had now reduced them very quietly down to 180. He had formerly complained that the report contained too much—he had now found out that it contained too little. In the course of his speech he had declared that there were most important omissions in it. He had lamented that the commissioners had not entered into the question of conveyancing, of injunctions, or of contempt. Now if the commissioners had entered into the consideration of these questions, they would have entered into an inquiry that was not referred to them. He should conclude the few observations which he had to make upon this subject, by saying a few words upon the charge which had been made against the Lord Chancellor in respect of the delay of his decisions. The evidence to which he wished more particularly to call the attention of the house was that of a gentleman whom he had not the honour to know personally, but who possessed a very high character for talent (Mr. Basil Montagu), an unprejudiced witness, who said, "There are delays in the judgments which the Lord Chancellor is called upon to give. I cannot deny it, but I impute them to three distinct circumstances. The first is, that the Lord Chancellor takes a different view from that taken by his predecessors of his duties as a judge; for he feels himself called upon to decide, not only on

the law, but on the controverted facts of the case. Other judges had referred the decision on controverted facts to a master or to a jury; but the Lord Chancellor makes up his mind to the facts as well as to the law in all cases of bankruptcy." Would any man therefore condemn the Lord Chancellor because he felt it to be his duty to make up his mind upon controverted facts, and because he took some time in doing so, with a view to save the suitors of his court the expenses of further litigation? or because he paused from an ultra anxiety to decide justly. If the delay imputed to his lordship arose from his indulgence in pleasure or in frivolous amusements, he should be one of the first to condemn it; but when he saw a man devoting twelve out of twenty-four hours, without remission, to the public business, and allowing himself no longer a vacation than three weeks out of 52, he would pass over with a light hand the venial fault of him who decided slowly, from the peculiar constitution of his mind, and his ultra anxiety to decide justly (hear, hear). Mr. Basil Montagu further went on to say—"These two circumstances have occurred within my knowledge. In the case of Blackburne, which I argued two or three times, I certainly never was more satisfied in my life with my own argument than I was then. I mentioned it again and again to the Court, but I could not obtain judgment. At last the Lord Chancellor stated that he had been deliberating upon the case for many hours during the night, and that there was one point which had escaped me in my argument, to which he wished to direct my attention, and he was pleased to direct my attention to it, and to desire it to be re-argued; and upon re-arguing it, I was satisfied that he was right, and I was wrong; and whatever may have been the cause of the delay, the consequence has been that he has prevented the injustice which I should have persuaded him to have committed (hear, hear). Not only in that case was there an advantage to public justice from the delay which took place, but there would have been, had the Lord Chancellor come to a hasty decision on the case, a false light set up to mislead other judges to erroneous decisions in future" (hear, hear). Mr. Basil Montagu then proceeds—"I beg also to mention another case (*ex parte Leigh*), which will be found in 'Glyn and Jameson,' 264,—the case of a habeas corpus; where, to my knowledge, the prisoner was detained illegally, upon an affidavit upon detainers for debt by a Mr. Claughton, for 10,000l. The Court of King's Bench refused to discharge him. I presented a petition to the Chancellor on behalf of the bankrupt, being convinced that the decision of the Court of King's Bench was erroneous; and, it being in the case of liberty of the prisoner, the Chancellor heard it immediately, and took the trouble of applying to the Chief Justice of the Court of King's Bench; and, after deliberation, thought it his duty to reverse the judgment, and to order him to be discharged; and, but for this care and deliberation, I am satisfied he would have been in prison at this moment, as I know the hostility between these parties is continuing to this very day." Now if one counsel could state such facts as these as occurring within his own knowledge, he thought that if other counsel would be equally explicit, it would be proved beyond all dispute, that the delay of which the Lord Chancellor was accused could not produce much danger to the

interests of public justice. The noble lord had been blamed for not having made the reforms in his court which were now recommended; but absorbed as he was in the various duties of his office, he had not the leisure to consider such reforms with the necessary deliberation. The presence of the Lord Chancellor before the commission on all occasions where his presence was necessary; and his absence on all occasions where his presence was likely to exercise any control over the witnesses, were facts which must tell to his immortal honour. It was no more than an act of justice to vindicate the ability and industry with which the Lord Chancellor, now seventy-six years of age, performed the duties of his office, who though he might be accused of delay, had not had his motives impeached by a single voice in that house (hear, hear).

Dr. Lushington:—Any gentleman who considered the complexity of the subject which had been referred to the commissioners, could never have expected that they should be unanimous in their support of 180 propositions, proposing great and important changes in a system which had now been pursued for more than 150 years. It was more extraordinary that so many of them could conscientiously put their seal to such a report as they had presented, than that some of them should have differed from their colleagues on its details. Against this report it had been urged, that though the reforms which it recommended were beneficial, still they were ineffectual towards removing the delay so much complained of in the Court of Chancery. It was likewise objected to the commissioners, that they had not dared to inquire whether any and what delay took place between the setting down of the cause and the hearing, and then between the hearing and the judgment of the Chancellor. Those points came within the direct terms of the commission, and if the commissioners had shrunk from their investigation, they would have left unexamined the most important points on which they were directed to inquire. But of the mass of evidence taken by the commissioners, part was still unprinted, and that part would have proved beyond all dispute that they had investigated this matter. The reason why it was not printed was, that it was given at the latter part of the inquiry, and consisted principally of documents.—There was the cause paper of the Lord Chancellor and the Vice Chancellor—the motions set down for hearing,—the account of business in bankruptcy and lunacy cases,—and also the manner in which his lordship had expended every day in court during the last three years,—together with a special account of the business set down and left undone each day, and the reasons of its postponement. Besides these documents, any person who read the evidence would see that every witness was asked what was the cause of the delay, and also the best remedies for it? He was aware that some of them had felt great reluctance to answer that question; but he contended, that the commissioners could not have gone further, unless they had purposely sought for matter to criminate the Lord Chancellor. He did but discharge a debt of justice to that individual, when he said, that from the beginning to the end of the investigation, he had given the most material assistance to the commissioners. He did not deliver his opinions to them dogmatically, but allowed those who doubted of their

correctness, to investigate them thoroughly, affording them every explanation which they required, and that, too, in a manner which left on his (Dr. Lushington's) mind a most favourable impression with regard to the learning, intelligence, and integrity of that noble lord (cheers). So far from ever seeking to check inquiry, he had done every thing to promote and forward it (hear, hear). Whatever opinion might be entertained as to the delay regarding appeals, he was bound to say that there were other cases in which it was impossible to deny that great delay existed. Some cases which appeared to be almost entirely laid by, had been productive of injury to the suitors, which every feeling mind must deplore. Whether that delay had arisen from the Lord Chancellor finding difficulties in the cases, which rendered him averse to consider them, or whether it had arisen from the too great pressure of his other avocations, or from any other cause, it was to be lamented and ought to be remedied (hear, hear). He confessed that he was not one of those who entertained sanguine hopes that the business of the Court of Chancery would be much facilitated by the alterations now proposed, but he was satisfied that in recommending the adoption of them, the commissioners had done all that was consistent with prudence, in the first instance. It would be wiser to try the effect of these proceedings, and if they were not effectual, then to adopt bolder remedies, than to sweep down at once a system which had lasted for ages, and of the annihilation of which no man could calculate the consequences (hear, hear). As to the dividing the business of bankruptcies from that of Chancery, there was scarcely a witness whom they had examined that did not consider such a proceeding as extremely inadvisable. The commissioners would, therefore, have been very bold if they had ventured to recommend such a proceeding against the experience of all their witnesses, and even against the opinion of many of their own body. It appeared to him, however, that of all the systems connected with the Court of Chancery, that of bankruptcy was the very worst, from the infinite delay in justice, and the ruin which it occasioned to the suitors. When he saw that there were no less than 70 commissioners of bankrupts, costing at least 20,000*l.* annually, many of them notoriously incompetent for the duties of their office,—when he recollected that they met only for one, two, or at the outside three hours at a time, for the dispatch of several commissions; when he saw their opinions and their actions conflicting daily, he had almost said hourly, with each other; when he saw that one list had committed ten times as many individuals as all the others put together;—when he considered all these facts, and reflected that bankruptcy formed the great source of the Lord Chancellor's patronage, he thought that it would have been the pride of the report if it had recommended the alteration of such a system. But if the Lord Chancellor were to select ten out of those 70 commissioners as a court to decide on bankruptcy, and from them there was to be an appeal to the Vice-Chancellor, and from him again to the Lord Chancellor, nothing could follow but increased delay, expense, and confusion. It was to be lamented that subjects connected with the jurisprudence of the country were not sufficiently attended to by the house. Instead of remedying the defects which had

been occasioned by time, hon. gents. had covered the table of the house with statutes till it was impossible to find any individual who on any important point could say what was or what was not the law. As to conveyancing, no country gentleman could guess the tax (until his solicitor's bill was brought in) which the present system imposed upon him (hear, and a laugh). It never could be right that the abstract of a man's title should take up 800 brief sheets, as appeared from the report to have been the case in one instance. Of a large estate which he (Dr. Lushington) held as a trustee, and which was valued at 800,000*l.*, many small plots were to be sold; and would the house believe it when he told them, that the abstract to the title of those small plots filled 400 large brief sheets (hear, hear)? Such a system inevitably led to injury and confusion. He therefore called upon the house to devise a remedy for an evil which had increased, was increasing, and which he believed every body would admit ought to be diminished (hear, hear).

Mr. Brougham felt that if he were to permit the two last speeches to go forth to the country without comment, he should be rendering himself accessory to the error and delusion which they were, from their contents, so well calculated to create. He wished, in the course of his remarks, to avoid any personal reflections upon the noble lord who was at the head of the Court of Chancery, and to preserve that tone of debate which applied to the subject more than to the individual. Now, he must say, that it did appear to him, until he had heard the speech of his learned friend near him, that there was—he would not say a slumbering on the part of the commissioners, any more than he would say that there had been a slumbering at his post on the part of the Lord Chancellor for the last 25 years—but an omission of the most material importance in the labours of the commission, as they were stated in the large report which had been laid upon the table of the house. That omission principally consisted of a want of inquiry into the causes of delay between the final hearing of a cause, and the decision by the Lord Chancellor. Having found in no part of the report any allusion to such inquiry,—having perceived here and there some allusion to facts connected with it,—having seen in the answers much matter that naturally suggested further examination,—having observed points volunteered by some of the witnesses on which they courted examination, and on which no examination was instituted,—it did appear to him, he must own, that that head of inquiry had been purposely omitted by them all. But his learned friend now came forward to inform them, that there was part of the evidence on this portion of the inquiry of the commissioners still unprinted. It was impossible to have anticipated such a fact from the report itself, as there was no opinion in the report purporting to be founded on such evidence. He had looked in vain for any allusion to such evidence, both in the report, in the 180 propositions annexed to it, and in “the labours” of Mr. Beames, as they were styled, upon those propositions. He had inquired of others whether they had discovered any such allusion, and he was informed that there was not the slightest allusion, either by hint or reference, to that great integral branch of this most important subject. That there was an expense and abuse arising from the delays of the Court of

Chancery, was not to be denied at this time of day. The country wished to be informed whether it was owing to the system of the court; if so, to which of its branches,—and then, how it was to be remedied. In plain, honest English, people wished to know whether the delay so long complained of, but so lately admitted to exist, was an inevitable consequence of the system, or was owing in any part, and in what, to the learned individual now at the head of it (hear, hear). It was stated as matter of great praise to the Lord Chancellor, that he had not impeded, but forwarded the labours of the commission. Nobody on his side of the house had ever expected that a man of the Lord Chancellor's knowledge and experience would act so clumsily as to interpose obstacles directly to the investigations of the commission. What his learned friends about him had said was this,—that even if the Lord Chancellor had been a more repulsive and less fascinating man than he now was, his presence in that commission would have been dangerous to its complete success, and that he was more likely to impede its operations, silently and not actively, but still effectually, by promoting than by openly thwarting its progress. That was the objection which he had originally felt and stated to the formation of this commission; and he looked in vain to the report for any thing calculated to remove the impression which he had originally entertained. He had expected that much learning would be displayed, and great inquiry made, with regard to the original constitution of the Court of Chancery; but he did not expect that any inquiry would be made into the cause of the delay which unfortunately distinguished all its proceedings. Much had been said in the course of the discussion of the opinion which Mr. Basil Montagu had given of the causes which led to this delay, on the part of the Lord Chancellor, in giving his decisions; and great stress had been laid upon that opinion, because it was said to come from an individual who was notoriously opposed to his lordship in politics. Now, with all deference to Mr. Basil Montagu, he must take the liberty of saying that he did not know what his politics were, and that, whatever they were, they had little to do with this Chancery report. He must, however, complain of the ingenuity with which the *rt. hon. sec.* (Peel) had mixed Sir S. Romilly and Mr. B. Montagu together. He had so managed his expressions as to render them well calculated to inculcate a belief that the opinion of Sir S. Romilly on the character of the Lord Chancellor coincided with that of Mr. B. Montagu. Now he begged to state, from his own personal knowledge of that great and illustrious character, that he entertained an opinion directly the reverse of that entertained by Mr. Montagu. Other individuals entertained similar opinions; nor would there have been any difficulty in extracting such opinions from the witnesses examined, had not the commissioners intentionally shrunk from the task of extracting them. He would give one proof of it out of many which were contained in the report. In fol. 95 of the evidence attached to the report:—“Q. After a cause has been heard, is there, generally speaking, much delay in obtaining a decision?—A. That depends upon the different judges before whom it is heard. Q. Supposing the cause to be heard before the Lord Chancellor, is there much and what time elapses before obtaining a decision?—A. Cer-

tainly; frequently months, sometimes years; and I have heard of many cases in which the parties have not been able to obtain any decision at all.” What did the house think was the next question?—“Is not the Chancellor much occupied in hearing appeals?”—a question evidently asked to afford an excuse for the Lord Chancellor, and to turn aside the examination from the course which it then seemed naturally to take. One learned gentleman was asked whether he conceived that the court, with its present powers, was capable of performing the duties imposed upon it, and had replied that three angels could not get through the business. He had likewise added, that the business in the court had not been transacted with sufficient dispatch. Why had he not been asked his reasons for this assertion? Another learned gentleman had stated, that he did not think that more time could well be devoted to the actual sittings of the court than was devoted at present. He had said, and said rightly, that the most active and vigorous attention was required by the judge; and he conceived that six hours a-day, as from ten till four, regularly employed in court with the mind on the stretch, was as much as any judge could bear without exhaustion. Was it not right to inquire why the next question was not put to this learned gentleman—“Does the Lord Chancellor sit six hours in each day in his court?” If the answer had been in the affirmative, then there would have been strong evidence to throw the blame of the delay on the system, and to avert it from the individual at the head of it. If any gentleman would now get up and state that his lordship regularly sat six hours a-day, that would enable the world to determine whether any, and what additional assistance was requisite. Until some gentleman would make such statement, he would prefer the experiment of trying to get through the business of the court by means of judges, instead of the angels which Mr. Shadwell recommended. It was said that there were now *only* 109 appeals in arrears, and that this number was not increasing. *Only* 109! Surely that declaration did not exhibit a very splendid, or, to suitors, a very pleasing exhibition of the dispatch of the Court of Chancery. To prevent the accumulation of such arrears in future, which it was admitted could not be disposed of in less than two years, he would separate the judicial from the political character of the Lord Chancellor. It was in vain to deny that it was his political distractions of which his court had principally reason to complain. There was also in the Lord Chancellor a certain doubting disposition, of which he could not easily divest himself,—an infirmity of temper which led him to over-much subtlety, and disceptation, which made him, as it were, by traps for that sound judgment which in general distinguished him. He contended, however, that with all this tendency to doubt, his lordship was not long in making up his mind on any question—he was only long in making up his mind to pronounce the opinion which he had deliberately formed. He possessed a mind which was gifted by nature with great strength, and which was furnished by long experience with as much learning as ever enlightened a court of law. It would, therefore, be very extraordinary if he did not see through most questions at the first glance. It was the opinion of Sir S. Romilly, that his lordship made up his mind quickly on every judicial question,

and that he was only slow when he had to make his opinion known (hear). That, however, was not a benefit, but a misfortune to the suitors. He (Mr. B.) had spoken thus freely what he thought of that noble lord; and he felt less scruple or hesitation in saying it, as in doing so he had said little more than what he had heard the noble lord admit himself. It was not, perhaps, so much a matter of blame as it was of excuse to the noble lord, that he had too much to do; that he was obliged, by his political duty, to be in one place, when his judicial duty required of him to be in another—that he was now there when he ought to be here—that he was one day obliged to attend the presenting of the Recorder's report, and on another day to attend the Cabinet Council. Again, he was engaged in hearing appeals before the House of Lords; and these, with a variety of other occupations, allowed him little or no time to attend to the efficient discharge of his judicial duties in the court over which he presided. Amongst other disadvantages of these various avocations, to which his lordship was subjected, the suitors had to experience this material and important one—that the Lord Chancellor could not attend continuously, at any one time, to hear the whole of a case, so as to be able to take a full view of it, and to decide at the moment that all the arguments on both sides were fresh upon his mind: but, by being now called off here, and again called off there, he was only able to collect the case as it were by piecemeal, and to decide (when he did decide) upon it after that disjointed and disconnected hearing of it. These various distractions realized the observation which was so familiar in the house about ten years ago, in discussions on this question, that on account of the political and judicial functions of the Lord Chancellor interfering with each other, "the judicial year was diminished, not by minutes or hours only, but by days, and weeks, and months" (hear, hear). So it was now, and would continue to be, until the judicial was separated from the political character of the Lord Chancellor.—The learned gent. proceeded to advert to the opposition which was always given, if not by the Lord Chancellor himself, at least by his friends, to any measure of reform in the (now at length) admitted abuses of his court. On one occasion a committee was appointed, and was so constituted (though a majority of his friends was to be found in it), yet it was so constituted as to promise some prospect of effectual reform. Its proceedings went on smoothly for two or three days; but at length some delicate point was started, and down poured his lordship's friends and allies—principally Masters in Chancery—some of them Masters in existence, or Masters *in esse*, and others Masters in expectation, or Masters *in posse* (hear, and much laughter); and the consequence was, the inquiry was stifled. In 1810, 1811, 1813, 1821, and 1822, exertions had been made to procure a committee without effect; and, during the whole of that period, the Lord Chancellor himself had made no single exertion, not one effort—no, not so much as to the moving of the little finger of his left hand to procure the remedy of one evil—the correction of any, even the smallest, abuse, that under his own eye, and with his own knowledge, existed in his court. It had been said that Lord Somers, and the great men who preceded Lord Eldon, had not been required to make those alterations and corrections which were now so loudly called

for in the practice of the court. But, in the first place, neither Lord Somers, nor any other Lord Chancellor, had, like Lord Eldon, the experience of twenty-five years as judge of that court, and twenty-five years more as a practitioner in it. Secondly, the grievance was never in former years represented to be so great a grievance as it was now and had been of late years. Thirdly, such abuses had never been known to exist without any control whatsoever to check or restrain them. Fourthly, with the admission of these abuses, there never had been displayed such an opposition to every motion, plan, and measure, proposed to remedy them, as had been displayed during the last sixteen years in this house: and, lastly, and most of all, there had been no former instance of such injury being entailed upon the suitors of the Court of Chancery by the union of the judicial and political character of the Lord Chancellor, and without the separation of which, it was idle to expect any effectual reform in the abuses of the Court of Chancery—abuses more flagrant and enormous than those by which the people of any country had been aggrieved by a tribunal instituted for the purpose of administering equity and justice (loud cheers).

Mr. Robert Smith said, that the commission was not authorized to enquire into the conduct of the Lord Chancellor; and he should have esteemed an inquiry on ex-parte statements most unconstitutional. He thought that the inquiry had been perhaps kept by the terms of the commission within closer bounds than might have been desirable, but had no doubt that the report would be productive of material benefit.

Mr. Denman thought that inquiry into the conduct of the Lord Chancellor was the most important duty of the commission; and that if, as had been alleged, the delays of the court originated with him, it ought to have been specified in the report.

Mr. Tindal defended the report, and augured much advantage from the measure before the house.

Mr. Abercrombie thought that it would have the effect of considerably increasing the appeals.

Leave was given to bring in the bill.

### *Criminal Law:—Criminal Justice, and Larceny Laws Bills.*

THURSDAY, MARCH 9.—Mr. Peel, in moving for leave to bring in these bills, spoke to the following effect:—"I hope, sir, that the house is prepared to give me its attention, whilst I explain the object of those measures connected with the criminal law which I am about to submit to its consideration. To many, I fear, this subject may appear barren and uninviting. It can borrow no excitement from political feelings, nor can it awaken the hopes or fears of conflicting parties; but it involves higher interests, it concerns the security of property—the prevention of crime—the moral habits of the people—and it prefers, therefore, a just and imperative demand on the serious attention of parliament. I claim that attention on another ground. Of all the subjects which fall within the range of our deliberations, none perhaps has been more neglected than the criminal law. *Inter arma silent leges*, is a trite remark applied to periods of civil dissension. I fear that it might with

equal justice be said that amidst the excitement of party conflicts, the true principles which should regulate the criminal jurisprudence of the country have been too frequently disregarded. I conjure the house, therefore, by these high considerations, by the paramount importance of the subject, and by the reparation which is due for past neglect, now to entertain with favour and attention, a proposal for the simplification and amendment of some important branches of the law.—The two measures which I mean to submit to the house, are a bill for the consolidation of the statute law of England relating to the crime of theft; and a bill to improve the administration of justice in some particulars, which I will hereafter specify. And first, with respect to the bill for the consolidation of the law relating to theft, I presume that I shall not have to combat at the outset any objections to the principle of an attempt to consolidate and simplify the criminal law. It appears so conformable to the dictates of common sense, that the law, of which all men are supposed to have cognizance—and which all are bound under heavy penalties to obey, should be as precise and intelligible as it can be made—that it is almost needless to fortify by reasoning or authority, the first impressions of the understanding. If authority were required, I could cite some of the most illustrious names that have adorned the civil and judicial annals of this country, the names of lawyers and of statesmen, who have either expressed a decided opinion in favour of the attempt to simplify the law, or who have been actually engaged in the undertaking. To one of these, the first in point of antiquity, as the first in weight and esteem, I will refer, and thus preclude the necessity of summoning other less important testimony. The Lord Chancellor Bacon submitted to King James I. a proposal for amending the laws of England. In that treatise, short as it is, is comprised every argument that can be cited in favour of the measure of which I am speaking—every objection is foreseen, and satisfactorily confuted. The lapse of two hundred and fifty years has increased the necessity of the measure which Lord Bacon then proposed, but it has produced no argument in favour of the principle, no objection adverse to it, which, to use the words of Cowley applied to Bacon himself, ‘from the mountain top of his exalted wit,’ he did not anticipate. The house will allow me to substitute for my own imperfect expressions the emphatic terms in which Lord Bacon has recorded the suggestions of a mighty intellect. In addressing his sovereign, he says that his object is not to tax the laws; ‘I speak,’ says he, ‘only by way of perfecting them, which is easiest in the best things: for that which is far amiss hardly receiveth amendment, but that which hath already, to that more may be given. Besides, what I shall propound, is not to the matter of the laws, but to the manner of their registry, expression, and tradition: so that it giveth them rather new light than any new nature.’—He proceeds to state that for the safety and convenience of the proposal which he makes, ‘it is good to consider and answer those objections or scruples which may arise or be made against this work.’ Objection the first, ‘that it is a thing needless; and that the law as it now is, is in a good estate comparable to any foreign law: and that it is not possible for the wit of man in respect of the frailty thereof, to provide against the uncer-

tainties and evasions or omissions of law.’ The following is the answer of Lord Bacon: ‘For the comparison with foreign laws, it is in vain to speak of it, for men will never agree about it. Our lawyers will maintain for our municipal laws—civilians, scholars, travellers will be of the other opinion.’—But, sir, I must interrupt my reference to Lord Bacon by remarking that the lapse of years has supplied us with an answer to the first part of this objection which Lord Bacon had not to urge. Foreign nations have condensed and simplified their laws, and have disintegrated us to vindicate the confusion or uncertainty of our own statutes, by the boast (weak and fruitless as an argument, if it were well founded) that those statutes are less confused and less uncertain than the ordinances of other states. ‘Certain it is,’ says Lord Bacon, ‘that our laws as they now stand are subject to great uncertainties, and variety of opinion, delays, and evasion.’—‘Mark,’ he observes, ‘whether the doubts that arise are only in cases not in ordinary experience, or in cases which happen every day. If in the first only, impute it to the frailty of man’s foresight, that cannot reach by law to all cases; but if in the latter, be assured there is a fault in the law. There is an inconvenience of penal laws obsolete and out of use: for that it brings a gangrene, neglect, and habit of disobedience upon other wholesome laws that are fit to be continued in practice and execution: so that our laws endure the torment of *Mazentius*.—The living die in the arms of the dead.’—The second objection foreseen by Lord Bacon is this:—‘That it is a great innovation, and innovations are dangerous beyond foresight.’ He replies, ‘All purgings and medicines, either in the civil or natural body, are innovations, so is that argument a common-place against all noble reformations. But the truth is, that this work ought not to be termed or held for an innovation in the suspected sense. Besides it is on the favourable part, it easeth—it preserveth—not—and lastly it is rather a matter of order and explanation than of alteration.’—Another objection stated by Lord Bacon, and that which is perhaps most frequently urged at present, is this:—‘That it will turn the judges, counsellors of law, and students of law, in school again, and make them to seek what they shall hold and advise for law—and it will impose a new charge upon all lawyers, to furnish themselves with new books of law.’ The reply is:—‘For the former of these—touching the new labour, it is true it would follow, if the law (the common law) were new moulded into a text law, for then men must be new to begin, and that is one of the reasons for which I disavow that course. But in the way that I now propound, the entire body and substance of law shall remain, only discharged of idle and unprofitable or hurtful matter, and illustrated by order and other helps towards the better understanding of it and judgment thereupon. For the latter—touching the new charge of books, it is not worthy the sprinkling of a matter of so high importance—it might have been used of the new translation of the Bible and other like works.’ Lord Bacon adds the brief sentence, pregnant with a truth too often disregarded—a truth of everlasting and universal application:—‘Books should follow sciences, and not sciences books.’ Having urged these reasons for the simplification of the statute law, he lays down the principles upon which it should be conducted. ‘For the reforming and

recompiling of the Statute Law, it consisteth of four parts.' The first, 'To discharge the books of those statutes, where the case by alteration of time is vanished; as Lombards, Jews, Gauls' halfpence, &c. Those may nevertheless remain in the libraries of antiquities, but no reprinting of them; the like of statutes long since expired and clearly repealed. The next is, to repeal all statutes which are sleeping and not of use, but yet snaring and in force; in some of these it will perhaps be requisite to substitute some more reasonable law, instead of them, agreeable to the time; in others a simple repeal may suffice. The third, that the grievousness of the penalty in many statutes may be mitigated, though the ordinance stands. The last is, the reducing of concurrent statutes heaped one upon another, to one clear and uniform law.' Such, Mr. Speaker, are the reasons upon which I have undertaken the measure I shall propose, and such the principles by which I have guided myself in the preparation of it. May I not add, in the concluding words of Lord Bacon, 'this is the best way to accomplish this excellent work; of honour to your Majesty's times, and of good to all times.' If, sir, there be any to whom the authority of Lord Bacon may appear of too remote an antiquity, or who may consider his views too philosophic and abstract, I will for their satisfaction produce another authority more recent, and more practical—the authority of a committee of the House of Commons. In the year 1796, a committee was appointed to inspect and consider all the temporary laws then about to expire. The chairman of that committee was the present Lord Colchester, and to him we are indebted on this, as on many other subjects, for one of the ablest reports that can be found on the journals of the House of Commons. That report observes, 'That a general revision of the statute law appears to have been often recommended from the throne—to have been petitioned for by both Houses of Parliament—to have engaged the labours of successive committees, and to have been undertaken by individuals under the sanction of royal and parliamentary authority, but never to have been carried forward to any degree of maturity. After the Restoration, Finch, Solicitor-General (afterwards Lord Nottingham and Lord Chancellor), Serjeant Maynard, Mr. Robert Atkyns, Mr. Prynne, and others, were appointed in 1666, to be a committee, 'to consider of repealing such statute laws as they shall find necessary to be repealed, and of reducing all statute laws of one nature, under such a method and head as may conduce to the more ready understanding and execution of such laws'. This seems to be the last recorded instance of this sort. And thus it is,' says the report, 'that parliament has hitherto failed to accomplish this general revision; and has now suffered it to sleep for more than a century, although the delay of it has annually augmented its necessity'. Now, sir, what I propose is, to break this sleep of a century; of more than a century indeed, for thirty years have passed away since the report of 1796, and each successive year has added its own heavy incumbrances to the statute-book. I shall, sir, with the leave of the house, present a bill uniting into one statute all the enactments that exist, and are fit to be retained, relating to the crime of theft, and to offences immediately connected with theft; such, for instance, as the 88th, 1826.

ceiving of stolen property. I select the laws relating to theft in the first instance, because I consider the crime of theft to constitute the most important class of crime. There are acts, no doubt, of much greater malignity—of a much more atrocious character than the simple act of robbery; but looking to the committals and convictions for crime, it will at once be seen, that those for theft so far exceed the committals and convictions for any other species of offence, that there can be no question of its paramount importance in the catalogue of offences against society, and that, if the laws relating to this class of offence can be simplified and united into one statute, we shall have made a most material advance towards the revision of our criminal statute law.—By a reference to the criminal returns for England and Wales it will be found that in the last year, the year 1825, 14,437 persons were charged with various crimes; of this number not less than 12,500 persons, amounting to six-sevenths of the whole number, were charged with the crime of theft. There were charged with burglary, 428; cattle-stealing, 42; horse-stealing, 229; stealing in a dwelling-house to the value of forty shillings, 265; from the person, 835; robbery on the person on the highway and other places, 189; sheep-stealing, 166; simple larceny, 10,087. If any other offence be taken it will be seen that the numbers charged with that offence bear a very trifling proportion to the numbers charged with theft. In 1825, the same year in which 12,500 persons were charged with theft, were committed for the crime of arson, 22; for murder, 94; for manslaughter, 122. If a longer period be taken, the result will be nearly the same. In the last seven years there have been convictions for forgery, 331; for murder, 121; for perjury, 43; for arson, 50; while, for simple larceny alone, there have been in the same period not less than 43,000 convictions. I need say no more to demonstrate the immense importance of the crime of theft, considered as a class of crime, and to shew the necessity of establishing, with regard to it, as clear and intelligible a law as it is possible to establish. The number of the statutes at present in force relating to this offence amounts to about ninety-two—they include a period of time extending from the reign of Henry III., from the statute called the *Charta Foresta*, passed in the ninth year of that king's reign, to the last year of all, the sixth of his present Majesty. The number of these laws, the remote and various periods at which they have passed, will probably create an apprehension that the attempt to simplify their language, to classify their provisions, and to condense them into one statute, is a hopeless undertaking. But, sir, I hold in my hand the visible proof that the undertaking is not hopeless. Here is the draft of a bill which has been printed for the purpose of facilitating the consideration of its details previously to its introduction, and in the short compass of thirty pages, without making any rash experiment to curtail the phraseology of the existing laws, without the omission, I believe, of a single clause, which it is fitting to retain, are included all the provisions of the statute law relating to the offence of larceny. This reduction of the bulk of the law has been effected by selecting, in some instances, from an heterogeneous mass of legislation heaped together in one statute, upon matters perfectly unconnected and dissimilar, those enactments that

relate to the protection of property from theft, and in other instances by extracting from various statutes which have been passed in particular cases, the principle upon which each was founded, substituting in lieu of various scattered enactments, giving protection to individual articles of property, one general enactment, affording protection to the class of property to which those individual articles belong. It is clear that criminal legislation has been heretofore left to the desultory and unconcerted speculations of every man who had a fancy to legislate. If an offence were committed in some corner of the land, a law sprang up to prevent the repetition, not of the species of crime to which it belonged, but of the single and specific act of which there had been reason to complain. The new enactment too was frequently stuck into the middle of a statute passed probably at the latter end of a session; to the compounding of which, every man who saw or imagined a defect in the pre-existing law, was allowed to contribute. To give an instance or two of legislation of this kind: some member has been injured, or he has a constituent who has been injured by the stealing of madder roots, and a provision is forthwith made for the special protection for the future of madder roots, not by a single statute, but by including the enactments directed against the stealer of madder roots, in a law of which the following is the comprehensive title. "An act to continue several laws therein mentioned for granting liberty to carry sugars of the growth, produce, or manufacture of any of his Majesty's sugar colonies in America, from the said colonies directly into foreign ports, in ships built in Great Britain, and navigated according to law; for the preventing the committing of frauds by bankrupts; for giving further encouragement for the importation of naval stores from the British colonies in America; and for preventing frauds and abuses in the admeasurement of coals in the city and liberty of Westminster; and for preventing the stealing or destroying of madder roots." I will mention another instance of the same kind. There are not less than twenty statutes relating to the preservation of trees from theft or wilful injury, some properly confined to trees alone, others relating to matters so utterly unconnected with the protection of timber, or with the crime of theft, that I shall be almost suspected of fabricating the title of a bill for the purpose of my argument. It seems to have been discovered about fifty or sixty years since that the various laws which had previously passed with respect to timber, did not afford sufficient protection to hollies, thorns, and quicksets, and to save the trouble of amending the former laws—these neglected shrubs were provided for in an act, which, in taking charge of them, took charge also of the other matters referred to in the following title. "An act for the better securing the duties of customs upon certain goods removed from the outports and other places to London; for regulating the fees of his Majesty's customs in the province of Senegambia in Africa; for allowing to the Receiver General of the duties on offices and employments in Scotland a proper compensation; for the better preservation of hollies, thorns, and quicksets in forests, chases, and private grounds, and of trees and underwoods in forests and chases; and for authorizing the exportation of a limited quantity of an inferior sort of barley, called bigg, from

the port of Kirkwall, in the island of Orkney." Now, sir, what I propose is not to lessen the security which the law gives to the owner of madder roots, not to throw open the holly or thorn to wanton depredation, but merely to transplant them to a more congenial soil than the province of Senegambia. The laws relating to trees are fruitful in instances of hasty and slovenly legislation. For instance, there passed in the 6 Geo. III., two statutes for the protection of certain trees and vegetable productions in gardens, the 36th and 48th chapters, which must have passed almost concurrently. Neither of them refer to the host of antecedent statutes, and the author of chap. 48 must have been apprized of the labours of him who had introduced and probably was superintending at the time the progress of chap. 36; for offences which by that act are made a felony, are by chap. 48 punishable only with a fine of 20*l*. Had the latter statute passed in a succeeding session of parliament, it would have amounted to a virtual repeal of the preceding act. There are no less than three separate acts of parliament extending the provisions of chap. 48 to particular species of trees.—I will proceed to explain the material points in which I propose either to simplify and consolidate the law, or in which I propose to remedy, what appear to be glaring defects in the law; for my undertaking is not limited merely to the condensation of the statutes. Where I find any omission through which notorious guilt escapes, I propose to supply it—where I find a just principle at present only partially applied, I propose to extend it to all the cases which it ought to include. I trust the house will bear with me in this reference to details, because details are here of the utmost importance. There are on the statute book, twelve statutes relating to the offence of stolen goods. They are numerous, because they are founded not upon any definite principle, but because they refer to individual articles of property. One statute punishes the receiver of stolen lead, iron, copper, brass and bell metal. Then follows a statute to punish the receiver of stolen pewter. Another refers to jewels, plate, and watches. Then comes the general act as to all goods and chattels—but even this was not considered general enough to apply to bank notes and negotiable securities, and therefore an act was passed in the present reign for their special protection. Now, I shall expunge from the statute book all these special provisions, and substitute in lieu of this legislation directed to particulars, one simple and general enactment, founded on this plain principle, that he who receives, knowing it to have been stolen, any thing whatever the stealing of which amounts by law to a felony, shall himself be deemed guilty of felony. Surely this is the enactment which common sense suggests as the fit enactment against the wilful receiver of stolen property, whether that property be lead or pewter, jewels or bank notes. The example to which I have last referred will sufficiently explain the mode in which I have attempted to proceed in simplifying and compressing the law in all other cases of a similar nature. I come now to a subject of at least equal importance. The supplying of those omissions in the law which ensure the impunity of guilt. Of those omissions I will give some examples. Under the law as it stands at present, it has been decided that it is not an offence, at least not an offence

in the eye of the law, to rob a ready-furnished house, notwithstanding that it is a very serious offence to rob a ready-furnished lodging. It is upon record, that after the conviction of a man who robbed of some articles of plate the house which he had hired, the sentence was respited upon a doubt whether the case were within the statute which uses the word lodging and not lodging-house. It was agreed by all the judges that the case was not within the statute, and Chief Baron McDonald ordered the prisoner to be discharged, saying, "I am sorry the laws of England have not provided for your case, for I have no doubt whatever of your guilt." Again, the statute which makes it an offence to steal or destroy fish in streams, expressly refers to such streams as pass in or through an estate. If therefore the stream, as is frequently the case, neither passes in nor through an estate, but passes between two estates, being the boundary to each, the owner of the fish forfeits his protection under the statute. Can any man doubt that these are examples of imperfection and omission in the law, which can and ought to be supplied? Can any man doubt that it is expedient to extend, as I propose to extend, the protection which the law at present gives to securities for property in the British funds, to securities for property in the funds of foreign states, and to mercantile instruments of all kinds, entitling the holder to payment of money abroad? Is it fitting that these securities and instruments should be liable to be stolen with impunity? Is it fitting that the stealing of a handkerchief should subject to transportation, and that the stealing of title-deeds, that the stealing of a will on which the property and existence of whole families may depend, should remain altogether exempt from penalty? The law with respect to a very frequent and very aggravated offence, the embezzlement by servants of their master's property, is at present very defective. Among the principal defects are these: It is necessary to state in the indictment, and to prove in evidence the embezzlement of specific monies, not merely of the sum in the gross of which the master may have been defrauded, but of the particular coin or notes of which that sum consisted, which may have entirely escaped the recollection of the master. Again, if the servant has defrauded his master by the means of receiving change, he cannot be convicted at all. Supposing, for instance, the servant having ten shillings to receive for his master, gives ten shillings to the party from whom the money is due, and receives a one-pound note, which he embezzles, he commits no offence against the law. He cannot be convicted of embezzling the note, for that was not the property of his master, nor can he be convicted of embezzling shillings, for he has received none. The main defect in the law is this: the offence is at present a felony; now by the rules of law each act of embezzlement is considered a distinct felony, and only one distinct felony is admitted to be proved upon an indictment for felony. The prosecution therefore often fails from the impossibility of laying the whole case, the whole tissue of fraud before the jury. The proof being confined to a single act of embezzlement, the jury leans not unreasonably to mercy, and frequently chooses to presume that the single act of embezzlement may have arisen from mistake, rather than to convict for the felony. I propose to remedy these defects;

to admit proof that various sums have been received and misapplied by a prisoner, without requiring proof as to the specific coin or bills of which those sums consisted. I propose to alter the legal designation and character of the crime of embezzlement, to make it a misdemeanour, instead of a felony, and thus to admit the proof of that which may be absolutely necessary to enable the jury to determine the real extent of the prisoner's guilt, namely, of the whole series of embezzlement, in which he may have been engaged. In the course of the observations which I have made, several cases have been mentioned in which I propose to subject to penalties, acts which at present may be committed with impunity. But I beg to observe, first, that these acts are in every instance acts of great moral guilt, which only escape at present through the imperfection of the law; and secondly, that the new penalties which I affix, amount in no case whatever to death; I constitute no new capital felony. I propose to extend the grasp of the law, but in no instance do I increase; in some I mitigate its severity. I will mention two important examples of the abatement of penalty. The law which makes it an offence punishable with death to steal in a dwelling-house to the amount of forty shillings, extends at present to all out-houses within the curtilage, as it is called. It is intended to except for the future from the operation of this law, so far as regards capital punishment, the stealing in all out-houses which are not connected with the dwelling-house by some internal communication. Another case in which it is proposed to reduce the penalties of the law, arises out of an act of the last session of parliament, which makes the robbery of gardens, without any distinction of circumstances, a transportable felony. The severity of the penalty renders this law in many instances inoperative. It is paralyzed by the stronger law of humanity and reason, which tells a man to overlook altogether the offence of the school-boy who robs an orchard, more perhaps from a wanton spirit of enterprize than from vice, rather than consign him to a prison and indict him for a felony. We shall give more effectual protection to the owner of this species of property, if while we retain the severer penalties for all cases of aggravated delinquency, we empower a magistrate to hear the complaint, and if he shall think fit, to dismiss the offender for the first offence on payment of a reasonable fine. I have now detailed the leading objects contemplated by the bill for consolidating the laws relating to larceny, or I should rather say, I have given such examples of those objects as will enable the house to understand the general scope of the measure. I will now proceed to explain the outline of the other, and not less important bill, which is intended to effect improvements in the administration of the penal law generally. It is impossible, sir, to contemplate without painful reflections, the state of this country with respect to the number and the increase of criminal offences. It is useless, it is worse than useless, to conceal from ourselves the truth that there is not in this country that security from fraud and depredation which there ought to be in a well-constituted society; and that there has been of late years a rapid and alarming increase in the amount of that species of crime. Many causes may concur to swell the amount of crime in this country, as compared with the amount of it in some other

countries of Europe. Property in this country is much greater, more generally extended, and necessarily more exposed. The freedom of action which is allowed to every man by our law, the absence of any control upon that action through the medium of police establishments, like those which exist in many countries, empowered to act upon vague suspicions, and preventing by unceasing vigilance the commission of offences that would otherwise be completed—such causes no doubt contribute in many instances to favour the early stages of vice in this country. But while I notice their existence and their effect, let it not be supposed that I am blind to the greater good which counterbalances the evil, or that it is my purpose, by rash attempts at controlling the excesses which this freedom of action may engender, to impair the noble spirit, the enterprise and energy, that are its blessed offspring. I shall now proceed to submit to the house a few details with respect to the comparative numbers of criminal offenders at different periods, and I deeply regret that the result is in some particulars so unsatisfactory. In the seven years, ending December 1816, there were committed to the several gaols in England and Wales 47,522 persons charged with criminal offences. In the seven years, ending December 1825, the number was nearly double, amounting to 93,718. In the former period there were 29,361 convictions. In the latter 63,418. In the former period there were sentenced to death 4126 persons. In the latter 7770. In the former period 536 persons were executed. In the latter period 579; being an immense reduction, let it be observed, in the number of executions as compared with capital convictions. It is a circumstance worthy of remark, that although in the country generally there would appear by these returns to have been so large an increase in the amount of crime, in the last of the two periods to which I have been referring, an increase nearly of one half the total amount, there has been by no means a corresponding increase in the number of criminal offenders in London and Middlesex, although in this district the increase of the population must have been at least as great as that in any other district. Taking the more serious offences, those to which the penalty of death is attached, we shall find that in London and Middlesex 1018 persons received sentence of death in the seven years ending December 1816. In the seven years, ending December 1825, 1124; being an increase in capital offences of not more than one-eleventh. The total number of convictions generally in the first period was 7421. In the latter period 11,624. If reference be made to the number of executions in London and Middlesex in late years, compared with former periods, I trust we shall be warranted in concluding that crimes of an atrocious character are on the decrease, though no doubt the reduction in the number of executions must be partly attributed to a greater forbearance in carrying into effect the extreme punishment of the law. In seven years, ending with December 1793, there were in London and Middlesex 272 persons executed. In the same period, ending with December 1825, there were 165. In two years alone, 1786 and 1787, there were 138 executions for offences committed in London and Middlesex. In the three last years there were only 39. From the year 1810 to the year 1822, inclusive, there were 173 exe-

cutions in England and Wales, for robbery on the highway, being at the rate of about fourteen in each year. In 1823, there were five executions for this offence. In 1824, six. In 1825, six. For the seven years preceding 1823, the number of convictions for this last offence, were at the rate of 140 in each year. In the last three years they have not exceeded on the average 110. From the year 1810 to the year 1822, inclusive, there were 260 convictions in England and Wales for murder, being at the rate of 20 in each year. In the year 1823, there were 12 convictions for murder; in 1824, seventeen; in 1825, twelve. I trust, therefore, that although there has been so great an increase in late years in the total amount of criminals for crime, I am warranted in the inference that crimes of the deepest dye are less frequent than they formerly were, and that they are gradually decreasing in number. With respect to the fact that crime has not increased in London and Middlesex, in the same proportion in which it has increased in every other district of England, almost without an exception, I cannot but think that the cause of this is chiefly to be looked for in the efficiency of that police establishment, which is placed under the superintendence of the Secretary of State, an establishment consisting merely of magistrates, with no higher authority than that which any justice of the peace possesses—of constables and patrol, with no other powers than those which the common constables can exercise, but efficient and active because their whole time is devoted to the duty which they have to perform, and because a responsibility is imposed upon them, which it is very difficult to impose practically upon the gratuitous discharge of public functions. I am confident that the house will not require an apology for these general observations on the nature and extent of the criminal offences committed in this country, with which I have prefaced the explanation I will now give of the particular objects of the second measure which I propose to introduce, and which I trust I do not improperly designate a bill to improve the administration of the law. This bill will regulate in some respects the proceedings connected with the administration of the law, in the various stages of a criminal prosecution. It will re-enact, and more clearly define the duty of the coroner as to taking evidence upon an inquisition of manslaughter or murder—the binding by recognizance—and the certifying of the evidence, the recognizances and the inquisition, to the court before which the trial is to be. In respect to the magistrate—it will define what is generally understood to be the law as to the power of admitting to bail, which now rests upon the construction of an obscure statute passed in the reign of Edward I. It will make it obligatory on the magistrate to do that, which it is the general practice to do in case of felony, (but a practice not enjoined by law), namely, to take the examinations upon which a prisoner is either committed to prison, or admitted to bail, in the actual presence of the prisoner himself. It will extend this obligation to cases of misdemeanour, as to which there is at present no provision by law, and it will require the return of examinations to the quarter-sessions, to which they are not at present, by any existing statute, bound to be returned. It will extend to subsequent and to future acts the principle of an act of King William, which

places the felon in the same situation as to the consequences of his guilt, whether that guilt be proved by evidence—or confessed by himself—or admitted by his standing wilfully mute—or by his suffering outlawry. At present, there are several offences, constituted such by acts of the legislature which have passed subsequently to the act of King William, in the case of which, the same consequences do not follow to the offender, should he confess his guilt, or stand wilfully mute, as would follow in the case of his conviction by verdict upon evidence. This bill will extend to accessories to felony after the fact, the principle of the existing law, which makes accessories before the fact triable, either in the county in which the principal felony was committed, or in the county in which the offence of becoming an accessory was committed. The propriety of such an enactment will be best shown by referring to circumstances which recently occurred connected with a very aggravated burglary in the county of Hertford. Lord Cowper's house was broken into by night by a gang of eight persons, who went from London for the purpose, and his steward was robbed of the amount of the rents which he was known to have received from Lord Cowper's tenants the day before. The booty was brought to London, and was divided into shares by a man of the name of Dudfield, who received a considerable portion of it, and who, though not himself present at the robbery, was no doubt actively concerned in planning it. He was apprehended and sent to Hertford for trial, but it was impossible to convict him there, because there was no proof that the offence with which he was charged, namely, that of being an accessory after the fact, had been committed in that county in which the principal offence had been committed. He was next arraigned at the Old Bailey, but he escaped there on the same ground. Ultimately he was convicted in Surrey after very great difficulty, and at an expense to the prosecutor of four hundred and twenty-six pounds for bringing that single offender to justice. Should this bill pass into a law, the prisoner indicted under similar circumstances would be liable to be tried in Hertfordshire as well as in Surrey. By this bill a discretionary power will be given to the judges of assize and to the court of quarter-sessions to award to the prosecutor in certain cases of misdemeanour the actual expenses incurred by him. On a trial for felony it is well known that the courts have such a power at present, and experience proves that the total want of it on trials for misdemeanour, is a serious obstacle to the due execution of the law. I am fully sensible that this power ought to be strictly defined and controlled. It ought not to extend to cases of assault, on account of the tendency it might have to encourage a litigious spirit and frivolous prosecutions, and it might probably be expedient to limit it to prosecutions for those offences to which the punishment of hard labour can be by law attached. I will give the fullest consideration to every suggestion for preventing the abuse or the injurious effects of this extension of the authority of courts of justice, but I must contend that by withholding the authority altogether, you frequently close the avenues of justice in instances in which the poorest classes are the sufferers, and in which the public interest loudly demands reparation from the offender.

What distinction in point of moral guilt, nay in many cases, what distinction in point of injury to the sufferer, is there between actual rape and the attempt to commit rape? The law calls the latter offence a misdemeanour; it expects that the party aggrieved, the infant child perhaps of a labouring man, shall overcome all the natural feelings of delicacy and shame, and shall appear in a public court to prove the disgusting details of the injury she has received; it requires the sacrifice of time, the trouble which are inseparable from public prosecution, and after all, inflicts on the injured party the heavy penalty of paying the whole expenses of the suit. There may no doubt be occasionally subscriptions towards such expenses from private and casual sources, but the public purse is closed by law to the prosecutor in such a case as that which I have been detailing. Take again the case of gross abuse of authority, or gross neglect of duty, by some public officer, amounting to misdemeanour, can we expect that private individuals will take upon themselves the invidious duty of lodging the complaint, the painful task of arranging the proofs, and finally the whole costs of prosecution, and all this out of a pure abstract love of justice and tender care for the public interest? It is ridiculous to expect it: to withhold public aid from the prosecutor in such instances as these, amounts to the frequent denial of all reparation to the poor man, and to the impunity of great offenders. My attention was drawn to the last instance which I have mentioned of imperfection in the law, by a gentleman whose name will be familiar to all who hear me, the Rev. Mr. Sydney Smith, a magistrate of the county of York. He had committed a man on the charge of poisoning cattle; the man's house was searched by a constable, who found there the poison (arsenic), brought it to the house of Mr. Smith, and subsequently to screen the prisoner from punishment, denied that any poison had been found. The constable confessed the part he had acted in this transaction, and yet the magistrate had no alternative but either to permit such flagrant misconduct to go unpunished, or to take upon himself the whole burden of the prosecution. Either alternative appears to me fraught with injustice, for which I hope to devise a remedy. Perhaps in my own opinion a more extensive remedy ought to be applied than that which I am at present prepared to apply. But such a remedy might work a change in our institutions and habits too material to be hastily adopted, without feeling our way by the aid of that previous discussion which familiarizes the public mind to changes, that may be good abstractedly considered, but that lose half their benefit, if they are too precipitately carried into effect. If we were legislating *de novo*, without reference to previous customs and formed habits, I for one should not hesitate to relieve private individuals from the charge of prosecution in the case of criminal offences justly called by writers upon law—public wrongs. I would have a public prosecutor acting in each case on principle, and not on the heated and vindictive feelings of the individual sufferer on which we mainly rely at present for the due execution of justice. Such feelings are rarely the fit measure of the propriety of prosecution. They are apt on the one side to overrate the wrong committed; on the other, still more apt to subside

after the first impulse of revenge, and coupled with the just fear of trouble and expense, to lead to disgraceful compromises, in which the interests of justice are altogether overlooked. I would therefore make the prosecution of these public wrongs much more a matter of public concern than it is at present; I would (taking at the same time all proper security against the encouragement of undue litigation) indemnify parties more liberally from the pecuniary charge which the trial of a public offender entails, and I would, by the appointment of a public prosecutor, guard against malicious or frivolous prosecutions on the one hand, and on the other, I would ensure prosecution in cases in which justice might require it. In Scotland crimes are prosecuted in this manner through the agency of a public officer, responsible for the justice and propriety of the prosecution when undertaken at the public charge, and for the conduct of it through its various stages. The public prosecutor in Scotland has another power devolved upon him—the exercise of which is frequently of the utmost advantage. In the prosecution of a crime, to which the penalty of death is attached by law, he is enabled, in preferring the indictment, or indeed any subsequent stage of the trial, to restrict the sentence in case of conviction to a punishment short of death, thus empowering the jury to find a verdict of guilty with a perfect assurance that the death of the prisoner cannot be the consequence of that verdict. Whether such a power can be safely and properly transferred to the institutions of our own country, I am not now prepared to give an opinion. Of this, however, I am confident, that if it should be found possible to borrow from the laws of Scotland suggestions for the improvement of our own law, no Englishman would be found to decry the adoption of such suggestions as monstrous innovations, the offspring of a ridiculous desire for useless uniformity, and the badges of disgrace to the country for whose benefit they were intended. In the detail of the chief provisions of this bill, I have reserved for the last, that alteration in the existing law to which I attach the greatest importance. It appears to me, sir, that when a prisoner charged with a heinous crime, and proved to be guilty on clear evidence, escapes the penalty of the law upon some technical quibble, or in consequence of some omission of useless forms, a grievous injury is done to society. Not only is justice defeated in the particular case, but the law is discredited, and the numerous class that speculates keenly on the advantages to be derived from crime, compared with the risk of its punishment, sees in every instance of undeserved impunity a fresh encouragement to the adventure. They may, and probably they do, grossly miscalculate—but what is that very circumstance, but a great additional evil to society? It is surely a gross mistake to boast as the perfection of any system of law, that it favours the escape of the party accused. That law, I apprehend, to be most perfect, which most certainly ensures the conviction of the guilty man, and the acquittal of him who has been unjustly accused. But the acquittal of the innocent ought, in justice to innocence, to be upon the merits of the case. The innocent man derives no benefit from the advantage which may be taken of mere informalities; on the contrary, if that advantage be taken in his case, he forfeits, perhaps, the only chance he

has of rescuing his character from stigma, by the proof in open court, that the charge against him is totally unfounded. When I say that the law is most perfect which ensures with the greatest certainty the conviction of the guilty, and the acquittal of the innocent, I ought to add as a qualification, that the law ought to ensure that conviction and acquittal upon principles not capable of being misapplied and perverted. There are, for instance, provisions in the criminal law of France, calculated no doubt to individual instances to elicit truth, but which I should never wish to see ingrafted on the practice of this country. I should deprecate any thing approaching to the compulsory examination of an accused party; above all, I should be unwilling to see the judge who presides at a criminal trial, actively concerned in the conduct of that trial. I should fear that the general tendency of such an interference would be, if not to create in the mind of the judge by insensible degrees, a leaning in favour of the accusation rather than the defence, at least, to lead to inferences on the part of the jury as to the impressions of the judge, which might unduly influence their verdict. I should deprecate the temptation which it might create in the display of superior acuteness in the examination of evidence, every thing in short, which could give to the judge the character of a party to the cause, rather than that of a perfectly unbiassed arbiter. To return, however, to the immediate object to which I wished to call the attention of the house, namely, the expediency of devising some means, which, at the same time that they in no degree endanger the security of the person unjustly accused, shall diminish the chances of escape to the guilty man through mere quibbles or useless technicalities. If any one will review the grounds upon which great offenders, of whose guilt there could not be a question—whose guilt had been proved in evidence—nay, upon whom a verdict—upon whom even judgment itself had passed—have still escaped punishment; he cannot rise from that review without lamenting such melancholy triumphs of legal forms over substantial justice. Ought notorious guilt to be entitled to the same impunity with proved innocence, because after judgment it is discovered, (to quote the phrases of this bill, which I have had prepared,) that in the indictment for a felony there is wanting some proper addition to the name of the defendant, or because there is the want of a *profect*, or *probat per recordum*—or because there is the omission of *vi et armis et contra pacem*? Yet these are the grounds upon which offenders have escaped. Ought the murderer to have all the benefit of acquittal, because the murdered man had three Christian names, and only two of them are set forth in the indictment? or because the wound which caused his death is not described with entire accuracy? Surely we may rely on the dictates of common sense, and be assured that these things are not perfections in the law. But if I am called upon for professional authority, I will cite the beautiful expressions of Sir Matthew Hale, and let them stand as the fitting preamble to the enactment I propose. In the history of the Pleas of the Crown, Sir Matthew Hale concludes the chapter on the forms of indictment with these memorable remarks:—"And thus far, touching the forms of indictment, wherein generally we are to take notice that in favour of life great

strictnesses have been in all times required in points of indictments, and the truth is, that it is grown to be a blemish and inconvenience in the law, and the administration thereof; more offenders escape by the over-easy car given to exceptions in indictments, than by their own innocence, and many times gross murders, burglaries, robberies, and other heinous and crying offences, escape by these unseemly niceties, to the reproach of the law, to the shame of the government, and to the encouragement of villany, and to the dishonour of God. And it were very fit, that by some law this overgrown curiosity and nicety were reformed, which is now become the disease of the law, and will, I fear, in time grow mortal, without some timely remedy." In the bill which I had prepared for the purpose of applying this timely, or I should rather say, this tardy remedy, it was originally proposed to enact that if upon any trial for felony or misdemeanor, the jury shall be satisfied that any person, time, fact, matter, or thing, touching which evidence is given, is really the same person, time, fact, matter, or thing intended by the indictment, it shall be lawful for the jury to find the defendant guilty, notwithstanding any variance in the name or description contained in the indictment. It was thought, however, by some whom I consulted, and in whose judgment I place implicit confidence, that this enactment goes too far, and that it might introduce a laxity and uncertainty into indictments more mischievous than the excessive subtilty which it is intended to correct. I shall propose, therefore, to limit the enactment, at least for the present, to a specification of those defects which shall not (as at present they do) vitiate an indictment after verdict, or after confession or default.—I have now, sir, I fear, at very unreasonable length, detailed the objects of the two measures which I propose to introduce. They may not perhaps answer the expectations of some who call out for the immediate and simultaneous revision of the whole of the criminal law. To those I answer, in the first place, that they are little aware of the difficulties of far less extensive projects, of the labour and caution, and judgment which are requisite in every step of such an undertaking as that to which the present motion refers. The mere collection of dispersed statutes under one head is an easy process, compared with the more important task of rejecting what is superfluous, clearing up what is obscure, weighing the precise force of each expression, ascertaining the doubts that have arisen in practice, and the solution which may have been given to those doubts by decisions of the courts of law. In the second place, I answer, that nothing would be more unwise than to force on the country in too rapid succession, these alterations in the law. Even if we could have an entire confidence, that the substituted law was in itself perfect, without a blemish or omission, still we must recollect, that we are not the instruments for carrying it into effect, and we shall defeat our intentions, and blight the prospects of real improvement, unless we give leisure to the various authorities on whose assistance we must depend; nay, to the country generally, to comprehend the full scope of the projected changes. Let us not distract and confound society by a multiplicity of new arrangements relating to matters of such importance, and of such constant recurrence in the daily business of life. It cannot, I think,

be justly said, that of late years at least, the march of amendment in the law has been too slow. During the four years that I have held the appointment which I now hold, the following measures have been carried through parliament:—The whole of the statute law relating to prisons, and prison discipline, has been, after deliberate inquiries, commenced by my predecessor (Lord Sidmouth), consolidated and amended. The severity of the criminal law has been mitigated by extending the benefit of clergy to many offences that, before, were capital felonies; and one great objection to that severity has been altogether removed, by enabling the judges to abstain from passing sentence of death in every case, excepting that of murder. The laws relating to the punishment of transportation, have been revised and collected into one statute. The laws relating to the effect of pardons from the crown, and to the rights of convicts after pardon, and after the fulfilment of their sentence, have been placed upon just principles. The abuses that grew out of the practice that prevailed with regard to writs of error, have been corrected. And, lastly:—the jury act, comprising the regulations that were previously dispersed in sixty-six acts of parliament, which now no longer encumber the statute book, has been passed, and has, I have every reason to believe, materially improved the constitution of juries. I have entered into this detail of what has been actually done, for the purpose of satisfying the house, that there is no indisposition on my part to proceed in the review and improvement of institutions connected with the administration of the criminal law, though I certainly deprecate that rapid progress, which is inconsistent with mature deliberation, and which leaves behind it, in its thoughtless career, the various instruments, without whose concurrence it is useless to advance. There may, sir, perhaps be some who may think it extraordinary, that I, who have not had the advantage of professional practice, or even of a legal education, should undertake the introduction of measures, the details of which must necessarily require so much of professional and technical learning. But let it be recollected, that I am placed in an office which devolves upon me the duty of superintending, in many important respects, the administration of justice, which entitles me to advise the Crown as to the remission or execution of almost every sentence of the law, and which gives me daily, I might say, hourly opportunities of witnessing the practical operation of the statutes which I am attempting to simplify and amend. These considerations will probably relieve me from the charge of any unwarranted and presumptuous interference in matters which I do not comprehend. I should be indeed open to that charge, if in presenting these bills to the house, I were offering my own crude speculations, unaided by the learning and experience of professional men. No, sir; it has been my good fortune to profit by the willing assistance of men who yield to none in respect to general acquirements, to profound knowledge of the principles of law, or to experience in its practice. I owe the preparation of these bills to those gentlemen through whose labour and skill the jury act of last session was prepared; to Mr. Hobhouse, the Under Secretary of State in the Home Department, (to whom, but for the relation in which he stands to me, I would do much more ample

justice); and to Mr. Gregson, a barrister of high eminence on the Northern Circuit, justly respected by all who know him. The bills, thus prepared, have been submitted to all the judges, and from many of those eminent individuals, from Mr. Justice Bailey, Mr. Baron Hullock, Mr. Justice Holroyd, Mr. Justice Burrough, and Mr. Justice Gaselee, I have received very useful suggestions. The assistance which has been afforded by the Lord Chief Justice, I cannot sufficiently acknowledge. He has devoted to the minute examination of these measures all the leisure which he could spare from the immediate pressure of his judicial duties; and has, I fear, encroached upon that repose which was essential to the restoration of his health. In the profession of the law generally, I have found the utmost readiness to co-operate in the work which I have undertaken. It is the fashion to impute to that profession an unwillingness to remove the uncertainty and obscurity of the law, from the sordid desire to benefit by its perplexity. This is a calumny which I know to be unfounded; for I have never made, in the progress of this work, a single application for assistance to any member of the profession of the law, which has not been received in the spirit which becomes a generous mind, rising above the narrow prejudices of habit, and the paltry view to private gain. There is one gentleman among those who have thus shewn a willingness to give assistance,—to whom I must make this public return of my acknowledgments; I allude to Mr. Russell, a gentleman who has rendered important service to the law by most valuable publications, and who has offered suggestions with respect to many provisions included in these bills, that are entitled to every attention.—I now leave to the consideration and decision of the house the measures into which I have entered at such unreasonable length. They will, I trust, be found, after full investigation, not unworthy of the final sanction of parliament. They propose no encroachments upon civil liberty, no extension of executive authority,—no rash subversion of ancient institutions,—no relinquishment of what is practically good for the chance of speculative and uncertain improvement. ‘The work which I propound,’ as Lord Bacon says, ‘tendeth to pruning and grafting the law, and not to plowing up and planting it again; for such a remove I should hold indeed for a perilous innovation.’ Whatever, sir, may be the ultimate decision of this house, with respect to the measures themselves, it will not, I am confident, condemn the motives which have prompted me to the undertaking. I can have no motive but the desire to improve the opportunities which have been placed within my reach, and to exert to useful ends the influence and authority which constitute, if rightly applied, the real value of high official station. And, sir, if there be mixed with that desire any latent feeling of a more personal nature, why should I disavow the legitimate ambition to leave behind me some record of the trust I have held, which may outlive the fleeting discharge of the mere duties of ordinary routine; and that may, perhaps, confer some distinction on my name, by connecting it with permanent improvements in the judicial institutions of the country?—The rt. hon. gent. concluded his speech\*, amidst the acclamations of the house, with moving, “That

leave be given to bring in a bill to consolidate and amend the laws relative to larceny, and to such offences of stealing, and embezzling, and of receiving stolen property, as are cognizable in England.” Also, “a bill for amending the laws relating to felonies, to the trial and punishment of accessories, and the expenses of prosecutions and of the apprehension of offenders, and to the taking of examinations, informations, bailments, and recognizances, and returning the same to the proper tribunals in England.”

Sir M. W. Ridley hoped that the rt. hon. gent.’s ameliorations would embrace the whole of the British law. There was one law which required special attention: it respected the exportation of horses. There was a law prohibiting their exportation, which had been so far repealed as to allow of their being exported at a certain duty; but, as mares had not been particularly mentioned, it was still in the power of any person to prevent the exportation of a mare.

Mr. Calvert had never listened to a speech in that house which gave him more satisfaction than that of the rt. hon. gent. (hear, hear). But he thought the system, with regard to the punishment of offences, required correction. If a man did not commit a capital crime, he might continue to offend, going to prison and coming out thence worse than he went in. He might persevere in this course through a long life, making others as bad as himself. He was of opinion that every person convicted of felony should be transported for life; and gradations of punishment might be found at the place of transportation, where young men might lead better lives than at home. By following this system, the calendar might, in his opinion, be reduced one-half.

Mr. Lockhart remarked that great advantage would accrue to the country from the introduction of a protective police. The power of the constable had been too much curtailed. In Germany, powers were given to petty officers, and he thought a similar expedient might be adopted here. As it appeared from the statement of the rt. hon. secretary, that crime had increased in the country two-fold, and had not increased in the metropolis, the non-increase must, in his opinion, be attributed to the police system, and it ought, therefore, to be extended to the country.

Mr. J. Abercrombie entirely concurred in the tribute of respect which had been paid to the speech of the rt. hon. gent. (hear, hear). He considered the subject to be one of great importance, and sufficient to engage the attention of the greatest mind. In the general proposition laid down by the rt. hon. secretary he fully agreed; no one, indeed, could deny that the law ought to be made accessible to all. He wished to express his great satisfaction at having lived to see the day when a minister of the Crown had risen in his place to declare his opinion that the criminal law of the realm needed revision. Many members must recollect the difficulties which a friend of his (Sir S. Romilly) had to encounter when he endeavoured to alter the criminal law. He had been told that it was presumption to attempt it. Upon the suggestion of that distinguished person, the house did, indeed, recognize the principle that promptitude and certainty were essential requisites in punishment.—The hon. member sat down by declaring, that he attributed the great proportion of the increased crime, which was ob-

\* Reprinted from the edition of Hatchard, 1826.

servable in the agricultural districts, to the operation of the game laws. He trusted that the *rt. hon. gent.* (Mr. Peel) would keep those laws uppermost in his mind; and that some alteration in them, before long, would add to the benefits which, in his jury bill, as well as in the measure before the house, the *rt. hon. gent.* had conferred upon the country.

Sir J. Sebright concurred with his hon. friend (Mr. Abercrombie) in his opinion of the game laws. He believed that a great mass of the crime of every description had its origin in the violation of those statutes.

Mr. Sykes returned thanks to the *rt. hon. gent.* for his measure generally; and particularly for that part of it which repealed the law under which it was felony to steal an apple. An act which had probably been committed by every member of that house ought not to be punished, in any man, with such a degree of severity.

Sir G. Chetwynd agreed that there were cases of misdemeanor, such as assaults with intent to commit felony, in which it was desirable that prosecutors should have their costs. He trusted, however, that care would be taken how any new additions were made to the charges on the county rate, which were heavy enough already.

Mr. Estcourt thought that it was a mistake to attribute the increase of crime in the country to the operation of the game laws; he rather looked for the cause of that increase in the poverty and privation which was endured by the lower classes. With respect to the payment of costs upon prosecutions for misdemeanor, he agreed in the principle; but he thought the expense should be defrayed, not out of the county rate, which touched only one description of property, but out of the general taxation of the country.

Mr. Peel wished to have the provisions of his measure thoroughly canvassed. There was one alteration in the law relative to estreating recognizances, which he should deem it peculiarly important to make as soon as possible. Nothing was more common than for persons who were bound over to appear as witnesses, upon prosecutions, and were not called in court, to be actually arrested, perhaps years afterwards, owing to some mistake as to their appearance or non-appearance. As to the payment of costs in cases of misdemeanor at sessions, he believed that they would be far lighter in amount if paid out of the county rate than out of the general funds of the country. He had observed that all expenses allowed at sessions by magistrates who had an immediate desire to keep the county expenses down, were much lighter than those given by the judges of assize.

Leave was then given to bring in the bill.

Monday, April 17.—On the motion of Mr. Peel, the house went into a committee on the Criminal Justice bill.

Mr. Peel said he wished to enlarge and define the authority of magistrates with respect to the power of admitting to bail in certain cases. At present that power rested on a statute of Edward I. The clause which he should propose would enact, that where a party was charged with felony on oath of a credible witness, if the charge was not answered, and left a

sess. 1826.

strong presumption of guilt, the party should be committed; but in cases where it appeared to the magistrate that a strong case was not made out, and that a strong presumption of guilt did not exist, then the magistrate would have the power to remand the party, until his case could be considered by two magistrates, who would have the power, if they took the same view of it, to admit the person to bail. The experience of years had shown, and he would not go further back than the commitments of the last seven years, that a vast number of persons were acquitted or discharged from want of prosecution, who had been imprisoned for considerable periods. Now, if the committee looked to the effect of imprisoning for a long period in a common gaol an innocent man on a charge of felony, and considered that in almost all cases such a person came out a much worse man in point of moral character than he was when he went in (hear, hear), they would not, he was sure, object to the grant of a power to magistrates, which would prevent in many cases the chance of an innocent man being exposed to such a contamination. He inserted the word "felony," because at present, with few exceptions, where a man was charged with felony, the magistrate, even though he might not think it a case strongly presumptive of guilt, had not the power to admit to bail, but must commit or discharge the prisoner.

On the clause being moved that all informations and examinations on which any person should be imprisoned or admitted to bail, should be committed to writing, and returned into court at its opening,

Mr. Peel said, that at present magistrates, upon charges of misdemeanor, were apt not to reduce the examinations into writing, but although it might give some little more trouble, he conceived it but right that this should be done in all cases.—This clause was then agreed to; as also the clauses for giving similar powers to coroners in this respect as to justices, and imposing a fine on both of them in case of their failing to observe the above regulations.

On the clause being moved that all felonies, without benefit of clergy, should be ousted of that benefit under all circumstances consequent on the indictment,

Mr. Hume said, that the *rt. hon. gent.*, whilst he was improving the criminal law, would be doing a great benefit if he were to do away with the distinction as to the benefit of clergy altogether; indeed, the meaning of this term was far from being generally understood.

Mr. Peel said, that it was his intention to attempt the consolidation of the whole criminal law; that next session he purposed to consolidate the statutes relating to injuries of the person, coining, and forgery, and that till a great progress had been made in this consolidation, it would be difficult to adopt the suggestion of the hon. member, inasmuch as the doing away with the benefit of clergy now would have the effect of making a great number of offences capital which were not so at present.—The clause was then agreed to.

On the next clause being read, which provided that accessories before the fact should be liable to the same punishment as the principals,

Mr. Scarlett suggested that the punishment awarded to accessories before the fact should

not in all cases be the same as that awarded to the principals. For instance, a man might suggest to another a robbery, not intending to have the person robbed treated with violence. The individual committing the robbery might, in the execution of it, employ such violence as would render his life justly forfeit to the laws of his country. Would it be right in such a case to punish the accessory before the fact with as much severity as the principal? The clause as it stood at present, would introduce a fresh severity into our criminal law. He would therefore wish to have some distinction drawn between the different degrees of guilt which individuals might contract by becoming accessories to a felony before the fact.

Mr. Peel said, that his object in bringing in this bill was not only to consolidate the law, but to reduce it as nearly as he could under one principle. Now he understood the principle of the law of England to be this—that accessories before the fact should undergo the same punishment with the principal. It was so in the case of murder, of robbery, of burglary, of house-breaking attended with circumstances of fear, of arson, of horse-stealing, and of forgery; and he believed that wherever the accessory before the fact was not punishable in the same manner with the principal, it was not by the intention but by the omission of the legislature. Though there might be cases in which the accessory before the fact was not equally guilty with the principal, there were also cases in which he incurred much greater criminality than the actual perpetrator of the felony: as for instance, in the case of a man who employed a young boy to commit a robbery. For this reason he thought the present clause perfectly defensible.

The clause was then agreed to.

On the moving of the clause empowering offences committed within 500 yards of the boundary line of two counties, to be tried in either county,

Mr. Sykes expressed a wish, that in all cases a prisoner should be tried either in the county where the offence was committed, or in that in which he was apprehended. The latter case must always be clear.

Mr. Peel thought that it would be much better to have the prisoner always tried in the county where the offence was committed, as it would enable both prosecutors and prisoners to conduct their cases with the least possible expense. If the prisoner was to be tried in the county where he was apprehended, how would the hon. gent. act, supposing the prisoner was apprehended on the boundary line, or in a boat on the river dividing two counties? He certainly could not consent to the hon. gent.'s proposition.

Mr. Scarlett observed, that if there were any doubt as to the boundary of a county, there would be also some doubt as to the distance of 500 yards from that boundary. It appeared necessary to make the law more explicit upon this point.

The clause was then agreed to.

Mr. Peel next moved the order of the day for the further consideration of the Larceny Laws bill, and after intimating that he might think it expedient not to pass the bill through the house this session, but to suffer it to stand over for consideration, in its amended state, till the next session of parliament, stated

to the house two or three of the alterations which he desired to make. In the first place, as it was expedient to limit as far as possible the list of offences which were subject to the punishment of death, he intended to repeal that law which made the stealing in a church (no matter under what circumstances, or to what amount) a capital crime. As the statute stood, a man who stole his neighbour's prayer-book, as they sat in the same pew at chapel together, would be liable to suffer death for it; the act being in itself no more than a simple larceny. He saw no reason why any other law should be applicable to a place of worship than belonged to the common case of a dwelling-house: in either case, the breaking and entering would be capital, but not the simple act of stealing. In the same way, the statute which made it death to steal from a booth or tent at a fair, was one which ought to be revised; people who keep such open booths ought to guard their property sufficiently themselves, and not look for laws of unreasonable severity to protect it. The stealing to the amount of 40s. in a dwelling-house, independent of burglary, was now capital; he proposed to increase the 40s. to 5l. The sum of 40s. had been fixed (as necessary to constitute the capital offence) in the reign of Queen Anne. Considering the different circumstances of the country, the amount which he now proposed was not materially greater. The punishment of stealing fish out of any pond was seven years' transportation; and there was no difference between an angling and a stealing by nets or other engines. Now he thought it rather hard to send an angler, although he did fish in other people's waters, to Botany Bay for seven years, and therefore proposed a mitigation; the law, as he would have it, should oblige every angler, who caught fish improperly, to give his name and address on demand, subject to a penalty of 50l. for giving a false one; and his punishment should be to pay three times the value of the fish taken, with an additional fine to the king, to be levied by order of the magistrate. With respect to the deer-stealing, hon. gentlemen were perhaps aware, that by the present law, any person who was sworn to have had the head, hide, or any part of the flesh of a deer in his house within one month from the date of the oath, was liable to be called on—without any proof given that he really had possessed such venison—to show that he had not possessed it illegally. This statute was too severe; indeed perfectly unreasonable; and he (Mr. Peel) proposed to leave the law as to venison on the same footing with that which applied to other meats. Some change was proposed in the law referable to obtaining goods on false pretences; but with these, at so late an hour, he would not intrude upon the house.

The report was received, and ordered to be further discussed on that day se'nights.

LORDS, TUESDAY, MAY 9.—The Earl of Liverpool having, in moving for its commitment, described the heads of the Criminal Justice bill, said, that he could not conclude without making two or three observations on the statements which had gone abroad respecting the increase of crime. In the first place, it appeared from the returns that the increase of crime had been greater within the last series

years than the preceding seven years; secondly, that though the increase of crime had been greater on the whole during the last seven years, still the more heinous crimes had not increased. Strange, however, as it might seem to their lordships, it was found that the increase of crime was not proportionally so great in the metropolis and its vicinity, as in the country at large. This result was contrary to all the ideas which had heretofore been entertained on this subject, for it had always been supposed that crimes abounded most in a great and luxurious metropolis. Another remarkable circumstance was, that if any line of distinction could be drawn between the manufacturing and agricultural districts, it would be found that the balance was rather in favour of the morality of manufacturing districts over the agricultural. This state of things with respect to the agricultural districts might perhaps be in some measure owing to the laws respecting game, and he thought that those laws required revision.

The bill was then committed, some amendments were made, and the report brought up.

THURSDAY, MAY 18.—The Earl of *Liverpool* having moved the third reading of this bill,

The Earl of *Malmesbury* not only had no objection to the principle of the bill, but highly approved of it, and he was of opinion that the name of the framer of this and other bills of a similar kind would descend with distinction to posterity, while the memory of the political economists would be buried in oblivion. But he wished to bring under the notice of the house a clause which maintained a practice that appeared to him to be founded on partiality and injustice. This bill allowed expenses to poor prosecutors, which, indeed, was the old law with respect to cases of felony. The present measure, however, not only confirmed that practice, but extended it to cases of misdemeanour. According to the bill, any Irishman, Scotchman, soldier or sailor, or whoever he might be, would be entitled to the allowance. Now, as this was a measure of public benefit, it was natural to expect that the expense would be thrown on the public. But on what fund did the burthen fall? On the county-rate. The hardship of such a measure would evidently appear, by considering the burden which the county-rate already imposed. In a county with which he was connected, the rate for ten years, ending 1799, had in no year been more than 200*l.* In the ten years ending 1812, it was in no year more than 538*l.*; but in the ten years ending 1823, it rose to 1315*l.* The county-rate had now increased to nearly seven times the amount at which it stood in 1799; and if regard were had to prices, still higher, (for wheat, which was then at 8*s.*, was in 1823 only 6*s.*) The extent to which such charges on the county-rate might be carried was a serious consideration. By another clause it appeared, that certain expenses might be paid on application to the Treasury; and he thought those charged on the county-rates, which fell chiefly on agriculture, while the landholder escaped the burden, might be paid by an order on the receiver-general of the taxes.

The Earl of *Liverpool*, with respect to the principle of the clause to which the noble lord had referred, observed, that it had not been adopt-

ed without due consideration, and communication with persons interested in its operation. All charges were not thrown by the bill on the county-rates, but in special cases power was given to the judges to award certain expenses. The burden had always been borne by the county-rate in cases of felony; but whether the whole mode of conducting this business might not be placed on a different footing was a question which he considered open to discussion. It would be a fit question for their lordships' consideration, whether the law of Scotland should not be followed, and the law officers of the Crown made public prosecutors. He felt the weight of the objection made relative to the county-rates. The principle with respect to these charges was, that they should fall on every description of property, and if any way could be devised to distribute the burden more equally, he should certainly throw no obstacle in the way of so just a measure.

The bill was then read a third time, and passed.

### *Stealing in Orchards.*

COMMONS, THURSDAY, APRIL 27.—Mr. Sec. *Peel* observed, that he had already intimated his intention of postponing till the next session of parliament, the bill for the consolidation of all the laws relating to the malicious destruction of property. There was, however, an act passed during the last session to prevent stealing from orchards, which he did not think ought to stand till then. That act included the offence of a schoolboy who stole an apple, as well as offences of greater moral guilt; and it materially tended to deprive individuals of the very protection it was designed to afford, for persons would rather connive at those acts than be instrumental in sending the offenders to prison. Some other mode of punishment might be devised, either by a fine or summary conviction, or forfeiture of treble the value of the goods, and in default of payment, committal for a limited time. The offence ought not to be punished as a felony. If the house thought it expedient that this bill should not be suffered to remain, he would move for leave to bring in a bill to amend the law respecting the offence of stealing in gardens and hot-houses.

Leave was given to bring in the bill.

### *Counsel in Cases of Felony.*

TUESDAY, APRIL 25.—Mr. *George Lamb*, in asking for leave to bring in a bill for the purpose of allowing persons prosecuted for felony to make their defence by counsel, explained why, since the last discussion, he had suffered two sessions to pass over without calling the attention of parliament to the subject. His reason was his unchanged conviction that there was no good ground of opposition to be offered to the motion which he intended to propose. In alluding to the arguments which had been used on the former debate, he could not avoid expressing his surprise that the Attorney-General, when he admitted the propriety of counsel speaking on behalf of persons accused of misdemeanours, had not thought it inconsistent to refuse the same privilege to those accused of felony. He did not think it necessary now to go over the whole of the au-

thorities, which he had mentioned on a former occasion; but he could not allow it to be imagined for a moment, that he considered the old common law of the land, as was asserted, to have ever precluded a prisoner from employing counsel in his defence upon a charge of felony. In *Magna Charta* itself, it was expressly stated, that no man should be put upon his trial save *per iudicium parium aut legem terræ*—a full proof, as he conceived, that from the very foundation of the common law, a man was intitled to full use of counsel and advice upon his defence; and that the limitations which had been introduced by various bills only related to those cases where the Crown sued in its own right, and not where it acted as a public prosecutor. That power had, however, been taken away from the Crown in cases of prosecution on its own right; and there were many authorities in favour of the general right. Among them he might mention the names of Blackstone, of Whitelock, and even of Chief Justice Jefferies, who, when he attempted to vindicate the denial of the copy of the indictment, said that the denial of counsel to prisoners was a bad practice, and not to be defended. He might, too, refer to the authority of Sir John Hall, in *Hillis's* case, and Sir R. Atkyns, in *Lord Russell's*, whose arguments upon the subject were afterwards recognised as law in the act for reversing the attainder. He might allude, too, to the opinions of Sir Bartholomew Shower, in the arguments for a new bill of rights in 1692. But the most remarkable was that of Sir Matthew Foster, in his crown law, and the more remarkable, because it seemed to have been relied upon during the last debate as an authority against the practice. It was, however, to be remembered, that there was nothing extraordinary in a judge from the bench (and in that light they must view Sir M. Foster) defending the practice as he found it. Sir Matthew Foster said, however, and he conceived it bore quite as much for his case as against it, that "at common law no counsel was allowed upon the issue of guilty or not guilty, in any capital case whatever, except upon questions of law; and then only in doubtful, not in plain cases. I am far from disputing the propriety of this rule, while it is confined to felony and the lower class of treasons, concerning the coin and the seal. I hear many things have been thrown out upon this subject; and inconveniences, some real, some imaginary, have been suggested by popular writers, who seem to have attended only to their view of the question; but it is impossible, in a state of imperfection, to keep clear of all inconveniences, though wisdom will always direct us to the course which is subject to the fewest and the least; and this is the utmost human wisdom can do." Any thing more absurd than such a declaration being taken as authority could scarcely be conceived; and they would find, that long after the treason bill, the same eminent judge, in a trial which took place at Bristol, of which place he was recorder, in the case of a Captain Goodyer, for murder, refusing the prisoner a right to cross-examine the witnesses; it was not astonishing that a lawyer who would refuse a prisoner to cross-examine a witness, should declare that he thought it unnecessary for the prisoner to have the benefit of counsel. The time was gone by, however, when they were in the habit of looking upon the wisdom of their an-

cestors as something infallible; he thought, as the great Lord Bacon once said, in his advice to a young judge, that they should use the wisdom of other times as a light to open their eyes, but not as a guide to lead them by the noses (hear, hear). He was now relieved from being met by those panegyrics which they had heard so often upon their criminal proceedings, and by declarations of their being the very perfection of human wisdom; for they had at that moment before them a bill, which intimated, in pretty strong terms, that all the criminal laws were not thought entirely perfect. In answering the cases made out for the prisoner upon this subject, it had been taken as a general axiom that the judge was always counsel for the prisoner, but he begged to deny that most distinctly. The judge was counsel for public justice, and could not be considered more a counsel for the prisoner than for the accuser. He had said that Sir Bartholomew Shower was in favour of counsel for the prisoner; and he would now read an extract from his *Reasons*, in 1692, for a new Bill of Rights, which, he thought, would bear him out in his assertion. It was to be found in *Somers' Tracts*, vol. 1. p. 568:—"Then, in the name of God, what harm can accrue to the public in general, or to any man in particular, that in cases of state treason counsel should be allowed to the accused? What rule of justice is there to warrant its denial, when in a civil case of a half-penny cake, he may plead either by himself or advocate? That the court is counsel for the prisoner, can be no effectual reason, for so they ought to be in every action, unto each party, that right may be done; but the Frenchman's remark upon this phantom, for it is no more, hath sufficiently censured it. 'My counsel ask no questions for me—my counsel make no good sign for me—me no like my counsel.' And it hath too often proved, according to that poor fellow's observations, nothing but practice. No written law excludes from counsel in any case (says the great Lord Coke); and there is the same pretence for denying a copy of the indictment: though that has been granted in case of felony, in one Kitt's case, which is in a book called *Mair's Reports*."—In modern times he could produce an authority which must be allowed to possess some weight. Baron Garrow, in his charge to the grand jury at Exeter, on the 16th of August, 1824, thus expressed his opinion on the subject of a judge being counsel for a prisoner:—"It had been said, and truly said, that, in criminal courts, judges were counsel for the prisoners; so undoubtedly they were, as far as they could, to prevent undue prejudice—to guard against improper influence being excited against prisoners; but it was impossible for them to go further than this—for they could not suggest the course of defence that prisoners ought to pursue, for judges only saw the depositions so short a time before the accused appeared at the bar of their country, that it was quite impossible for them to act fully in that capacity."—He thought such sentences from the bench must go a good way towards answering the objection, that prisoners were always provided with counsel on the bench. Another objection frequently urged was, that if counsel for the prisoners made misrepresentations or mistakes, a judge must reply upon him in his charge to the jury. But he would ask if any such consequences had follow-

ed from allowing counsel in cases of treason? Would not any thing of that kind be preferable to what happened in the case of Mr. Spencer Cooper, afterwards on the bench himself, who, when put upon his trial for murder, in a duel, was told repeatedly by the judge—"Come, now, Mr. Cooper—no more flourishes; speak to the point." Could such language have been used to any counsel, employed for Mr. Cooper, on such an occasion? He remembered seeing a case in the newspapers, where two men were tried for a burglary; and one of them was reported to have cross-examined the watchmen as to whether or not the deed was committed in the dark. The judge, upon that, observed, that he considered it a very bad sign when such men as they were seen so well versed in the knowledge of the intricate parts of cross-examination (a laugh). It seemed something like a decision pronounced by that summary legislator, Jack Cade, who is said to have told a man he would hang him, if it was only for pleading his life so well. The hon. gent. then alluded to the case of Bellingham, who was permitted to pour forth slanders, in his defence, which no counsel would have dared to utter, and argued, both from it and other cases, that there was no danger of a judge turning himself against a prisoner from the observations of his counsel. Another advantage which, he calculated, would be derived from the bill it was his intention to introduce, was, that it would afford facility for the detection of perjuries in proving *alibis*, which were so frequent at present. The verdicts of juries under the present mode of trial were very frequently unsatisfactory to the public. If no complaints were made of them, it was because the public knew that wherever any doubts existed as to their correctness, they were certain to be considered in the office of the Secretary for the Home Department, and that sentence would not be carried into execution until the whole case had been subjected to the most rigorous revision. He should be sorry to allude to cases where execution had taken place without the public being satisfied of the guilt of the party executed, though he did believe that such cases occurred. But had they not repeatedly seen instances, where men were respited almost at the foot of the gallows, from doubts which had arisen upon a reconsideration of the evidence, by the officers of the Crown? There was the case of the men who were sentenced to death the other day, for robbing Lord Cowper's steward—a case which shewed that the proceedings, though they were not tainted by perjury, were unsatisfactory to the public, and were therefore wisely and justly reversed by the *rt. hon. gent.* (Mr. Peel). It was difficult to collect the opinion of the judges now on the bench upon this subject; but if he might be permitted to hazard a conjecture, he thought that they were not opposed to the view which he was inclined to take of it. He believed that he might say that there were some judges who felt very acutely the impolicy of the present system, under which they were obliged, as soon as the evidence for the prosecution was closed, to tell the prisoner, "Now is the time for you to say any thing you may have to say in your defence, for your counsel cannot say it for you;" and then to witness the jailor pulling him by the arm, and prompting him to say, "I leave it all to my counsel," amidst the gaping and laughter of the multitude, on whom such a scene was not calculated to leave an impression very favour-

able to the administration of justice. With a view of obviating the impolicy of this system, efforts had been made to stop the speeches of the counsel for the prosecution. But such a plan had been found impracticable in cases of difficulty, where it was necessary to inform the jury of the facts to which it was necessary that they should turn their attention on behalf of the prosecution. It was then proposed, that in such cases the prisoner's counsel should have the right of making to the jury a similar statement of the points of his case before he proceeded to call the witnesses on the part of the defence; but then the difficulty arose as to the party who should decide in what cases this privilege should be granted. It clearly could not be the judge, for that would be making him acquainted extra-judicially with the circumstances of the case; and if it was not the judge, who else could it be? It appeared, therefore, to him, to be most advisable to give to prisoners generally the right of making their defence by means of counsel. He had been told that counsel would be placed in a situation of great embarrassment, when an undeniable case was made out against the prisoner, since he must either hold his tongue, and so admit the guilt of his client, or suggest doubts, in which he, in common with the whole court, must see there was no weight. Now, he thought that the *gents.* at the bar would be relieved from the irksomeness of this situation, if they were allowed in such cases not to deny the guilt of the prisoner, but to urge such considerations as might suggest themselves to their mind in mitigation of the punishment legally attached to it. They were already allowed to pursue such a course in cases of misdemeanor, and he could see no adequate reason why they might not also do it in cases of felony.—The learned gent. concluded by moving for "leave to bring in a bill to allow persons prosecuted for felony to make their defence by counsel."

The *Attorney-General* rose to oppose the motion. He trusted that, after the full discussion which this subject had undergone upon a former occasion, he should be excused if, instead of following his learned friend into the wide and devious field of argument upon which he had entered, he merely confined himself to stating his own view of the question. He had no hesitation in declaring, that in his opinion the alteration which his learned friend proposed to make would, practically speaking, not be an advantage, but an inconvenience to the fair, calm, and dispassionate administration of the criminal justice of the country. His learned friend had talked much to them of authority. Now he wished to say in the outset that he was not going to decide this question by authority, but by the practical experience which he had acquired as a lawyer, and by the information which he had carefully collected from every quarter; and, judging by that experience, and by that information, he was bound to say that he had come to a conclusion directly the reverse of that at which his learned friend declared himself to have arrived. He believed that the bar were divided in opinion as to the policy of the measure proposed by his learned friend, but the judges now on the bench almost universally disapproved of it. If, then, those who were best qualified to judge on such a subject, considered the proposed alteration to be at the best one of doubtful utility, he thought that the house

ought to act with caution in regard to it, because it was evident, that if they once granted to prisoners that latitude of defence which was now asked for, then it would be impossible to recal the grant, supposing it should turn out in practice to be pregnant with inconvenience. He called upon the house to consider how justice was administered at present in the courts of England. He asked every gent. who had witnessed the proceedings of our tribunals, whether, in point of temper, coolness, and collectedness, any thing could be added to the system which existed at present. It was true, that the counsel for the Crown did make a dry statement of the case against the prisoner; but then, if he overstepped his duty, the judge always interposed and reprimanded him for so doing. After the statement which counsel were allowed to make was concluded, the evidence on the part of the prosecution followed, and was heard calmly and temperately, and without any controversy or contest. The prisoner was then called upon for his defence. He made any statement that he thought right himself, and then left the remainder of his defence to the prudence of his counsel. The counsel, it was true, could make no statement for him, but he could arrange and marshal his evidence, and argue points of law. That evidence was called, heard, and examined in the same manner as that offered by the prosecutor's witnesses, and then the judge, not as counsel for either party, but as the head of the court, who was bound to see that justice was impartially administered, upon a calm, dispassionate, deliberate, and collected view of the case, submitted it to the consideration of the jury, who decided upon it. Could any thing be better than such an arrangement? Let them now consider what it was proposed to substitute in lieu of it. They were to create, in case of criminal justice, that excitement, animation, and zeal amongst contending advocates, which invariably arose amongst them when they were pitted against each other in civil cases. Was he exaggerating upon this point? No; every day's experience proved the truth of his assertion. He had heard it lamented over and over again in the Court of King's Bench, that whenever an indictment for perjury was tried there, it was carried on with the same zeal and pertinacity, with the same desire to press and suppress particular parts of the case, as took place in a contest where civil rights only were at issue. Would any advantage result to the community from introducing such a spirit into the whole mass of our criminal proceedings? Even if there would, was it so great that a real and palpable good should be sacrificed for the attainment of it? Let the house look at the practical effects of such a measure. If counsel were heard for the prisoner, he presumed that he was to be heard liable to the same rules which prevailed in other cases. If, then, the counsel for the prisoner called witnesses, the counsel for the prosecutor must be entitled to a reply. Now one of the most anxious duties which a counsel had at present to discharge was in those criminal cases where the defendant was entitled to make his defence by counsel, as in indictments for perjury and for conspiracy, to know whether he ought or ought not to call witnesses who were represented to him as material. If he called them, he gave the prosecutor a reply, and thus entitled the party, who made the first impression on the jury, also to

make the last. He had heard his learned friend (Mr. Scarlett) lament over and over again the unequal situation in which a defendant was thus placed. Did his learned friend (Mr. Lamb) wish to introduce this inequality into all our criminal proceedings? Did he wish in all cases to give the prosecutor odds against the prisoner? Was the prosecutor not only to be heard first by the jury, but also to be allowed to avail himself afterwards of the little discrepancies of the evidence for the defence, in order to inflame their feelings, and to transfer to the individual the indignation which ought to be directed against the crime? Infinitely better was it for the investigation of truth that the evidence should be heard temperately and calmly on both sides, and that it should then be left without comment or misrepresentation by either party to the judge, who had to deal impartially between both. He had before said that the judge was not counsel for either party; was not counsel for the prisoner, and it was most material that he should not appear to be counsel against him. Now, suppose that the prisoner's counsel determined to call no witnesses, and that he resolved to sacrifice any advantage his client might derive from them to the policy of avoiding a reply from the prosecutor's counsel; what would be the consequence? First, that the counsel for the prisoner would indulge in broad assertions unwarranted by the evidence; and next, that the judge, when he began to pursue his observations upon the line of defence suggested by the prisoner's counsel, would put himself in a situation apparently hostile to the prisoner. Every body at all conversant with the operations of the human mind, must be aware that when a man was pointing out the fallacy of an argument, it was difficult to stop at the precise point where he ought. If the judge should, in the warmth of argument, go beyond that point, the inevitable consequence would be, that the judge would be represented as bearing hard upon the prisoner, and that the verdict, if it were recorded against him, would be attributed to that circumstance. He conceived that that observation deserved the serious attention of the house. He was now brought back to the original question in this case,—was the present system so defective as imperiously to demand this alteration? His learned friend had said that innocent men, under the existing mode of trial, were sometimes found guilty. He would admit that to be the fact, and would then ask his learned friend whether he was prepared to say that, under the proposed alteration, such an event would never again take place? Would it not, in all human probability, be constantly said, as it was now often said in civil cases, "Oh! that verdict was owing entirely to the admirable reply of the counsel for the prosecution?" What would be the result then? That representations would be constantly made to the judge who tried the case, and also to his *rt. hon. friend* near him (Mr. Peel), that the verdict was not gained by the weight of the evidence, but by the eloquence of the counsel for the prosecution? Unless his learned friend could show that this would not be so, there was no weight in the argument which he had founded upon the circumstance that innocent men were sometimes unjustly found guilty. Such was the short view of the question which he had to submit to the house. He would not say of the al-

administration of criminal justice in this country, that it was perfection—for what human institution was perfect? but he would say of it, that it was superior to that of any other nation in the world. He was unwilling, therefore, to introduce into it an alteration which even its advocates admitted would be productive of important consequences one way or the other, and which he conceived would be productive of no real advantage, but of much practical mischief and inconvenience. He admitted that, as a lawyer, he might have many erroneous prejudices upon this subject, for he knew what systems had been defended by lawyers of former times, whose motives were free from all imputation. Formerly accused persons laboured under greater difficulties than they did at present. In cases of felony, they had originally no counsel; then counsel were assigned to them under certain limitations—to argue points of law. They were not, however, allowed to suggest them; if the prisoner found them out himself, and the Court thought them arguable, counsel were appointed by the Court to argue them. Another difficulty with which a prisoner formerly had to contend was, that his witnesses were not examined on oath, and the reason assigned for it was, that they would thus have a greater latitude in which to speak on behalf of the prisoner; but when a conflict arose between their statements and the evidence for the prosecution, the judges always told the jury that one party was sworn, and that the other was not. He mentioned these facts to show the house that he was aware that he might be under the influence of professional prejudices, and to prove to them that he had endeavoured to get rid of them in his consideration of this subject. He therefore conjured the house to pause before they consented to the proposition which had been made for altering the present system, because, if they should once adopt that proposition, it would be impossible ever again to revert to the practice which the experience of so many years had proved to be wholesome and useful. However it might be found, when the alteration should be made, that it was inconvenient to the administration of justice, and injurious to the prisoner, it would be impossible to repeal it. He assured his learned friend, that he opposed him now as he had done on a former occasion, on the principle of his measure. The objections which he had raised were not connected with the details, but with the principle of the alteration which it was proposed to effect, and he therefore thought that the present was as fitting as any future opportunity could be for the discussion.

*Mr. John Williams:*—His learned friend (the Attorney-General) had very forcibly described the inconveniences which he fancied might result from the zeal and eloquence of counsel who might be employed on behalf of prisoners; but it must be remembered at the same time, that the want of such assistance left the prisoner in a most helpless situation. And if counsel might sometimes be led by the warmth of their feelings, and the excitement of the subject on which they were engaged, into those flights of eloquence which his learned friend had spoken of, (but which he thought was generally too highly rated), this was not the case only with the counsel for prisoners. It was said that the alteration was the less necessary, because prisoners had the judges who tried them to act in the capacity of their counsel. This sounded very

well; but his own experience had taught him that there was little practical advantage in it. If it should ever be his own lot to be tried for a felony, he should in the first place take care not to be his own counsel, as in that case he knew, on the faith of the adage, what sort of person he should have for his client—and the person whom of all others he should next wish not to have for his counsel would be the judge. He should rely with much greater hope of success on the assistance of such an advocate as his learned friend, or of any other person of his skill and experience. His learned friend had viewed the subject too much in the light of a lawyer. He had omitted altogether that inequality in the situations of the prisoner and prosecutor, which formed the chief ground of the present motion, and had overstated, as he (Mr. Williams) thought, the inconvenience which, by any possibility, could result from the change which it was now sought to effect. In his opinion nothing could be more offensive and lamentable than the forlorn and derelict situation to which prisoners were sometimes reduced, and the desperate attempts they made to save themselves, and which sometimes brought down upon them the fate they were endeavouring to avert. For these reasons he gave his cordial support to the motion.

*Mr. Peel* expressed his dissent from the proposition which had been submitted to the house. Two years ago the same subject had been under discussion, when the deliberations upon it were conducted with so much ability and acuteness, that he must confess his opinion had oscillated, and he had entertained some doubts on the question. He thought, however, that it would be better and more safe to give the benefit of those doubts to the existing system, and he had accordingly voted against the motion. The subsequent reflection and examination he had bestowed on the subject had convinced him that he was right. He should not object to the alteration, because it was an innovation upon a practice which had been sanctioned by years; for that would come with an ill grace indeed from one who had already more than once endeavoured to abolish customs, which, if their antiquity alone could have recommended them, were entitled to the most absolute protection. Nor was it because numerous authorities were to be found in favour of the existing practice; for the same might be said of many others, of which he entirely disapproved. On both sides authorities might be adduced, the weight and respectability of which no one could doubt, and which might place the mind of any one who examined them, as Lord Bacon said, in *confluentis aquarium*. He was ready to admit, that whatever would tend to elucidate the truth, to procure the acquittal of the innocent, and the conviction of the guilty, recommended its immediate adoption, and the alteration of the system which prevailed; but it was because he believed the motion of the learned gent., if carried, would not tend to this, that he opposed it. One of the considerations on which his opposition was founded was, although not in itself a very important one, yet not to be lost sight of—he meant the expense to the prisoners in paying fees to counsel, and the delay which must be occasioned in the administration of justice. He did not mean to be understood that any consideration of expense or delay ought of themselves to preclude an alteration like that now moved for, if it could be

shown that justice was more fairly done in consequence; but he did not believe (and he had means as accurate, perhaps, as any one, of knowing the fact if it were so), that any injustice or even inconvenience was felt by the prisoners themselves under the actual practice. Every day almost petitions were presented to him on the behalf of prisoners, which contained various complaints, but he did not remember to have seen one like those mentioned by his learned friend. Various grounds were alleged by the prisoners, but none of them complained that counsel had not been heard on their behalf. He was unwilling to risk any change in the present system, (which not only secured the impartial administration of justice, but gave general satisfaction), if, under the system which it was proposed to introduce, the judge might be rendered less impartial, and the jury less free from influence than at present. On these grounds, he was compelled to give a reluctant refusal to a proposition which had come before the house, recommended in so fair and temperate a manner (hear, hear).

Mr. *Horace Twiss* said, that in assenting to the motion, he was not influenced by any consideration of its probable effect upon the number of acquittals; the true object being, not to acquit the greatest number of prisoners, but to secure the greatest number of right verdicts. He should, therefore, instead of inquiring whether this change of the law would be a gain to prisoners, inquire only, whether it would be a gain to public justice? While it gave to the accuser the right of stating his case to the jury by counsel, it denied the same right to the accused, and then compensated this injustice to the prisoner, by the still greater injustice to the country, of allowing unsubstantial objections to the indictment. Any statement on the merits must be made by the prisoner; but the prisoner might be disabled by illness, blindness, deafness, or some other visitation. If there were such a disability in a majority of cases, the legislature would, no doubt, relax the law. But, in the majority of cases, this ground for relaxation did already exist; for the prisoner was placed in a situation, the terrors whereof were such as would take away from any average man the common resources of the human mind. If this were a condition to confound the sight, hearing, and speech of any ordinary man, what mattered it, whether those needful organs and senses were denied to him by nature, or paralyzed by circumstances (cheers)? Was he not, in either case, equally a defenceless man? It could not be said that his guilt had made him dumb: for, till his trial should be concluded, he was presumed to be not guilty. There was a homely saying, that "he who is his own advocate, has a fool for his client." To that incapable advocacy the law consigned every prisoner in a trial for felony, in the very crisis of his life or death (cheers). The prisoner seldom knew, till he was called on for his defence, that his counsel were not permitted to address the jury for him; so that he had to execute this difficult task at a moment's notice. In such a state of things, what did he profit by the boasted excellence of the criminal law in general? Its excellencies might as well, so far as he was concerned, be contained in the Code Napoleon, or the Imperial Pandects. It had been said that the judge was counsel for the prisoner. It would be more correct to call him counsel for

the prosecution, for his only instructions were the depositions for the prosecution, from which, in the absence of counsel, he examined the evidence against the prisoner. On the prisoner's behalf he had no instructions at all (hear, hear). The maxim that he was counsel for the prisoner was untrue even in theory. The duties clashed. Did the judge take all advantages to defeat the prosecutor, and acquit the prisoner? Then, as judge, he betrayed his oath of office. Did he decline to take those advantages? Then, as counsel for the prisoner, he deserted his client (cheering). Sir Robert Atkyns had observed, in his comments on Lord Russell's trial, that he knew by experience what sort of counsel judges were to prisoners. That the hardship had not confined itself to political cases, nor to very early times, Mr. Savage's trial was an instance; and though Judge Page would have no imitators now, yet modern judges might not be so influenced by other considerations, adverse to the prisoner, as his character, his demeanour, or the public consequences they might happen, in their own minds, to apprehend from his offence. A judge, summing up for an acquittal, might seem to be the prisoner's counsel; but how if he summed up for a conviction?—the prisoner's counsel, exhorting the jury to convict his own client? But the rule was then explained to mean, that he was counsel for the prisoner, only so far as to see that the prisoner suffered no wrong. Why, to that extent he was counsel for the prosecutor also, and for every suitor in every suit. The maxim was a fanciful one. No such principle as that the judge was the prisoner's counsel, had ever been adopted in the ancient law; but the hardship arising from a want of some provision becoming afterwards apparent, some dealer in legal fictions had invented this afterthought, this humane prettiness, of treating the judge as the prisoner's counsel (cheers). And so the absurdity of refusing counsel in the extremity most requiring it, had been met by the greater absurdity still of treating, as an advocate for one of the parties, the only person in whom it would be a vice to have a bias for either (loud cheers). Lord Coke had assigned as a reason for leaving the prisoner without any other counsel than the judge, that "the evidence to convince him (to convict him) should be so manifest, as it could not be contradicted." Perhaps there were some cases thus clear; but there were many with circumstances more or less favourable to the prisoner. In these, there being more or less of doubt, the question on which the prisoner's life or death must turn, would be the degree of consideration these doubts were entitled to; and yet on that question you refused to hear his counsel. The doubt might be a reasonable one, and yet not so obvious to suggest itself spontaneously to the court. The judge on the bench might well fail to see some points in the view, which the counsel at the prisoner's side would discriminate distinctly. The lights strike differently on the same objects, when seen from positions so different; but therefore the court should gladly adopt any assistance to catch and distinguish those points from the haze and shadow in which they rested. There had been a notion that the doubts raised would be quibbles, or trifles to swell a speech. That might occasionally happen, but in general the privilege would be used for better purposes. There was a large class of cases where the slightest varia-

tion in the proof made the broadest distinction in the offence (hear, hear), as where manslaughter bordered on murder. There was the whole class of cases resting on circumstantial evidence, where the minutest and most argumentative statements were made by the prosecuting counsel. If all that reasoning and inference were useful for the prosecution, could it be altogether needless for the defence? or, if needful, could it be furnished by the prisoner himself? It was feared, by the *rt. hon. Sec.*, that appeals would be made to the fancy of jurors. Considering the class of persons, he himself had little fear of attacks upon their imagination. But the mischief existed already in another form. Speeches were made under colour of legal objections, and observations insinuated in the shape of questions to witnesses. These practices, bordering on irregularity, produced heats among the counsel; for where the lives of their clients, as well as their own reputations were at stake, strong feelings would needs be roused; and the more bitterly, on account of the prisoner's disadvantages. A contest of fair speaking, a legitimate vent, would prevent these feelings from exploding in that irregular direction (cheers). The argument of his learned friend (the Attorney-General) then took another turn; contending, that the prisoner would be a loser by the sharp reply the judge would be obliged to make upon the counsel's heated speech. But if his learned friend's opinion were a correct one—that the general effect of the speeches of counsel was rather to hurt than help the prisoner, by bringing down a destructive reply from the bench—treason must be the case where counsel would be most hurtful, because treason was the offence where the judge was generally most adverse to the accused (cheering). But the privilege, though denied to felony, was not confined to treason; it had existed in all cases of misdemeanour for centuries, without even a suggestion of its being injurious, till the Attorney-General's speech of that evening (cheers). Thus, in treason, the highest offence, and in misdemeanour, the lowest, you allowed the privilege; denying it only in felony, which was in neither extreme, but lay between both. Was there any thing in the actual nature of the offences called felonies to warrant such a distinction? So far from it, that very often it was difficult to say, on the facts, whether the offence were felony or not; nay, it might sometimes be felony, misdemeanour, or treason, as the prosecutor pleased: as where a mob had assembled, to repeal by riot and force some unpopular statute, and certain persons had continued in that assembly for more than an hour after proclamation to disperse (hear, hear). That might be treated as a levying of war against the king; and then the prisoner would be entitled to receive, as Lord G. Gordon did receive, the full and saving aid of counsel. It might be treated as a seditious riot; then it would be a misdemeanour, and counsel would still be allowed. But if Government had a mind to destroy the prisoner effectually—to fire a deadly shot, yet make no report,—let them introduce into the indictment the aggravation that the prisoner had continued with the mob for an hour after reading the proclamation to disperse, and they would convert the charge into a felony assailing the prisoner's life, and at the same time exclude the address of the counsel, by whom, peradventure, that life might have been saved

Jan. 1836.

(cheers). Could an exclusion, thus resting on the form of proceeding selected by the prosecutor, be vindicated as a thing beneficial to the prisoner (cheers)? If it were for his benefit to exclude counsel, they should be excluded in treason,—they should be excluded in misdemeanour,—the benefit intended should be made uniform and equal; but if the exclusion was a disadvantage, the prosecutor should not be permitted to impose that disadvantage on the prisoner by a mere variation in the form of his proceeding. Neither was it only in political cases that this distinction was unreal between felony and other divisions of crime. A receiver of stolen goods, who had employed a young girl to rob her master, might be tried for the misdemeanour; the girl being taken afterwards, would be tried for the felony. The receiver would be punishable only with fine, imprisonment, or whipping, and he could have counsel to defend him with the jury: the misguided girl, being indicted for felony, would be forbidden this advantage; and yet to her, transportation or death would be the consequence of conviction (hear, hear). Was there any foundation in reason for these distinctions?—or was not the felony, in very many cases, lighter in the scale of moral guilt than the misdemeanour? His learned friend (the Attorney-General) was afraid that the prisoner's counsel might be embarrassed by the consideration, whether he should call witnesses, and thus let in a reply, which, of course, must be allowed, if they allowed a speech for the defence. Even in civil cases, his learned friend had said, where the defendant's counsel did address the juries, this difficulty was often a painful one; and what could it be in criminal trials? He would ask his learned friend, whether defendants in civil cases would be willing to give up the right of addressing the jury by their counsel, for the sake of avoiding this embarrassment? If not, he was at a loss to understand why the right should be more injurious to defendants, in criminal proceedings (hear, hear). In truth, the only difficulty he found was to understand how it happened, that the sanction of law should still be wanting to this common right. He could account for it only by the strength which custom lends to all old regulations—the vigour of mere inveteracy. How could any man state the nature of the doubt in graver language? If a native of Scotland—where this hardship was unknown—should meet any member of the house next day, and ask, what arduous problem in legislation had been occupying them that night, what account would he render of the disquisition? He would have to tell the inquirer, that the house had been considering the question—whether, in a court of criminal justice, it were fit to hear both sides equally; whether, though in civil cases, where only property was at issue, both sides should be equally heard, there ought not to be a difference where liberty and life were at stake?—whether it might not be the best way of dealing with all prisoners who could not defend themselves, being 999 out of every thousand, to condemn them unheard? He was glad the *rt. hon. Sec.* (Peel) had disposed of the discreditable argument about the consumption of time by the addresses of the counsel. What! could the country find time enough to accuse the prisoner, time enough to convict him, time enough to inflict the punishment

of death upon him, and could not find time to hear the reasons for his acquittal? The right hon. Secretary had dealt with that argument in his usual manly tone, and he believed it would have no more effect on the house than he was sure it would have with the judges of the land, who would not grudge their time for the justice of their country. He trusted the house would decide on no arguments drawn from personal convenience, but on those grounds of reason and justice, which prescribed that we should give to the accused the same chances and means with his accuser (cheering).

Mr. Tindal thought this measure, instead of producing benefit, would be the cause of much mischief to the administration of justice. At present, the prisoner had a right to the aid of counsel in arguing any question of law which might arise, as also in the cross-examining witnesses and marshalling his own evidence; all which was refused was, a right for his counsel to address the jury in like manner as the counsel for the prosecution. But the speech which the counsel for the prosecution was in the habit of addressing to the jury, was nothing more than a plain statement of facts: if any thing more were to be attempted, if there were any endeavour to affect the passions or mislead the judgment, it would instantly be put down by the judge. The proposed alteration of allowing counsel to address the jury for the prisoner in all criminal cases, as they at present had a right to do in civil cases, and in trials for treason or misdemeanor, would have the effect of completely changing the character of the counsel for the prosecution, and making him a party advocate. As prosecutions were now conducted, a counsel would never think of attempting to keep back any witness mentioned in his brief, on the ground that he thought his evidence would make in favour of the prisoner; but let this counsel be opposed by another of equal experience to himself, and you would immediately create in his mind a desire to overcome his opponent, which would probably prevent his acting in so candid and liberal a way towards the prisoner. Another disadvantage to the prisoner would be, that if his counsel were to have the privilege of addressing the jury, the prosecutor's counsel must have that of replying. At present the counsel employed in the conducting of prosecutions were generally the younger members of the profession; but if this measure should pass into a law, prosecutors would begin to retain advocates of the greatest experience, who could not be retained by prisoners except at a ruinous expense: so that a prisoner would lose infinitely more than he would gain. With respect to the judge, it might very probably happen in several cases, that he might, from physical causes, be unable to do away with the effect which an eloquent address from the prosecutor's counsel might have made on the minds of the jury. As to its being an anomaly to refer counsel in cases of felony and allow them in cases of treason and misdemeanor, he hoped the house would not be misled by such an argument: the unanimity required at the hands of an inexperienced jury, and the appeal from judges learned in the law to the House of Lords, were also anomalies, but anomalies attended with the greatest benefit to the community. He knew that in theory this measure was very plausible, but we should consider how it was likely to operate in practice. As an authority

in favour of his view of this question, he would refer to the work of a very able and ingenious person of great experience in the French law, who had accurately examined into the forms of our civil and criminal proceedings—he meant Monsieur Cottu, and who highly approved of the manner in which our criminal trials were conducted. It had been said by the advocates for this measure, that our criminal proceedings should be assimilated to our civil ones; but in civil cases the law and the fact were much more complicated than they were in criminal ones; besides, if a jury had been induced by the eloquent address of a counsel to give in an erroneous verdict, the matter might be rectified by granting a new trial, which was never granted in the case of felony. He trusted the house would pause before it gave its sanction to this measure, which would have the effect of totally altering the tone, character, and temper of the administration of criminal justice in this country.

Lord Althorpe's principal reason for objecting to the present system was that it gave so great an advantage to an educated prisoner over one who was uneducated.

Mr. Scarlett had formerly entertained an opinion on the subject of the bill different from his present opinion; he was now disposed to vote with his learned friend. The reasons for this change of his opinion were founded not in theory, but in practice. It had been stated by his learned friend, that, in the present practice, there was an absence of all prejudice and passion: there were no conflicting passions of counsel; and that the whole trial was conducted with a strict regard to discover truth. But, to discover truth was also the object of civil suits; and if it were found in such suits, that it was advisable to have counsel on each side, would not the same object be obtained by the same means in criminal cases? Some learned gents, indeed, drew a distinction, and seemed to imagine it was the better mode in criminal trials to have advocates pleading only on one side. If this were the way to come at truth in criminal cases, it must also be the way in civil suits, and thus the argument of those learned gents fell to the ground by the *reductio ad absurdum*. Unless they were prepared to contend, that, to have advocates on one side, in all cases, was the best mode of discovering truth, they must give it up in criminal cases. He believed that, in the great majority of cases, he might say 19 out of 100, owing to the strict investigation cases underwent before prisoners were sent to trial, they were really guilty. In such cases the counsel for the prisoner would see that he had no defence to make, and would proceed no further with the trial. This was now done in civil suits, and were there advocates on both sides, it would also be done in criminal cases. Prosecutors had not stronger feelings than plaintiffs, and, in general, were less zealous in pursuing an offender than a party to a civil suit. He thought, therefore, that there could be no fear of passion mastering the advocates in criminal prosecution. It was in cases founded on circumstantial evidence, that counsel for the prisoners were most required. He had himself often seen persons he thought innocent victim, and the guilty escape, for want of some acute and intelligent counsel to shew bearings of the different circumstances, conduct and situation of the prisoner. It is a natural disposition of the mind, that if a

receive, with a readiness to believe, the well-connected chain of facts that was brought before it, and afterwards felt a disposition to explain the facts offered in defence, so as to show the consistency of the first statement. The same was the case in civil suits. The cases were few, in which counsel could be of important benefit to the prisoner; but in such cases they were of great importance. Every body was aware of the importance of having the last word; it was always of great advantage, and this advantage would, in the alteration proposed, belong to the prosecutor. And one of the things most to be desired in this country was, that the guilty should be more certainly convicted. The great number of acquittals was one of the greatest defects of our law; and in his opinion, it would be better that a greater proportion of the accused should be convicted than at present. This was frequently caused by the prosecutor's feelings for the unprotected state of the criminal, from which he allowed him to escape. Another cause of this also was the disproportion of punishment to crime; and if that were removed, as he believed the right hon. Sec. opposite intended to remove it, the motives for prosecutors abstaining from prosecution would be done away, and one great argument against employing counsel for prisoners would fall to the ground. One objection was, that giving counsel to prisoners would waste time. He did not believe this. At present the counsel made the defence of the accused by cross-examining the witnesses, and the judge allowed greater latitude in such a cross-examination than he would if the prisoner's counsel could speak in his defence. If the counsel had the privilege of speaking, he would not waste the time of the court in cross-examinations. They would, in many cases, when they saw they could make no defence, allow a conviction. He had a great many doubts on the whole question; and if the question now were to make a law, he should hesitate very much; but as it was only to bring in a measure which would enable them to consider the matter further, he should cordially concur with his learned friend.

The *Solicitor-General*, after pointing out the conflicting effects of the opinions given by the advocates for this bill, as to whether it would tend more to acquit the innocent or convict the guilty, observed that no alteration had been called for by the public or by the committees which had reported on the state of the criminal law.

Mr. *Brougham* formerly had an impression similar to that of the learned gents. opposite, but after the fullest consideration, he had decided in favour of the bill. The *rt. hon. Sec. (Peel)* said that, notwithstanding the opportunities he had of hearing complaints from prisoners, he had never heard of a complaint on this ground. Of course the complaints urged were confined to the existing system, such as that their counsel had not called certain witnesses, or that facts which made an impression on the jury had not been explained. This argument, therefore, went for nothing. There was no man who visited our criminal courts, who did not see the fearful odds against a prisoner; a counsel speaking against him; none who could speak for him; and who could only be a fact by that side-wind procedure, which had been so ably described by his learned friend. Even if the people were sa-

tisfied, an important subject of consideration remained—ought they to be satisfied? With respect to the objection that the alteration introduced by this bill would lead to wrangling amongst the counsel, and to scenes unsuited to a court of criminal law, he would reply, that under the present system, there were collisions in cross-examination, and objections urged, which would never have existed had the counsel a more legitimate course of proceeding in behalf of their clients. Objections were now made, and points of law raised, which were never intended for the judge to whom they were ostensibly addressed, but to the jury, whom the counsel had not the liberty to address directly. This practice produced a waste of time as well as temper; it was neither conducive to the interests of the prisoner, nor to the great end of public justice, which was not to increase or diminish the number of convictions, but that all persons put upon trial should, if not guilty, be acquitted (hear). Our laws were too severe, and thereby those who merited some punishment frequently escaped without any. In conformity with this, was the practice in administering those laws. A prisoner was placed upon his trial, with a leaning in one direction, because the law or the practice leaned in another. It was said that counsel did not press severely upon a prisoner; but this depended upon the temper and the judgment of the counsel and of the judge who happened to preside. It was one of the grounds of complaint formerly urged by a learned friend of his (*Sir S. Romilly*) that so long as the law left so wide a discretion, it depended upon what particular judge went a circuit—whether one view or another would be taken, and whether there would be a greater or less chance of escape. There was a most important fallacy lurking in the argument respecting the speeches of the opening counsel. The learned Attorney-General said, that the opening was a calm, dispassionate statement of facts. Let it be so. But the cases where counsel were most necessary to a prisoner were those where the evidence was circumstantial; and could any thing be harder than for a prisoner's counsel in such cases to be tied up (not from employing adjurations and obtestations of heaven and earth, as represented by *M. Cottu* to be heard in foreign courts), but from saying a word in explanation? Suppose the counsel did confine himself to a dry statement of facts, no case could be harder than for the whole web to be, as it were, united together by the juxtaposition of all the circumstances, so as to make up such a picture of the prisoner's guilt as that a man could not rid his mind of it, and fancied he saw the prisoner committing the fact; so that it would require the most acute and skilful counsel to counteract its effect. As to the only other topic, the waste of time which the alteration would occasion, he doubted whether there would be any greater consumption of time in criminal trials than at present; but if there were, it was the duty of the legislature to see that time was given; and if the number of judges were too small, and the wizes too rare, they should be increased. Upon the whole, he was of opinion that the bill ought to be suffered at all events to be introduced.

Mr. *Canning* had attended carefully to the arguments on this subject throughout the two debates it had produced. If the learned gent. who had just sat down, and his learned friend (*Mr. Scarlett*), after deep consideration, had

only got so far as to have those doubts, in some degree, removed, it might be permitted to him (Mr. Canning) an unlearned man, who could have no prejudices, except in favour of the existing institutions of the country, to allow that his doubts had not been removed. Such a bill as this, in the state of doubt in which he was, it became his duty at present to oppose. The arguments in favour of a change did not preponderate over those on the other side; on the contrary, the weight of argument was against the change; but even if they were equal, the present system ought to remain unchanged until there was a preponderance. He (Mr. Canning) had not met with any objection to the present practice out of the house; an apprehension of the effects of a change seemed to prevail more than a desire for the change. Whether the measure would increase or diminish the number of convictions was not the true object of inquiry, which was this—how far the amount of certainty and confidence as to decisions being correct would be increased? He thought the proportion which acquittals bore to trials afforded a pretty fair conclusion, that on the whole the present practice was not unfavourable to prisoners. The argument that weighed most on his mind was, that the change might produce a contentious tone of conducting criminal trials. That consideration should not, however, stand in the way, if he thought any injustice had been made out; but he could not admit that the proportion was in favour of justice, but rather the other way. Upon the whole, he did not think there was a belief throughout the country that justice was not properly administered; and he thought it was safer to let the existing practice remain till the change was more decidedly sought for than at present.

Mr. Denman admitted that the cases were very common, in which there was no counsel for the prosecution, while the prisoner had counsel to examine witnesses. But he still thought that the proposed alteration would be beneficial; and he was glad to have two such converts to his opinion, as the learned gents. below him (Messrs. Scarlett and Brougham). It had been his lot lately to try two prisoners who were deaf and dumb, and who could only be made to understand what was passing, by the signs of their friends. The cases were clear and simple; but if they had been circumstantial cases, in what a situation would the judge and jury be placed, when the prisoner could have no counsel to plead for him? So in the cases of foreigners who could not speak for themselves, and in whose cases the court was obliged to have recourse to interpreters; what a relief would it be to the judge and jury if they could be defended by counsel! With respect to the remark that the change would introduce a contentious mode of conducting criminal trials, he had only to observe, that it was by such contention and collision that truth was elicited. The dictum of Lord Coke had been referred to on this subject—that the case against a prisoner ought to be so clear before conviction, that no counsel could withstand it. This dictum had been adopted by Lord Chancellor Nottingham; and yet it was the unhappy lot of that judge to pass sentence of death upon a Peer, who could never have been found guilty if he had been allowed counsel to plead for him. Nothing could be so clear as that, if Lord Stafford had been assisted in his defence by

counsel, no court—not even the House of Lords, constituted as it was in those days—could have refused to acquit him. It was objected to the motion, that there was no public dissatisfaction as to the existing practice; but no objection could be more untenable. The object of the present motion was to prevent any dissatisfaction in future, by removing the grounds on which it would sooner or later arise. The house was called upon to interpose on principle, when there was no clamour, in order that it might not be obliged to legislate at some other time in haste, and under the excitement of popular feeling. It was his duty to preside at the trial of perhaps more criminals than came for judgment before any other magistrate in this country; and from his own experience, he declared, that he felt the want of the aid of counsel in the elucidation of truth. Nobody could more desire than he, for the sake of justice, that both parties should be placed on equal terms. All the defects of the present mode of conducting criminal trials resulted from the denial of the full benefit of counsel to the prisoner. The tedious length of cross-examinations would be unknown, if the prisoner's counsel had the right of commenting upon the evidence. He would naturally prefer the clearest and most direct way of arriving at his point; but at present he was driven to have recourse to artifice and subterfuge. Hence arose the multitude of groundless insinuations, and the necessity of those false points, to which his learned friend (Mr. Scarlett) had alluded. The judge, in almost every trial of interest, was engaged in half a dozen contests, that would never take place if the prisoner's counsel were entitled to address the jury. As to the contradictory objections that, in that case, on the one hand, there would be more convictions—and, on the other, that there would be more acquittals—he believed that the consequence would be, that there would be more convictions of guilty persons, and greater security to the innocent. Formerly, prisoners were not allowed to have their witnesses sworn; and they were denied counsel even to cross-examine the witnesses against them. An act of parliament put an end to the former grievance; and the latter had been gradually removed by the connivance of the courts. He knew of no law or authority that would forbid a judge, at the present time, from allowing counsel to address the jury, if, at the close of a long and complex investigation of evidence, he thought fit to assert the right. If it were done in one instance, the practice would be established, and could not be denied in any other. Supposing such a case to have happened, would any member of that house attempt to deprive the prisoner of his newly-acquired advantage? Certainly not. Why then should it now be withheld from him?

Mr. Lamb having briefly replied, the house divided, when there appeared—

For the motion, 36—Against it, 105—Majority, 69.

### *Bills to prevent Cruelty to Animals.*

TUESDAY, FEB. 21.—Mr. Martin rose to introduce a bill for the more effectual prevention of bear-baiting, dog-fighting, and other cruel sports. It was, he observed, so very unusual to oppose a bill on the motion for its introduction, that he felt it incumbent on him not to take up

much of the time of the house. He would therefore reserve himself to answer any arguments by which his application might be opposed. The bill for which he should move had this recommendation to the representatives of the people,—that it was generally approved by their constituents throughout the country. He held in his hand a list of 52 petitions, presented from some of the most opulent and populous cities and towns of the kingdom, praying that an end might be put to these cruel sports. These disgraceful scenes were carried on in places called pits, and in no places were they more cruel and disgusting than in that called the patrician-pit in the neighbourhood of that house. It had become the duty of parliament to put an end to these enormities. He would not now occupy the attention of the house further, but would conclude by moving for leave to bring in his bill.

On the question being put,

The *Attorney-General* said, the merits of this case had been so frequently discussed, that he felt it would not be necessary to make any further comments upon it: he would therefore confine himself to stating, that he would oppose the bill. (Cries of question, question; in the midst of which)—

Mr. *Martin* again rose and said, he could hardly persuade himself that a case which had come to the house recommended by the inhabitants of 52 respectable places, should have been met by a simple negative and the cries of "question, question." The hon. members who raised those cries could not, surely, be aware of so many petitions being before them on the subject, otherwise they would not have thought it decent to limit the expression of their opinions to that brief negative. He could assure the learned gent. that he would not recommend himself to that body (the University of Cambridge) whom he wished to represent, by opposing the present motion, for there was no Christian minister who would countenance those brutal exhibitions: both the clergy of the protestant church, and the dissenting ministers, were unanimous in a wish to have them put down: there was also a petition in progress in Westminster, and ninety-nine persons out of every hundred were desirous of signing it. He would supplicate the *Attorney-General*, if it were only out of respect for the learned body whom he wished to have for his constituents, to assign the reasons for his opposition to this motion. He (Mr. *Martin*) had received some affidavits which gave a heart-rending account of a most horrible act of atrocity which had recently been committed at a bull-bait near Oxford: after the bull had been torn and mangled by the dogs, a wretch who was a disgrace to the name of man thrust some sharp instrument into the mouth of the suffering animal, and cut out its tongue by the roots, and having placed it on a plate, carried it round amongst the assembled multitude, soliciting a collection. He could mention a hundred instances of similar acts of cruelty, of which he had been informed on most undoubted authority, but he would only trespass on the time of the house by detailing one more. A fellow matched his dog to fight with one of a much heavier weight, and after it had won, he again matched it against another dog, also much larger than itself. In this second engagement it was vanquished, upon which its brutal owner chopped off its fore legs with a bill-knife, and

having dug a hole in the ground, interred the dog alive. If the *Attorney-General* thought it right and for the good of the country that fights and atrocities of this kind should daily take place, he hoped the learned gent. would state so to the house. There was not a single magistrate in London, Westminster, or the adjacent counties, who was not desirous that these disgraceful practices should be put down. It was a matter of great concern to many of them that they had not been able to suppress the brutal contests and exhibitions which were continually taking place at the patrician-pit in Westminster. In short, he would defy any hon. gent. to deny that the whole body of the English nation were against these sports. He trusted, therefore, that the house, out of regard for the general feeling which prevailed on the subject, would not meet the motion with a mere negative.

Mr. *W. Smith* thought that the motion of the hon. member had not been received by the house with that consideration which it deserved; but this should not deter him (Mr. *Smith*) from stating his opinion on a subject which seemed to him most materially to concern the morality of the country. He conceived the motion could only be opposed on one or other of the following grounds:—first, that the facts stated by the hon. member were not true: for his own part he could not see any reason to doubt their truth—they had all of them been stated in the public newspapers, and the occurrence of them had never been denied;—secondly, that the existing laws were sufficient to put them down: but if this were so, how had it happened that they had not been suppressed? He thought the hon. member was entitled to the gratitude of the country for having brought forward this motion, and it should have his warmest support.

Col. *Wood* had last session been of opinion that the house had already gone far enough in legislating on this subject, but a most brutal occurrence which had since then taken place near Warwick (he alluded to the lion-fight which had been exhibited in that neighbourhood) had induced him to change his sentiments as to this point; he could not conceive but that the magistrates would have prevented this disgraceful exhibition if the present laws had enabled them to have done so.

Mr. *R. Colborne* did not approve of too much legislating, or of interfering with the amusements of the lower classes, while the sports of the higher orders were left untouched: he admitted that a former bill of a similar nature, which had been brought forward by the hon. member (Mr. *Martin*), had had beneficial effects; but he doubted whether even that bill would not have been a dead letter, if the hon. member had not personally exerted himself quite as much in carrying it into execution as in procuring its enactment.

Mr. *C. Wilson* said, that having witnessed the good effects of the former measure, he felt strongly disposed to hope that the measure now proposed would operate in a similar way. It had been urged against the adoption of it, that it would contract the amusements of the lower classes, but he could not conceive what amusement any human creature could derive from beholding the agony of a tortured animal. It had also been said that we ought not to legislate for brutes; but surely there was no objection to legislate for men, to prevent them from rendering themselves brutes.

Mr. *Pael* did not see how the learned Attorney-General could lower himself in the estimation of any individual or body of men whatsoever, by opposing a measure which he conceived owed its rise to mistaken notions of humanity. If this had been the first time that this matter had been proposed to the house, he should not have objected to the hon. member's having leave to bring in his bill; but the same proposition had already been so often before the house, and been so thoroughly canvassed, that it could answer no purpose to suffer it to proceed further in its present shape. The particular acts of cruelty which had been detailed to the house had caused as great a disgust in his mind as they could possibly have created in that of the hon. member himself; but he could not concur in any general enactment, unless that hon. member was prepared to explain to the house what was the general principle on which he intended to proceed. If bull-baiting and dog-fighting were to be prohibited, surely pigeon-shooting ought also to be suppressed. It would create nothing but confusion if the house were to pass acts to meet individual cases of cruelty. If some general and practicable measure were proposed for the protection of all animals, he would have no objection to go into the consideration of it; but he was afraid that if the measure now proposed should be carried, and become a part of the law of the land, that instead of affording protection to brutes, it would become an instrument of oppression to human beings. For these reasons he felt compelled to oppose the present motion.

The house then divided, when there appeared,  
Ayes, 37—Noes, 76—Majority against the motion, 39.

Mr. *Martin* then said he was going to ask leave to introduce a bill which was intended to afford the same protection to domesticated animals which was at present afforded by law to cattle. He could see no reason why a dog was not entitled to the same protection from the cruelty of man which a horse now received. Even an animal like a cat should be protected from being flayed alive, as numbers of them were often found at the present moment. They had been asked whether they ought to legislate upon individual instances of monstrous cruelty and oppression? and to that question he would give an answer, after he had told them an anecdote which he thought bore upon it. Mr. *Halls*, the magistrate at Bow-street, upon one occasion saw some wretches take a dog, flay it alive, and leave it deprived of its skin. They then put a collar round its neck, led it thereby to the river, and then threw it in. Mr. *Halls*, on seeing this act of brutality committed, was guilty of a breach of the law, of which he supposed any man of spirit would have been guilty under similar circumstances, for he threw the miscreants into the river after the dog (a laugh). Now, upon such an instance of atrocious cruelty as this he thought the house ought to legislate. One such instance he conceived to be sufficient to awaken their interest. What happened to one dog might happen to thousands. Indeed, it might happen to every dog, so long as there was no law to prevent it (a laugh). In legislating upon this subject, they were acting in conformity with the wishes of the whole British public. The bill which he now asked leave to bring in was to amend a former act of his own.

It would give the prosecutor a reasonable compensation for his loss of time in prosecuting for an offence of this nature, which he could not claim under the present act. It would also enable the magistrates to inflict a punishment more severe than an imprisonment of one month, and a fine of 2*l.* or 3*l.*, on any man who should be guilty of such an act of atrocity as tearing out the tongue of a bull and handing it about upon a plate for the purpose of collecting money. It would enable the magistrate who first took cognizance of such offence, to send it to the quarter-sessions, to be disposed of by the magistrates there, as they might deem proper. It would also remedy a defect in Sir *James Macintosh's* bill, which made it necessary to prove malice against the owner before a conviction could be obtained against any person who maimed and wounded cattle. The hon. member concluded by asking leave to bring in a bill to alter and amend the 3*d.* of Geo. IV. c. 71, entitled, "An Act to prevent the cruel and improper treatment of cattle."

Mr. *Butterworth* seconded the motion, and complained of the manner in which prize-fights brutalized the character of all who attended them; and censured severely the conduct of certain magistrates at Warwick, who (two years ago) permitted the peace-officers to be present at one of those disgusting exhibitions, in order that the people might have what they called a comfortable fight.

Mr. *Ashurst* said, that the statement of an individual having torn out the tongue of the bull and placed it upon a plate, assumed a very different aspect when it came to be substantiated before him on oath. It appeared that during the time the bull was baited, a ferocious dog, which had been tied up in a house adjoining to the spot where the baiting took place, escaped from his kennel, attacked the bull, and actually bit off a small portion of its tongue. But the witness being asked, whether he had seen the tongue put upon a plate, and carried round the meeting, said that he saw no such thing done, and did not believe that it had been done. The hon. member had asked him, whether he conceived bull-baiting to be illegal. For his own part, he must say, that he knew of no law by which bull-baiting had been prohibited; and when he knew that lands were held at Windsor, at Okeingham, and at Stamford, on condition of keeping a bull for baiting, he could not believe that it was illegal. No person who knew him could charge him with being guilty of giving encouragement to the practice; but he did not believe it to be prohibited by any law at present in existence.

Mr. *Martin* said, that he had an opinion of the Attorney-General, which he would get published, declaring the illegality of bull-baiting.

The Attorney-General did not rise to object to the motion of the hon. member. If he thought that his former bill wanted amendment, it was only fair that he should have an opportunity of amending it. But he (the Attorney-General) was of opinion that the offence of bull-baiting was punishable by the existing law; as was also prize-fighting. He conceived that the recent assembly at Warwick to bait a lion was a riotous and illegal assembly, and as such it might have been dispersed by the magistracy. To those persons who did not know him he would say, that he was the last person in the world who would become an advocate for cruelty; and that he

opposed these motions, not because he loved cruelty, but because they would not answer the objects which the hon. member (Mr. Martin) had in view; because they would give rise to numberless petty vexations; and lastly, because he did not know where the house would stop, if it once began to legislate, not with regard to the security of property, but with regard to the feelings of the animal. His hon. friend ought not to introduce his measures in detail, but should introduce them upon some general principle, which could be fairly discussed and decided on by the house. His hon. friend, on each of his motions, brought forward instances of cruelty which he believed to be true, but which generally turned out to be either false or greatly exaggerated, as had been the case to-night with regard to the tearing out of the bull's tongue. Nothing could be so unsafe as to legislate upon the statement of one or two particular facts, and not upon some great and general principle.

Leave was then given to bring in the bill.

THURSDAY, MARCH 16.—Mr. Martin moved the second reading of the Cruel Treatment of Cattle bill.

The Solicitor-General objected to the bill, as being too general and indefinite in its enactments.

Mr. Martin thought he should have great reason to complain of the Attorney-General, if he either opposed or sanctioned any opposition to the present bill; for this bill was in substance a copy of one which on a former occasion had been corrected and approved of by that learned gent.; at least it only differed from it in the following particulars, that the words "dog, and other domesticated animals," which were not in the former bill, had been introduced into the present, as also a proviso which had been added in consequence of an objection which had been raised against the former bill in the House of Lords, that without such proviso it might have the effect of repealing a very beneficial enactment, called Sir James Macintosh's act, for preventing the ill-treating of cattle.

Mr. Alderman Wood said, he could not support the present bill; and he thought he had good reason to complain of the hon. member for having deserted his post the other evening when the flogging of men was under discussion: he trusted that when that question should next come on to be agitated, the hon. member would consider it his duty to favour the house with his attendance, and that he would not, in the meantime, expend all his sympathy upon dogs and cats, but that he would reserve some small portion of it, at least, for his own species.

Mr. G. Lamb did not particularly object to the introduction of the word "dog," but he considered the whole bill exceptionable; and he thought the hon. member would have advanced his object much more, if he had supported the bill by arguing it on the merits, instead of entering so much into detail as to conversations which had passed between himself and the Attorney-General respecting it.

Mr. Trant moved an amendment, that the bill be read a second time this day six months.

Mr. Warre thought that the hon. member had already brought about sufficient legislation on this subject, and that it was not politic in him to press this measure any further.

Mr. Martin, in reply, said that he thought if it was merely on account of the introduction of the word dog, that most faithful of animals, this bill deserved to be permitted to go into a committee. The hon. member then recapitulated his former statements as to the cruelties which had been practised upon this animal; after which, Mr. Trant's amendment was put and agreed to, and so the bill was thrown out.

THURSDAY, APRIL 20.—Mr. Martin moved for leave to bring in a bill to prevent the cruel and improper treatment of dogs.

Sir M. W. Ridley remarked, that the house had on a former occasion rejected a bill for protecting domesticated animals, in which, of course, dogs were included.

Mr. Hume hoped that the bill would include cats (a loud laugh),—animals which were worried by dogs, whereas dogs were generally well used. Wherever a poor cat was seen, it was sure to be worried. The house, by admitting this bill for the protection of dogs, without including cats, would act inconsistently; and by admitting it at all, they would turn legislation into ridicule (hear, hear). He would submit it to the house, whether it should not endeavour to preserve itself from the ridicule which these legislative measures would cast upon it (hear).

Mr. Martin thought this opposition of the hon. member strange, as he had promised the motion his support.

Mr. Hume:—"Not to my knowledge."

Mr. Martin:—"Then you did it without your knowledge" (a laugh).

Mr. Peel opposed the motion. The partial efforts of the hon. member defeated the laudable object he had in view, by the ridicule which they entailed upon it. Whilst the legislature was clearing the statute-book of the load of acts with which it was incumbered, the house would be weaving the web of Penelope, if they increased as fast as they diminished the statutes.

Mr. W. Smith opposed the motion, though he thought it desirable that acts of cruelty should be punished as misdemeanors.

Mr. Martin defended the motion and himself against the ridicule which had been directed against both. The hon. member mentioned various instances of consummate cruelty practised on cats as well as dogs. He referred to the case of a person who thought the under-jaw of his dog too long, and sawed off two or three inches of it. It was shocking to think that our criminal law punished a man for destroying an ash-tree, and yet gave impunity to such an act as this. Hundreds of instances might be mentioned of cruelty towards cats. It was well known that they were flayed alive, because the fur was found to be more valuable when taken from the living animal, and they stripped better.

Mr. Benett expressed himself favourable to the motion.

Sir Francis Burdett thought that such acts as had been described must be cognizable at common law, as offences; in legal language, *contra bonos mores*. It would be better, in his opinion, that the hon. member should be allowed to introduce his bill, and point out to the house the remedies which he conceived would obviate the shocking practices referred to. Although it

might not be practicable to put an end to those practices, the house ought to sanction the principle of legislating for that object.

Sir T. D. Acland observed that the hon. mover had produced two instances of cruelty towards dogs, and said he could produce hundreds of cases of cruelty towards cats; yet the former he protected and the latter he left without protection. He recommended the hon. member to withdraw his motion.

Mr. Martin expressed his readiness to withdraw the present bill; but stated that he would on a future day introduce another measure of a more comprehensive nature.

Mr. Peel observed, that while he felt as much as any man the justice of the principle on which his hon. friend (Mr. Martin) proceeded, yet he much approved of his desire to withdraw this bill. Still, however, he must guard himself from being supposed, from the course which he took on this occasion, to say one word in favour of the more extensive measure of which his hon. friend had given notice; and of which he could, of course, know nothing.

The bill was then withdrawn.

### Game Laws.

THURSDAY, APRIL 20.—Mr. Blackburn presented a petition from the sheriff and grand jury of the county palatine of Lancaster, praying the house to consider the present state of the game laws.

Lord Stanley bore testimony to the respectability of the persons by whom the petition was signed. It was carried unanimously, and he felt the justice of the principles laid down in it. He wished, to use the words of the petitioners, "that some system may be established which, while it was calculated to meet the present state of society, would effect a just protection to the rights of individuals" (hear, hear).

Mr. Stanley deplored the mischief which arose from the state in which the law had so long remained. It gave rise to open violence and hostility between the poachers and those employed to protect the game. In Lancashire it not unfrequently happened that 30 or 40 commenced firing on each other, and did not cease till their ammunition was spent. Individuals were taken, wounded, and frequently dying, to the hospitals, and others who were killed were buried privately, to guard against inquiry. In considering this question, it ought to be recollected that a large and wealthy interest had grown up in the country, that must and would be supplied with game, and there was a labouring population that would not shrink from procuring it for the least possible reward. He had known instances where individuals, without getting any share of the spoil, went out poaching at 4½d. per night. It could not be supposed that gentlemen could go on preserving their game satisfactorily to their own consciences, if they thereby upheld such a system. He hoped the hon. member (Mr. S. Wortley) would not be deterred, in consequence of his former ill-success, from making fresh endeavours to alter the law so as to make it meet the increasing wealth of the country, as well as the liberal feelings which were every day gaining ground.

Mr. S. Wortley expressed his determination to persevere: every hour proved to him more and more the necessity of altering the game laws.

Lord Milton was convinced, that so long as the present feeling of the public and of parliament continued to exist, nothing would repress poaching. The vulgar estimation of the goodness of game as an article of food, lay in the laws, which constituted the taking and killing it a privilege of the upper classes. Let them abolish the laws which gave value to that privilege, and they would remove the chief cause of poaching.

The petition was ordered to be printed.

### Spring Guns' Bill.

THURSDAY, APRIL 27.—Mr. Tennyson moved the third reading of the Spring-Guns' bill.

Sir George Chetwynd was opposed to the present bill as too severe.

Mr. Ridley Colborne concurred in the opposition to this measure.

Mr. Peel concurred in the measure.—If a spring-gun was to be defended as a punishment for a trespass, a man might also defend the springing of a mine, by which a whole gang of poachers might be destroyed at once. He could not approve the power of punishing with death a trespass of which, even if a man were convicted, would only bring upon him a punishment of three months' imprisonment. If persons were anxious to preserve game, let them keep a force sufficient for that purpose. He was a game preserver, and he always kept a sufficient number of persons for that object. At the same time he would wish to make a distinction between spring-guns set for the preservation of game, and for that of walled gardens. In the case of game, a man might be only a trespasser, but in the other a man might enter with the intention of committing a felony. He could wish that the bill had made an exception in favour of gardens, on which in many cases a man's whole subsistence depended.

Mr. W. Horton would have no objection to the bill if it were to last for only one year, by which time he hoped that some law would be passed for legalizing the sale of game; but he did not, without such a measure as that, wish to see this bill made permanent.

Mr. Goulburn said that he would support the bill, if it embraced the amendment of last year,—that the prohibition of the use of spring-guns should be limited to woods, underwoods, or open fields.

Mr. J. Smith was in favour of the bill. He, for one, would wish to see the experiment made by an hon. friend of his (the member for Lewes) more generally adopted. It was that of behaving so kindly to his poor neighbours as to put an end to the necessity of poaching on their part.

The house then divided, when the numbers were—

For the bill, 24—Against it, 25—Majority, 1.

### CHURCH ESTABLISHMENT.

#### *Protestants in Catholic Countries.*

FRIDAY, MAY 19.—Sir R. Inglis, without any prefatory remarks, moved "that an humble address be presented to his Majesty, praying that he will be pleased to give directions to British Consuls in Catholic countries to send the Secretary of State for Foreign Affairs such information as they might be able to obtain respecting the exercise of the Protestant religion in Catholic countries, and particularly

respecting the right of sepulture of Protestants in Catholic countries, as it may be secured to them by law, or permitted by custom."

Mr. *Canning* thought that the hon. bart. should have given notice of his intention to make such a motion. If such a return should be ordered, he should feel it necessary to move for a similar return of the rights enjoyed by Catholics in Protestant countries under similar circumstances.

Sir *R. Inglis* observed, that he did not conceive that any objection could have been made to this proposition, as it was only a sequel to several motions made ten or twelve years ago for the obtaining of information relative to the Catholic religion.

Mr. *Canning* again submitted to the hon. bart., that this was a motion which required consideration, and suggested to him to postpone it till Friday next. Such a measure would prevent the house from being taken by surprise, on a motion which appeared to be of some importance.

Mr. *Denman* said, that the motion which the hon. bart. had so unexpectedly brought forward, was one of a novel and unprecedented description. It was a motion which called upon our different consuls to exercise duties which had never been supposed to belong to their office, and which, if they did exercise, would give them a claim to additional emoluments from the country. From the extensive nature of the inquiry which the hon. bart. proposed to institute, it was evident that they must peruse an enormous mass of legal documents, and must wade through a great quantity of historical evidence, for which their previous habits might not have altogether perfectly qualified them. Besides, the information which the hon. bart. wanted would, if obtained, only tend to raise a clamour in the country upon an argument which was fallacious in itself, and which had never yet been incorporated with the discussion on the Catholic question. If the motion were good for any thing, it could only be for advocating some reciprocity of measures from the English government to its Catholic subjects, founded on the measures adopted by foreign Catholic governments to their Protestant subjects. Now if the conduct of Roman Catholic governments had been most execrable in this respect, it was only a stronger argument for an enlightened government like that of England giving to its Catholic subjects those privileges which had been withheld by the gloated bigotry of less intelligent governments. He hoped that the rt. hon. gent. would pause before he gave his high sanction to this motion; at any rate he hoped that the House of Commons would pause before it allowed the policy of England to take its colour from that of bigotted, intolerant, and unenlightened Catholic countries (loud cheering).—countries which we had hitherto outstripped in the race of intellectual glory and happiness, and which we had never followed in that career of intolerance which had been the curse of the world in all ages (cheers).

The motion was then withdrawn.

### *Protestant Dissenters.*

THURSDAY, MAY 18.—Lord *J. Russell* presented a petition from several Protestant Dissenters residing in London and Westminster and their vicinity, praying that they might be

See. 1826.

relieved from the disabilities under which they at present laboured in consequence of their religious opinions.

Mr. *William Smith* rose, not to argue the case of the petitioners, but to call the attention of the house to them and to their grievance. The parties were the old Protestant Dissenters of this country, of the three well known denominations of Presbyterians, Independents, and Baptists, well deserving men, whom he considered as more unjustly and injuriously treated than any other class of British subjects. For any supposed, or, if it were so, real fault, of any of their ancestors, 300 years ago, it would be as unjust to punish them now, as it would be to lay to the charge of the present liberal and revered metropolitan the hateful cruelty and bigotry of Laud, or the absurd violence and folly of Sacheverel. The Dissenters had lain for a century and a half under the ban of the legislature—bidden to hold any office civil or military—condemned to endure degradation from their just rank in society, and placed on the same level with criminals convicted of infamous crimes, for no other reason but their differing from the Established Church of the country, not on points of moral principle or conduct, but of religious discipline and theological mystery. They were not ambitious of such company, and desired not to be confounded with such miscreants, either in accusation or punishment. And their case was the harder, because they brought this evil upon themselves by voluntarily, and it was then thought patriotically, consenting to the bill, which, not levelled against them, imposed those disabilities on the Catholics at a moment when the fear of a Popish successor to the throne had filled the country with a panic terror. Their patriotism then induced them to permit themselves, without objection, to be included in the proscription, from which they had never since been able to get free, though their loyalty and attachment to the constitutional liberties and Government of England had been repeatedly acknowledged by the best monarchs who had since filled the British throne, and they were thus still unjustly suffering the penalty of a zeal laudable but imprudent, from which a little more worldly wisdom would have saved them. In the reign of Geo. II., about 90 years ago, they attempted to obtain relief, and were flattered with good words and hopes; but their prayer was at last rejected. Fifty years after, in 1788, they made other attempts; and again and again were cajoled and repulsed. Since which time they had lain by watching for a fair opportunity to repeat their reasonable request. For several years past, during the agitation of the Catholic question, they abstained from coming forward, preferring to wait the effects of increasing liberality of opinions. During the present session they had once intended to procure a motion to be made in their favour in parliament, but the circumstances of the times seemed to afford so many topics of embarrassment, that they determined to waive it, and to content themselves with presenting a memorial and petition in which their grievances were stated, their pretensions were preferred and argued, in the hope that when their case thus came to be set before the eyes of those to whom hereafter they meant to apply for relief, it would challenge their consideration; that gentlemen would examine and weigh the arguments adduced in its support; and unless they felt

themselves able to refute them, would not again refuse to grant that reasonable and complete relief which they earnestly but respectfully requested.

The petition was then read, and ordered to be printed.

### *Prosecutions for Blasphemy.*

MONDAY, APRIL 17.—Mr. *Hume* presented a petition signed by 200 or 300 individuals, who thought it a great reflection upon the Christian religion that so many prosecutions should have been instituted in this country for the alleged offence of blasphemy, &c., but which were, in point of fact, directed against the right of private judgment. He concurred in the opinion of the petitioners, that no man ought to be imprisoned for holding a religious opinion which happened to be different from his neighbours; and it was certainly a reflection on the present enlightened age, that people should be cast into prison for three, four, and five years, for no other crime than that of thinking as they pleased upon speculative subjects. He was glad to find, indeed, that the present sec. of state for the home department did not, like some of his predecessors, encourage these prosecutions; still it was singular, that when on a late occasion he had ordered the liberation of Mr. *Carile*, he had not also set at liberty a number of other persons who were incarcerated for offences of the same nature. Were these matters left to their own operation, without the notoriety of state trials, they would soon become things of utter indifference.

Mr. *Peel* said that there was a great distinction between *Carile's* case and that of the others to whom the hon. member alluded, and who were confined for certain definite periods. The additional confinement which had been endured by the individual just named, was by way of commutation for his fine and sureties.

Mr. *Serjeant Onslow* denied that these prosecutions interfered with the right of private judgment, unless, indeed, that could be called such which struck at the root of all morality and true religion. It was an abuse of terms to designate blasphemy and impiety as connected with the just right of free opinion in a well regulated state (hear).

The petition was then laid on the table.

### *St. Olave's, Hart-Street, Tithes Bill.*

TUESDAY, APRIL 25.—Mr. *Calcraft* presented a petition from the churchwarden and inhabitants of *St. Olave's*, stating that the differences respecting tithes in that parish were as yet unadjusted; that an offer had been made by the parish which had been rejected by the rector; that the whole parish contained only 175 houses; and that, chiefly owing to the differences which unhappily existed between the rector and the parishioners, the church was very thinly attended. The tithes which formerly were sixpence in the pound had been first raised to a shilling, and now to two and ninepence, by which the rector had increased his income 1800l. a year, a sum nearly equal to what the whole parish paid for King's taxes. The petition, in concluding, prayed that the House would be graciously pleased to take the premises in-

to its consideration, and afford such relief to the petitioners as should be deemed fit.

Mr. *Hume* had no hesitation in saying, that proceedings such as these were a reproach to the heads of the church, without whose sanction they could not be continued. In the present instance there was every likelihood of a satisfactory arrangement being completed between the parties, and were it not for the Bishop of London an amicable settlement would have taken place between the rector and the parishioners. That prelate thought, however, fit to interpose; he would not consent to an adjustment, and the consequence was that none could be effected. Such conduct on the part of a bishop, whose duty it was to be a peace-maker whenever he found it necessary to interpose, merited the severest reproach. In this instance he had laid aside his sacred calling, and was rather a fire-brand (murmurs) than a peace-maker—a promoter of discord, than a minister of the gospel (loud murmurs). He (Mr. *Hume*) did not intend to enter into the merits of the question between the petitioners and the rector; but he thought it most unjust that one parish should be taxed at such a high rate, whilst others of greater size were much less heavily burdened.

Mr. *C. W. Wynn* said, that without offering any remark on the present petition, he could not resist the inclination which he felt to rise up and protest against the unjustifiable attack of the hon. member (Mr. *Hume*) on the conduct of the rt. rev. prelate whose name had been introduced on the present occasion (hear, hear). The hon. member asked why had that rt. rev. prelate interfered in an arrangement between the rector and the parishioners? In doing so, the Bishop of London had only consulted the interest of the church of which he was one of the heads, to prevent an arrangement, the benefits of which would not be extended to the incumbent who might succeed the present. The Bishop of London had not appointed the present rector, and therefore he could not have acted from any personal or partial feeling in pursuing the course which he had taken (hear, hear).

Mr. *Calcraft* said that before the petition was ordered to be printed, he begged leave to say that so far from any blame being attached to the Bishop of London, he thought that he had done as much to reconcile parties, as he could have effected, considering the station which he filled (hear, hear, from the ministerial benches).

Mr. *Peel* expressed his regret that he was not in the house when the hon. member (Mr. *Hume*) made use of such unwarrantable observations with regard to the venerable prelate whose name had been used in the present discussion. He should just observe, that the member who could so far commit himself as to deal forth his invectives in that unwarrantable manner against a prelate who was not more distinguished by the exalted station which he filled, than by his piety and learning, had grossly abused the privilege which he enjoyed as a member of that house. Was it, he would ask, to be tolerated—was it manly or decent to apply the term “fire-brand” to the venerable and respected Bishop of London (cheers)? Had the hon. gent. who had thought fit to use that term been in a more exalted station than that which he filled in the estimation of the house, a more serious notice should have been taken of such conduct. And what was it that called for the hon. gent.'s remark,

or how was he warranted in adopting the course which he had pursued? The Bishop of London had displayed the utmost anxiety to produce an amicable arrangement; and he had no other feeling, no other interest to advance, than that which a sense of his duty had dictated.

Mr. Hume was willing to confess that the term which he had applied to that prelate was rather stronger than he could have wished (hear, hear). But knowing the divisions with which this parish had been disturbed, and the heart-burnings caused by the litigation of the question of tithes, he had given vent, rather unguardedly, he admitted, to expressions which perhaps it were better had they not been uttered (hear, hear). The Bishop of London, however, ought not to be too hard on the parish. He ought to be satisfied with having raised the tithes from 250*l.* to nearly 2000*l.* per annum; and he again repeated that he should have consented to the proposed arrangement without offering any further hindrance to the final adjustment of the question in dispute.

The petition was then read, and ordered to be printed.

#### PUBLIC WORKS.

##### *Addition to the National Picture Gallery.*

WEDNESDAY, MARCH 22.—The Chancellor of the Exchequer, in rising to propose a vote of 9000*l.* for the purchase of three pictures to add to the National Gallery, wished to explain to the house the circumstances under which the purchase had been effected. Having heard that three paintings of some of the most renowned of the old masters were on sale, and wishing to add them to the national collection, his Majesty's Government were fortunate enough in having agreed for their purchase; and when the house was aware of their value, he was sure there could be but one opinion on the subject. One of the pictures was painted by Poussin, another by Caracci, and the third was the production of that celebrated master, Titian. The three paintings were admirable specimens of the respective masters. The picture by Caracci was admitted to be one of the best of that great master. It was a singularly beautiful painting with respect both to its design, and the exquisite felicity of its colouring. The picture by Titian had been some time in this country. Its subject was Bacchus and Ariadne, and it was confessedly the finest specimen of that great master. It was not a large picture, but its beauty was unequalled. He was quite certain that no person would grudge the sum of 9000*l.* which had been given for those pictures. Artists and persons of the first taste and judgment had concurred in praising their beauty. The late Mr. Angerstein had offered 5000*l.* for the Titian alone, so that the three pictures could not be considered dear at the price which they cost the country. They were now in the National Gallery, which was open to the inspection of the public.

The vote was carried without any further observation.

THURSDAY, MARCH 23.—On the report of the grant of 9000*l.* for the three pictures lately pur-

chased by Government, and added to the national gallery,

Mr. Hume said he was not quite satisfied as to the propriety of the present vote. He was assured that things were not altogether right with respect to this picture speculation. From what he had heard, he believed that certain individuals were implicated in palming those pictures on Government. He did not deny the utility of having a national picture gallery; but he objected to the manner in which the pictures which called for the present vote had been obtained. He wished that a report should be laid before the house, from persons who were competent to judge of the merits of those pictures, explaining the individual excellence of each.

Mr. Herries:—The pictures were purchased on the opinion of competent judges, and he believed that their excellence could not be questioned. As to the report required by the hon. gent. he did not exactly know what to say respecting it; but if the hon. member wished, he could have a return of the names of the persons on whose opinion the pictures had been purchased, and he (Mr. Herries) was quite sure that the respectability of those gentlemen would place them above suspicion. The pictures were purchased because they were esteemed excellent specimens of the art, and because they were considered cheap.

Mr. Hume wished that the persons on whose opinion the pictures had been purchased would state an opinion as to their merits. He had seen a statement in a public newspaper tending to question the competency of a certain rt. hon. gent. on whose opinion it was said the purchase had been effected, and if that statement were to be relied on, there were certainly some grounds for inquiry. If, however, the rt. hon. gent. considered otherwise, he (Mr. Hume) did not wish to press the subject any further.

WEDNESDAY, APRIL 19.—Mr. Herries brought up a copy of the Treasury minute for the purchase of the three pictures which had lately been added to the National Gallery.

Sir C. Long said, that being one of those at whose suggestion those pictures had been purchased, he thought that the public had a right to be satisfied with respect to the transaction. He confessed that he knew of no way in which purchases for the National Gallery could be so satisfactorily effected as by the recommendation of a committee of competent persons. It was under such an arrangement that those pictures had been purchased, and it was the intention of Government that no purchases should in future be made without a similar recommendation. He had received a great many letters from different individuals, inviting him to see their collections, and he had, he owned, rather unadvisedly complied with several of those invitations. The hon. member (Mr. Hume), among others, had written to him to go and see the collection of a friend of his, but having made up his mind at that time not to visit private collections for the future, he had declined the offer; but in doing so, he hoped that no want of courtesy had been shown to the hon. gent. (Mr. Hume). His only motive in declining the offer of the hon. gent. was, that he did not wish any longer to take upon himself the very thankless office of passing judgment on pictures in the possession of private individuals. It was at best an ungracious task to be obliged

to pass an opinion on works of taste in the presence of their owners. If that opinion happened not to agree with the notions which the proprietors might entertain as to their excellence, nothing was more easy than to throw out insinuations of an injurious tendency, and to complain of a want of taste and judgment; and if, on the other hand, the opinion should be favourable, the owners were too apt to go into the market, and quote that opinion, whatever weight it might possess, for the purpose of raising, perhaps, a disproportionate price. The *rt. hon. gent.* then proceeded to state, that so little inclination had been shown by Government to add to the national collection by indiscriminate purchases, that since the gallery had first been formed, only four pictures, including those three, had been purchased. It was unnecessary for him to state, that those pictures were of the first class, as the concurrent testimony of artists and men of taste had fully admitted.

*Mr. Bankes* said, that one of those pictures alone was worth the greater part of the sum which had been paid for the three.

### *Westminster Abbey.*

THURSDAY, MARCH 16.—*Mr. Hume* rose to submit a motion to the house, for information respecting the money collected for admission to see the monuments in Westminster Abbey. He was induced to do this by observing in the estimates a sum appropriated for keeping these monuments in repair. The Dean and Chapter of Westminster, as was well known to the house, charged money for admission to see the monuments, though, he was bound to say, that in consequence of the attention the subject had received, the money demanded had, within the last year, been considerably reduced. He wished, however, to know how the money collected for admission was expended? The house had voted sums of money to erect these public monuments, and it was surely right to throw them open to public inspection. The public had probably also paid the Dean and Chapter for the privilege of erecting them. The sums collected were, he understood, appropriated to pay the minor canons, and the persons who attended the visitors; but the Dean and Chapter ought to pay the salaries of these persons. Formerly, he believed, there was little or no charge for seeing these monuments, and the trifling sum, if any, was exacted, like that at St. Paul's, solely to keep away improper persons.—As a body, the Dean and Chapter did what no men, as individuals, would do. The public opinion, and the opinion of that house, had been strongly expressed on the subject, and yet they persisted in making exactions universally condemned. If neither his Majesty nor the house had any right, as had been said, to interfere with the Dean and Chapter, then it was not proper to place public monuments under the care of individuals who could not be controuled. The *hon. member* concluded by moving “for an account of the sums charged by the Dean and Chapter of Westminster to each person visiting the abbey; of the total amount of the sums thus collected for each year for the last five years; and how the same had been appropriated.”

*Mr. Peel* did not oppose the motion, as he thought it fair that the house should be in possession of the information asked for by the

*hon. member.* The *hon. member*, however, was in error, if he supposed that the Dean and Chapter of Westminster had any rights different from those of other Deans and Chapters, or that they made the public pay for the privilege of erecting monuments to eminent persons. The house, he believed, had no power to compel them to admit strangers to the abbey, which, like other abbeys, was entirely under the controul of the Dean and Chapter. The *hon. member* was also wrong in supposing that the fees for the admission of visitors were of recent origin. They had existed from very early periods, and instances might be found in the Record Office, of their being granted by patent. At present the fees were divided, he believed, among the minor canons and the choir. The amount of the income of the minor canons, who were obliged to attend about four months in the year, was about one hundred pounds per annum, and of this they drew about seventy pounds from the fees. The admission fee had been diminished, and was not at present more than was necessary to protect the monuments. The abbey was now opened three times a day to every body when divine service was performed—it was opened without any charge, at all reasonable times, to artists—and the admission fee for the public generally had been reduced from 2s. to 1s. 3d. The total amount of the emoluments would be seen when the papers were produced. During the last 25 years the Dean and Chapter had expended 38,871*l.* in repairing the abbey, being on an average upwards of 2000*l.* a year. During the last twelve years, the sum of 40,000*l.* had been applied, or more than 3300*l.* per annum. This showed that the Dean and Chapter had paid liberally for the maintenance of their magnificent abbey. They might mistake in demanding a sum for admission, but he was persuaded that they were sincere in their opinion that such a sum was necessary to secure the safety of the monuments. The sum now levied was defruct, and the guides were not allowed to make those appeals to generosity, which were often more productive than the regular fees.

*Mr. Hubbard*:—As the public paid for the monuments they had a right to see them; the better plan would be to allow them free ingress and egress, appointing a person to act as guardian of the monuments, and to take care that no injuries were done them.

*Mr. Baring* said that in ancient times cathedrals were open for the admission of all persons at all times of the day; and at present, in Catholic countries, any person who demanded it, was admitted into them without restriction. If the Dean and Chapter of this cathedral claimed the power of excluding parties, they ought to show the right on which such claim was asserted.

The motion was agreed to.

THURSDAY, APRIL 13.—*Mr. Hume* now rose for the purpose of submitting to the house a motion which arose out of the return which had been recently made. He was anxious to satisfy the house that the persons for whom the collections at Westminster Abbey were made, ought to be in possession of funds which would be more than enough to pay them, without any call upon the public. He had been informed from very good authority, that some years past

the Dean and Chapter of Westminster had appropriated to themselves certain land, which belonged of right to the minor canons and gentlemen of the choir of the abbey-church. The latter persons appointed a committee of their own body to inquire into the circumstances attending this affair: but, notwithstanding their representations, the Dean and Chapter insisted that the minor canons should owe their support principally to the collections which were made at the doors for showing the monuments. The minor canons alleged, that by virtue of a charter granted by Queen Elizabeth, sufficient funds were set apart for their maintenance; and the chief object of the present motion was to see that charter, in order that the truth of this statement might be ascertained. In order to accomplish this object effectually, it would also be necessary to have a statement of the sources from which the money received under that charter was derived. He believed, also, that sums had been bequeathed by certain individuals for payment of the minor canons, which, if they were properly applied, would prevent the necessity of any collection being made; but into this part of the subject it was not his present intention to enter. He, therefore, moved for a copy of the charter granted in the second year of the reign of Queen Elizabeth, whereby she, of her free bounty, conferred the abbey-church of Westminster on the Dean and Chapter for ever, and subjected the same to their entire and lawful management. The hon. member said there were several other motions with which he should follow this up.

On the motion being put,

Mr. Peel felt obliged to oppose it. When it was recollected that he had offered no opposition to the hon. member's former motion, he was sure the house would be convinced that he had no wish to withhold any information that might be necessary; and he could not but think that the hon. member made an ungracious return for the facility with which he had obtained the documents he before required. He now wished the house to call upon the Dean and Chapter of Westminster, to show the title by which they held property that had been for so many years in their possession. The hon. member asked also for returns of the lands, houses, &c. appropriated to the maintenance of the minor canons—for a copy of the grant of 1697 to the choir, on condition that, receiving the benefits of the exhibition of the monuments, they should keep them clean—for an account of allowances and income received by the minor canons, &c., and in whose possession are the lands, houses, &c., from which the same are derived.

Mr. Hume said, he had not made any such motions.

Mr. Peel said, the hon. gent. had proposed to follow up the present with motions to that effect; had entered them in the clerk's book, and had given no notice of his intention to withdraw them. If the hon. gent. doubted the right of the Dean and Chapter to take money for admission to those monuments, he could refuse to pay it, and on being prevented from entering the church, could try the question in any way he thought proper; but he ought not to call upon the house to make itself a party to any such dispute. The minor canons thought they were entitled to something more than the Dean and Chapter allowed them; but ought the house to enter into that quarrel? Ought

they, in the present overwhelming state of public business, to neglect that which it was their duty to dispatch, for the purpose of settling the differences between the minor canons and the Dean and Chapter of Westminster? The notice went on to call for returns of the lands and tenements in the possession of the Dean and Chapter, and the title under which they were held. It was impossible that the house could sanction such an infringement of private rights. Upon this objection, if it were the only one, he should be disposed to resist the present motion.

Mr. Hume replied: he said, that the notice in the book had been entered from an abstract which he had handed to the clerk at the table, and in which some alterations had subsequently been made. He thought that no member in that house ought to be told by another, in the presuming and improper manner which the rt. hon. gent. had adopted, that he was bound by the precise terms of that notice (cries of order).

The Speaker did not know whether the hon. gent. rose to reply, or to explain. It had been the practice in the house for a long period, not quite as a matter of right or necessity, but as one of general convenience, that notice should be given of any motions which it was intended to make. As these notices were the only means which hon. members had of learning the object of the various motions which were to be made, it was highly desirable that they should be correct. It appeared in the present instance that they had been copied from the hand-writing of the hon. gent., and if they were incorrect, who was to blame? The hon. member should not be surprised that he alluded to him in this way, when he recollected that no person in the house gave so many notices as he; nor if he (the Speaker) pointed out to him the necessity of rectifying such errors as soon as they were discovered.

Mr. Hume said, he had explained the reason why the notice did not appear correctly entered in the book—that it was taken from an abstract.

Sir J. Wrottesley had hoped that the returns moved for by his hon. friend would have been granted without hesitation. There was no ground whatever for the exactions of the Dean and Chapter of Westminster, and their practice in this respect had not even the plea of antiquity to recommend it, because it was an infringement of which many hon. gents. in the house had seen the beginning. He had been educated at Westminster school, and he knew (having passed through it hundreds of times in every year) that there was a passage from the cloisters through Poets' Corner. At the period to which he alluded the lower part of Westminster Abbey was open daily. It was true that admission might still be obtained upon payment, but it was by no means the same thing to be escorted by an impertinent and talkative verger, as it would be to spend a solitary hour there on a rainy day, contemplating the monuments of illustrious persons, and thus acquiring a knowledge of the history of the country (a laugh). To what purpose had the national money been spent, but to hand down to posterity, by means of those monuments, the achievements of the heroes to whom they were erected, and how was this purpose to be effected if the abbey was to be for ever shut up? It was stated in the returns which had been laid before the house, that divine worship was celebrated

in Westminster Abbey twice a day; this was true, but one of the periods at which service was performed was so early, that no person attended but two or three old women, in red cloaks. In the return which had been made, he found the name of a person whom he and all those who had known him, never heard without feelings of love and veneration; and he was sure that if that man could rise from the grave, nothing would give him greater pain than to see his name of Vincent coupled with the return on the table.

Mr. *H. Gurney* had no wish to trench on the rights of private property, but he considered the free ingress of the public to Westminster-abbey to be a national object, and therefore he would support the motion.

Mr. *Ashurst* did not conceive it to be at all improper that a tax should be levied upon the visitors of the Abbey, in order to keep in repair those objects of curiosity which attracted them. He thought there was no ground for the motion.

Sir *J. Newport* believed that a considerable number of the monuments which were erected in the abbey, never would have been placed there, if it had been supposed that the public would be excluded from it. The appropriation of the fees was as improper as the original exaction of them; for it appeared that they constituted a fund out of which the salaries of the minor canons were paid, which ought to be paid out of the private funds of the Dean and Chapter. The hon. member then complained of the manner in which the return which the Dean and Chapter had made to the house was drawn up. They were bound to state facts, and to reason or discuss was not respectful to the house. But these gentlemen insisted "That their founder bound them to defend their rights and privileges against all encroachments." The house was to infer, therefore, that it was an encroachment on those privileges for the house to call for a return (hear, hear)! The house was making an encroachment on the rights of the Dean and Chapter when they sought to protect the public against exactions! They were told too that the question of right might be decided in a court of law; but it should be recollected that the expense of the trial would fall on a single individual, whilst the Dean and Chapter would defend themselves with the money extorted from the public (hear, hear).

Mr. *Wynn* said, that the house had no authority to call for the documents in question. If the house should come to a vote that the custom of taking fees was improper, they had no power to order it to be discontinued. The Dean and Chapter, like other clergymen, had a right to shut their church when service was not going on. It was desirable that the house should not interfere where it had not power to enforce compliance with its wishes. The Dean and Chapter might, if they pleased, set the house at defiance. Under these circumstances, he would oppose the motion, although he deprecated the practice of exacting fees for seeing the Abbey as much as any man.

The house divided, and the numbers were,

For the motion, 56—Against it, 72—Majority, 16.

Mr. *Hume* then moved for a copy of the grant made to the choir of Westminster in 1697, on condition that they should keep the monuments always clean.

Mr. *Peel* said, he would accede to this motion, inasmuch as there was a parliamentary ground

for inquiring into the fact that a grant of the public money was made for a particular purpose. He wished it to be understood, that in all he had said, he had no desire to vindicate the practice of exacting fees for visiting the Abbey. He merely proceeded on the principle that the question of right ought to be determined without the interference of that house. He sincerely wished that every facility should be given to the public access to the Abbey, consistent with the preservation of the monuments which it contained (hear, hear). He regretted that the Dean and Chapter had considered it necessary to make such a return to the order of the house; it would have been much better for them to have confined themselves to a simple statement of facts (hear, hear).

Mr. *Canning* recommended the postponement of the motion. If it should turn out upon inquiry, that the grant emanated from the Crown, his rt. hon. friend would have no objection; on the contrary if it came from the Dean and Chapter, the motion would be objected to.

Mr. *Denman* saw no reason why the motion should be withdrawn. If the grant was from the Dean and Chapter of the choir, there was the greater ground for inquiring into the causes why the delegated trust had been neglected. It was not a consistent way of meeting such a motion as this, to say that there was a remedy in a court of law. In cases of abuse of a public trust, complainants might as well be told that they could file a bill in Chancery. The question was, whether there had not been a violation of a public trust.

Upon a division, the numbers were,

For the motion, 37—Against it, 68—Majority against the motion, 31.

Mr. *Hume* observed, that after the rejection of this motion, the Dean and Chapter might, if they chose, shut up the Abbey altogether. He would withdraw his other intended motions; but it was his intention to propose, on a future day, a motion expressive of the sense of the house on the extraordinary conduct of the Dean and Chapter.

### *Improvements at Charing-Cross and in the Strand.*

TUESDAY, MARCH 21.—Mr. *Arbutnot*, in rising to move for leave to bring in a bill for making several improvements in the neighbourhood of Charing-Cross and the Strand, said, that before he entered into any statements connected with those improvements, he felt it necessary to state, that those which he should propose would be carried into effect by the same architect (Mr. Nash) whose designs in the formation of Regent-street had received such deserved commendation from the public. It was almost impossible for him to give the house a correct detail of the proposed improvements, without maps or plans being before them, and therefore he hoped for their indulgence while he detailed as well as he could what was intended. He would propose the purchase of that tract of building lying between the Mews and St. Martin's-lane; and also the whole of that tract on the east side of St. Martin's-lane, which was bounded on the north by Chandos-street, on the south by the Strand, and which terminated in its eastern point at Castle-court, near Bedford-street. This, it would be admitted, would be a great

improvement, by opening a wide and easy communication between the west and east ends of the metropolis,—a communication which had long been wanted at that part of Westminster. Should parliament sanction these purchases, there would be formed a grand quadrangle, one side of which was already formed by the College of Physicians and the buildings in that line. The eastern part of the line would be made to correspond, so that there would be a view from Pall-mall west down to the portico of St. Martin's church. In this line it was intended to erect a gallery for the reception of the national collection of pictures and statues. This was chosen as being more central and more easy of access than the British Museum; but though it was judged proper to have these collections in a building thus remote from the British Museum, still it was thought right that this gallery should be under the guardianship of the trustees of the Museum. It had been suggested that there should be a central building as a Royal Academy, but the general opinion of those consulted seemed to be in favour of leaving an open space. He mentioned this, as the point was yet undecided, and it would be left for the consideration of the house. The south side of the quadrangle would be open to Charing-cross, giving a view of Parliament-street and Whitehall. The extent of it would be 300 feet from the statue (at Charing-cross) to the present stables. Its extent on the other sides would be made to correspond as nearly as possible. The reason why it was proposed to carry on the improvement to Bedford-street was, that the Strand up to that part should be widened from its present width 35 feet, to nearly 60 feet. The narrow passage in this part between Charing-cross and Bedford-street, was a source of great inconvenience to all persons going from the west and to the city, and in this respect he had no doubt that the new plan would meet with general approbation. At present, all the stage and mail-coaches, coming from Piccadilly, to the east end of the city, and returning from thence to the west, were obliged to come down by Charing-cross, and pass through this narrow gut, as he might call the space between the Cross and Bedford-street; so that by the crowd of vehicles of all descriptions, there was sometimes a stoppage, which often interrupted for a considerable time the communication between one end of the metropolis and the other. Should the house approve of his proposition, the whole of this inconvenience would be avoided. Persons going to the city from, and returning to, the west end, would have access, not only by the widened carriage way of this part of the Strand, but also by new carriage ways running parallel. There would be an additional carriage way across the upper part of the quadrangle into a street on the south side of St. Martin's church, which would run diagonally into the Strand, towards the end of Villiers-street; so that a great part of the crowd at present entering the Strand by Charing-cross would be avoided. But this would not be all. The means would likewise exist of forming another street from Leicester-square, by Hemmings-row and Chandos-street, which would fall into the Strand by Bedford-street. This would be the least wide of the three communications, but still it would give a great additional convenience, and by taking off part of the throng of carriages that would otherwise have access to the Strand only by Charing-cross,

would very much relieve that part from the crowd which daily pressed along it. He would now say a word as to the expense which would be incurred by these improvements; and no doubt it would be satisfactory to the house to learn, that unless the building of a Royal Academy or National Gallery in the site to which he had already alluded should be determined on (in which case it would be necessary to come to the house for a grant), he should not have to apply to the house for a shilling (hear, hear). He would not at that moment enter into the details of the means by which it was intended to carry these plans into effect. It would be sufficient to state generally, that by the exchange of Crown lands in some instances, and the sale of them in others, the department with which he was connected would be enabled to meet the greatest part of the expense. It would, however, be necessary, should the house approve of his plan, that in the bill which he would introduce, powers should be given to borrow a sum of money on mortgage of a part of the new street; but this, it should be observed, would be only a continuation of an act already passed for the erection of the buildings in Regent-street. Looking at the whole of what he had detailed as one plan, he could not anticipate any objection to it as a general measure. It was, he thought, highly desirable to get rid of the unsightly appearance which would be presented by allowing some of the houses in the neighbourhood of Charing-cross to remain as they now stood. If the house should disapprove of carrying the alterations to the extent that he had proposed, then it would be necessary to have the intended quadrangle on a much smaller scale. He thought, however, that such an opportunity as the present ought not to be lost, for such another might never present itself of making these desirable improvements. Looking to the probable result of this plan, the house, in order to form its judgment, might be glad to learn what was the result, as to expense, of that splendid undertaking—the building of the new street (Regent-street). That, it should be remembered, was undertaken in a time of war, and such as it was, he did not believe that it was regretted by one man in the country. Taking the expense of that, and the opening to the Regent's-park, in the purchase of good-will of premises, and in the awards given by juries, the result was, that while a great part of the Crown land was improved and an interest created which did not exist before, the interest on the whole of the sum laid out produced within a fraction of 3 per cent. He did not say that the expense of the improvements now proposed would be as great, but for the space to be acquired they would be comparatively greater; for in the former case there was erected on the site of the houses pulled down, a continuity of buildings, which were now productive; but a great part of the site of the houses now to be removed would remain unoccupied, and would of course produce no return for the sum laid out; but after all, and making allowance for this unproductive space, he expected that an interest of  $2\frac{1}{2}$  per cent. would be returned on the money expended. This, considering the great advantage to be derived from the more open communication between the two quarters of the metropolis, and the splendour of forming such a magnificent quadrangle, would be a fair return. But the ornament of the proposed quadrangle would not be its only advantage.

The leaving such an open space in a neighbourhood so thickly surrounded with buildings would be a great benefit in contributing to the health of the inhabitants of the vicinity. He would not now go further into detail, but merely observe, that he would move, that the bill, if the house consented to its introduction, should be read a first time that night, and a second time to-morrow; and that it should be printed, and afterwards referred to a committee up stairs, to examine the plan, and report whether it could conveniently be carried into effect. The hon. member concluded by moving for leave to bring in a bill "to extend to Charing-cross, and other places adjacent, the provisions of an act for opening a more convenient communication between the east and west ends of the metropolis, and enabling the commissioners of land revenue to sell and grant leases of Crown lands."

Sir M. W. Ridley suggested the propriety of improving a part of the Strand by the removal of Exeter-change. There could be no doubt this was a very great nuisance to the inhabitants of that neighbourhood, and as a very considerable commerce was carried on in that part, he thought this suggestion was not undeserving of the rt. hon. gent.'s attention. He wished also to draw his notice to a letter which appeared in *The Times* newspaper of this morning, touching the exclusion of the public from the turf of the Regent's Park, in order to secure to the Crown a rent of 100l. a year. Certainly it had been understood, that as soon as over the trees had grown up sufficiently, the park would be wholly thrown open to the public.

Mr. Arbuthnot said, that he did not disagree with the hon. bart. in his observations respecting Exeter Change, but as that was the private property of Lord Exeter, difficulties would arise in effecting there the alterations suggested, and he thought that whilst the house were providing for public improvements, they ought also to be attentive to private property. Besides, he understood, that as soon as the leases which had been granted of the property about Exeter Change had run out, it was the intention of Lord Exeter to make very great improvements there; and he could assure the house, that if his assistance should be at all required, he would most gladly co-operate in so laudable an undertaking.—What had been observed by the hon. bart. respecting the Regent's Park, had not escaped his notice. It was, however, a mistake to suppose that the annual rent which government received on account of this park was only 100l., for in point of fact it amounted to 1800l.; but still this would be no consideration with the Government for excluding the public from the full enjoyment of this park one moment longer than the state of the park itself absolutely required; but at present, although the pasturage was extremely good and luxuriant, the surface of the soil was not in a proper condition to be walked upon, neither had the trees as yet arrived at sufficient maturity to render it safe that the fences which at present protected them should be thrown down. In the course of another year he hoped that these obstacles would be removed, and that the public might then have a free and unrestricted access to all parts of the park. He felt as fully sensible as the hon. bart. himself could possibly do, that it was the duty of those who had the direction

over matters of this nature, to prefer the public health and convenience to every other consideration.—Before he sat down he would take the liberty of alluding to the very important improvement which had recently been made in Hyde-park, and which must necessarily have afforded the public a most considerable additional accommodation; he did this the more readily, because it had been granted by the express direction of his Majesty, who had himself suggested and pointed out the improvement.

Mr. Hume did not rise to object to the rt. hon. gent.'s having leave granted to bring in the bill, but he hoped that the public would not be called upon to pay any money towards it; and, indeed, instead of borrowing money for this purpose, he thought it would be far better to sell some of the crown-lands to defray the expenses of it.

### *New Corn Exchange Bill.*

MONDAY, APRIL 17.—On bringing up the report of the above bill,

Sir T. Baring felt it to be his duty to enter his protest against this unwarrantable and uncalled-for measure. Its chief effect would be to increase the number of retail dealers in corn, to the evident injury of those who had already embarked in that trade. But his great objection to the bill was, that it would interfere with the private rights of individuals—with the rights of those who were the possessors of the present Corn Exchange—without adequately remunerating them. The individuals who had formed this project asserted that a new exchange was greatly wanted. He was disposed to doubt the correctness of that statement, as he believed the sale of corn had not increased within the last 20 or 30 years. He should therefore move "that the report be received this day six months."

Mr. Hume seconded the motion. The present measure was one of those instances of interference with private property that ought to be resisted by the house. The bill went to take from the present proprietors their property in the corn-exchange, without any guarantee that another would be built.

Sir E. Brydges supported the measure on the score of public utility. It was said that the present exchange was private property; but if it were, it differed essentially from other private property, because it was devoted to public purposes. He hoped that the report would be received now.

Mr. T. Wilson said, it had been asserted by the supporters of this measure, that corn would sell better in a large market than in a small one. If this were so, and if the present corn-market were not sufficiently spacious, let them enlarge it, or build another elsewhere. The existing corn-market was built by private parties for their use and convenience, and the business had been carried on there very prosperously for a great many years. This measure, he thought, interfered with private rights.

Mr. H. Sumner expressed himself friendly to the bill. A new corn exchange was very much wanted. The present market was quite inadequate for the sale of corn, and the place opposite to it was equally so. In consequence of the want of necessary accommodation, the street in which the market stood was frequently rendered impassable. It was said that this was an uncalled-for invasion of private property.

He did not view it in that light; but even if it were considered as private property, this interference was rendered necessary for a public object. They were told that the new proprietors would, under this bill, turn out the old proprietors. It was no such thing. They said, "We will build a market by the side of yours; and we will, for the purpose of making a communication between the two markets, take down as much of your wall as admits of four stands, at the annual rent of 40l. a year, for which we will make full reparation." It was also stipulated, that the new proprietors should, at the option of the old, take the whole of the market, if the latter desired it.

Sir R. Wilson stated, that a most respectable corn-dealer had, in his evidence, pointed out the impossibility of carrying on business in the present state of the market, and it had come out in the course of the inquiry, that a bye-law had been framed by the society, or joint stock company, who held the exchange, by which they excluded from participating in this corn-trade, every person except corn-factors. The corn-factors had thus erected themselves into a body, who were to mete out to the public whatever quantity of corn they thought fit, under their own regulations, and at their own price. That this was a monopoly, and a very profitable one, was apparent from this fact—that though the premises were not worth more than 10,000l., the good-will was estimated at 60,000l.; and the proprietors actually called for that indemnity, if the market were affected by this measure. Those who required this bill were anxious that the present proprietors should throw open the market to the corn-dealer, generally.

Mr. Calcraft said, the object of this bill was to take by force the property of individuals; and in order to put a face upon the matter, they were calumniated as monopolists.

Sir E. Knatchbull defended the character of those with whom this measure originated. It was admitted on all hands that the present market was most inconvenient; and those individuals took the only method of remedying the inconvenience.

Mr. Alderman Wood said, there could be no difficulty in the erection of a corn market by this society, because they had already purchased the ground adjoining the old market. All they asked for was, to have an opening from one market into the other; and he was of opinion that that point ought to be conceded to them.

On a division, the numbers were—For the motion, 76—Against it, 27—Majority for the bill, 49.

## FOREIGN RELATIONS.

*Diplomatic Service.*

FRIDAY, MARCH 17.—Mr. Herries moved that a sum of 200,000l. should be granted to his Majesty, to defray the expense of civil contingencies for the year 1826.

Mr. Hume said, that he had expected to see in the estimates for the present year some reductions under this head; the country was not in a situation to pay nearly half a million annually for the expenses of ambassadors and other matters connected with them. The house was not, perhaps, aware that the charges on this head had gone on increasing for several years past. In 1818, the charge was 258,078l.; in 1824, it was 320,178l.; in 1825, it was 326,463l.

See, 1826.

Many of the items, he thought, should have been included in the sum voted for the civil list. He found there sums of 73,860l. for extraordinary disbursements; 19,240l. for outfit and equipage of envoys; and 6402l. for presents. He did not object to the expenses which were incurred in respect of the ministers who were sent to the states of South America; but he thought that the expenditure for some of the less important states of Europe might be reduced. Such places, for example, as Wurtemberg, Saxony, and Switzerland, could not be of such importance as to justify the expenditure they occasioned. It appeared that the extraordinary expense incurred in the last year, on account of the embassy to Paris, was 17,570l.; and, adding to this the salary of the ambassador, which was 13,000l., the total amount became rather more than 30,000l.—a sum equal to the whole civil establishment of the United States of America. In the year 1792, the whole expense of all matters connected with the diplomacy of the country was 185,000l., and this year it was little short of half a million sterling. Upon principle, he opposed any such system of expenditure, because he was convinced that whenever the emoluments of public employments were large beyond the duties to be performed, appointments would be made as matters of patronage, and other qualifications besides appropriate aptitude, would be deemed the only pretensions to office. He saw in the charge to which he had last alluded a sum of 12,000l. for repairs to the hotel of the British embassy at Paris, and for furnishing some of the apartments. Some years ago, the house was called upon to grant 30,000l. for the purchase of that hotel, and now another item was brought forward for repairing it. Unless the house would at once resolutely interfere, there was every reason to believe that these expenses would go on increasing, and that every year would see some augmentation to them. In the year 1792, the whole annual expense of the French embassy was only 9000l., including the extraordinary charges. In the year 1822, it appeared to have amounted to 14,555l. The charges for the embassy to Russia were 14,535l.; to Austria, 14,000l.; to Spain, 14,000l.; to Prussia, 8000l. What need was there to send an ambassador, at the annual expense of 7200l. to the Two Sicilies, or to Sweden at 5300l., and Denmark, 5800l.? What reason could there be for expending for the same purpose a sum of 4619l. on Wurtemberg, of 3900l. on Tuscany, and of a similar sum on Saxony? He thought that the whole expenses charged on account of the consuls, in a paper laid on the table yesterday, required an explanation, and he hoped to hear it from the rt. hon. gent. (Mr. Canning).

Mr. Canning rose for the purpose of answering the observations of the hon. gent., and of giving him such explanation on the subjects which he had touched upon, as he was able. He would begin with that which had been last adverted to by the hon. gent.—that was, the account of the salaries to his Majesty's consuls abroad. He was not a little surprised to hear the hon. gent. express himself so wholly unacquainted with this subject, which he (Mr. Canning) had always taken to be a child of the hon. gent.'s own. When he (Mr. Canning) came into the situation he now held, he understood that the opinion of the house had been expressed—that it would be beneficial to the

See, 1826.

country, and particularly to the trade of the country. If the system of foreign consuls, then existing, should be done away with, and put on an entirely different footing; in short, if the payment by means of fees should be abolished, and salaries substituted for them. He begged it to be understood that this was by no means his wish; but although he did not concur in the principle which had been laid down, as he found it settled, he had done his duty, and had carried it into execution. He was sure that in many cases small fees were a better mode of payment than salaries. He, however, only made this protest *obiter*, and he mentioned the subject for the purpose of expressing his surprise that the hon. gent. who had laid this burthen on the country, should now turn round and complain of the expense. From the moment at which he (Mr. Canniog) had come into office, this subject had engaged a great portion of his attention, and he could assure the house that he had met with none that had given him more trouble. It was his duty to hear the particulars of each case, to ascertain how much might be abridged from this, and what compensation should be allowed to that, in lieu of the old accustomed profits. Although it might be pleasant enough to the hon. gent. to make the reductions he thought fit in the aggregate, the putting them into practice in detail was a very different affair. To shoot into a crowd where the victim could not be seen, was an affair which perhaps excited little care; but to execute individually the sentence which had been pronounced in gross, was most painful and distressing to the person on whom the duty might fall. In the last three years he had to listen to, to examine, and to answer applications on all these subjects. It appeared that the total amount of the burthen to which the trade at the different out-ports had been subjected amounted to 61,160*l.*; if he had said 70,000*l.*, that would include every thing, but he would take it at the former amount. The hon. gent.'s system was, that this should be taken from the trade, from the private merchants, and put upon the country. As a part of the alteration, he had called upon the Levant Company last year to surrender their charter. They gave up at the same time the fees which they had formerly levied, amounting to 29,000*l.*, out of which they paid their consular agents, and this expense of course now fell upon the public. The salaries under the old system amounted to 50,000*l.*, and, adding to this the salaries of consuls in the Levant, forming an amount of 11,000*l.*, the whole salary account was 61,000*l.* The contingent expenses had been estimated at 18,000*l.*, and this formed an aggregate of 79,000*l.*, the sum which the house would be called upon to vote. A sum of 30,000*l.* had always been voted in the civil list on account of consuls, and this, deducted from the amount he had just stated, left 49,000*l.* Since, then, the house had chosen to put itself in the place of the merchants, he was entitled to deduct that sum from the charge made on this account. All that had been done, therefore, for 61,000*l.* formerly, he did now for 49,000*l.*, and the saving to the public therefore was 12,000*l.* This was the explanation which he had to give with respect to the consuls' salaries. With respect to the consuls who had been more recently appointed, there was much greater difficulty, owing to the peculiarities of the countries in which they were established. He had endeavoured to feel his way in the best

manner he was able, and had endeavoured to procure returns of the expenses on all subjects, in order to shape the establishments as much like those of Great Britain as was possible. The house would, however, be aware that it was not easy to do this with respect to a country in which a man might buy a horse for a dollar which would cost him two guineas to get shod. All that he could then say on this subject was, that it was in progress, and that the house might rely on his giving it his strictest attention. He had already procured such information respecting Buenos Ayres and Colombia as would enable him to act, and he hoped to go on so as to arrange the others as near to the second-rate European Consuls as possible. With respect to the European missions, they were at present on precisely the scale which had been sanctioned by parliament in the year 1816, excepting where they had been reduced. Those of Switzerland, of Frankfort, and of Saxony, he had thought offered an opportunity for reduction, and that opportunity had been embraced. But, to carry the principle so far as to withdraw missions from countries in consequence of what might be supposed to be their insignificance, was what he could neither see the justice nor the policy of, and which he was surprised beyond expression to hear advocated by the hon. gent. It had never been the principle of this country to neglect the minor independent governments of the continent; and although he did not pretend to foresee the events which the future might produce, he did not believe that the time would ever arrive when this country would have to regret that she had held up heads which circumstances had contributed to lay low. But from generals the hon. gent. had proceeded to particulars, and complaining that the embassy to France had cost 30,000*l.* during the last year, he had argued that it was likely in the next to amount to 50,000*l.*, and that it might go on in a progressive ratio. He was sure that the fallacy of this method of putting the case must have occurred to the hon. gent., and that he would not, upon reflection, insist that the annual amount ought to be stated at the sum he had mentioned. He would, however, confess that the item for the repairs of the ambassadorial dwelling was one which required explanation. In order to understand the affair, it would be necessary that the house should know exactly the history of it. In the year 1814 it had been thought advisable to purchase a house for the residence of our ambassador in France, and the purchase had accordingly been concluded at 30,000*l.* During the last five or six years, a considerable sum had been expended on the repairs of the house. In the civil contingencies of last year, 12,000*l.* were voted for that purpose. That circumstance called his attention to the subject, and he directed the Treasury to send a person to survey the house, and to report whether any, and what repairs were required. Mr. Smith was dispatched to Paris by the Treasury, and his report was, that such another house was not to be got in all that capital, and his estimate of the expense of the repairs necessary was between 5000*l.* and 6000*l.* On this report, the Board of Works were ordered to undertake these repairs. The Board of Works, however, sent over another surveyor, Mr. Wyatt, to look at the house, and he reported that the expense of the repairs would be 16,000*l.* and of new furniture, 7000*l.*, making, altogether, 23,000*l.*

to do the whole in an English workman-like manner. Upon receiving this report, he directed that the house should be sold, and orders were sent to Paris to dispose of it, if it could be done to advantage. The report which was received from Paris on this subject was discouraging. In the first place, during the last 12 years, the value of such a house as the one in question had exceedingly augmented in Paris, on account of their number having decreased. The hiring of a new house would, it was found, be attended with very great expense. In one instance 150,000 francs (equal to 6000*l.* per annum) were demanded, and the lowest rent asked was 9000 francs per month. Then again there was another consideration of some importance connected with the selling of the ambassador's hotel. He received remonstrances from persons of all parties in France, who were favourably disposed towards England, against the selling of the house. These persons represented to him that it was a matter of political importance that the house should not be sold—it would (they said) look like a wish to break off our connexion with France. There could be no doubt, from what had been stated to him, that the most unpleasant construction would have been put on the proceeding. This imaginary grievance should not, however, have stood in the way of the disposal of the house, if that could have been done with any chance of its being advantageous; but it was quite clear that by the selling of the hotel, and the hiring of another, (besides losing the *prestige* of being the only nation but one which had such an establishment in Paris), we should have incurred a much greater expense than the keeping of the present establishment. Under these circumstances, he directed that the hotel should be repaired, not in the English way (which supposed that the doors would shut and the windows close), but in the French style, that was to say, it should be made weather tight. The repairs were proceeded with under the direction of Mr. Wyatt, who was restricted to the expenditure of 12,000*l.* He was well aware that Great Britain did not want any accidental claim to the consideration of France; but he could assure the house that very great importance was attached to the circumstance of our having an ambassadorial hotel in Paris. Russia was the only nation, excepting England, which had an establishment of that kind in the French capital, and if our's were removed, the influence of Russia would be thereby increased. The hon. member had alluded to the increase in the estimates under the head of extraordinary. He would explain how that had happened. The house was aware that in the course of last year an embassy was sent to congratulate the King of France on his accession to the throne. The Duke of Northumberland, who was appointed his Majesty's representative on the occasion, stipulated that he should pay all the expenses of the mission out of his own pocket. But, on the one hand, though it was very public-spirited in the noble duke to make this stipulation, it was not thought right that the public and the sovereign should be served entirely gratuitously. It was resolved, therefore, that his Majesty should present the noble duke with some part of his equipment, which might remain in his family, and go down to posterity as a memorial of the event. A sword, value 10,000*l.* (certainly not a fourth part of the expense which the noble duke incurred), was given to his grace by his

Majesty. This item had swelled the amount of the extraordinary. He believed that he had now touched upon every point which the hon. member had alluded to. With respect to South America, he could not pretend to account for every item of expense. Much that was done there was in the nature of trial and experiment.

Mr. Bernal observed, that several large sums were charged for presents of snuff-boxes to foreign ministers. He thought that item of expense ought to be reduced.

Mr. Canning said, he could not justify the custom to which the hon. member alluded, except by stating that it had existed in civilized Europe from the earliest traces of diplomacy.

Mr. Baring approved of the abolition of consular fees. There was, however, one part of the *rt. hon. gent.*'s system to which he objected—he alluded to the regulation which prevented consuls from trading as merchants. He understood also that the rule was not generally applied, and that some of our consuls in Holland were merchants. He hoped the regulations would be abolished altogether, for it would be more creditable to have the consulships filled by respectable merchants, than by persons who could not, with the small salary which they received, maintain that high character in society which was desirable.

Mr. Canning said he thought it right that all persons who were appointed consuls should be prevented from trading subsequent to their appointment. Some of our consuls were merchants; but they had been merchants at the time they were appointed.

Mr. Hume again adverted to the subject of the repairs of the ambassador's house at Paris, and said that the sum which had been expended for that purpose was an instance of shameful extravagance. He understood that the hotel was fitted up in as splendid a style as any house in London. (Mr. Canning:—"Very well!"—a laugh). It was not very well, but very ill that such profuse expenditure should be permitted.

After some further observations, the resolution was ordered to be reported on Monday next.

TUESDAY, MARCH 21.—Mr. Brogden brought up the report of the committee of supply.

On the resolution being read that the sum of 200,000*l.* be granted for defraying the charge of civil contingencies for the year 1826,

Mr. Hume, after repeating his objections to the estimates for the Diplomatic service, moved that the following be added to the resolution, by way of amendment:—

"That it appears by a return (No. 285 of 1822) on the table of this house, that the total charge for his Majesty's diplomatic service and consuls abroad, for the year 1792, including special missions, outfit and equipage extraordinary, and incidental expenses, pensions to retired ministers and consuls, was 113,980*l.*, and that the charge for the same in the eight years, 1818 to 1825, both inclusive, exceeded the sum of 2,500,000*l.*, as follows:—

|                           |          |             |
|---------------------------|----------|-------------|
| For 1818 . . . . .        | £258,078 |             |
| 1819 . . . . .            | 335,022  |             |
| 1820 . . . . .            | 289,179  |             |
| 1821 . . . . .            | 303,177  |             |
| 1822 . . . . .            | 288,196  |             |
| 1823 . . . . .            | 281,957  | £2,504,107. |
| 1824 . . . . .            | 320,178  |             |
| 1825 . . . . .            | 326,463  |             |
| Additional amount due     |          |             |
| and for consuls . . . . . | 96,857   |             |

being on an average of these years 313,000l. each year.

Resolved,—That, in the opinion of this house, it is expedient, in order to relieve the burdens and support the public credit of the country, to lessen the public expenditure by every practicable means consistent with the safety and good faith of Government; but that so large an expenditure for the diplomatic service of the country, and in particular in the last year, is at variance with that course, and deserves the censure of this house.

The *Speaker* said, that when the report was brought up for the consideration of the resolutions, it was of course competent for any member to move that they be affirmed, negatived, or amended; but if he moved their amendment, he could only propose such amendment as could have been proposed in the committee; and this not being a committee for considering abstract propositions, or examining into historical facts, there was no stock on which such an amendment as the one proposed by the hon. member could be grafted. The hon. member might, indeed, move this as an amendment to the resolution being read a second time, but he could not move it is an amendment to the resolution itself.

Mr. *Hume* then withdrew the amendment.

#### *British Claimants on France.*

THURSDAY, MAY 18.—Mr. *Littleton* presented a petition from Clement Joseph Philippe Pen, Baron de Bode, complaining of the conduct of the commissioners appointed to carry into effect the several conventions for liquidating the claims of British subjects against the Government of France. The petitioner was a natural born British subject, the son of a man of rank in Alsace, who had connected himself by marriage with some of the most respectable families in the country which he (Mr. *Littleton*) had the honour to represent. At the time of the breaking out of the French revolution, he was possessed of estates and seigniorial rights at Soultz-sous-Forêts, in Lower Alsace, which were, in the year 1793, illegally confiscated, and sold under the authority of the revolutionary government of France. The petitioner thereupon entered the military service of the then Empress of Russia, and in the campaigns of 1812, 1813, and 1814, commanded a regiment of Russian cavalry, which bore his own name, and with which he advanced with the Allies into France. By the treaty of peace, which was entered into between Great Britain and France in the latter year, and by subsequent conventions, indemnification was provided for the subjects of His Britannic Majesty, in respect of property moveable and immoveable, illegally confiscated by the French authorities; and a very large perpetual annuity, bearing interest, and representing a very large capital, was inscribed in the Great Book of the Public Debt in France, in the names of certain Commissioners of Deposit, appointed by his present Majesty, then Prince Regent, acting in the name and on the behalf of his late Majesty, for the purpose of being applied to the satisfaction of such claims as might be established in pursuance of and in conformity to the said treaty and conventions. By these conventions, a certain period was fixed for bringing forward the claims of British subjects, after the expiration of which they were no longer to have

the benefit provided by the treaty, and the names of all such claimants as presented themselves within the period prescribed were to be inserted in certain registers. Now, by an act of parliament, passed in the 59th year of the reign of his late Majesty, it was declared, that any rejection of any such claims as should be by the commissioners, or on appeal to his Majesty in council, be adjudged not to be within the true meaning and intent of the said conventions, or any of them, should be final and conclusive; and should be held to be a full and entire discharge of the French Government, and of his Majesty's Government, from any demands in respect of any claims falling within the object and true intent, and effect, and meaning of the said conventions, or any of them, and which had been inserted in the said registers during any period allotted for that purpose by the several conventions. But it was expressly declared by the same act of parliament, that no new or additional evidence should be produced, or received on any appeal to his Majesty in council, from the award of the said commissioners, and that the judgment or decision of his Majesty in council should be finally binding and conclusive on the said commissioners respectively, and on all persons. By the 16th section of the same act of parliament it was declared, that the residue or surplus of the sum so inscribed in the great book of the public debt of France, should, after the satisfaction of all claims that might be established, be at the disposal of the commissioners of his Majesty's Treasury for the time being, or any three of them. Now the petitioner stated, that in pursuance of the regulations which he had just mentioned, he sent in a claim for property illegally confiscated, amounting to 541,162l. sterling. He was entitled to this property—first, by virtue of a formal gift or cession, thereof made to him in 1791 by his late father; and secondly, by virtue of a vested interest in remainder. The petitioner then proceeded to state, that for the purpose of prosecuting and attending to his claim, he quitted the Russian military service, and thereby sacrificed his present means of subsistence. The petitioner's name having been inscribed in the registers, and some modification and reduction having been made as to the amount claimed by him, he stood a claimant for the sum of about 445,440l. sterling, and proceeded to establish his claim, by producing such evidence in support of it before the commissioners as was sanctioned by the conventions. He was engaged in obtaining further evidence, of which notice was given to the commissioners by the agent of the petitioner, who earnestly requested them to delay making their award until that evidence should arrive. The commissioners refused to wait for the said evidence, and signed their award on the 26th of April, 1822, rejecting the claim of the petitioner. The petitioner contended that the additional evidence was of the highest importance in support of his claim, and could not have failed to have satisfied the said commissioners of the justice of it. The petitioner afterwards appealed to his Majesty in council against the award of the commissioners, and his appeal came on to be heard on the 23d of June, 1823; but as by the act of parliament he was precluded from bringing forward on the appeal the additional evidence he was possessed of, and as, by inadvertence and oversight, a most important part of his case—namely, his vested

right to the estates in remainder—was not brought to the attention of his legal advisers, and consequently not pressed upon the consideration of their lordships, they were pleased to confirm the award of the commissioners. Under these circumstances, he was advised to prefer a petition to his Majesty in council, praying for a re-hearing before the Lords of the Privy Council, which their lordships were pleased on Saturday, the 6th of May instant, to grant. They came, however, to the conclusion, that under the act of parliament they were deprived of all power of interfering on his behalf, concluding their judgment with the following words :—" However this may operate on the interests of the Baron—however we may commiserate his situation, we feel that we have no power of granting the prayer of his petition." The petitioner then went on to contend, that as by the conventions and act of parliament, and the insertion of his name in the registers before-mentioned, he was barred from obtaining any redress from the Government of France, he was now left without any other remedy for obtaining indemnification for the loss of his immense property than what must be provided for him by the liberality and justice of the British nation. He also begged to state, that he had been informed, and verily believed, that there would be a very large surplus of the capital provided by the French Government for the satisfaction of British claims, independently of that occasioned by the rejection of his claim. The prayer of the petition was, that the house would take the case of the petitioner into its consideration, and award him such relief as to its wisdom should seem meet. The hon. member said, he was not aware of any relief which the house could give the petitioner other than by means of an act of parliament, and that, at this period of the session, it was of course impossible to expect. He hoped, however, that the petition might engage the attention of the rt. hon. gent. at the Treasury, and as it was clear that there must be a large surplus, and no less clear that the petitioner had sustained a considerable loss, he trusted that some terms of compromise might yet be offered to the petitioner.—The petition having been read,

Mr. Canning said, that the case to which this petition referred had been examined before the commissioners appointed by the act of parliament, and after a regular discussion, the claims of the petitioner had been rejected. He then appealed in the manner provided by the same act of Parliament; his case was re-heard, and again his claims were rejected. Now, if after this they were again to be preferred, and again examined, either in this house or before any other tribunal, it would have been better that parliament should never have given any such power to the commissioners whom they had appointed. He could assure the house that the cases before the commissioners had been argued with much care, and a patient and solemn investigation was made into them.

Mr. Hauss asked whether there were not circumstances in this case which did not occur in others. The petitioner had only four days' notice of trial, and not sufficient time to enable him to produce evidence, which was necessary to making out his case. He had also discovered new matters, which he was not allowed to prove on his appeal. The hon. member thought, therefore, that such a petition as this should not be rejected on any formal grounds.

Mr. Canning said, that he did not pretend to be, as it was not his duty to be, acquainted with the exact facts of every case before the commissioners; but of this he was sure that if the reasons stated by the hon. gent. were thought sufficient to require a re-hearing, he knew of twenty cases in which the parties had quite as good a right as this petitioner.

Mr. Baring said, he was acquainted with the case, and thought the petitioner had suffered great hardship.

The petition was ordered to be printed.

### Military Occupation of Spain.

FRIDAY, MARCH 10.—Sir Robert Wilson begged to ask the rt. hon. Sec. (Canning) whether there was any definite period fixed for the evacuation of the Spanish fortresses by the French troops, and particularly of the fortress of Cadiz?

Mr. Canning assured the hon. and gallant member, that he personally (Sir R. Wilson) could not be more anxious to see the French troops entirely out of Spain, than he (Mr. Canning) believed the French government itself to be. For the precise moment at which this evacuation would take place, he certainly was not prepared to state it; several times, when it had been upon the point of occurring, a series of paltry, vexatious, troublesome, though unimportant, attacks had arisen to delay it. As a minister, however, and as an individual, he was perfectly satisfied, although he could not name any precise day, that the French government wished its troops out of Spain as heartily as the gallant member, or any other member of that house.

### Greece.

LORDS, THURSDAY, APRIL 20.—Earl Grosvenor wished to know whether ministers had received any information respecting the fall of Missolonghi, and whether there was any hope of the Greek cause being at last taken up. That cause, if not entirely desperate, appeared to be almost so; but he was anxious to be informed if there yet remained any hope that the unfortunate Greeks would not be entirely abandoned. It was understood that there was a disposition on the part of Russia to come to rupture with the Porte, but he hoped and trusted that the annihilation of the Greeks was not to be made the price of the independence of Wallachia and Moldavia.

The Earl of Liverpool could not give any other answer to the noble earl on the report of Missolonghi being taken, than that he believed it was not taken at the date of the letter to which the noble earl had alluded. With respect to the other question put by the noble earl, as to whether the Greek cause were now desperate or not, he should only say that the contest being one with respect to which this country was perfectly neutral, he did not consider it a subject for discussion in that house.

COMMONS, FRIDAY, MAY 19.—Sir R. Inglis presented a petition from a parish in Essex, praying the house to interfere on behalf of the Greeks in the present struggle which they were now waging with the Turks.

Mr. W. Smith envied the feelings of his hon. friend in presenting such a petition. He heartily wished that there could be an expression of

public sentiment throughout the country upon this subject, which might convince the world that we were not indifferent to the great and holy war which the Greeks were now waging to recover their liberty and independence.

Sir R. Wilson said, that the time was now come when some step ought to be taken by England, in order to save a Christian people from extermination. The cruel and inhuman manner in which the Turks carried on the war against the Greeks was evident from this circumstance—that the Greeks preferred sacrificing themselves along with their women and children to submitting to the degrading captivity which they must suffer if they fell alive into the hands of the Turks. He was sorry to say, that notwithstanding the heroic resolution with which many Greeks had freed themselves by death from the degrading brutalities of their captors, some of them had been exposed for sale at the price of 50 and 100 dollars a head in the market at Alexandria. He lamented that French officers should have degraded themselves and their country by entering into the service of the Pacha of Egypt, and by fighting against the Greeks; but he lamented still more the impolitic law which prevented British subjects from embarking in the cause of Greece, and from showing their attachment to the sacred cause of freedom.

Mr. Hume would have felt it his duty to have called the attention of parliament to this subject, had he not suspected from what had appeared in the public papers, that any motion in the House of Commons regarding Greece would have the effect of impeding the march of his Majesty's ministers. He trusted that ministers would not be drawn by any thing which might be said to—first into making any declaration that might be ultimately prejudicial to the cause of Greece. If he had determined to bring the state of Greece under the consideration of the House, he could have proved beyond dispute that the French government had evidently acted in a manner that was neither fair to Greece nor to England. Our Government had acted most fairly and loyally by its people's representatives; but the French Government, though it had professed to give assistance to the Greeks, had in point of fact been giving it all along to the Turks. He had obtained a list of French officers, who were in the service of the Pacha of Egypt, and were at the same time receiving half-pay from the French Government. He could mention the names of several Austrian ships which had engaged in open hostilities with the Greeks; and he could further prove that a French ship of war had been employed in regularly transporting treasure from Egypt to the Morea for the payment of the Pacha's troops. He thought that these facts were sufficient to show that there was in the French and also in the Austrian Government an intention to give underhand, if not open, assistance to the Turks against the Greeks.

The petition was then ordered to be printed.

LORDS, FRIDAY, MAY 23.—The Earl of Derby wished to know whether it was a fact within the knowledge of his Majesty's Government, that France had permitted armaments to be fitted out, which had sailed from her ports, to act against the Greek islands?

The Earl of Liverpool replied, that as the noble earl had not called his attention to any particular case, he was unable to give him a

specific answer. But he had no difficulty in stating generally, that the avowed policy of France was neutrality in the contest alluded to, and nothing had certainly come to the knowledge of his Majesty's Government which proved that they had not acted upon that policy.

FRIDAY, MAY 23.—The Earl of Derby was not satisfied with the answer he had received a few days ago from the noble lord (Liverpool), respecting the conduct of the French government with respect to the Greeks. The noble earl had stated that that government observed a *bona fide* system of neutrality. Were that the fact, he should feel that he had nothing to say on the subject. But it appeared that supplies were sent to the Turks under the protection of French convoys. This was surely saying that it was a system of neutrality. The French government seemed to pursue the same conduct with respect to the Greeks as to the slave-trade. They professed one thing, and did the contrary. Manifestations of war were sent from Marseille to the Pacha of Egypt, under convoy of French ships of war; and the French officers who served with the Greeks were deprived of their half-pay, while those who served the Pacha were allowed to retain it. He concluded by moving for information on the subject of the neutrality of France, and for copies of any communications with the French government, on the subject of ships fitting out in French ports for the Pacha of Egypt.

The Earl of Liverpool never heard such a motion proposed without any previous notice being given of it. The effect of such a proposition, if carried, would be nothing more or less than the taking away the King's prerogative, to place it in the hands of parliament. He did not mean to say that either house of parliament might not entertain such a proposition as that of the noble earl; but then there ought to be some solid grounds for bringing it forward, and the nature of the intention should be given. With regard to the particular question—that was the case. His Majesty was at peace with all the world. This country was neutral as well as France. As neutrals, it was the object of both to preserve the peace, and when peace was broken, to use the best means in their power to reconcile the belligerents. But what could be expected from the noble lord's motion? Any interference of the kind he proposed, in fact, would be doing good, could not fail to be attended with positive evil. On a former day he had stated that the French government acted upon the principles of neutrality. Now there were two ways in which a government might maintain neutrality. One was to allow none of its subjects to serve on either side; and this was the principle adopted in this case by his Majesty's government. But another principle of neutrality allowed subjects to serve on both sides, and this principle had also been sanctioned by the British government; for their lordships were doubtless aware, that Swedish ships and Russian ships had been commanded by British officers in the wars between those powers. In the present contest between the Greeks and the Turks, French subjects were permitted to engage on both sides. Their lordships might indeed have read within these few days, of a Greek force being commanded by a French officer, and an officer, too, of reputation. As to whether a little more favour with respect to trade, was given by France to the

Turks or the Greeks, he knew nothing of the fact, and it was a subject which did not appear fit to be inquired into. That French officers might be engaged in private intrigues, was likely enough; and he had no doubt that such intrigues were as active on the one side as the other. With regard to the slave-trade, some most reprehensible practices, it appeared, had taken place; but that had nothing to do with the present question. In short, the motion of the noble lord was brought forward at a moment when agitating the subject to which it related could be attended with no advantage, and might be productive of mischievous effects.

The Earl of *Darnley* intimated that he would not persist in his motion.

### *Alien Act.*

COMMONS, THURSDAY, APRIL 20.—*Mr. Peel* rose to move for leave to bring in a bill for the registration of aliens. When the question of the Alien act was last under discussion, in 1824, the house would probably recollect, that a hope had been expressed, both by his *rt. hon.* friend (*Mr. Canning*) and himself, that the Government would be enabled at the end of the then stipulated term of the bill, to allow it to expire. The period had now nearly expired, when, unless the intervention of the house caused a different result, the powers vested in the executive government by the provisions of the Alien act would cease to have operation, for the duration of that act as the law now stood was limited to next November. He was extremely happy to have it now in his power to fulfil the expectation, which he had just alluded to, as having been held out on a former occasion, and to inform the house, that it was not the intention of his Majesty's Government to call for the prolongation of this law (cheers). In proposing the registration bill on the present occasion, it was merely wished that the Government should have that to which he thought there could be no possible objection—a registration of the names of such aliens as thought proper to take up their residence in this country. He did not mean to propose any further measure as affecting aliens, nor to take any steps whatever for compelling them to leave this country under any other circumstances than those which would be operative upon the natural born subjects of his Majesty (renewed cheers). He could sincerely assure the house that no man could be found more willing than he was to part with the authority which this bill had officially entrusted to his execution, and in relieving himself from such a burden, he had the satisfaction to reflect that during the five years in which he had exercised it, not a single instance of abuse had been laid to his charge. It was true that the mere circumstance of an abuse of the power would not have been conclusive against the propriety of the measure itself; but it still would have naturally enough indisposed the house to afford a too great facility for its re-enactment. It was also due to his predecessor to state, that he had only resorted to the measure five or six times, so that altogether its extraordinary powers had been but rarely brought into operation. The single case in which he had been himself under the necessity of applying it, was not at all of a political character—it was where an individual had threatened to resort to personal violence against a foreign

ambassador, in such a manner as to induce a rationally-grounded expectation that he would, if left unrestrained, have carried his threat into execution; and he really believed that it afterwards proved of great advantage to the individual himself, that it was not left in his power to offer the violence he had premeditated against a high public functionary, who was undoubtedly entitled to all the protection which the laws furnished, while he resided officially in this country. The act which he meant, on the present occasion, to propose in the place of the alien act, was intended not as a temporary, but a permanent law; and it merely required that every alien should upon his landing in England, under a certain penalty for omission, be compelled to give a true designation of his name, and place of intended residence in this country, and that the Secretary of State should also have the power of requiring a renewal of this registration of names, at certain intervals, while the same parties remained in England. He certainly should not consent to part with the power conferred by the alien act, if he had not observed the conduct of the aliens, and he had not the smallest idea they would abuse the new privileges (for such they might be called) which were about to be conferred upon them. Many of the foreigners who were now in this country had been compelled to seek its shores, in consequence of the intestine troubles and dissensions which unfortunately raged in their native homes. They had here, he was glad to say, found an asylum, and received the generous and humane sympathy and assistance of all parties (hear, hear). It would, therefore, be a bad return for British generosity, were they to make this land, where, under their misfortunes, they had sought and found a resting-place, the scene of cabals or conspiracies against their own governments, while Great Britain was in alliance with them. If, however, (which he had no reason to anticipate) these foreigners should hereafter by their conduct defeat his sanguine expectations, then he should feel no hesitation in calling upon parliament for a renewal of the alien bill. He did, however, hope that such a step would be unnecessary, and it was therefore with the greater cheerfulness he consented to relinquish a power, which he had the consolation of feeling had passed through his hands without abuse (cheers).

*Lord Althorpe* congratulated the *rt. hon. gent.* on the liberal course which he had just taken, and expressed his perfect confidence that no inconvenience whatever would arise from the expiration of the alien bill; but that, on the contrary, the relaxation of such a system of uncongenial policy would operate beneficially for the country.

*Mr. Hobhouse* begged to express his entire concurrence in the opinions which had been just expressed by his noble friend; and he was quite sure that the proposal of the *rt. hon. gent.* would be hailed with gratitude, not only by those in that house, who were, upon constitutional grounds, the opponents of the alien bill, but also by the friends of just and liberal principles in every quarter of Europe (hear, hear). Indeed, he believed the Government were hardly aware of the extent of benefit they were conferring by the abandonment of this measure. The alien bill, whether in actual or threatened operation, was always reckoned by enlightened foreigners as one of those measures by which

England had suffered herself to become connected with the arbitrary system of the continent. He could assure the right hon. gent. that every intelligent traveller who had visited other countries was impressed with the prevalence of this belief. The abandonment, therefore, of a system so abhorrent to the principles of the British constitution, would be hailed all over Europe as the principal step (in conjunction with those other liberal measures which had been lately taken by the Secretary for Foreign Affairs) on the part of Great Britain to return to her ancient and better policy—that policy which had so long made her, and through a bright succession of years of triumph also, the protectress of the oppressed, and the great patroness of public liberty all over the world (hear, hear). Before he sat down, he must say, that he could hardly find adequate terms in which to express his gratitude to the rt. hon. gent. for the course he was about to pursue on the present occasion.

Sir R. Wilson did not rise to detain the house while he paid a tribute of justice to the rt. hon. gent. (Mr. Peel). But it was due from him (Sir Robert) to say, that not only had the powers of this bill not been abused during the administration of the rt. hon. gent., but he could from his own personal communications bear testimony, that he had upon various opportunities found him most anxious to do justice to the claims of foreigners, and correct most rigidly any tendency to abuse on the part of the subordinate agents, who had to execute some of the provisions of this bill. He had always found the rt. hon. gent. most desirous of respecting the rights and interests of these proscribed individuals. There was one point which he wished to notice, respecting the proposed registration of the names (a measure to which he had in itself no objection). In times of political troubles abroad, when individuals were more likely to seek shelter here, they were often compelled to adopt new names, to escape the vigilance of their persecutors. In such cases he was desirous that the foreigner upon his landing should be empowered to give his real name, and that in so doing he should not be exposed to any troublesome delay or reference, on touching the shore of this country.

Mr. Peel, in reply, said he saw no objection to such an arrangement as that the foreigner should be empowered to give his real name (confidentially) to the officer on the coast, who would have to register it (hear, hear).

In answer to a question from Mr. R. Smith,

Mr. Peel said, that he had never permitted the names and address of aliens to be disclosed from the Alien-office to applicants.

Leave was then given to bring in the bill.

#### CONSTITUTION.

##### *Representation of Edinburgh\*.*

THURSDAY, APRIL 13.—Mr. Abercrombie, in moving for leave to bring in a bill to amend the representation in parliament of the city of Edinburgh, commenced by assuring the house that the course which he proposed to take was the result of anxious and careful investigation. An election of members for Edinburgh by a body of only 33 voters out of a population of

100,000 people, was not a state of things which could be openly defended; and therefore the object of its supporters had been to excite alarm by misrepresenting the motives and intentions of those who desired to change it. He was ready to confess, that if he succeeded as to Edinburgh, he was so far a parliamentary reformer, that he should not be inclined to rest there, but should endeavour to extend the same advantages which would then be procured for the capital of Scotland, to her towns and boroughs generally; but he did entreat the house not to be carried away upon this declaration by the clamours of the high anti-reformation party, who could never see any thing in the most obvious and necessary change but desperate and immediate revolution. He had preferred calling upon parliament first to attend to the case of Edinburgh, because that city had members for itself, and was not joined with any contributory borough. If the experiment succeeded in Edinburgh, there would then be the better argument for trying it in other places: on the other hand—and this fact ought to induce the anti-reformers to give their support to the measure,—if the project was tried and found to do mischief, those who now opposed it upon what they took to be the probabilities, would then have the plea of actual experience. For any charge which might be made against him of republican spirit, he repelled it by reference to the petition which he had presented. There was not one word contained in that petition which was not of the most respectful as well as of the most constitutional character; and the petitioners, after setting out their grievance, did not venture even to prescribe what should be the remedy. There could be no doubt as to the necessity of introducing some change into the representative system of Scotland, and especially of Edinburgh. He knew that it would be argued against him, that Edinburgh had prospered under the present system, and that no case of abuse had been shewn by him against the provost and town council in the exercise of their elective rights. He admitted the prosperity. But Edinburgh had prospered, not through, but in despite of the town-council, and against their most desperate efforts to prevent it. Since he first had the honour to sit in the house, a great many questions of vital importance to Edinburgh and its inhabitants had been brought forward in parliament. In one and all of those subjects the inhabitants of Edinburgh were found arranged on one side, and the town-council on the other. In every one the cause of the inhabitants and householders had prevailed, because the impartiality and justice of parliament had to determine between the parties. He was not bound to shew any case of particular abuse. All that was incumbent upon him was to shew, that the measure he proposed was safe, and well qualified to benefit the public. If it had been any part of his duty, he could have found a case sufficiently strong for the purpose. But his design was not to attack individuals, but to alter the system. Though the act of 1469 was passed to prevent election broils among the people, its intention was also to secure the fidelity of the representatives by making their election annual: but from the passing of that act till the civil wars, many laws had been passed to correct the gross abuses which the system had generated. In the reign of Charles II. the

\* See petition connected with this motion, ante p. 67.

abuses had again become formidable, and the subject of complaints so clamorous, that a royal commission was appointed, and the report of that commission found that there was great corruption and disorder in the borough, because of adventurers who squandered away their money in the purchase of votes. Little good was done in the way of remedy. At the revolution another commission set forth the same evils as abundantly arising from the same causes, and the Convention Parliament recommended as a remedy, what was called by them the only true and rational mode of free elections. Scotland in the following reigns became twice convulsed, and it was no wonder that during that stormy period nothing was done. From 1784, down to the present day, the subject had been forced upon the observation of parliament again and again. No remedy had been applied, and the evil remained as before. The people had been excluded from all control over those who managed their affairs, and the corporations had become venal and corrupt bodies, who had lost the confidence of the public, and were not worthy to be trusted with the powers and privileges which they held. This was not his opinion only. It was that of a philosopher, an enlightened author and a learned judge, who had thus instructed his descendants, and enlightened posterity upon the subject. "The greatest evil of all, respects the claims of some few men in the royal burghs to elect the representatives to sit in parliament." The passage was from Lord Kaimes, who described the excessive venality of corruption which had been introduced into those corporations. It would be objected to him, that any alterations of the rights of these boroughs would be an infringement on the articles of union. Let the house recollect what parliament had done in the case of the heritable jurisdictions of 1747, which had been most distinctly reserved by the articles of union, which were much more matters of property than the rights of the burghs, which were legally subjects for sale, mortgage, or the claims of creditors, yet parliament abolished them. It went farther; it re-organized the court of session, and established a mode of trial which before had been unknown in Scotland. He enlarged on the unmeaning dread entertained of the enlightened and educated householders of Edinburgh; as if they could have an interest in misrule, and as if, contrary to common and every-day experience, there could exist in the body of a well-ordered people any jealousy of those classes which possessed among them the greater part of the property of the country. Did not the example of England shew, that when people of rank, wealth, and talents, were proposed, the electors were always disposed to prefer them? Those who were hostile to radical or any other reform in England, ought to vote for reform in Scotland. Here there was, in particular cases, at least something like the representation and free expression of the public sentiment and opinion in parliament. In Scotland there was nothing of the kind. There was not one open borough, and popular election was altogether unknown. The most unjustifiable system of representation in a free government ever heard of was that of Scotland.

Mr. W. Dundas was not surprised that the learned gent. appeared now as the chosen champion of burgh reform. The learned gent. was himself a splendid example of purity of election.

Sm. 1826.

What was the shape in which the boon was proffered to Scotland? It was presented to them by the representative of the free and incorruptible borough of Calne. He it was who was to lead the way in beating down and trampling upon chartered rights, solemnly sealed, which had borne the test of ages, and had been sanctioned by experience: experience, too, of that prosperity which he feared not to attribute as having been brought about for Edinburgh by that very corporation whose rights the learned gent. would now sacrifice. He would himself object to any change in the system of representation. But if the house should at any time entertain a project for altering that system (and he should call that, indeed, "England's evil day"), he flattered himself that such had been the exemplary conduct of the royal burghs, that they would receive so much commiseration from the house, as to be denounced last. Let them not take this upon his word. About seven years ago a noble lord had moved for a committee to inquire into the representation of the county of Lanark. He succeeded in his purpose—he named his own committee, according to the courtesy of the house, of which privilege he very fully availed himself. What followed? The fullest inquiry was instituted, all the officers of the corporation were sent for, and a ship-load of books and papers was examined. The result was perfectly triumphant to the parties accused. No abuse was shewn, and therefore there could be no pretence for proceeding. Did the house ever pause—did it shew backwardness to punish venality and corruption—did it not rather lend its prompt and effectual assistance to drag the delinquent into the glare of day, and strip him of unjust advantages? Why should they now quit that fair and equitable course, and deviate with the learned gent. into a path of injustice? He was astonished at the comparison made between the right of parliament to interfere with the royal burghs, and the heritable jurisdictions. At any rate, he had an authority to quote of another description, which could not be thought a contemptible one by the house. In the debate on heritable jurisdictions, Lord Hardwicke had taken the distinction the other way, for he had classed the heritable jurisdictions among those things which might be altered, though he professed to hold most sacred the articles of union; and they differed in this respect, according to his lordship's estimation, from the royal burghs, which could not be subjected to new arrangement.

Mr. J. P. Grant denied that they were arguing a subject of personal right merely. These corporators were in possession of a right which they held as a duty and a trust for the public; or, in other words, if they held a private right, it resolved itself into a public trust. It was not contrary to the articles of union to inquire into, and modify the exercise of such a right. The very speech of Lord Hardwicke, to which the hon. gent. referred, showed the contrary. "The general provision of that treaty is, that the laws of Scotland shall continue in full force, as before the treaty, but alterable by the parliament of Great Britain; with this difference between the laws which concern public policy and those which concern private right,—that the former may be made the same throughout the whole United Kingdom; but that no alteration be made in the latter, except for the evident utility of the subjects

within Scotland? The rights and privileges of the royal burghs surely concerned the subjects within Scotland. He was entirely opposed to any general and sweeping plan of reform—because questions and rights of the gravest and deepest nature must somewhere or other be involved. But to this degree of reform, those who resisted it on every other occasion ought to agree. Whenever it was proved that corruption prevailed in any particular place, the right of the electors was so far diminished that they were only left to the exercise of it in company with many others who were admitted to the same right. In a recent instance the right had been taken away from the corporation altogether. In Scotland there was no such thing as a popular election. Why should they not seize the first opportunity which presented itself of giving at least one instance of an election where the people might have the power to make a choice (and he did not think that any place could be selected for the experiment better than the city of Edinburgh), and thus have the means of knowing practically what was the opinion in Scotland on the subject? But it was said that popular elections were attended with danger. If so, then England at the present moment was in a most dangerous situation, for her elections were of that character. In England there was representation of various kinds: from the interest of the aristocracy down to that of the lowest class of the people, all was represented; but in Scotland no one was represented. There was not even one member elected by the voice of the people throughout the whole country. Now, he thought it would be impossible even to govern Scotland otherwise than as a province or colony, until she obtained something like a fair representation in the Legislative Assembly of the empire. Such a representation was not only necessary for the interest of Scotland herself, but should be desired for the permanent advantage of the empire at large.

Sir George Clerk rose to protest against the doctrine which he had heard laid down, that the question before the house did not involve that of general reform; for when once the safeguards which protected the ancient rights and privileges of boroughs were broken down, it would be impossible to say where the work of innovation was to stop. As a principle, he begged to deny that the house ought to interfere with the rights and privileges of any corporation except in cases where those rights were abused by the great body of those by whom they were held. In England no interference with the rights of boroughs was ever attempted by parliament, except in such cases; and it was required that the clearest proofs should be given of venality, before the right of election was impugned. This was the principle adopted in the recent transfer of the right of electing two members from Grampound to the county of York. The house, therefore, ought not to set an example, for the first time, of interfering with the ancient privileges of a city, against the electors of which no delinquency had been proved, or even charged. Why should Edinburgh be the first to be thus interfered with? It had its peculiar mode of election. So had the cities and boroughs of England. He would admit that in Edinburgh the number of electors was small, but in some cities in England the electors were not more numerous.

Why, then, begin with Edinburgh? He, however, would contend, that there was no necessity of making the experiment at all, and that if they once passed the sacred barrier, they would find it extremely difficult to know where to stop. It had been asked whether any danger could be apprehended to the constitution from giving the right of election to the great body of the enlightened citizens of Edinburgh. He would answer no; but if they departed from the present mode, he did not see why suffrage might not be extended to all householders, and there were many among the reformers who would extend it to every man who had arrived at the age of 21 years. It would be much more safe not to interfere; for it would be impossible to do so even in a slight degree, without letting in the whole question of general parliamentary reform. If he looked at the state of Scotland—at the rapid advances she had made in the arts and sciences—at the great improvements in the moral condition of the people, he saw no ground for changing a system under which such a state of things had grown up. Upon the question before the house, a meeting had been held in Edinburgh, and a petition agreed to. He was in Edinburgh at the time the petition was in the course of signature; and he could state that the great majority of the inhabitants knew nothing about it. The learned gent. by whom the question was brought forward, had stated, that the reform which he proposed, was not intended to apply to any part of the kingdom but Scotland. That very limited range would not, he was sure, satisfy many of the learned gent's friends. They would have a much more extended kind of reform; and if this bill were allowed to proceed, there was no doubt the house would soon hear of other bills brought in to disfranchise Bath, Portsmouth, Salisbury, and other places, where the number of voters was but small. He would conclude by giving his decided opposition to the motion.

Sir R. Fergusson said, that the simple question was, what was the nature of the constitution of that house? Was it not that they sat as members should represent the people (hear, hear)? If any one held a different opinion, let him avow it. But if the constitution of the house was as he described it, it must follow that those who were returned by Scotland were not fit to sit there as members, for there was not one man among them sent there by the people (hear). Some were sent by small corporations, others by the holders of pieces of parchment, who did not possess a single acre of land; but in not one case was there an election by the people. Was this a state of things which should be allowed to continue?

Sir F. Burdett:—“On the former occasion, when this question was discussed, I felt great difficulty in taking part in the debate; not because I was not connected with Scotland, not because I was disposed to treat with disregard the petition of so enlightened and respectable a body as the inhabitants of the city of Edinburgh, but from a kind of feeling, that if I had interfered, the advocates of this question might have exclaimed—*Non tali auxilio*, rather than have accepted such feeble services as I might have been able to render them. But the question has been discussed this evening upon such broad and general grounds, that I now feel no hesitation in joining in the debate.

The conduct of the rt. hon. gent. (Mr. W. Dundas), who represents the corporation of Edinburgh, has undoubtedly been such as to furnish the inhabitants of that city with a cogent reason why they should persevere in that claim of right which, I am glad to hear, they are determined, by all constitutional means, to urge and maintain, because he has exhibited the zeal with which a representative will always defend the interests of those who are really his constituents (hear). Yet he could not deny that the system of representation in Scotland is, as a system complete in all its parts, a scandalous and unblushing violation of all the rights of the people, and directly at variance with the best interests of the country (hear, hear). A more flagrant usurpation of all that must be most prized by an intelligent population, I cannot conceive. It is a perfect machine of political corruption, in which public trusts are systematically abused to private ends, in a mode which I think it would have been difficult for the perverted ingenuity of man at once to have devised (hear, hear). Still I confess that on this occasion I feel less zeal than usual, because I own I do see that it is possible to support this particular question unconnected with the general question of Parliamentary Reform. I wish that every part and branch of that question could be indissolubly united, so that the whole people might be compelled, in the case of each individual grievance, to struggle for the attainment of that one great constitutional remedy for all our political evils. The case stated this evening by my learned friend (Mr. Abercrombie) is so complete and unanswerable, that it has remained, not only unanswered, but even unattempted to be answered. It is, in fact, like the political corruption of Scotland, a "perfect chrysolite," without flaw or blemish;

"Totus teres atque rotundus."

The enemies of every species of reform are, however, so keenly sensible of their situation—their consciences are so alive and trembling—that it is in vain to shew that the city of Edinburgh has claims of a peculiar nature, and not applicable to any other portion of the community. It is in vain to shew that they might, without inconsistency, do this act of grace; and politic and wise no doubt it would be, as a sort of compromise, by which they might fairly hope to gain time with regard to the general question of reform; it is in vain, I say, that this is made evident; for though the eyes of Argus were closed, one by one, by the pipe of Hermes, nothing can close the ever-watchful eye of corruption, or throw it off its guard for a moment, or prevent the still small monitor which disturbs its dreams from whispering fresh alarms, and startling it with the dread of that security which it well knows it cannot endure (hear, hear).—Talk to these gentlemen of one evil, and they meet you by mentioning the existence of twenty others: the hon. bart. (Sir George Clerk) does, indeed, admit that the case of Edinburgh is atrocious; but then, he says, that of Bath is quite as atrocious. I perfectly agree with him. Nothing can be more disreputable than that great and enlightened city, which is well entitled to send representatives to parliament, should be denied any share in the constitution of the country. The number of the corporation, by which the sham representatives of that city are elected, is

nearly the same as that which returns the mock representative of Edinburgh (hear, hear). But it is in this way that all complaints are met in this house. Let any case, however scandalous, be brought forward, twenty others, equally scandalous, are immediately cited as reasons why no reform should be attempted in any case, because it cannot be applied to every one. I trust that my learned friend (Mr. Abercrombie), who introduced this motion with a degree of good sense and temperate feeling which entitle him to the approbation of every honest man in the country, will receive the support of some part of his Majesty's Government: I have reason, I think, to hold this expectation, considering the measures of improvement on which they have lately acted in conjunction with what my hon. colleague (Mr. Hobhouse) has very appropriately termed his Majesty's opposition. Certainly a more honourable opposition, I believe, never sat in this house. I speak freely, for I am not attached to any party (hear, hear). I was addressing myself, however, to what I consider as the cork on which the administration swims—that which keeps it afloat in the public mind (hear). I hope to see those members of his Majesty's Government, to whom I allude, support the application of those principles which they have lately professed with so much eloquence in this house. I can hardly call the present an administration; it is rather two halves of one, drawing together like galley slaves at the same oar. They have not one mind or sentiment as to any one great question affecting the public welfare (hear, hear). What power keeps together so incongruous a mass—what Mezentius is able to *complexu misero*, to join them like the living and the dead, I cannot divine. Like *Caliban's* double monster, they have two heads and two voices. I know not what to call them. An administration they certainly are not in principle, though they are undoubtedly so in fact (hear, hear). I am now desirous to see whether these principles of philosophy, which have been justly represented as the only true grounds of public policy, and the only rule of wisdom, but which, I admit, may, in their practical application, be pushed too far, and should be followed at all times under the controul of reason; I am anxious to know, I say, whether the rt. hon. gent. (Mr. Canning) is now prepared in this case to carry into execution those principles which he has eloquently advocated? This learned, enlightened, and philosophical city has claims upon the friends of philosophy which they ought not to deny, and which I hope to find the rt. hon. gent. forward this evening to confess.—In conclusion, the hon. bart. called upon the rt. hon. gent. in the spirit in which he had reprobated the principles which had consigned Galileo to the dungeon, which, to use his phrase, had rolled back the tide of civilization—he called upon him, as he upheld that character which distinguished the man of wisdom from him who feared the light, to support a motion which, without his aid, stood on a firm basis, and which defied even his ingenuity to shake. If this motion should be rejected, it would shew the determination of the house to resist all improvement, and would compel men, when all rational hopes were destroyed, to go even further than their cooler judgments would prompt them. It would bring an united band to bear upon the general question of reform, which had been supported by every great man

who had lived in this country, and of which, the longer he lived, the more he perceived the necessity (hear, hear). If they refused the motion now, the house would, in the words of Lord Chatham, be assailed with a vengeance from without. This motion was brought forward in the fairest manner possible, and would, if carried, to use the expression of the same distinguished person, infuse new health into a decrepit constitution (hear, hear). If the house rejected the motion, the people of England, Ireland, and Scotland, might bid adieu to all reform from that house (cheers).

Mr. Keith Douglas could see nothing special in the case of the city of Edinburgh to call for the present motion. The gentlemen who supported it had not, in his opinion, made out any case to call for a particular enactment. He agreed with the hon. bart., it would be better to act on general principles than to legislate on partial cases.

Lord A. Hamilton:—The only argument that had been offered against this motion was, that it was contrary to the provisions of the Union; but this, in fact, was no argument at all, and could not be relied upon as a principle by which the opinion of the house should be governed. The union with Ireland, and the interference with heritable jurisdictions, had materially altered the question. The shutting out from the right of returning representatives to parliament so large a proportion of the inhabitants of the capital of Scotland, a city so highly distinguished by talent, science, and intelligence, was a monstrous injustice. If the house refused to act, the influence of education and the diffusion of knowledge, through mechanics' institutions, would compel them to do that which they now refused.

The Lord Advocate said he wished this to be treated as a British, and not merely as a Scottish subject. If a reform in the representation was to be attempted, he thought it would be but fair that the trial should extend to the whole empire, and not be confined merely to one of the weaker parts of it; for, unless it were for the purpose of effecting some such general reform, he could not discover on what principle the charter of a borough was to be taken from it, and the articles of the union violated, merely because it was imagined that its elective franchise might be placed in better hands. Where the elective franchise had been interfered with in England, it had always been on account of some corruption or very improper conduct in the parties who had the exercise of it; but against the borough of Edinburgh no misconduct had been, no misconduct could be alleged: its proceedings had been most closely examined into, and on that occasion the conduct of this borough had been found perfectly fair and unexceptionable. The persons who exercised the elective franchise in it, had done much for Edinburgh, they had acted most beneficially and liberally towards it. He believed the electors in this borough were less exceptionable than the electors of any other borough in Scotland; and it should be recollected, that although their number only consisted of thirty-three, still these thirty-three were chosen by a very numerous body. Neither were they all of the same political principles; six or seven of them, amongst whom was the convenor of the guild of trade, agreed in their political opinions with the hon. gents. who sat on the same side of the house with the noble lord.

He was convinced that the giving votes to all those who occupied tenements of the value of 5*l.* a-year, and which were, in fact, generally occupied by gentlemen's servants, would, instead of improving the representation, have a directly contrary tendency; and he was persuaded that if it were expected that the noble lord's motion would be likely to be attended with any other effect than the affording a subject for declamation, that all the respectable part of the inhabitants of Edinburgh would have come forward to petition the house against it.

Mr. Canning:—“Although it was neither my intention nor my desire to speak upon a question, with reference to which I thought I should best perform my duty by remaining a mere spectator; and although I have not found any thing in the observations, either upon the whole question of reform, which it is said by some to involve, or in the character of the arguments by which the particular measure is supported, which call upon me to depart from that course which I conceive to be the most expedient, yet, as I have been in some degree personally appealed to during the debate, I feel it necessary to trouble the house with a few observations. I have been called upon by the hon. bart. (Sir F. Burdett) to answer certain questions which have been proposed to me, connected with the general question of reform, and to declare upon what ground I can, in any consistency with some former declarations of mine on another occasion, oppose that degree of improvement which is supposed to be contained in the present proposal. This call has been undoubtedly made with great politeness, and in terms of more than ordinary, and, I fear, undeserved compliment; but, I confess, I am very much at a loss to understand the grounds upon which it is said I should give my concurrence to the present measure, or how such a character can be attached to my expressions, as to give reason for supposing that I am pledged either to this or any other more comprehensive measure of reform. It is perfectly true, that on the occasion alluded to by the hon. bart., I did make use of those expressions which he has taken as the foundation of his argument; and that I did state, in the language used by all men, when they have occasion to address a deliberative body upon any great question connected with policy or the public weal, that I would not resist change, merely because it was change; neither would I resist innovation, as innovation, provided they were accompanied by that degree of improvement and advantage which would sanction a departure from established order, and warrant the propriety of adopting them. I have often been accused of being incorrigibly and pertinaciously averse to a reform of any kind which I did not consider absolutely necessary and expedient; but I would even take a higher and more formal ground, and say, that I desire to be accused of resting my opposition to reform, not upon any times—not upon any circumstances—not upon its application to any particular places—not upon any events of a nature transitory and evanescent—but upon a decided, matured, and, I may say, unalterable conviction, that there are no grievances in the representation to be redressed; but that, if there are any grievances, that they could not be remedied without leaving us exposed to the chance of greater misfortunes and greater calamities.”

than could possibly arise from any of those evils to which we may be subjected by an endurance of our present grievances (hear, hear, from the opposition benches). I am not calling upon gentlemen to argue the question now; I am only stating fairly those principles which have been attributed to me, and upon which I still profess to regulate my conduct with respect to the question of reform; and I confess I am, I repeat, very much at a loss to understand how any inference can be drawn from those professions, which would warrant the assertion that I am bound to support it at this moment more than at any other period of my political life (hear, hear); and still less can I comprehend why it could be supposed I would support the measure now before the house, from any former declaration; for of it I do not hesitate to say, that if I had never opposed reform before—if I had never made any declarations which, upon every principle of consistency, and from the deepest conviction, I felt myself bound to support, still I would give this motion my most determined opposition (hear, hear). I consider it, whether I look to the circumstances of its introduction, or to the consequences which it professes to obviate, as being one of the most objectionable of all the measures of Reform which I have yet known submitted to this house. The noble lord (A. Hamilton) has said that he hopes I do not intend to rest my opposition to a reform in the Scottish burghs, on the articles of union; to a certain degree, I will admit that I do not. If, on other grounds, I could bring myself to think that a great and sweeping plan of reform, which would go to the reform not only of the Scottish burghs, but of the whole system of representation, in the empire could be made practicable and beneficial; and if these articles of union stood in the way of that general improvement, I would go with the noble lord in his view of the case, and say that nothing in that act with respect to a particular portion of the empire could be conclusive against the power and opinions of the legislature, when considering the advantages which would result to the whole community. But I think that no such good would result from any such sweeping or general reform; that the present motion would not do good, either as advancing the general question, or putting a termination to a particular abuse; and I cannot but be of opinion with the learned lord who spoke before me, that we are bound to oppose any experimental plan of reform when about to be applied to that party who is the weakest in the compact, and that she has a right to say, if there are any hazards attendant upon these measures, which we contend there are, try the measures first upon yourselves, before you subject us to its consequences, and do not select the viler vessel to make upon it a trial of your experiments. Since the commencement of the present debate I have had the articles of union put into my hand; and in them I find that the article upon the subject runs thus:—"And be it provided, that from and after this date no one shall be capable to elect or be elected a member of the parliament for the United Kingdoms of England and Scotland, except such as may have been capable to elect or be elected for the parliament of Scotland". Now I say, that as long as England preserves that state of representation which she possessed at the period of this Union, so long has Scotland a right to plead

that she should not be compelled to adopt any plans of reform which England may not think it expedient to try upon herself,—but if, I repeat, the whole empire was to be affected by any such alterations, then I would contend that Scotland could not plead this act of union in bar of the claims of that empire, for the purposes of universal benefit. I admit, with the noble lord and the learned mover, that speaking of Scotland only, and the parliament of Scotland, there may not be that popular election which would in other cases be desirable; but that, I contend, is no argument why we should force on Scotland a popular representation. Again I admit, with the noble lord and the learned mover, that there may not be, in speaking of Scotland and the parliament of Scotland, such an expression of popular feeling as might be desirable, and as would be perhaps procured from a more popular method of election; for I admit that no parliament would be, or ought to be, deemed a true representative of all the interests of the community, if it did not possess such an infusion of popular spirit and feeling as might contain, and as I contend the parliament of this country does contain, that expression of national sentiment, which answers all the high objects desirable in a deliberative assembly. But we are not arguing the question with regard to Scotland alone. I am not about to maintain that such an infusion would be necessary or desirable in every separate part as well as in all; but I am prepared to contend that, taking Scotland, with its representation, to be, as it virtually is, a part and parcel of an empire, in which so many classes of things and sentiments find, and must have, an organ of their opinions; it is fully and truly in possession of a representation of its opinions in the parliament of the kingdom. I do not mean to say, that if I were allotting the portion of representation, I would not give to Scotland a larger share of that popular infusion, which I consider desirable; but I do say, that the infusion of other parts of the empire, where the representation is of a character more popular, produces such a commixture in the general parliament of the empire, as I think sufficient to ensure all, even the highest, objects for which such a body may be desirable in this rich and populous country; and that although it may not possess all the advantages which may be thought attainable in theory, yet that I do not wish to touch that which I find to be of sufficient practical utility, for the sake of the theory, which may, after all, prove delusive. Be it remembered, that I do not call upon hon. members to agree with me upon this view of the question; I only state candidly and fairly what are my opinions, that I may not be subjected to doubt or misrepresentation (hear, hear, from the opposition benches). I say, that although I miss the public principles, as far as regards the kingdom of Scotland; yet that I am glad to find the other portions of the kingdom bring enough of the infusion and commixture of that principle, to atone for the want of it there, and to serve all the purposes of practical utility for which it is desirable (hear, hear). Let us for a moment consider the case, as applied to Scotland, in the view of public benefit. Have we any reason to believe that country to have been exposed to any difficulties, to have suffered any distresses, because the representatives of that kingdom have not been chosen with the same regard to the popular voice as in the elections

of this more wealthy and more populous nation? If we look to Scotland, can we say that in these times, when the whole empire has been flourishing, she has not advanced in power and importance? So far from that, I would say the very reverse is nearer the truth. She has even outstripped us in the race of prosperity, made advances to wealth and greatness, in a ratio much beyond those who enjoyed in its fullest extent, the benefits of free and uncontrolled election. There is no man who may not, either by personal inspection or from public documents, convince himself of the rapid advances which that kingdom has made, and is still making, in the race of improvement. The learned gent. has said, that he has been induced to bring forward this motion from the disparagement which has been thrown upon the character of the Scotch representatives. I own I have observed no shrinking—no awkwardness of feeling on their part; I have perceived no symptoms of that disparagement (a laugh). Whatever may be said of Scotch representation, it must be admitted that Scotland makes good her own (laughter). Whatever may be the grievances of which she complains, she cannot complain of this country having made any intrusion or any impression upon her representation—at least not permanently. There was, it is true, the exception of Mr. Fox, who, having been once rejected by Westminster, sought refuge in the arms of Kirkwall (a laugh). But I never heard of any southern invaders having made a permanent lodgment there—whilst they (the Scotch) are not satisfied with filling their own representation, but, besides, keep representatives in reserve for filling the boroughs of England (laughter). The very motion of this night proceeds from a gentleman who comes from that country; who has nestled himself in an English borough; and who having so nestled himself, undertakes with filial piety to reform the abuses in the representation of his mother country (cheers, and much laughter). For my part, were I an advocate for the measure of parliamentary reform, which I am not, I would move an amendment to the motion of the learned gent., and instead of a motion for “leave to bring in a bill to amend the law relative to choosing a representative for Edinburgh”, I would propose that “Edinburgh” be omitted, and that “Calne” be substituted for it (loud cries from the opposition of move, move). I am arguing the question upon the supposition that I was an advocate for the general measure of parliamentary reform; and if I were, I should certainly object to the mode of proceeding adopted by the learned gent., and should tell him, that if he were disposed to make an experiment of this kind, that he ought naturally to commence with a reform of the borough of Calne, as a place with the nature of whose representation he was more intimately acquainted. The objection to the elective rights of the Corporation of Edinburgh was, that there were but 33 electors. Why the number of electors in the borough which the learned gent. represents is still smaller, not smaller, perhaps, in comparison to the whole population of the place (hear, hear, from the opposition), but still there is a great disproportion between the body of the electors and the body of the inhabitants of the borough of Calne. I do not complain of this smallness, but I would say to those who complain of smallness as an objection to the exercise of elective rights, “Look

at home before you go abroad” (hear, hear). If this objection is to be an available one, why select Edinburgh, when the learned member, by looking at home, would find a fitting subject for the experiment he proposes. If the paucity of numbers is to be taken as a test of insufficiency, why stop here? If such a motion were entertained, the house would be called upon night after night, to alter the law relative to this borough, and that borough, and they would be required thus to proceed, in a series of partial legislative measures, without end. I have now argued this question as it is connected with the place to which the motion has reference, and I shall briefly proceed to notice it, as it is connected with the more general question of parliamentary reform; and first, I would say, that this is the single instance in which the paucity of the numbers of the electors has been made a ground of disfranchisement—on every other occasion, it has been deemed necessary to allege and prove an abuse in the exercise of the franchise; and I contend, that without the proof of such abuse, there is no conclusive ground established for an alteration in it. The present question is one quite different in principle from the more comprehensive one, of which a noble lord (Lord John Russell) has given notice, and which will come on for discussion in a few nights: here the principle relates solely to the smallness of numbers; and is quite distinct from the measure of a more comprehensive reform, which should be adopted, in spite of all existing rights, for some great national good (hear, hear). That every partial interest should yield to so great an object, I admit—but though I admit the principle, I deny the advantage of its application to the measure of reform. As to the present measure of partial reform, although I will not say that cases may not occur to deprive a city or borough of its franchises, or to alter them, yet I do object to such a deprivation or alteration, without proof being given of abuses in the use of them. I do, besides, object to this motion, because it is the first time that such a change would be made on the ground that the electing portion of the inhabitants of a place is disproportionate to the bulk of its population—and because, by entertaining it now, a series of discussions leading to endless contentions and individual squabbles, would be let into that great question of parliamentary reform (for great I admit it to be) of which the noble lord (Lord J. Russell) has given notice for an early day. Sir, I prefer to discuss that great question on its own merits. The topics relating to it should be kept for the motion of the noble lord, and I hope they will be kept for discussion long after his time (a laugh). To the entertainment of this partial measure, I prefer that the more comprehensive one be submitted to this house for the purposes of declaration and of annual display. I shall be as well satisfied if the display be a triennial one (laughter). But as this is a measure which does not purpose even (if carried) to accomplish a national good—as it cannot operate even as an example in any useful way, but is one of individual injustice (individual not only as to the persons to whom it is proposed to apply, but also as to the instance itself); and as I look upon it, in every point of view, to be fraught with many evils and no advantages, I am determined to give it the most decided opposition” (loud cheers).

Mr. *Hobhouse* commenced by calling the attention of the house to the extraordinary doctrines which had just been laid down by the rt. hon. gent. The rt. hon. gent. had told them, that though a popular representation was good for the whole of the United Kingdom, it was still good for a part of it that some portion of its representation should not be conducted upon popular principles, and that part of the kingdom he subsequently admitted to be Scotland. He asked the house whether, by this species of defence, the rt. hon. gent. had not given them a character of Scotch representation which no Scotchman would be glad to recognize. Surely the rt. hon. gent. that evening had held up to the public view those shameful parts of the British constitution which, according to the advice of Mr. Burke, ought rather to be concealed than exposed. The rt. hon. gent. had likewise taunted the members on his side of the house with not bringing forward the case of the borough of Calne. Now there were many gents. near him who would vote as readily for an alteration in the mode of electing the member for Calne as they would for an alteration in the mode of electing the members for Edinburgh. It was unfair, however, to say that there was any thing parallel in the cases of Calne and Edinburgh. Was Calne a large town like Edinburgh, where 33 inhabitants returned a member to parliament to represent the remainder of its 130,000 inhabitants? The reformers had frequently been called on to abstain from general invective, and to point out a specific case of abuse. They had now answered that call, and had pointed out a gross case of abuse in the present instance. Could there, indeed, be a grosser abuse than that 33 electors should return a man who had no feeling in common with those who were styled his constituents, and who formed the most enlightened community in the British empire? They might call such a system by what name they pleased—but sure he was, that they could never correctly call it a representation. “But,” said the rt. hon. gent. “the system, such as it is, works well.” He denied it. That system could not work well which placed the member for Edinburgh in direct variance with the great majority of those who were misnamed his constituents, and of which loud and repeated complaints came from all parts of Scotland. The learned lord was even bolder in his assertions than the rt. hon. gent.; for he said, that the system not only worked well, but also gave full content to all the enlightened inhabitants of Edinburgh. He (Mr. Hobhouse) must be permitted to dispute this position. If it were true, how was it that the respectable inhabitants of Edinburgh solicitously seized every opportunity of disclaiming every act of the gentleman who was styled their representative? Let the house consider in how short a space of time all the talent of Edinburgh could be marshalled in array against any measure which emanated—he would not say from the administration, but—from the false system of Scotch representation which it protected. Did the learned lord mean to say that the *Jefferies*, the *Craigs*, and the *Murrays*, who were every thing when representing the feeling of Edinburgh, but would be nothing without it, were in favour of the present mode of electing its representative? The gentleman who now filled the situation of member for Edinburgh, represented not

the city of Edinburgh, but three-and-thirty individuals, who had peculiar interests to be furthered in this country—who made no appeal to the people or parliament of England—but who addressed themselves invariably to the Treasury, well knowing that so long as they kept up a good understanding with it, their cause would be treated with more attention than any of the public interests of the country. His hon. colleague (Sir F. Burdett) had called upon the rt. gent. (Mr. Canning) to act on this occasion in conformity with the declaration he had made on a former night, that he was not hostile to innovation, provided that innovation was productive of improvement. He was sorry that the rt. hon. gent. had not answered to that call. He declared solemnly, that he thought one of the greatest evils that had recently befallen the country to be this—that the rt. hon. gent. was so decided an opponent to the cause of reform. He believed, that had not the rt. hon. gent. laid down in early life, sentiments upon this subject, from which human frailty, or he ought perhaps to say the love of consistency, prevented him from now departing, he believed, he repeated, that with the power which the rt. hon. gent. now possessed,—he meant not the power of the Crown or of Parliament, but the power which the opinion of the people naturally gave in a country governed like England by liberal institutions,—we might have been able to look up to some individual to rescue us from the Egyptian bondage in which we were now placed. He said Egyptian bondage—for such it was—to be restrained in all our aspirations after freedom by a representative system which did not represent us. He had little doubt but that a time would come, when the rt. hon. gent. would be sorry that he had not made common cause with the people (hear, hear).

Mr. *Abercrombie* in reply:—“The rt. hon. gent. (Mr. Canning) has complained of Scotchmen intruding upon the representation of England, and has thought proper to select me as an instance of such intrusion. But, I will tell the rt. hon. gent. that, if I were one of those unshrinking Scotchmen, to whom he has alluded, I would not have found much difficulty in finding a place in the representation of my own country (hear, hear). It is because I am not one of that unshrinking class which he describes, that I did not find a place there (cheers). And is it because—not being one of that class—I was obliged to lessen myself to nestle (as the rt. hon. gent. terms it) in an English borough—is it therefore to be made a matter of charge and of taunt against me, that I give my humble aid here (and humble, I feel, that it is), in removing and healing the grievances of my native country (hear, hear)? The sentiments, and tone of the language of the right hon. gent. this night have indeed surprised me. The meaning of it is, that it might be well for other parts of the United Kingdom to have the advantages of popular representation—an infusion of popular feeling and sentiment into the representation of England and of Ireland, is good and wholesome—but there ought to be no infusion of it whatever into the representation of Scotland (cheers). Can there be a more flagrant proof of the necessity of a change in the Scotch system of returning members to parliament, than is to be found in the admissions of the rt. hon. gent. himself? or can any thing be more unfair, than that the member who proposes such alteration,

should be subjected to taunts as I have been (loud cries of hear, hear)? If any excitement was wanting to inflame and exasperate the persons, on whose petition this motion is introduced, it is contained in the speech of the rt. hon. gent. who tells them that the largest portion of the people in other places ought to enjoy and exercise the rights of representation; but that it is beneficial to them that those rights should be enjoyed and exercised by the smallest portion (hear, hear). If there be no other advantage to be derived from this discussion—this advantage is, at least, derivable from it—that the people of Scotland can no longer entertain a doubt as to the manner in which they are to be treated. The rt. hon. gent. the chief of the anti-reformers, has plainly told them the course intended to be adopted and pursued in their regard (hear, hear).—When measures of general reform were brought forward, the great change which they would effect was made a ground of rejecting them; and now, when a partial measure was proposed, when reform was proposed on a small, safe, and gradual plan, it was rejected, because it was not a general measure (hear); the plain meaning of which was, that there was to be no redress of grievances—no favourable entertainment of any measure relating either to general or partial reform (cheers). The people of Scotland, however, now know what they are to expect—they are apprized of their fate—they are made sensible of the disposition and intention formed towards them, and they know, too, that there is power to back that intention. Whether with this knowledge, and under these circumstances, they will persevere in their present course of pressing for reform, or whether they will unite their exertions with those of the reformers of this country, in procuring a measure of general reform, it is not for me now to decide; but of these two things I can confidently assure the rt. hon. gent.—first, that the speech which he has pronounced this night will not induce one man in Scotland to surrender his opinion and conviction, as to the necessity of reform; and secondly, that that speech will have the effect of not only continuing those who are anxious for reform, in their present sentiments, but that it will be the cause of gaining many thousands to their side; and of confirming them in a tenfold determination to increase their exertions for the attainment of that great object (loud cheers).

The house then divided. For the motion, 97—Against it, 122—Majority against the motion, 25.

### *Representation of Yorkshire.*

THURSDAY, APRIL 20.—Mr. S. Wortley moved for leave to bring in a bill to regulate the manner of taking the poll for the election of a knight of the shire for the county of York.

Mr. Hume inquired of the hon. gent. why the poll might not be taken in every parish, instead of drawing all the electors to one place? This, he thought, would be a very good opportunity for trying the experiment, and preventing the repetition of those scenes which had occurred at former elections. Had the hon. member any objection to try the experiment?

Mr. S. Wortley had a great many objections to such a proposition. The object of the intended bill was merely to increase the number

of booths in which the poll would be taken, from 15 to 30, as the former number would be inadequate to the purpose.

Mr. Sykes said, it was quite impossible for them, in the awful moment of their dissolution (a laugh), to consider, much less to carry such a measure as that which the hon. member (Mr. Hume) proposed. He felt very great satisfaction at the motion of the hon. member (Mr. S. Wortley); for, from practical experience, he perfectly well knew that it was wholly impossible to poll the entire county of York within the restricted time, unless the booths were increased in number.

Lord Stanley observed, that the presence of the candidate was of great importance during the progress of an election; but if, as the hon. member (Mr. Hume) proposed, the election was to be carried on in every parish at the same time, he knew not how the candidate could meet the electors.

Leave was then given to bring in the bill.

### *Reform in Parliament.*

THURSDAY, APRIL 27.—Lord John Russell:

—“I rise, sir, in pursuance of the notice which I gave some time ago, to bring before the house the very important question of Reform in Parliament. As the motion with which I intend to conclude is precisely the same as that which I have twice before submitted to the house, I had almost determined to rest my case on the reasons and arguments which I had before adduced. But, sir, the question seems to me of such paramount importance to the best interests of the country, that, although I do not think it possible to add to the arguments with which it has been pressed upon your attention before; although I believe the necessity of the reform which I propose to have been proved beyond all fear of contradiction; yet I do think it my duty again to state those reasons, which would justify the consent of this house, and which, in my opinion, so far from implying any thing like degradation in that consent, must be found to be accordant with the principles of sound policy, plain and intelligible to every mind which has not been influenced by interest or prejudice—carrying conviction to every heart that has not been subdued by the fear of innovation, or the love of corruption. The ground upon which we, and upon which I have always maintained the propriety of reform is, the absolute necessity of every government accommodating itself to the existing state of knowledge and intelligence in the country over which it is destined to preside; and so forcibly does this appear in every nation of the world, that even in Turkey, where the grand seignor may, according to the constitutional law of the empire, cut off 11 heads every day, he dare not omit the ceremonial observance of making his appearance every Friday before the people. I have heard it stated from the other side of the house, and admitted from this, that the country has arrived at a pitch of knowledge and intelligence never before equalled. It possesses at the present moment a class of men, whose advantages of education, of experience, of information, render them fit, beyond all others on the face of the earth, to understand and appreciate the power requisite for the proper manage-

ment of public affairs; and the numbers possessed of this extent of intelligence are greater than ever existed at any period upon record. On a former occasion, when I submitted this question to the house, I shewed, from numerous details for the last thirty years, which I think cannot be questioned, and which I do not think it necessary now to repeat, that intelligence had thus increased; and I think I may take it as admitted, that a people more capable of estimating the powers, and exercising the franchises of freedom, never existed before. I then showed, from an examination of the composition of the house, that so far from its being a representation of these portions of the wealthy and educated of the community, it was composed of persons returned for the most part by the least numerous class of the people; by persons avowedly the poorest and the most ignorant; or by a few others of great wealth and power, who nominated whoever they pleased to form one of the council of the nation, and who had thus reduced the representation to a state infinitely more confined and less popular than it had been even a century ago. I do not mean to state that the representation in this country is so totally destitute of popular infusion as that on the other side of the Tweed—undoubtedly the popular principle exists in many places—but I said before, and I say now, that that popular principle exists in a degree so limited and so insignificant, as to be altogether ineffectual; and that, whenever there is a question between the opinions of the people and the continuance of the abuses of the Government, the representatives of the popular principle are always overpowered by those who come into parliament, either upon the nomination of a few powerful individuals, or upon the strength of that exertion of money and address, which may be best comprised under the expressive word—*bribery*. Now, if this be the case; if the people have advanced to a state of knowledge and refinement, such as has been described and admitted; and if the house which was supposed to represent them, has become so vitiated and corrupted, that instead of being the organ of the larger and best informed portion of the people, it has become the instrument of the few; then, I say, there is such a discrepancy between the representatives and the people as ought not to be allowed to continue, but which, if continued, must, in my mind, sooner or later, be productive of the greatest calamities. In point of fact, indeed, no man ventures to say that this house is constituted of members representing the popular voice, or that it is not composed, on the contrary, of men nominated by a few, or elected by a select body; nor does even the *rt. hon. gent.* (Mr. Canning), who has been the constant opponent of reform in all shapes and at all times, seem to have taken that ground, or to have ventured to assert that it is so constituted. Having arrived at this point, I say we have a right to demand a reform of our representation, as much from the necessity of conforming to the advances of knowledge and the progress of power, as from the propriety of returning to those principles from which we have departed, and which are to be found in an examination of the history of our Constitution. Let us look at the very origin of that parliament which we are now called upon to restore. When Edward the First called together the first regular parliament which we find on record, it consisted of

855. 1826.

knights, the representatives of counties and burgesses, the representatives of boroughs—the knights being undeniably returned by all who were freeholders of land. I know, that some years ago it was asserted, that they were elected by those only who held in chief from the Crown; but recent researches have clearly proved, that those also voted who held from the great landholders; and so widely extended was the privilege, that in the reign of Henry the Sixth it was found necessary to pass an act for the regulation and restraint of the vast numbers who were led to collect themselves together upon the occasion of electing a knight of the shire. Then, as to the burgesses, by the ancient writs, the sheriffs are desired to compel every borough to make a return which may be found able to bear the expence of maintaining members: these persons were not returned then, as now, by a few individuals; they were elected by all the inhabitants, and bound to express the wishes of those inhabitants, upon the great questions submitted to their judgment. The present Lord Chancellor, when the famous *Inverness* case was argued before him, stopped the counsel, who was about to go to some length upon the subject, by observing that there was no necessity for any proof of all the inhabitants being entitled to vote. When any borough, however, was found to be too poor to bear the expence of this privilege, the sheriff was permitted to excuse it from such return, and the right was transferred to some other place more populous and powerful, and better deserving of the privilege of having its sentiments represented in the national council. It has been suggested that a statute might be framed on this principle, of a transference of the right, and that the sheriff might be empowered to excuse boroughs in the same manner in our days, from the trouble of sending members to parliament when they were no longer of consequence enough to be worthy of such a dignity. But although I admit that the boroughs of ancient times might have thought it a very reasonable thing to be exempted from such honour, when they were compelled to allow their members a certain sum, by way of wages, I doubt whether they could be induced to believe it was any great boon conferred upon them now-a-days, when they not only pay no wages, but actually receive every six years, for the mere exertion of their privileges, as much money as enables them to endure with patience for the other six all the poverty, privations, and sufferings, consequent upon that falling off of their trade and consequence, which we should consider a ground for their exclusion from any further enjoyment of the right of election. What I have said shews, however, beyond question, that the members of the ancient parliaments were elected only from places of consequence. Our ancestors did not consider the members of such places as *Old Sarum* or *Gatton*, or some others I could name, as qualified to speak the sense of such large, populous, and wealthy places as *Leeds* or *Manchester*. And what, I ask, has been the result of this species of representation by these men, thus chosen from the whole body of the people? By them have the great principles of our civil and religious liberty been established. To them we owe all those advantages of government which distinguish us from the nations of Europe. *Art. hon. gent.* (Mr. Canning), to whose opinions I have referred before, has been pleased to say, that he knew nothing of

4 E

these parliaments, but that they met for fourteen days, voted a subsidy, as they were commanded, and were then dissolved. I know not upon what authority the *rt. hon. gent.* made that assertion; but they never voted until grievances were redressed; and, in the time of Edward the Third, when called upon to vote away money for the public service, they had acquired a privilege of inquiring into pernicious councils, and obtained a declaration that no man should be injured in person or in property, save by the judgment of his peers; thus laying the foundation of every thing important in what we now enjoy. Their power, therefore, was real, and not virtual, and they exercised it for the lasting benefits of posterity; and if a celebrated modern author, who asserts that our ancestors purchased our liberties with their blood, had said that they purchased our liberties with their money, he would have made use of an expression equally forcible, and more correct. In fact, according to Fortescue, Comines, Lord Bacon, and every one who had written on the national character, we were remarked as a people distinguished from the French and all other nations of the Continent, by a sturdy race of yeomen, enlightened enough to understand, and free enough to assert their independence. In asking for a reform, therefore, I ask but for a restoration of our ancient rights.—I come now to a consideration of the objections which have been at various times urged against any reformation of our representation; and, first, I would notice one which our great opponent puts usually forth—the great prosperity we enjoy under the present constitution of the House of Commons. This is not a fair method of meeting the question. I have never put my calls for a reform of representation, upon any state of prosperity or adversity. I have always relied, as I do now, upon general principles. But if I had been disposed to depart from that course and meet the *rt. hon. gent.* in his own way, how often could I have found moments of pressure and distress, when I might have said, look at our situation now,—look at the consequence of the corruption which prevails in the election of members for this house. At the commencement of the present session the country was in great distress. Parliament was called together to devise a remedy for these distresses. A measure was proposed—while it was agitated in this house, the difficulties of our commerce and the distrust of our capitalists increased; when it had been in some measure disposed of, that distrust decreased; but the moment parliament was adjourned for the Easter holidays, confidence began to revive. I might say from this, that so slight was the confidence reposed in parliament from the defective state of its constitution—so little did the people consider its deliberations as likely to be productive of benefit to their interests, that the very idea of any attempt on their part to interfere in their concerns, was productive of nothing but increased difficulty and apprehension; but that the instant they adjourned, and ceased to excite alarm by their efforts to remedy our misfortunes, that instant things began to revert to their accustomed course. But I argue the question of reform on no such considerations. I consider the prosperity of this country to depend upon no measures which have been produced by the wisdom of the parliaments of the

present day. I consider it to be founded upon acts which have been passed from 150 to 300 years ago, and upon measures with which the representatives of our times have little connexion or concert. I consider it to rest upon protection afforded to property beyond what is found in any other country, and upon that inestimable privilege, the Trial by Jury. I would go farther, indeed, and affirm that the house is incapable of injuring the prosperity of the country in any material degree, or to any permanent extent. But I do not say that it may not, by imprudent meddling, do much to retard it. There have been acts which, if they have not injured, have, at least, checked the course of that prosperity. But I do not wish to argue upon such facts, because I do not wish to hold forth a hope, that, even if a reform took place to the utmost extent which could be desired, any set of men could be found whose councils would have the effect of preventing those revulsions of prosperity and credit to which all commercial states are liable, or who could produce an instant and infallible remedy the moment they were called upon to apply it. Another objection, which we hear frequently urged, is, that a reform, such as we desire, would be an infringement of property, and an invasion of vested rights. Now, though I consider the right of voting for a member of this house to be a trust placed in the hands of a certain body of electors for the benefit of the community, and can see no injustice which could be committed, if such places as were found unfit to use that right should have the power taken away from them; yet I am ready to admit the right of electing to be a privilege which has, by circumstances, become a pecuniary advantage; and, as I stated before on a former occasion, I am not unwilling to grant a reasonable compensation for any loss which may be suffered by a reform in the representation. When I say I would do this, I think I offer the very utmost which can be required. Let us only see how far this house respects the most sacred private right, when they interfere with the public good. Is a bill lately passed for the Manchester and Liverpool rail road, it was found that the road was laid down to pass over the grounds, and close to the house of an individual who had lately raised himself a mansion, to which he had retired under the expectation of passing the remainder of his days in ease and tranquillity. It might be supposed, that under such circumstances, parliament would have paused before it gave its consent to such an invasion of private property. But no; it gave consent, upon the plea of benefit to the community, that the trees should be plucked up, and all the improvements defaced, upon the offer of such compensation as might be considered advisable. In the same manner a bill had been passed lately for certain improvements in the city of Westminster. By that bill, an inhabitant of a house, with perhaps a prosperous trade, was obliged to remove, upon notice given to that effect. If he asked for compensation, a sum was offered, such as the commissioners considered sufficient; if he refused, he might go before a jury; but if he still considered the compensation insufficient—he had no resource; he was driven from his house; it was razed to the ground, and he was compelled to remove his business and his property from that situation, which had, perhaps, proved the principal

source of his prosperity. Are we to declare that the poor man in the Strand must sacrifice his right for an offered compensation, and are we to pause upon the rights of those who have no such claim upon us, and whose interests are so much more at variance with the benefit of the community? There is another objection, however, urged by the *rt. hon. gent.* (Mr. Canning). He contends, at all times, that, if we submit to this change, we must have a government of democratic tendency, and that we must, ere long, act over again all the horrors of the French Revolution. I agree, that if my plan of reform went to make the government wholly democratic, the objection would be of some force; but as I only propose a return to the original constitution, I cannot regard such an argument as any thing else than a sample of that species of declamation in which the *rt. hon. gent.* is but too prone to indulge. Let it be supposed that I was about to infringe upon the privileges of the House of Lords, and to diminish their influence in the constitution; such a proposal might doubtless affect the nerves of all who were interested in preserving the just balance of the constitution; but, suppose I only proposed to deprive that house of some encroachments upon the rights of others, or to bring the prerogative of the crown within its natural limits, I do not conceive that I should be accused of any violation of the constitution. In the same way, I ask only to place the House of Commons in the same state in which I have proved it always ought to have continued. As a last argument, the *rt. hon. gent.* asserts, that the House of Commons, as at present constituted, works well for the public—but I deny the truth of the assertion; I say it does not, and never did work well, and that if the system is pursued without any reformation, it will ultimately endanger the very existence of the government. With regard to the bullion question and some others, I do not mean to deny that the house may have decided as fairly and impartially as if it had been composed of the representatives of the people; but so, I beg to be allowed to say, would the Privy Council, or an assembly nominated wholly by the Cabinet, or any other number of well-educated or enlightened men, upon any question where there was no immediate contest between the people and the Crown. But let us recollect the decisions of this house upon questions where the interests of the people and the Crown differed. Let us look to those occasions, when the representatives of the people were called upon to resist profligate expenditure or controul mischievous power, and let the advocates of parliaments as they now are, say how the system worked then. Let them declare how far the opinions of the people at large influenced the decisions of the house upon such occasions as these. I have examined the details of the divisions in those particular instances, and I can assert, that although there might be a great majority against popular opinion, the minority was composed of a majority of popular representatives in favour of it—facts from which I draw an inference, which no sophistry can overthrow, that this house is not a representation of the opinions of the people; and that if it were such a representation, its members would not act in the same manner as those who now usurp the name. In making these deductions, I only calculated from my own memory and experience; but

Mr. Fox, and others, have made the same observations. Mr. Fox, in one of his speeches, asserts, that at the close of the American war, in every division against the minister (Lord North), five-sixths of those who voted with him (Mr. Fox) were popular representatives. On this, then, I would rest the arguments for the necessity of the measure. In going into the question on the former occasion, I had to show, that on all great questions, this house had acted contrary to the wishes of the people, and had increased the discontent and disaffection of the country. But it was thought necessary to apply measures of coercion on the occasion of that discontent. If those measures had not been abandoned, we should have been driven to the sad alternative of coercion by an armed force, or of having reform forced upon us by open violence. Now a new course has been adopted by ministers, and they are beginning to display a disposition to accede to the wishes of the people; but, in that very concession to popular feeling, I find one of the strongest arguments for reform, the measures having originally been suggested by those members who were influenced by popular opinions. As a confirmation of this, I would refer the house to a speech of an hon. member (Mr. Brougham) made in March 1817, and which ended with four resolutions—in the second of which it was stated, that the difficulties of our trade and manufactures were materially increased by the policy pursued with respect to our foreign commerce, and that a revision of this system ought forthwith to be undertaken by the house; in the third, that the continuance of those difficulties was, in a great degree, owing to the severe pressure of taxation, which ought by every practicable means to be lightened; and in the fourth, that the system of foreign policy pursued by his Majesty's ministers had not been such as to obtain for the people of this country those commercial advantages which the influence of Great Britain in foreign courts fairly entitled them to expect. These resolutions at that time were little attended to, and were negatived by a large majority, though, strange to say, since that period, a great portion of the time of the house had been taken up in acknowledging the truth of those very resolutions, and devising the best means of carrying the suggestions contained in them into execution. Though ministers have done much of late years to entitle themselves to the praise of the country, they would have done still more had they dared to act fully and freely upon their own views of public policy. It was a saying of Fontenelle, that if he had his hand full of truths, he would only let one of them out at a time. The course adopted by ministers appears to be founded upon a similar principle; for, after opening their hands so as to let out first one and then another beneficial measure to the country, they have suddenly closed them, and stopped short in their career, as if they had some difficulty in going further. I suspect that if the new parliament should be chosen in the same manner as the present, those members who are returned to it not by the people, but by those who oppose themselves on all occasions to the people, will protest in strong terms against the liberal system of policy which ministers have latterly pursued. The *rt. hon. gents.* are placed in a situation of great difficulty; and the best mode of extricating themselves from it, would be by creating a certainty, that they would meet none but the real repre-

representatives of the people in the next parliament. If they meet none but the real representatives of the people in that parliament, and if they pursue the same liberal and enlightened policy which they have recently done, adopting firmly but cautiously such improvements as they think our institutions require, from such a parliament they may reckon upon meeting a certain and overpowering support. The plan which I shall now propose, will be to take a certain number—for instance a hundred—of the small and decayed boroughs, and to allow them to return only one member instead of the two which they return at present. The vacancy which would thus be created in the representation, would be filled up by adding to the number of representatives for counties, and also by giving the right of representation to the large towns which have grown up in different parts of the country. Whether such a plan is the best that could be devised, I do not know; but it will be of use in promoting discussion among the friends of reform. I am no friend to sweeping measures; I am an advocate for partial reform. As far as I can recollect, there have been only two plans of reform proposed in this house. Of these, one would reconstruct the house upon new principles, and the other reform it partially by infusing what Lord Chatham called new blood into the constitution. The latter plan I consider to be the wisest and the most salutary. It was that, of which Lord Chatham was the author; it was that which was adopted by Mr. Pitt, whilst Mr. Pitt was a reformer, in all the schemes which he had presented to the house for its reformation; it was that which was sanctioned by Mr. Fox in the various speeches which he made upon this important subject. During the French revolution, Mr. Fox appeared to go further than he (Lord J. Russell) was now prepared to go; but before that revolution commenced, and even at its commencement, Mr. Fox declared himself to be nothing more than a partial reformer. In the speech which that great man had made in 1793, on Mr. Grey's motion for a reform, he made use of the illustration, which has since been so frequently quoted, of building a house. His illustration was, that the most skilful architect could not build in the first instance, and at once, so commodious a habitation as one that had been built piecemeal, and gradually improved by successive alterations suggested by its various inhabitants. It is on the principles which have been recognized by such men as Lord Chatham, Mr. Pitt, and Mr. Fox, that I would build the reform which I have to propose. In the words which Fox used in defending Mr. Grey's motion for a reform, I shall conclude the observations I have offered to the house. "What the present motion recommends to the house, is not to pull down but to work upon our constitution, to examine it with care and reverence, to repair it where decayed, to amend it where defective, to prop it where it wants support, to adapt it to the purposes of the present times, as our ancestors have done from generation to generation, always transmitting it, not only unimpaired but improved, to posterity." I now propose, sir, "That the present state of the representation of the people of England requires the serious consideration of this house."

Lord Althorpe seconded the motion. He should not trouble the house further than to say, that in his opinion, the present state of the

representation was such that the people had not that preponderance in it which was necessary to secure them the certainty of being well governed. He did not mean to say that under the present system, they were not well governed—for able ministers could, if they pleased, govern a country well, no matter whether it had or had not a representative government. The grand characteristic, however, of a representative government was to have in its hands the means of good government at all events. In a House of Commons where the minority consisted of the representatives of the people, and the majority of the nominees of the borough-holders, such a power could not exist.

Mr. J. E. Denison declared that he had arrived at a conclusion directly the reverse of that which had been stated by the noble lord. The noble lord had called upon the gentlemen near him to enter upon a reform of the representation, because they had already entered upon a reform of many abuses. But their having pursued this course showed that the further reform called for was unnecessary, and that their resistance to the present motion was the result of sincere conviction. The house had already thought it requisite to lay aside the consideration of many questions, on account of the approaching dissolution. Now, it appeared to him, that no question could have been so well deferred as the present, affecting the right of suffrage which the people were soon going to exercise. If, then, the time for mooted this question were wrong, was there any thing in the peculiar character of the house at the present moment which rendered the discussion of it expedient? Was the present house more corrupt than its predecessors? He thought not. An hon. member (Sir F. Burdett) had stated, on a former evening, that he had never before sat with so pure and so honourable an opposition as he now found in the house; and he thought that the merit which the hon. member assumed for his political coadjutors, he (Mr. Denison) might also claim for his own. The division, which took place on a recent motion, which he thought might have passed without suspicion, proved that the influence of the Crown did not steal on the house unregarded and unopposed; and the motion which an hon. member (Mr. Littleton) had introduced to regulate the committees upon private bills, proved that they were not insensible to the feelings of the people regarding practical abuses. It appeared to him that a reform on principle must seek to render the system of representation more uniform than at present. He could only conceive two methods by which it could approximate to that of uniformity. One of them was, by extending greatly the popular principles of the constitution; and the other, by making the representative franchise dependent on the amount of property. They had at present examples of both these systems; and as experience was so unsafe a guide to act by, he would call the attention of parliament to their practical operation. In France, the elective franchise depended upon property, and in order to obtain it, a high average rate of property was necessary. In consequence of that state of things, the expression of the opinions of the lower orders of the country, which was so admirably heard in the House of Commons, found no entrance into the Chamber of Deputies. In order to proceed on the French model, the first step

necessary to be taken would be to disfranchise a large portion of the electors of the United Kingdom. Hon. gents. knew, however, too well the weakness of the French government, to wish to change the House of Commons, imperfect as it might perhaps be in some respects, for an assembly constituted like the French Chamber of Deputies. The other method which he had mentioned was that of placing the representative system on a popular basis, and of making it approach to what he would call a representative democracy. An example of this was to be seen in a country in some respects similar to our own—he meant the United States of America. In any observation which he made upon that country, he begged to be considered as making it without disrespect. An institution which might be advantageous there, might be highly pernicious here. Here we had a limited monarchy, on the principle of blending with it both an aristocracy and a democracy; there they had a republic on the basis of pure democracy. Whatever we had of liberty had been gradually won from the grasp of power; whatever they had of control, had been built up as a check against the licence of democracy. Making these and other allowances for the difference of circumstances in the two countries, a useful practical lesson might perhaps be derived to this country from the state of things in America. In America, there were annual parliaments, universal suffrage, with some slight modifications, and in many instances election by ballot. The consequence was, that from the manner in which their elections were conducted, not only did property lose its useful influence (which was not so important there as here, in consequence of its being more equally subdivided), but also it was less respected. Hence, in times of popular effervescence, and of excited political feeling, all the elections turned upon a single consideration alone. No man was returned without his giving some decided and devouring pledge. Not only did individuals sink under such a system, but whole parties were sometimes swept away by it. One party not only triumphed over the other, but in triumphing over it prevented it from giving expression to its opinions. The system, however, by some means, worked well in America; but though it worked well there, he contended that no argument could be deduced from it as applicable to England. In the several states of America, there arose practically, from its territorial divisions, certain checks, which existed here from other causes. At Washington the members for the different states met in congress, and the distinction between northern and southern states, slave-holding and not slave-holding states, was so strong and so productive of various conflicting interests, that no change took place in the general institutions of the union which was not a compromise, and all compromises begat moderation. Whether the representative system adopted in any one of the United States would serve as a system for the whole union, he could not pretend to decide; the experiment had never been tried. No reform would be considered satisfactory, unless it were a reform on principle, and no reform on principle could take place, except by one of the two methods which he had mentioned. For neither of them, though they might each be fair and specious in parts, would any gentleman consent to change the system, incongruous and impure though it

might be, by which they were that day assembled in that place. We had in our system the French principle of property acting with its natural and legitimate force, controlled, however, by a large infusion of the American principle of democracy, and that again checked by the salutary weight of the aristocracy, and by the general respect paid to the hereditary distinctions of rank and fortune. The House of Commons, as at present constituted, partook of all the changes of public opinion, as means were given for the introduction of all parties, and for the expression of all principles in it. He believed that to the admirable balance of the aristocracy and democracy in that house, the country owed much of its honour—much of its safety—and much of that distinction for which it was admired and envied abroad. It was owing to that balance that no one parliament deviated much from its predecessors,

—“neque enim plus septima ducitur uxor,  
At genus immortale manet multosque per annos  
Stat fortuna domus et avi numeratur avorum.”

He was not blind to the inconsistencies and incongruities of the present system; but in meddling with the complicated machinery of Government, he was afraid lest, in moving what at first sight appeared an impediment, he should destroy that which was in reality an important power. Our representative system was not constituted on the principles of Grecian uniformity; it rather partook of the irregularities of its old, native, and unadorned Gothic. On that account, he did not wish to be the first to introduce innovation, under the guise of reform, into its ancient but still firm and compact fabric. He viewed it with awe and admiration for the protection which it had afforded to the country amidst all the storms of foreign and domestic contention, and nothing which he had yet heard could induce him to raise his sacrilegious hand to mar it by any pretended improvements.

Mr. Ross opposed the motion. The present time was not that best suited for the discussion of this question. To introduce it at the close of the last session of the present parliament, was particularly unwise. Supposing the motion were carried, and it was agreed that a reform was wanted, not this session, nor twenty sessions would be sufficient to terminate the discussions which would arise as to its details. But he would spare all trouble about the details, by confessing that he would never give his assent to the principle: there was no increased influence either in the Crown, or in the aristocracy, which rendered a reform in parliament necessary; and the people were as duly represented under the present as they could be under any other system. There never was a period in which parliaments were purer than they were at present. Queen Elizabeth had committed members to the Tower because they questioned the extent of her prerogative. The Stuarts disregarded acts of parliament, and dispensed with the laws, whenever they thought fitting, by proclamation. The two first Georges effected by bribery, what their predecessors had effected by power. Great stress was commonly laid by the advocates for reform, upon the influence which the Crown possessed. The collection of the revenue, it was true, very often placed the officers and other inhabitants of

boroughs in some degree under the influence of the Crown; but it must be remembered that the emoluments of those persons were at this time very considerably reduced, and that while holding those offices they were prevented from voting in the election of members. A similar exaggeration was commonly resorted to respecting the power of the Crown by means of its patronage in the church, the army, and the navy. The Crown was possessed now of no more church patronage than it held at the time of the reformation, and he did not know in what manner the promotion in the army or navy could be directed more properly than by the Crown. With respect to members in that house, it was most unjust to insinuate that any hon. member would vote against his conscience because he received a salary under Government. But while it was attempted to be shown, that the power of the Crown had increased, could it be denied that the power of the people had increased to an immense degree? He would not have it supposed that he mentioned this circumstance with any thing but satisfaction. No man could rejoice more heartily than he at seeing the spread of information among the people of England. He saw in it the most effectual safeguard of the constitution and the strongest barrier against the encroachments of tyranny. The eyes of the people were open to the affairs of the state, and they took an interest unprecedented, perhaps, in any other period in the proceedings of parliament. Not a word was uttered within the walls of that house that was not immediately placed before the eyes of the people, and became the subject of their contemplation. But it was said that the aristocracy of the country had increased, and the power of that aristocracy along with it. He admitted that it was so; but he denied that any evil was produced by that circumstance. If the aristocracy had increased, it was reasonable that it should be adequately represented. He was glad to see the wealth and talent of the nation—the wealth which was the result of enterprise and industry, and the talent which also assisted in producing that wealth, as well as the property which had been handed down through a long line of ancestors—represented as they deserved to be in that house. The noble lord had in the course of his objections against the present system, spoken of certain boroughs which contained a very small number of voters. This came with a singularly ill grace from any member of that side of the house, and particularly from one the greater part of whose friends were returned for close boroughs. A considerable change would take place after a general election in the appearance of the benches on the opposite side, if all the boroughs which at present returned the members sitting there were as populous as Manchester. The majority of the persons out of the house who most loudly advocated the cause of reform consisted of that order of the people who were neither willing nor qualified to examine closely the real state of the question, but clamorously followed the specious objections which had been raised against the existing system of the representation. On the other hand, those who were most distinguished for the virtue and quiet of their lives, for the dignity of their characters, and for the splendour of their talents, were found to be opposed to the change which it was sought to introduce. He should be disposed almost to put the question on this single ground, and to ask the noble lord, whether he would be con-

tent with the approval of such men as he had first described, if, at the same time, he incurred the reprobation of the latter class. The measure of the noble lord only went half-way towards a remedy; and if it should be agreed to, it would, he feared, be looked upon by those persons who sought to overturn the most valuable parts of the constitution, as a signal for further encroachments; and the way once opened, even those whose opinions were moderate, and whose intentions were honest, would not be able to stem the progress of the evils which must ensue.

Lord Glenorchy said, if the proposition of his noble friend (Lord J. Russell) and those who voted with him, had been to change the present system for a democracy, the objections of the hon. member (Mr. Ross) might have applied; but the contrary was their object; instead of attempting to destroy the constitution, they only sought to preserve it. He could hardly hope, however, after the recent decision of the house respecting the representation of Scotland, that the present motion would meet with greater success. Those who opposed reform as a general measure, were in the habit of admitting that if any specific case of abuse should be introduced, the house would listen to it; and yet when so flagrant a case as that of Edinburgh was brought forward, they refused to interfere until some act of criminality was proved on the part of the electors. They were told, indeed, that Scotland benefited by the diffusion of the popular spirit which prevailed in England, and the whole argument of those who opposed the inquiry on that occasion was, that the sound part here made up for the bad elsewhere. No hope being left of obtaining redress in any case of detail, he was glad to see the present question brought before the house on general principles. It appeared to him in the highest degree weak and absurd to refuse to provide a remedy against an evil which might be likely to exist because it had not yet been felt.

Mr. Hobhouse:—"The hon. member for Newcastle (Mr. Denison) claimed the indulgence of the house, on the score of the infrequency of his interference in the debates of parliament. I must apply for the same favour upon exactly the contrary grounds—namely, the fact of my having often spoken before on the same subject; for I feel it a duty attached to all those who are returned by the popular portion of the constituency of England, to take every occasion of expressing their sentiments on this great question. As for what has fallen from the hon. member (Mr. Ross), he has certainly gone to his work with considerable boldness; he scorns a compromise,—difference with him does not lie in the shades of opinion,—he does not argue much, but he asserts roundly,—with him, reform never was, nor now is, nor ever can be expedient, or even sufferable. He despises all the phenomena of the times, or he draws from the contemplation of them an inference quite different from the rest of the world,—he feels it, no doubt, not a little magnanimous to run counter to the general march and progress of opinion; and whilst all the other luminaries of the firmament are moving in one direction, the hon. member ambitiously pursues the contrary career, and, like the Apollo of Ovid, proudly boasts—

*Nitor in adversum, nec me, qui cœtera, vincit  
Impetus; et rapido contrarius evehor orbi:*

for, sir, I assert that the course and current of

events lead to exactly the opposite conclusion from that to which the hon. member has arrived. I may also add without disrespect, that by that course and current wiser men than the hon. member have been borne away: and that I do not despair even of seeing him, at last, sagely yielding to the influence of the resistless stream.—The other opponent of the measure (Mr. Denison) is of another complexion,—he is more temperate,—he can bring himself to believe that a popular and purely democratic assembly may work well; nay he has confessed that, in America, it does work well. Sir, I attribute no small portion of that gentleman's liberal disposition to the part of his political education which he has lately received in America. But the hon. member must forgive me if I tell him that I think he has not carefully investigated the history either of America or England, if he attributes the free principles of government which prevail in the former country to any discovery made by the founders or the successors of the American Revolution, or to any circumstances which render that vast country the peculiar and favourite abode of a pure democracy: the Americans are our brothers; and it is but justice to the memory of those who were their and our common forefathers, to say, that the democratic principles which pervade and animate the whole American Union are of English origin. The great battle of American independence was fought to prove, that taxation without representation is a tyranny that Englishmen ought not to bear,—it was but the same battle, and the same victory, that had rendered for ever memorable the glorious Revolution of 1688. The struggle was in no respect different from that earlier resistance to arbitrary power which slavish historians have branded with the name of rebellion; and the real instructors, the real political sages, whose lessons inspired the Americans of the first congress with their resolution to die in defence of freedom and of a pure representative system, were the Cokes and the Seldens, the Pym and the Hampdens, who gloriously contended for that liberty at home, which their contemporaries, the first exiles, thought they could find only in the deserts of the Western world. It is, therefore, a mistake to suppose that the institutions of the Americans are so entirely the offspring of the peculiar origin, and manners, and position of that powerful nation as to render them inapplicable to the system of English Government: on the contrary, whatever is free, whatever is popular, whatever is essentially representative in their Government, is English; and if we desire to know what were the parliamentary principles of our forefathers, we have but to look at the *practice* of our American contemporaries. I think that the hon. member (Mr. Denison) has also made a mistake when he supposes the representative system in France to be formed on the basis of property, in contradistinction to the American basis of population. I own it appears to be so; but those who have visited France with the eyes of a Reformer, know full well that by a species of management, which it is not necessary now to explain, the Crown has contrived to get the elections, for the most part, into the convenient channel; so much so that, except in Paris, and one or two places where the electors can act in concert, the ministerial candidate is almost sure of success. In fact, the Bourbons have been wise enough to take a leaf out of our

book; the government by mere brute force has been found too dangerous—they now try the surer mode of corruption, and under pretence of giving to their subjects a representative system, make them consent to infringements upon their rights, and to exactions upon their purses, which could not be obtained by the old method of un-disguised despotism. The restored dynasty have made a surprising progress in this their holy work; and they have been enabled so to do, not because they have been aided by the aristocracy, but because they have no aristocracy to oppose them. There is not in France any body of men round which the people can rally themselves, and stem the torrent of power; and as the landed estates in that country are cut, as it were, into shreds and patches, and are undergoing a perpetual subdivision, there are no individuals of sufficient importance to make head against the dispensers of the favours of the Crown. Where there is the least show of opposition, every engine is set to work; and where corruption fails, open injustice is not unfrequently brought into play, in the mode adopted of selecting the returning officers, and securing the election of the Court candidate. Nay, even violence has been tried; and the removal of ferry boats, and the breaking down of bridges, have been the last resource, not of popular fury, but of ministerial manoeuvre. So that, although France does not enjoy our well-working borough system, she has arrived at the result of that happy arrangement; and, so far from returning a representation from the property of the country, may, in fact, be rather said to send to her chamber the representatives of the property and the influence of the Crown. Indeed, the opposition to the measures of ministers in France is extremely insignificant, when compared with that which sits on these benches. And here I must beg leave to correct a misapprehension of the hon. member (Mr. Denison). He objects to my hon. colleague (Sir F. Burdett) the having praised the House of Commons for its improving purity, whilst at the same time he calls for a reform. But my hon. colleague did not praise the House of Commons; he praised the opposition;—he said he had never sat down with so many honourable men, notoriously acting solely upon public principle, and swayed by no base motive nor selfish influence. This is very different from passing an eulogy on the House of Commons itself. Of that house, indeed, we may say that (without embarrassing ourselves with the questions put by hon. members, as to whether it be more or less corrupt than at former periods) it is quite as corrupt as any ministers can wish;—we may say, with Mr. Burke, who has been quoted on the other side, and who may be quoted for any side of almost any question, that “for any purposes of popular controul it is not a House of Commons.” These were the words of that politician;—what was true then is true now. I can hardly understand how any one should venture to deny the assertion: yet it is denied; and to my infinite surprise, the hon. member (Mr. Denison) has this night adduced the discussion and decision of the question relative to the increased salary of the President of the Board of Trade, as a proof that the people exercise a salutary controul over the deliberations of parliament. This appears to me the most unfortunate instance that could be selected for such a purpose; nor would it be easy to find a more complete illustration of the cor-

ruption of parliament, and of the necessity of reform:—for, in the first place, I contend, that, except to such an assembly, no minister would have dared to make such a proposition:—secondly, I must remind the hon. member, that the proposal, the ultimate abandonment of which he quotes as so creditable to parliament, was carried by a majority of Parliament, of which majority, by the way, he was one. In the third place, the said majority, being eighty-seven in all, was composed of thirty-eight members in receipt of emolument from office, and of ten others nearly connected with such placements; whilst only one English county member voted for the proposal. Is it possible to give a more unfavourable picture of the present composition of parliament, than that which this very majority presents to us? Is it possible to form to oneself the idea of a representation more corrupt and contemptible than this commanded vote affords? Even in another point of view, this very vote shows the necessity of reform; for the smallness of the majority is a sufficient evidence of the natural consequence which would result from a frequent recurrence to the people for the choice of their representatives. Would not that majority have been much greater had not this been the last session of the parliament? It is notorious, that those members who are in the habit of supporting Government, and are partly chosen by the popular part of the constituency, just at the close of their career, are apt to tremble at their approaching dissolution. After four or five years of submission to ministers, they no sooner see the immediate approach of their latter end, than they give some sign of grace, and bethink them of the account which they shall have to render at the day of popular judgment. They resolve to signalize their last moments by some virtuous deed; and like the repentant death-bed sinners satirized by Dean Swift, are eager to “make a sacrifice to God of the devil’s leavings.” Hence we had only one English county member bold enough to vote for what an hon. member called the Board of Trade job; and that fact alone speaks volumes in favour of one part of our reformation—I mean shorter parliaments. With respect, sir, to the peculiar mode by which the reformers would wish to carry their wishes into effect, I beg to assure the hon. member (Mr. Denison) that, when he says we can choose only from two schemes—the American basis of population, or the French basis of property, as he calls it (very improperly, I think) he little knows the variety of plans proposed by us for the accomplishment of our great object:—as for the French plan, as now managed, we certainly would have nothing to do with it. There are, however, many, many ways by which we think we can modify and mingle the two principles of property and population, so as to arrive at the result we desire—namely, a fair controul of the people over the measures of the executive. My noble friend, the mover, has his plan; I shall vote for that. My hon. friend, (Mr. Lambton) whose absence we so much deplore on this occasion, has his scheme; for this also I should vote: other reformers, and myself amongst them, have their peculiar notions on the subject; but I fancy, that the great mass of us in the country would consent to almost any change, from the conviction that the present state of the representation is the worst and most pernicious

that can be imagined. The first step we want is, that which the noble mover has proposed; namely, an acknowledgment by this house that some change is necessary, and will be made. This will, of itself, be a most important reform; and the inevitable consequence of this first step would, I confidently believe, be the attainment, at some time, of all we can desire. Let us but introduce the fine end of the wedge, and trust to us for getting in the larger end afterwards.—I perfectly well understand the meaning of those cheers from the opposite benches, but I am unconscious of having made any admission unfavourable to the cause which I attempt to advocate. Sir, it would be dishonourable; it would deceive nobody, if I pretended to say that I should rest satisfied with the scheme of my noble friend: all I mean to say is, that if the house should once be persuaded to entertain the principles of reform, I will answer for attempting, at least, to drive the measure home.—I will answer for the great body of the reformers doing their utmost to make the project effectual; indeed, why should they not? Why should they be satisfied with obtaining anything short of their object, when that object is in itself unobjectionable? But if there be any men here, or in the country, who presume to insinuate that our end and aim are not such as we pretend,—if they would insinuate that anarchy, and revolution, and spoliation of property be the real object of our endeavours, in that case I repel the charge with the scorn and utter contempt that it deserves. Have not the reformers as much to lose, by lawless violence, as those who uphold the present system? Indeed, they have, and, I believe I may say, more:—amongst the reformers are to be found the wealthiest proprietors—the greatest names—the most important citizens of this powerful community. Their high characters—their large possessions—the thousand ties that bind them to society, are pledges for the purity of their motives, and the sincerity of their professions, when they declare that they entertain no projects inconsistent with the good of their country, and the virtue and happiness of their fellow-subjects. The reformers can have no other wish than that which they profess; namely, to recover for the people that controul which is, by rights, theirs; and to give them, by restoring the House of Commons to its original purity, the only real security for their persons and for their property. They ask for nothing new. It would be a waste of words to recapitulate the evidence so often given here and elsewhere to show that the parliament, as now constituted, is a wretched and, comparatively, a recent innovation, which has been ingrafted and has grown on the ancient institutions of England, together with those two other much-petted and unnatural children, the standing debt and the standing army. Efforts to garble elections, and bribe or intimidate members, may, of course, be discovered in early times; but the House of Commons, as at present framed, and as at present working, whether for good or evil, is of comparatively a recent date; and the people have by degrees, and those not very slow degrees, been cheated out of their ancient privilege to return a parliament upon the old popular basis of representation—the communities of counties, and the communities of towns. And here I must be permitted to notice a most extraordinary position taken up by the hon. member (Mr. Ross). He contended, that a reform of parliament

would throw the elections out of the hands of the real proprietors of England into those possessed of no respectable means of subsistence. Strange, indeed, to be said by any one—and stranger still to be said by a member for Orford, in the face of so many county and city representatives, who have constituents. Did the hon. member never happen to hear, that the complaint of the reformers points exactly to the fact which he has perverted and enlisted into his singular argument? The great complaint of the reformers is, that the body of electors—that is, the body that votes for the majority of this house, are persons of no property—are persons whose abode is, or ought to be, the work-house,—who have no will—no power—no voice of their own,—who, when they solemnly declare that they give their *vote*, that is, their *wish*, for the candidate whom they choose, are guilty of the basest and most pernicious perjury,—who are the mere organs of others, and depending upon their masters for the rags they wear, and the scanty food they eat, and the wretched cabin that shelters them, have no opportunity, and scarcely, perhaps, feel an inclination, to perform the sacred duty imposed upon the real independent elector. The complaint of the reformers is, that, whilst such an unhappy, miserable part of the population hold the elective franchise, and use it not for themselves, but under the controul, and for the benefit of others, the real respectable citizens—the contributors to the exigencies of the state—the most valuable members of the community, who have given pledges of fidelity to the Government, and to the country, are not partakers of the privilege which alone can give them the means of protecting their property; namely, a share in the choice of the representation. We claim, for the opulence—the industry—the importance of such towns as Birmingham and Manchester, the rights now thrown away upon, and shamefully bartered by, the penniless, idle, insignificant vote-sellers of such boroughs as Orford. The truth, as it seems to me, is, that the arguments of our opponents furnish a decisive evidence of the character of the strange, anomalous system which they attempt to defend:—all the forms of parliament, suppose it to be free, and fair, and independent—all the facts pronounce it to be exactly the reverse in every respect. Our forms tell us that peers shall not interfere in elections—our facts inform us that peers return something very like a majority of the house. Our forms require that when a member accepts office, his constituents shall have the chance of deciding whether they like him as well in his character of a placeman, as when he was not a holder of office:—What do the facts prove to us?—that there is no real reference made to the constituency of the country; but that, by the easy machinery of rotten boroughs, or close corporations, the vacating the seat, and the subsequent re-election, are matters of form. Need I mention another glaring contrast between the forms and the facts connected with parliament. We have numerous statutes against bribery; and all our election-law is founded on the pretence, that there ought to be, and is, no undue influence in the practice of elections. What is more notorious than the disgraceful, wicked traffic by which all these statutes and laws are evaded? They have been, indeed, long evaded; and it is not now, for the first time, that good men have thought it far preferable that, if parliament is not to be reformed,

SESS. 1826.

there should be a repeal of all these election statutes. An illustrious member of this house, if virtue can make a man illustrious,—I mean Sir John Barnard, made a motion to this effect in 1754. He proposed that the bribery law should be done away with, as it gave rise to nothing but perjury;—I say the same as he did; and I add, that besides the perjury which disgraces the individual elector, there is a widely spread evil which afflicts the country, arising out of these violated laws; namely, the delusion which is thus spread over the whole system, and which would make an unreflecting, inexperienced man, believe that the true old principles of the constitution are carried into effect, and that the representation now returned to parliament is fairly, freely, and purely chosen. And this brings me to a topic that is called to my mind by what fell the other night from an hon. friend of mine (Mr. Hume), who, by some strange accident, is not now in his place. That hon. gent., to my great surprise, said, that if the opposition would but do their duty, some great results might be expected. Now, I class this sort of assertion amongst the delusions which ought to be dispelled, in order to enable the country to understand the real state of the parliament. I would ask my friend, what he means by the opposition doing their duty? I suppose he means, coming down in force, night after night, and voting upon every disputed question. I beg to ask, what would be the consequence of the opposition adopting this course of conduct? If the opposition came down in numbers every night, the ministers would come down in numbers every night;—if we were always here, they would never be absent: as long as the contest lasted, the majorities and the minorities would be increased, but the proportion would be the same—the decision would be the same. The experiment has been fully tried before—it was tried by Mr. Fox and the extraordinary men who were his constant associates; night after night, session after session, they came, and fought, and were beaten. It has been tried most completely by those who are around me, in behalf of the hon. member himself: he cannot have forgotten the sessions of 1821 and 1822:—they almost destroyed us;—we divided on every item of every estimate;—we were glued to these seats. The evening sun went down upon us in this hostile array; and when he arose in the morning, he shone upon our undiminished ranks. If ever opposition depised hunger and thirst, and watchfulness for conscience sake, it was the opposition that was led by my friend during those never-ending sessions. But were not the ministerialists equally on the alert? We had, indeed, the satisfaction of fatiguing them as much as ourselves, but that was all; and if we had our seventy, they had their hundred and seventy; and that very period was signalized by perhaps as pernicious and absurd decisions as ever disgraced a parliamentary session;—some little improvement in our financial statement—some few farthing reductions, long since repented of and repaired, we did indeed procure; but any thing like a real national or constitutional object, we did not, because we could not obtain. The machine worked as usual; the majority was greater than the minority; and if any serious effect was produced, I rather should be inclined to say, the effect was not beneficial; for foolish, unreflecting debate-readers, seeing

4 F

a great deal said, thought a great deal done, by the opposition; and this house began to acquire a character which it did not, and never can, as now constituted, fairly deserve: so that I must really entreat my hon. friend never more to use the phrase of "the opposition doing their duty;" it tends to augment the great delusion, and nothing else. Better far to tell the truth at once;—no attendance, no efforts of ours, in this place, can make us a match for ministers;—I am not talking of the men, but their offices: let them become the opposition, and we shall know how to deal with them easily enough.—If we should be asked to select individual measures, I would undertake to mention a succession of follies and inconsistencies recommended by triumphant majorities at the time, but now so utterly decried and disavowed, that no one seems willing to confess he had any share in placing them in our statute-book. If there is any one department of legislation more than another which might be thought to be the peculiar province of this house, it is, doubtless, the financial; we are, constitutionally, the guardians of the public purse, and the habits of many of us ought to befit us for that duty. Now, I would ask, what have been our deeds in that department? Let me mention an instance or two of the wisdom of parliament in this respect.—First: is there any paradox so ridiculous, any false reasoning now so entirely rejected of all persons, as what was consecrated year after year, by majority after majority, relative to the old sinking fund? Mr. Pitt's compound interest, which would really swallow up the debt faster than was convenient for a commercial state;—Dr. Price's magical penny, which the revolution of not many ages would swell into a globe of gold larger than this earth; these monstrous absurdities formed the basis of financial law-making for more than the quarter of a century; and it was not until long after they had become the contempt of the nation, that their true character was discovered by this house:—it was not until the year 1819, that Mr. Vansittart, by asking for three millions of additional taxes, to create, as he said, a real sinking fund, proclaimed to the awakened parliament, that their old sinking fund had been a delusion, and the most pernicious delusion that ever distracted the finances of a state. I come next to the famous one-pound note and shilling resolution. This resolution was a solemnly proclaimed truth of the House of Commons of 1811; what is it now?—the standing jest of every speaker who is at a loss for an example of glorious absurdity; so much so, indeed, that the other night, the rt. hon. gent. (Mr. Canning) in a moment of kindness to the memory of a dear, departed, and translated Chancellor, declared that Mr. Vansittart, the propounder of that measure, was not the father of it, and that his reputation ought not to bear the load of that enormous folly. But, to come to our own more immediate days, I beg hon. gents. to recollect the circumstances connected with the adoption of the dead weight scheme, in 1822. When first propounded to this house, on April 29th and May 1st of that year, it actually met with no opposition; on the contrary, it was hailed with considerable joy, and, amongst others, by the member for London (Mr. T. Wilson);—more wonderful still, it was the subject of much panegyric from the lips of the President of the Board of Trade (Mr. Huskisson). In the succeed-

ing stages, some gents. (Mr. Brougham, Mr. Baring, Mr. Hume, and Mr. Ricardo) did point out the utility of the project, but the ministerial phalanx still kept firm to the folly. The first division shewed only thirty-five in the minority, against one hundred and fifteen approvers of the scheme; the second minority amounted only to fifty-four members:—no more divisions took place; and we, at this moment, suffer under that which is an universally acknowledged disgrace to our statute-book, and still give our sanction to a pernicious, perplexing juggle, of which the prime minister of the House of Commons (Mr. Canning) made, the other night, this ingenuous confession—that, for his part, he did not understand it. So much for the financial sapience of this house. If necessary, I could adduce many other instances of equal prudence in other departments, all tending to one melancholy fact, that the folly of the minister of the day is the wisdom of parliament. Let the man be ever so weak, and his project ever so unreasonable, he is still the dull divinity of the time, and his worshippers are no less numerous and devout than those of idols composed of more precious materials.

"Of whatsoe'er descent their Godhead be,  
Stock—stone—or other homely pedigree;  
In his defence, his servants are as bold  
As if he had been born of beaten gold."

Indeed, I have sometimes thought, that the less respectable the object of worship, the more zealous the enthusiasm of the worshippers. Perhaps there is fancied to be a sort of magnanimity and generosity in the attachment to an imbecile master; but, let that be as it will, the vote is as certain for the dullest, as for the most enlightened minister; and I have, myself, seen the largest majorities give sanction to proposals, recommended by speeches, received with the universal titter of the inmost rows of the treasury benches themselves. And how can it be otherwise? During the session of 1822, a return was made of eighty-nine members who sit in this house, receiving salaries, profits, and emoluments, to the amount of 183,372*l.*; and a return was also made of fifty-nine members holding commissions in the army and navy, of whom the pay was not stated. It is the fashion to say, that the impartiality of H. R. H. the present Commander-in-Chief makes it indifferent to an officer which way he votes;—I do not believe it; we have officers on our side the house, it is true, but where is the great majority of those holding commissions in the army and navy? Certainly ranged with ministers, and certainly amongst their most faithful adherents. Nay, I will add, that even those with whom I have the honour to be associated, do not feel themselves perfectly free agents when questions touching their profession come before the house; they cannot help recognizing the influence to which they are to look up for promotion; and they are, besides, bound together by that "*esprit de corps*," which prevents them from merging the officer in the member of parliament: exceptions to this rule there may be, but the usual fact is what I have stated. If, however, there should be any doubt as to the dependence of military and naval senators, there can be none as to the eighty-nine placemen and pensioners mentioned in the return. The rt. hon. gent. (Mr. Canning) complained the other night of the great scarcity of that de-

scription of gentlemen in this house:—allow me to ask him, how many would he have? Are not the eighty-nine enough? Add to these, that every actual heavy-armed placeman has one or two light-armed relations, on debates of emergency, usefully skirmishing by his side. That the eighty-nine are enough, we have the best possible proof. An analysis was made of the majorities and minorities on fourteen great questions discussed in the years 1821 and 1822; and from that analysis (which I hold in my hand) it appears, that the said eighty-nine, the salaried officers of the Crown, were the real combatants who gained the day in all those fourteen questions against the popular part of the representation. If this service was performed by the placemen now in parliament, an addition to their number would be a superfluous incumbrance. There is another most instructive deduction to be drawn from a similar analysis of the voters on thirty-six questions, in the same two years; the result is given in the following table\*.

| From. | Members who vote.                                  | For Abolition. | Against. | Both. | Not at all. | Total. |
|-------|----------------------------------------------------|----------------|----------|-------|-------------|--------|
| 40    | English Counties .....                             | 25             | 37       | 10    | 8           | 80     |
| 12    | Counties and 12 towns, in Wales ..                 | 13             | 9        | 1     | 1           | 24     |
| 39    | Cities and Boroughs where Election is open .....   | 57             | 107      | 5     | 11          | 180    |
| 134   | Cities and Boroughs where Election is close .....  | 151            | 41       | 5     | 38          | 235    |
| 2     | Universities .....                                 | 4              | 0        | 0     | 0           | 4      |
| 32    | Counties, and 66 Royal Boroughs, in Scotland ..... | 25             | 11       | 0     | 9           | 45     |
| 32    | Counties of Ireland .....                          | 21             | 14       | 2     | 34          | 64     |
| 32    | Cities and Boroughs of Ireland ..                  | 21             | 7        | 0     | 8           | 36     |
|       |                                                    | 390            | 226      | 23    | 89          | 658    |

The simple inference from which statement is, that, as far as the people (properly so called) return members to this house, they do attempt a control on the measures of Government, but that the Government is enabled to counteract all their efforts by the members who sit for those places where the election is in the hands either of one individual or a small portion of the community; and the conclusion from both of these examinations is, that rotten boroughs out of the house, returning placemen to the house, are the real basis of parliamentary power. I wonder that any should have the hardihood to deny the fact: it would be far more manly, far more sensible, to admit the fact, and to defend it. In fact, in this parliamentary Government there is no other mode of maintaining or directing power than that which was practised by the Walpoles and the Pelhams of other times; and what was done then grossly and openly, must be done now delicately and covertly. The vote is as venal, although the traffic is not quite so barefaced and undisguised. I call upon the past and the present Secretaries of the Treasury to speak fairly: they need not be ashamed; the sin is not theirs, it belongs to the system. I call upon them to confess, whether the compact phalanx which forms, or round which are formed, the majorities of parliament, is not kept together by favours either paid or promised—either enjoyed or expected;—I ask them, can any man pre-

sume to require the slightest participation in the good things which Government has to bestow, without giving a receipt in full at the table of this house, either in his own person, or in that of some near relation? The fact is too notorious to be denied; and I repeat, that those whose duty it is to manage these transactions, must have before them a most humiliating spectacle, when they become intimately acquainted with the petty wants, and the low desires, and the base compliances of those who ought to be the high-minded independent gentry of a free and fairly governed country. It is all in vain for the rt. hon. gent. (Mr. Canning) to tell us, as he did the other night, that he would scorn to govern by placemen—that he would scorn to govern, except through the just confidence of the country, expressed by an independent parliament. That rt. hon. gent. may, when he acts as he ought, obtain the just confidence of his country; but he knows full well the truth of what I have been saying—he knows that if he would wield at will what has been called the “fierce,” but which I would call the tame democracy of England, he must condescend to secure the usual support of parliament by the usual means—he must follow the example of his predecessors—he must do what was done before him, and what will be done after him, as long as the present system shall endure. In vain all his genius, in vain all his experience—in vain all his patient labour—in vain even that eloquence with which he delights his enraptured audience; they would be as but a feather in the balance, were the weight of ministerial patronage thrown into the opposite scale;—what was his fate once, would be his fate again, were he stripped of the robes of power, and reduced to charm us only by the naked graces of truth and wisdom. The rt. hon. gent. has furnished, indeed, several of the most striking instances by which we can form a judgment of the true quality of that influence which, and which alone, can be said to govern this assembly. Let me select one: on June the 3rd, 1822, the rt. hon. gent. being, at that time, in the simple capacity of one of the most brilliant and persuasive orators that ever addressed an audience, moved for a clause in the Corn Importation Bill, commonly called the Grinding Clause. The landed interest, by its loudest and most sonorous organ (Sir T. Lethbridge), complained that they had been “ground” enough already; but the Marquis of Londonderry, then manager of majorities, supported the clause, and the house divided—*ayes* for grinding the country gentlemen, 149—*noes* for not putting them between the millstones, only 41. On the 10th of June, the question came on again: nothing had intervened; but when the rt. hon. gent. moved the bringing up of his clause, the Marquis, the manager, declared against the proceeding, and without deigning to argue the question, recommended his rt. hon. friend to suspend his operations: but in an evil hour, the rt. hon. gent. forgot how those things are brought about here—he would accept of no compromise—he resolved to try his strength—he made a most ingenious speech—when, lo! the unhappy result!—under the wand of the manager, mute though he had been as Harlequin, the majority passed over to the other side—there they sat deaf as adders—they would not listen to the voice of the charmer, charm he never so wisely—the forty-nine were swollen to one hundred and sixteen; and, under the process of

\* This Table is extracted from a pamphlet by Mr. Marshall, called “Alphabetical List of the Members of the House of Commons,” &c. —Published by Miller, Fleet-Street.

the same enchantment, the hundred and forty-nine were reduced to a poor twenty-one—I myself being amongst them; so that I had the honour of finding myself in a sort of hackney-coach minority, cheek by jowl with the *rt. hon. gent.*:—and such would be his fate to-morrow, were he to drop down from the eminence where he now stands, to the position which he occupied on that luckless occasion. Perhaps I shall be told, that the reformers have made little or no progress in the attainment of their object. It is true, we are not so sanguine as to promise ourselves a speedy fulfilment of our wishes—we do not fix the day, or point out the precise period, which shall be illustrated by the great event which we, nevertheless, confidently anticipate; but we have still a rational, a well-grounded hope, that our object will finally be accomplished; and that, by perseverance, courage, and a well-regulated zeal, we shall at last triumph over the patrons and promoters of corruption. Sir, I have lived to see many surprising reforms, which had I dared to foretell, I should have been ridiculed as the wildest and most enthusiastic of dreamers—I have lived to see our jury system and our criminal code revised by a Secretary of State—I have lived to see the wretched fabric of commercial prejudice and antiquated policy overthrown by another minister of the crown—and, lastly, I have lived to see the important department of our foreign administration filled by a statesman who has burst asunder the bonds that chained us so long to the despots of the continent, and made this great country a partaker in the conspiracy against the liberties of mankind. Having witnessed this extraordinary revolution—having seen such unlooked-for changes, what is there to make us despair of bringing about that great reform which the best and the wisest of our countrymen have declared to be essential to our happiness and our permanent glory? I am sure that the wish for reform is daily gaining ground. It may seem too much to hope that those who now are in possession of the borough representation, and who, in fact, are the masters of the country, should be willing to diffuse amongst their fellow-citizens privileges which are now exclusively their own; and yet, such a self-denying ordinance would not only redound to the future advantage of these individuals themselves, but would be generous, and noble, and glorious beyond all the examples of patriotism. Nor need we despair—already have we seen some of that powerful body willing to consent to the honourable sacrifice.—The Russels—the Cavendishes—the Grosvenors—and the Vanes, have only to be joined by the other monopolists of the elective franchise, and the great object would be immediately attained. The same age would then witness the reformation of our jurisprudence—the adoption of a sound commercial policy—the recovery of that character which England so long maintained in the eyes of foreign nations; and, lastly, the establishment of that real popular control over the measures of Government, which alone can secure the continuance of all other advantages, and save us from a relapse into the miseries inseparable from a corrupt and delusive system of representation\*.

Lord Leveson Gower denounced the argu-

ments made use of by *hon. gents.* on the opposite side of the house, who gave their support to the motion. If the views of the *hon. member* (Mr. Hobhouse) were to be realized, he had no hesitation in declaring that they would tend to the ruin of the constitution, and the utter destruction of all that adorned it (hear, hear); and, in spite of the warnings and predictions of that *hon. member*, and the gloomy picture which he had drawn of the system under which we lived, he would still look up to that system for a continuance of those benefits and blessings which the country had heretofore enjoyed. If reference were had to the page of history, it would be found that the present state of things in this country was superior in every respect to the state of former times: and if the *hon. gent.* would look to other governments, the superiority of that of England would be manifest. He would not ask the question whether England was open to the charge of corruption in her elective franchise; and he could trace no link of connexion between the recent distresses of the country, and the question of parliamentary reform. Those who supported that measure were a party who, having little to lose themselves, were anxious to overthrow the present state of things, and rise upon the ruins which they made. Their object was to dispossess members of parliament, and to obtain seats themselves in the house. His noble friend who had brought this measure forward, had certainly supported his opinion by able, if not conclusive, arguments. But the influence of the press was a security against all apprehensions on the score of despotism or corruption. The changes which time had imperceptibly wrought upon the constitution of England, had only served to render the structure more venerable, and had taken nothing from its beauties. The lines written on a picture of the celebrated Sir Godfrey Kneller might with equal propriety be applied to the constitution of England:—

“More cannot be by mortal art express’d—  
But venerable age shall add the rest;  
For Time shall with his ready pencil stand,  
Retouch your figures with his ripening hand,  
To future ages shall your fame convey,  
And give more beauties than he takes away.”

Mr. William Lamb said, that the chief ground on which he rested his opposition to this measure was, that he could not see, nor had any person pointed out clearly to him, what real benefit could be derived from it. Giving to the noble lord every praise for the ability he had displayed, he could not pay him the compliment to take him as his guide in a course so doubtful, so experimental, and, he would add, so utterly unlikely to lead to the object which the noble lord had in view. The noble mover had stated, that he was not favourable to a democracy—the noble seconder had echoed the same opinion: and the *hon. member* (Mr. Hobhouse) had declared that he wished for nothing that could tend to revolution. Now, he would only say, in answer to this, that people did not always get what they wanted (hear). The question here was, not what gentlemen were seeking; but, supposing they got that which they sought, what effect such an event would have on the constitution? And his opinion was, that the alteration which was proposed would trench extremely on the no-

\* This speech is reprinted from the newspapers, and that published by Ridgway: London, 1826.

narchical portion of the constitution (hear, hear). He would not stop to argue, whether the influence of the democracy was too great or too little in the balance of the constitution. This, however, he would distinctly and decidedly declare—that, while he would do nothing to diminish it, he certainly would do nothing that could have the tendency to increase it (hear). In his opinion, all the advantages appeared to be on the part of the people. The press was generally in their favour, and most of the speeches which had been delivered this evening were, perhaps, intended to produce an effect out of doors (hear). It was said, that all those who appeared on the side of Government were influenced by corruption (hear). Every pecuniary motive, every worldly interest, was attributed to them, as directing their conduct. The hon. member (Mr. Hobhouse) had alluded to motives of this description as influencing the votes of those who generally supported the measures of Government. That hon. gent., however, could only judge from his own feelings. He could not know what were the motives by which the actions of members in the house were governed, and he had no right to impute to them improper motives. He argued from the uniformity of the votes of some gentlemen, coupled with the offices and salaries which they enjoyed, that they frequently voted contrary to their real feelings. If, however, the hon. gent. formed his judgment on that principle, he (Mr. Lamb) had an equal right to form his judgment, with respect to popular votes, on what he had actually witnessed; and he would say, that in the course of his parliamentary experience, he had seen many votes given, in conformity with the wishes of the people, which, he believed in his conscience, were contrary to the feelings of those who gave them (hear, hear). Such votes were not unfrequently given to prevent contests, to avoid a hostile feeling amongst electors, and thus to save expense. Viewing them in that light, he considered such votes to be just as corrupt as any that ever were given in support of the prerogative of the Crown, or in opposition to measures which were introduced by those who called themselves the especial friends of the people (hear). Let it not be supposed, however, that he preferred a despotic form of government to a democratic one. Far very far from it. But this he would say, that, in his view of the subject, the sultan of Constantinople, the sophi of Persia, or the dey of Algiers, was subject to a more efficient responsibility than the leaders of a democratic assembly (hear, hear, from the opposition benches, which were re-echoed by the members on the ministerial side). On the grounds which he had stated, he would seriously urge the house not to agree to this proposition. It was impossible for them to see their way completely through it; and so far as he could see, the effects would be most pernicious.

Lord J. Russell briefly replied.

The calls of question becoming general, the house divided.—For the motion, 123—Against it, 247—Majority, 124.

### *Bill for the Prevention of Bribery at Elections.*

THURSDAY, MARCH 2.—Lord John Russell said, that in rising to move for leave to bring in

this bill, he did not intend to trespass long on the attention of the house. In former days it had been found necessary (and he did not think it reflected much credit on the house) to impose upon a select number of their own body the task of deciding upon their oaths as to the justice of the complaints made to them, respecting the manner in which elections had been conducted. The remedy which had thus been applied, however successful, between party and party, regarding the interests of the public, was altogether deficient. There might be a corrupt election, and yet the committee appointed by the house could not apply the remedy which the case demanded. It might happen that there had been corrupt practices in which the petitioner had engaged, and which he was therefore afraid to bring forward, because he durst not stand the test which, in the committee, would be applied to him. It might also be the desire of the petitioner, who sought to set aside an election on specific grounds, to try another election, when he intended to practise those corrupt practices, which, if they were disclosed to the house, would defeat the return of his opponent. The remedy which he proposed to apply was this,—that when anybody complained of corrupt practices which had taken place in any election within six years, if it was thought that the petition made out such a case as was entitled to be attended to, the house should proceed in the same way as under the Grenville act, by appointing a committee of fourteen members, of whom the member presenting the petition should be one. This committee should be empowered to investigate the charges and other circumstances which the petition contained, and report their opinion thereon to the house. The house would see that what he proposed to effect by this committee might also have been done by means of a resolution of the house: but the petition was preferable, because it was the more usual form of bringing before the house grievances which required redress; and the precedent of the Grenville act convinced him that it would be better than any other he could devise. He thought it would hardly be said that the practices to which he had alluded did not require some new remedy; because they were known to prevail to a very great extent already, and because in all probability this year would, in many of the boroughs, give occasion to practices which were disgraceful to those boroughs, and detrimental to the interests of the public. On this occasion he augured more favourably of the success of his proposition, because he calculated on having in support of it an hon. gent. whom he could never yet induce to vote with him in favour of reform, although he (Lord J. Russell) had done all in his power to accommodate his notions to those of the hon. gent. He alluded particularly to the hon. member for Penryn (Mr. Grenfell), who, he found, had lately been addressing his constituents in language which favoured entirely his own view of this important subject, and which he would read to the house (hear, hear). The hon. member, whose talents would do credit to any place which might send him as a representative to parliament, and who had upon all occasions served his constituents with the greatest ability and earnestness, now found it necessary to address them in language to this effect. [The noble lord then read an address from Mr. Grenfell to the electors of Penryn, in which he an-

nounced his intention of withdrawing his name as a candidate to represent that borough in parliament, and stated as a reason for doing so, that he had been informed by some of his friends that he would not succeed in obtaining the votes of the electors, unless he should adopt practices to which they knew very well he would never submit (laughter). The hon. member reminded the electors that such practices had, upon former occasions, twice endangered their elective franchise, and on one of these occasions had exposed one of their members, who had adopted them, to penalties which had annexed a very disagreeable celebrity to his name (laughter). Now, the noble lord continued, if corruption so boldly reared its head, that the electors of Penryn had ventured to convey such an intimation as that alluded to in this letter to his hon. friend and their representative,—was it not time, he asked, that it should be put down? Was there any part of the house that would not concur with him in saying, that some remedy was absolutely necessary? He appealed to that part of the house which did not usually vote with him upon the question of reform, but which would not deny that if abuses existed they ought to be remedied. He asked them whether it was not the best and most satisfactory mode of proceeding, first to prove the specific grievance, and then to apply the remedy (hear, hear)? What he proposed to do was, if the committee should report that general corruption prevailed in a borough, that the house should proceed as in the instances of New Shoreham and Grampound,—that a bill should be brought in for disfranchising them; and then, as the nature of the case might direct, that the right of electing members should be conferred elsewhere. If the neighbouring hundred were a populous one, that the franchise should be transferred thither; but if the borough were a mean one, and the neighbourhood scanty, then that it should be transferred to some populous place in another part of the country,—to follow, in short, the example of that measure which had been proposed with respect to Grampound, the franchise of which was to be given to Leeds. The change which that measure had undergone in the House of Lords, giving it to the county of York instead, he thought was no improvement, but the contrary. In this manner, slowly, but effectually, as far as it went, would the representation of the country be reformed; and, to use an expression of a noble friend of his in the other house of parliament, the wool, the cotton, and the iron of the country would be represented (hear, hear).—The noble lord concluded with a motion for leave to bring in a bill for the further prevention of bribery and corruption in the election of members to serve in parliament.

Mr. Grenfell said, he conceived there was nothing in the address to which his noble friend had alluded, which was at variance with the opposition he had given, and should always, while he had a seat in that house, continue to give, to any plan of general or speculative reform.

Mr. Wynn admitted that it was the duty of the house to oppose as far as possible any practices which might tend to defeat the fairness and purity with which elections ought to be conducted. He objected, however, to empower a committee in the manner suggested by

the noble lord. He also thought that the expenses of the investigation would form another and a very serious difficulty. On the one hand, if the expenses were to fall on the parties preferring the petition, few persons would be found willing to bear those expenses for the sake of an investigation, the result of which could in no way benefit themselves. On the other hand, if the expenses should be paid by the public, that circumstance would give occasion to many of what were called "fishing petitions," in which the parties depended upon the chance of any evidence they might get, and without any previous authority, or sufficient ground for the proceeding. He also understood the noble lord to state, that the power of appointing the committee was not to be imperative on the house, but optional. He thought this was likely to give rise to very unpleasant discussions.

Lord John Russell said, he intended to propose that the expenses should be paid as in other committees, and that notice of the application should be given to the borough, who would be allowed to oppose by their counsel and agents.

Leave was then given to bring in the bill.

TUESDAY, MARCH 14.—Lord J. Russell moved the second reading of the bill for the better prevention of bribery at elections.

Mr. C. Wynn opposed the bill, as one which was not likely, in his opinion, to answer the end which the noble lord aimed at. As it seemed to him, the bill gave the house no useful power which, virtually, the house did not possess at present. The clause which provided that where petitions were presented alleging bribery, the inquiry should be at the expense of the public, he was convinced would be most pernicious. It would, beyond question, lead not to vexatious but to malicious charges; and for the bringing of such groundless charges, no penalty was declared. To the system proposed for choosing the committee of inquiry, too, he objected; the provision as to the appointment of the "nominee," was unfair; the nomination was, perhaps, the worst part of the existing system. Each party, in a petition of the kind in question, now named some one person upon the committee in whose discretion he thought he could confide; and that nominee invariably became what he should not be, a counsel in the case rather than a judge. But the noble lord's bill gave the accuser the power of appointing such a nominee, and withheld it from the defendant—an alteration which made that course partial and unjust, which (without having done ill qualities) was objectionable enough already. The hon. gent. concluded by expressing his opinion, that the house had already possessed powers amply sufficient to correct bribery whenever a case of that kind was fairly made out. He never knew an instance in which that house had failed to deal most severely with those against whom corrupt practices at elections were substantiated.

Mr. Warre was of opinion, that, in point of principle, no fair objection could be raised against the present measure, because they all knew perfectly well, that election committees were in the habit, under particular circumstances, of making special reports, the matter contained in which gave rise to ulterior proceedings. He could by no means go along with the hon. gent. who had just sat down, in his

statement that the law in its present state was sufficient to put an end to those corrupt and disgraceful practices which were known to be carried on in the course of some elections. The house ought to be allowed a more extended period than was now granted, for the purpose of hearing complaints on the subject of bribery and corruption. Reform was as much required amongst the electors as amongst the elected; and if the noble lord could devise a plan, by which notorious and scandalous practices of the sort to which this bill referred could be put an end to, a most beneficial object would be gained. In one or two boroughs those practices were notorious; and he conceived, if the provisions of the present measure hung over them in *terrorem*, it would produce a very good effect.
